Seasonable Topics.

Exit June. AS we write the month of June is drawing to a close. Midsummer day is past and gone, the Royal Show is in progress at Lincoln, and the sky overhead is just as grey and leaden as it has been for weeks past. According to an old weather saw in the south, when June is unfavourable the "turn of day" brings better weather, and from the bottom of our hearts we hope it will be so, for half the summer is gone, and we have had no summer at all except a bit about Eastertide. A good many agricultural shows have been held during the past month, and it speaks well for the enthusiasm of the public to know that they have been well attended as a rule, though we could not have been surprised had this been otherwise, considering the climatic conditions in many cases. What an aggravating way some people have of discussing the weather, to be sure! We have had that old saw about "a dripping June keeping things in tune" pushed down our throats till we are sick of it, and we are afraid that things will be very much out of tune if July does not give us what the world wants most of all just now—sunshine.

Battling with the Weather. "IT'S all very well for people to tell us that we should do this, that, or the other, but it's the weather that beats us, and we have to do the best we can." It was a hill farmer, who has considerably more arable land than pasture, who spoke these words, and he went on to explain that he had drilled in swedes under conditions that went to his heart, but there was no help for it, and they would have to take their chance. We sympathise with this man, and also with hundreds of other farmers who have made their calculations, but have been thwarted in the same way by the weather. Conversation turned on to the subject of weeds, and charlock was mentioned. The man waxed wrath, and how many times he had hoed and pulled we fail to remember; but as a last resource he had that morning set the men on to end off the hateful yellow flowers which stood up above the oats. Why didn't he spray? The farmer glared at us when we put the question, and asked what weather there had been for spraying. Too true, too true, farmers have been beaten all round just lately, and they stand a poor chance in a contest with the clerk of the weather.

Nature Study Exhibits at Shows. AN interesting feature at agricultural shows which bids fair to become general, is the Nature Study section which is mostly contributed by elementary schools. Having to put his hand pretty deeply into his pocket to pay for it, the sympathies of the farmer are not altogether on the side of modern methods of education, but he forgets about the rates when he attends an agricultural show, and takes an unfeigned interest in the nature study exhibits sent from elementary schools. We have seen a good many of the latter, and it seems to us that in many cases teachers are not quite clear as to what a nature study exhibit should consist of. In a word of advice we would say—let it be the work of the children and display some definite method of teaching. Elaborate, but unclassified collections of butterflies and moths, drawings that are mere copies, and big mixed-up collections of all kinds of things that have something to do with Nature, but convey nothing definite, should all be avoided in favour of children's work, done by children themselves, and not free from the mistakes that children make. The experts who adjudicate on Nature study exhibits have difficulty very often in deciding how much of the work has been done by the teacher and how much by the children, and they naturally favour that in which the latter only is apparent.

The Milk Question. LOOMING in the distance is a question that will have to be tackled seriously before long, and it is that of milk. The man in the street, who perhaps would never think about the matter himself, is told harrowing stories of the risks he daily runs by consuming milk from diseased cows, and from beasts that are kept under filthy, unsanitary conditions. It may be all true, but the unfortunate thing is that there is little or no difference in the appearance of good and bad milk, and neither looks nor taste are affected by any disease germs it may contain. Milk is an every-day commodity, and it is essential that it should be pure, but if the public is protected the farmer must also be helped. We argue that as a class the latter are as careful as they can be (though, of course, every flock has its black sheep), but farmers have to pay rent and live through their cows, and milk has to be produced at as little expense as possible. We know that there are sheds which are unsanitary, undrained, and badly arranged. We know that in cases the liquid manure from the cowsheds finds its way into the ponds from which the cows drink, and in many other ways things are not as they should be. Who is to remedy these matters? The tenant is helpless, and would be glad enough to have sanitary sheds and everything as it should be, and it would be unfair to make him more the victim of circumstances than he is already.

Ensilage. FORTUNE having favoured farmers in the past few years with good haymaking weather we have not heard very much about ensilage, but gloomy skies have a depressing effect, fears are entertained that we are in for a wet summer, and people are already beginning to talk of ensilage as a means of disposing of fodder crops. Indeed, some people contend that even under the best weather conditions it is an open question whether hay or ensilage is the better system; but the average farmer, unless circumstances direct otherwise, is loth to give up the time-honoured method of making his grass into hay. We remember that when ensilage was first introduced some years ago the idea was looked at askance by the old-fashioned farmer folk, but the novelty of the system has gone, and the utility value of good silage is generally admitted. We are hoping still for weather to make good hay, but if ensilage has to be resorted to as an alternative, there is no difficulty nowadays in getting information about making it.

The Appearance of Potatoes. POTATOES up to a certain point this year have done well. They were a long time in many cases before they showed through the ground, but after the growth made appearance we have never seen the bine grow more quickly or luxuriantly. It is true there are exceptions, and in some fields we have noticed a good many bare patches where the tubers have not grown, or only sent up spindling shoots. Leaf-curl disease seems to be the cause of this trouble, and it is less noticeable where the seed planted was obtained from Scotland. For the production of bine the weather has been favourable up to now, and there is no need to stimulate growth by top-dressing with nitrate of soda or any other nitrogenous fertiliser, but what about the possibilities of disease? Fears are entertained in some quarters, and the question of spraying as a preventive is being discussed, but with the hope that springs eternal in the human breast we are looking for the sunshine which the potatoes now need as much as other crops.

At a meeting held in London last week to consider the question of the marking of foreign eggs and poultry imported into the British markets, a resolution was passed expressing the opinion that it is desirable in the interests of agriculture and poultry keepers in particular, as well as of the public generally, that all foreign eggs and poultry should bear a mark indicating their country of origin. It was agreed that an executive committee should be appointed to approach the Government for the purpose of obtaining their consent to the appointment of a Committee of the House to hear evidence, with a view to the introduction of a Bill for the marking of foreign eggs and poultry.

The Royal Show at Lincoln.

The annual show of the Royal Agricultural Society took place last week in the cathedral city of Lincoln, and the whole district welcomed our national society in a most spontaneous and hearty manner. Lincoln itself rose manfully to the occasion, and the welcome extended to the Royal Show was a hearty one. The city was decorated in a most pleasing and tasteful manner, and it is many years, if ever, we have seen anything better of its kind.

First Day.

Tuesday, the first day of the show, opened very dull and dispiriting, it had been raining the whole of the previous night, and the weather conditions were most dismal. The judging day, for which an admission of 5s. was charged, passed off uneventfully, and the number of visitors to the show only amounted to 1,670, which did not compare at all favourably with previous exhibitions.

Second Day.

Wednesday was the day upon which popular attention was centred, for H.M. the King had promised to specially travel down from London in order to visit the show. Things did not look by any means cheerful during the forenoon, but with the approach of the time of the King being due the weather greatly improved, and subsequent to his arrival the conditions were most pleasant in spite of a considerable amount of mud in some parts of the showyard.

His Majesty reached Lincoln just at midday, and was received with all due formality by the Mayor of Lincoln and other officials, from whom he accepted an address. His Majesty, in his reply, alluded fittingly to the agriculture of this country, as in the course of his address he said :—

"You are well aware of the interest I have always taken in agriculture, and the splendid entries for the present Royal Agricultural Show prove to me that the pre-eminence of this country in breeding stock of the highest class, although often threatened, is not seriously endangered. It is to England that the representatives of countries journey in order to renew their blood stock, whether horses, cattle, or sheep. Strains of Lincoln sheep blood are to be found in the flocks which form the staple of wealth of Australia and South America.

"Our success in breeding results not merely from the favourable climate and soil with which this land is blessed, but from the skill and patience of the breeder, who has constantly improved his stock by the application of scientific methods."

Large crowds were present in the streets to welcome His Majesty, who was received with ringing cheers. Upon arrival at the showyard the King was introduced to Lord Yarborough and others, and made a very through tour of the showyard inspecting various sections with his well known thoroughness. His Majesty took his departure in brilliant sunshine and amidst a great demonrtration of popular good-will.

The attendance of the public during the day was good, but the numbers paying for admission was hardly so large as had been anticipated, for the necessary care for the royal train confined the excursion arrangements within strict limits. The complete cessation of traffic ordered by the city authorities, during the visit of the King, also tended to considerable inconvenience. We are aware that it is necessary to take all precautions to prevent any contretemps on such occasions, but the anxiety of the authorities on this occasion somewhat overpowered their discretion.

Third Day.

Thursday was beautifully fine and sunny, and large crowds came rolling through the turnstiles at a very early hour in the morning. During the day there were various entertainments in the big ring, whilst one of the most popular features in the show was the display of flowers. Two large tents were filled with the finest specimens sent by growers from all parts of the country. It was a magnificent collection, and highly appreciated by all visitors.

The attendance during the day was very good, and means a considerable sum to the society, for at Derby the previous year there was only one half-crown day, while at Lincoln the second half-crown day was quite as successful as the first.

Concluding Days.

On Friday as early as 10 o'clock the narrow but prettily decorated streets were crowded, and it was difficult to get a ride to the West Common. Lincoln has not established a record for a first shilling day, but the figures once more attest the wisdom of the Society in having turned its back upon London and in returning to the provinces. They also acclaim the keen interest of Lincolnshire people in the welfare of the Royal. The registered attendance by payment at eleven o'clock was 22,537. The next two hours brought the total up to 44,014, and the three o'clock attendance was 50,693. Just over 1,000 passed through in the next two hours, and when the show ground closed at seven o'clock it was found that the total attendance for the day was 51,888, as compared with 46,055 at Derby last year, and 7,754 at Park Royal in 1905.

Satisfactory as was the financial record of the Derby gathering, it was surpassed on Friday afternoon, owing to the re-introducing of a second half-crown day. Therefoee, Saturday's receipts were profits, and the balance-sheet, when drawn up, will show a substantial addition to the credit of the Society. There was no fifth day at Derby or at Park Royal in 1905. Apart from numerous ticket holders, 133,006 persons paid for admission at Lincoln during the week, including 33,870 on Saturday, or nearly 10,000 more than passed through the turnstiles at the final exhibition at Park Royal. Lincoln's achievement is a new record, beating all the five days' totals for many years, with the exception of the Cardiff figures of 167,423 in 1901.

FARM PRIZES.

The re-establishment of prizes for the best cultivated farms in the district in which the Royal Show is held was a most popular feature. For years there has been a movement on foot to revive this competition, and the announcement that the society had decided to do so in Lincolnshire was a most popular one. The prizes evoked keen competition, and their announcement, which was made at the annual meeting of members, was the cause of considerable local interest. The following are the awards :—

Class 1 —Arable and grass farm in the county of Lincoln, exceeding 300 acres—1, John Evens, Burton, near Lincoln ; 2, John Todd, Kirkby Green, Lincoln. Reserve —William Searby, Spilsby Road, Horncastle. Very highly commended —Henry Bemrose Minta, Normanton Hill, Grantham ; John Robinson, Eastfield House, North Thoresby, S.O. Highly commended—John Eastland, Casswell, Laughton, Folkingham ; Leslie W. Stepenson, South Thoresby Manor, Alford. Commended — William Usher Banks, Cranwell Lodge, Sleaford.

Class 2.—Arable and grass farm in the county of Lincoln, over 50 acres and not exceeding 300 acres.—1, Edward James Turton, Horkstow, Hull; 2, William Bray, East Keal, Spilsby ; 3, Henry Neesham, Lodge Farm, Canwick. Highly commended—Edward Burkitt, Faldingworth, near Lincoln ; Edwin Glassup, The Lodge, Colsterworth, Grantham ; John Thomas Shaw, The Elms Farm, North Cotes, S.O.

Class 3.—Arable and grass farm, regularly hunted over by the Belvoir, Blankney, Brocklesby, Burton, or Southwold Hounds, exceeding 300 acres—1, William Searby, Spilsby Road, Horncastle ; 2, John Robinson, Eastfield House, North Thoresby ; 3, Henry Bemrose Minta, Normanton Hill, Grantham. Reserve—Edward Godson Allen, Metheringham, Lincoln. Highly commended—Leslie W. Stephenson, South Thoresby Manor, Alford. Commended—William Usher Banks, Cranwell Lodge, Sleaford ; Thomas Barraud, Kelby, Grantham.

Class 4.—Arable and grass farm, regularly hunted over by the Belvoir, Blankney, Brocklesby, Burton, or Southwold Hounds, over 50 acres and not exceeding 300 acres.—1, Henry Neesham, Lodge Farm, Canwick ; 2, Robert Cecil Cooper, Waltham, Melton Mowbray ; 3, Edward Burkitt, Faldingworth, near Lincoln ; 4, Leslie Philip Stevenson, South Thoresby, Alford. Reserve—C. Hinsman and Son, Fulletby Grange, Horncastle. Highly commended—Fred Fisher, Welby, Grantham.

Farm in the Blankney Hunt which did not win a prize in either the county or combined hunts' classes.—W. H. Potter, Langford Moor, Coddington, near Newark.

Farm over 300 acres in the Blankney Hunt which did not win a prize in either the county or combined hunts' classes. —E. Goodson.

Belvoir Hunt special prize for farm over 300 acres.—1, H. B. Minta ; 2, J. E. Casswell. Reserve and silver medal.—T. Barraud.

HORSES.

Hunters.

The show of Hunters was very satisfactory, the number of entries being good, and the classes containing some of the best Hunters of the year, including the Olympia and Richmond champions and several animals that have been prominent at other good shows found themselves outclassed at the Lincoln meeting. The first class was that for colts or geldings foaled in 1906, of which there were eight catalogued. Mr. Swallow's good colt Recruit by Squadron Leader was placed first, beating Mr. E. W. Robinson's Collar Stud and Messrs. Cheney's good colt by Bachelor. In the two-year-old gelding class Mr. F. B. Wilkinson's fine colt so often first, His Grace, found a more favoured opponent in Mr. R. L. Fenwick's Whisperer colt, Zealot, which proved the high quality in this instance. Of three year olds there was a very large entry, and some capital geldings, Mr. F. B. Wilkinson's Expert this time holding his own against Messrs. Cheney's Nimrod and Mr. E. Hodgson's Dignity, Irish bred, sired by Fitz-Clifden out of a mare by that best of Irish sires of the past Ascetic. The yearling filly class was exceptionally strong, and better breeding and quality need not be desired than that of Mr. F. G. Colman's first prize winner, being by Royal Mask out of that capital mare Homely Lass. Other winners were Mr. Wilkinson's bay by Worsthorn and Mr. Addey's Kipper.

Two and three-year-old fillies were not strong classes. Mr. C. Hodgson's Mab by Pax and Messrs. Cheneys' Lady Mary were the best in the former class, and Major Leslie Renton's Success, a well-known and first-class filly, and Mr. R. W. Riggall's filly by Havoc were best in the older class.

Mares with foal at foot (light weights) were very strong, and with Mr. Mullens's Glowworm and Mr. Wilkinson's Rosalinda at the finish had quite quality enough. In the heavy weights class Mr. Mullens's Everlasting was first, and also awarded the gold medal of the Hunters' Improvement Society. Mr. Oliver Quibell's Diana and Mr. Furness' Laurista were the other winners in the class. The colt and filly foals were quite as well grown as those of the heavy horses, but the entry was not large in either classes. Mr. Mullins, Mr. Hodgson, and Mr. Furness were the winners in colts in the order written, the sires being Glenrossal, Rol O'Neill, and Squadron Leader, whilst the winning fillies shown by Mr. Mullens, Mr. Robinson, and Mr. Swallow were the get of Glenrossal, Riverstorm and Squadron Leader.

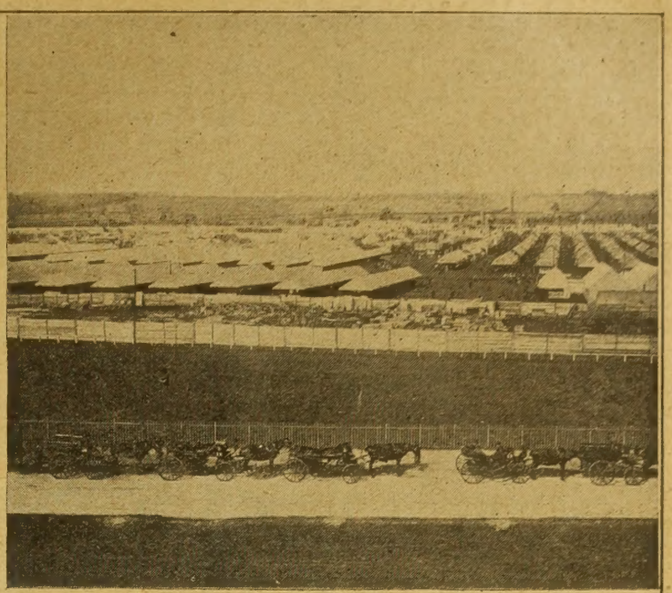
Polo and Riding Ponies.

The classes in this section were not very strong numerically, though the quality was high, many of the best animals of the year being present. For stallions foaled in or before 1904, Mr. Mumford's Spanish Hero repeated his London Victory, Mr. Kelly's Mountain Ash and Vice-Admiral Bridgeman's Carnival being the other winners, the latter being in the second place. In yearlings (colt, filly, or gelding) Mr. John Barker was as usual quite invincible with his Sandiway and Bold Marco stock, which beat Mr. Tresham Gilbey's Mayleaf, and in two-year-olds Mr. Barker's Ruby by Sandiway was also at the front, the other prizes going to the Keynsham Stud Company and Mrs. A. Hayes-Sadler. Mr. Barker followed up his victories in the three-year-old class and also in the brood mare section, his Deborah by Mark For'Ard and Silver Star being first in these classes respectively. Three-year-olds were weak, and brood mares were also not by any means numerous.

Cleveland Bays.

These classes struck the writer as being quite remarkable for quality all through, but there was not a large entry, indeed there seldom is, but breeders found a good inquiry for them which should encourage them in their work. The old familiar names, both of owners and horses, were once more most prominent. Mr. John Lett, Mr. George Scoby, and Mr. Frank Bateman divided the prizes for stallions foaled in 1904 or 1905, and for fillies foaled in 1904 or 1905, Mr. H. C. Stephens' Southern stud came to the front with Cholderton Silkstone by Wellington, a very good-looking filly, well grown, bred by her owner. The other winners were Mr. George Elders and Mr. George Grandage with Aislaby Winner and Woodland Flower respectively.

Aislaby Beauty and Woodland Rose were the only competitors in the brood-mare class, and were awarded first and second prizes in the order named for Mr. J. H. Tyerman and Mr. Bateman.



Coach Horses.

Coach horses, the next of kin to the Clevelands, were strong in stallions, but the female section was very weak. In the former, Mr. Scoby, Mr. Frank H. Stericker, and Mr. G. Grandage were the winners in the above order ; and in the filly class,

	Lincoln. 1907.	Derby, 1906.	Park Royal, 1905.	Park Royal, 1904.	Park Royal, 1903.	Carlisle, 1902.	Cardiff, 1901.	York, 1900.	Maidstone, 1899.

foaled in 1904 or 1905, of which three only were catalogued, the honours went in the following order: first, Mr. Grandage's Woodland May; second, Mr. Scoby's Beadlam Hylda; and third, Beadlam Beauty, from the same stables. Like the Clevelands, mares and foals only mustered a couple of representatives, and these were placed first and second; Mr. Grandage's well-known and stylish mare Woodland Briar taking the first position, and Mr. Beckett's Marian second.

Hackneys.

This breed gave a better account of themselves than has been the case at the Royal for some time, and their strong, attractive action had great effect upon the many strangers present. There were, too, more horses with size about them than has sometimes been the case. Yearling stallions came out with six entries, Sir Walter Gilbey's Flash Cadet, Sir Lees Knowles' Salford Viscount, and Mr. H. V. Sheringham's Creake Connaught, the first by His Majesty and the last by Copper King, were the recipients of the prizes in the order named, and each of them smart movers.

The two-year-old stallion class was stronger, Messrs. T. and A. Hall providing the winner in King of the West, a chesnut by Garton Duke of Connaught, that went very evenly. Mr. R. P. Evans's Kingsway by Copper King and Mrs. E. Fletcher's Angram St. Thomas were the other winners. Copmanthorpe Performer was up to his usual good form, and carried off first in the three-year-olds for Mr. Arthur Hall. This colt, it will be remembered, is a son of Garton Duke of Connaught, and one of the best movers with style in the show. Mr. Evans's Gartonius and Mrs. E. Fletcher's Angram Performer also showed very well, and followed on in the prize list in the above order.

Yearling fillies had a very strong representative in Sir Walter Gilbey's Flash Clara by Royal Danegelt, she has grown and goes with force; Mr. Cliff and Mr. Pentelow were the other winners.

Another well-known and grand filly turned up at the head of the two-year old class in the shape of Sir Walter Gilbey's well-known filly Lively Beeswing by Royal Danegelt. Mrs. Fletcher's Ganymede filly and Mr. Pentelow's Mathias filly were awarded the remaining money. Three-year-olds made up a very good class, too, the winners in these being Mr. H. Clark's Skeffing Lily, Mr. W. J. Tennant's Special Beauty, and Mr. R. P. Evan's Christolia. The lower weight class of Hackney-bred mares was not especially strong in notables, Mr. W. H. Clarke's Winsetts Lily, Messrs. Cockayne's Paddock Queen, and Mr. H. V. Sherringham's Creake Sylvia were the best of them; whilst in the over 15 2 class the quality was very high, and several famous mares were in the running. Mr. R. P. Evans' District Maid was placed in the first position, though she had a very powerful opponent in Miss Dora Schintz's Knowle Belinda by His Majesty, a mare that has true carriage-horse style, with size and fine action, and Sir Walter Gilbey's Gallant Girl occupied the third place.

The best colt foals in a rather small class were Mr. W. H. Clark's by Skeffling Fireaway, Miss Dora Schintz's out of Knowle Belinda got by Mathias, and Mr. Pentelow's by Gay Lothair. The best fillies were Mr. R. Surfleet's daughter of Beckingham Squire, Mr. R. P. Evans' by Evanthius, and Sir Walter Gilbey's chestnut by Hedon Sportsman.

The Hackney pony classes were not big in numbers, but they contained several of the sensational movers of the day, included in the winners being Mr. Jones' Warburton Aneroid, Mr. Kerr's Johnnie Cope, Mr. Stock's Sir O'Horace, Messrs. Wainwright and Sons' Talke Wonder, Mr. W. Foster's Mel Valley Snorter, Mel Valley's Wonder, Mel Valley's Prince of Holland, Mr. Robinson's Brixworth Sharp Speculator, Mr. Price's Lyndhurst Firegirl and Mivvy Star, and Mr. J. Pimlott's Lady Wellford.

Shetlands.

The small entry of these immature horses created a great deal of admiration and interest as they stood in their boxes and also when on parade. The Ladies Hope and Mr. R. W. R. Mackenzie won all the prizes, the ladies taking the champion medal with the stallion Thoreau.

Riding and Driving Classes.

These clases formed rather an important section, as a great many Hunters were entered in the riding portion. Mr. Edward Hodgson's Sportsman carried off the red card in the 12 to 14 stone class, Mr. J. H. Stokes' well-known good-quality and great winners Black Pearl and Dirk Moor taking the other prizes, whilst in the class up to more than 14 stone, where there was not so much competition, the first prize went to a gelding of Mr. Drages, and second and third to Mr. J. H. Stokes' Masterpiece and Lord Crafty.

The novice class up to from 12 to 14 stones was well filled, and the prizes carried off by Mr. Drage, Mr. G. B. Foster, with an Irish-bred horse, and Captain R. F. Gooch. In the heavy-weight novice class Mr. Drage's Mercedes beat Mr. J. H. Stokes' Orion and Mr. Gale's Dan Leno. Mr. Drage and Mr. Stokes also carried off the lion's share in the remaining classes.

Harness Horses and Ponies.

In the class not exceeding 14 hands Mr. W. Foster's Mel Valley's Veronique, Mr. Howard Franks' Tissington Cock Robin, and Mr. Raynor's Gay Girl, shared the prizes in the order named, the two former being in the Olympia and Richmond honours. Novices over 15.2 hands were a good lot. Miss Dora Schintz's Morocco, Miss Ella S. Ross' Grand Vizier, and Mr. S. Lears' Coltman Squire won the prizes in the order named, and promise to be heard of again after they have lost their claim to the title of novice. Pairs of horses in harness exceeding 15.2 were well represented, the first place being filled by Mr. John Kerr's Loudwater Flourish and Loudwater Fashion, Messrs. Cockayne coming in second with Paddock Handyman and Paddock Lilian. There were several classes in this section not judged until the last days of the show, in which many of the entries consisted of animals that have already been mentioned.

Shires.

Considering the important position the county of Lincolnshire occupies in the Shire horse world, the display of horses of this breed at the Lincoln Royal could scarcely be said to be satisfactory so far as numbers were concerned, whilst on the score of quality there were several animals in each class that were not as good as one expects to see at the Royal. The reasons for this somewhat small show of the breed may be accounted for in two three ways. In the first place, shows have been so numerous during the past few weeks that most of the Shire horses that have been got up for show purposes have tried conclusions at one place or another and proved their ability to compete, and where the result has not been in their favour, it is only natural that their owners should consider the cost of exhibiting them at the Royal for a week without any probability of winning something more or less substantial. Another very probable reason may be found in the very severe weather that we have been passing through, which has caused many horses to take on chills and bad coughs, and in some cases has resulted in death. The value of a good Shire to a farmer at the present time is too great to risk for little or nothing.

The first class for Shires was that for stallions foaled in 1905, of which there was a fairly good class, Mr. James Gould's London winner Lymm Grey being, as at that show, pretty quickly placed at the front. He has grown remarkably well this summer, and stands upon a first-rate set of legs and feet; his shape, too, is as it should be. He was got by Severn Bradford out of Darling by Coleshill Carbon. Mr. Frank Farnsworth and Lord Egerton carried off the other prizes with Ratcliffe Coming King and Tatton Settler, both of which were in the money in London, the latter also being the first prize foal at last year's Royal. Sir P. A. Muntz had also a very good colt reserved in Dunsmore Professor. Two-year-old colts brought out several very good ones, Mr. F. E. Muntz's King Forest, which has been so successful at the earlier shows, being an easy winner. He is by the great sire Lockinge Forest King, and for size, weight, and correct balancing of body and limbs is quite a hard nut to crack, in the opinion of many good judges being one of the best colts out for a long time. The second colt was Lord Rothschild's Hotspur IV., that was first in his class at the Agricultural Hall, since when, though he has filled out and held his form, he has not grown so much as could be liked, otherwise he is very good at the ground and in quality. He is the get of Birdsall Menestrel, his dam being by Markeaton Royal Harold. Sir P. A. Muntz followed for the third place with Dunsmore President, a capital colt by Dunsmore Jameson.

Three-year-olds, according to after results, must be called the class of the section, insomuch that they brought out both the champion and reserve champion stallions. There were Mr. Frank Farnsworth's Ratcliffe Forest King, which has won so many prizes and championships, and a very taking and correct colt of Mr. James Gould's, called Lockinge Truffle, bred by Lady Wantage, and sired by Lockinge Forester, an own brother to Lockinge Forest King, the sire of the first-prize colt. The second colt is full of style, size, and quality, as well as a very good mover, and was a great favourite at the ring side; though the first prize two-year-old was very much liked as a candidate for the superior honour; Sir P. A. Muntz was third with Dunsmore Premier, a grand class of colt by Birdsall Calamint, that must have run both the winners very closely.

Fillies foaled in 1906 were a very nice class as respects the best of them, which were Mr. W. T. Everard's well-built Bardon Flower of the Forest by Lockinge Forest King, full of the best Shire character and quality; Sir P. A. Muntz's Dunsmore Quicklime by Dunsmore Jameson, a filly with a good deal of class about her; and Mr. Tom Bond's Ludboro Royal Lassie by Lockinge Forest King, another very good type of Shire yearling.

Two-year-old fillies were one of the best classes, Mr. W. T. Everard's Ashleigh Royal Duchess, another daughter of Lockinge Forest King, with fine shape and good style and quality, came to the front, Lord Rothschild taking second with Misty Morn, a very nicely moulded filly, though none too big. Mr. Egerton Orme's Tatton Friar filly, Combermere Abbess, first at last year's Royal, was placed third, and Mr. G. G. Atterbury's very fine filly Fuchsia II. by Dunsmore Jameson was reserved.

The three-year-old class brought out the female champion in the shape of Mr. W. T. Everard's grand filly Bardon Marion by Lockinge Forest King; the Earl Egerton was second with Tatton May Queen, another very fine filly by the same sire; and Mr. T. E. Muntz's Alderby Lady Jameson, that has been the recipient of so many prizes and medals, and is an all-round, massive, well-shaped, weighty filly with quality, was given the third prize. Mares, with foal at foot, were a large entry in catalogue, but there were several absentees which reduced the class to a very small one in point of numbers, and several of the mares that have been good nurses were, probably owing in a measure to scarcity of feed and the cold, rather low in condition. Lord Rothschild's stud came out at the top with Belle Cole by Crossmoor Carbon, a Lancashire-bred mare of the right stamp to breed from, plenty of quality about her, low set, and with good shape both of body and limbs. The Duke of Sutherland followed with Lilleshall Moss Rose, a big, well-built, and good quality mare by Markeaton Royal Harold, and Mr. Leopold Salomons could only get the third prize with his big, weighty, and correct mare, Childwick Youno, bred by the late Sir J. B. Maple, Bart., and sired by Childwick Majestic. Two or three other very useful mares were awarded reserve cards.

The foals of both sexes were mostly small and backward, quite in sympathy with the season. The colt foal class came first, and out of five entries the one selected for first honours was the Right Hon. Victor Cavendish's colt by that good coming sire Holker Menestrel II. out of Holker Minerva, a very well-shaped colt, and good in his underworks. Messrs. Cartwright and Son came second with a colt by Nailstone Cœur de Lion, dam by Sir William, and the third prize was given to Lord Rothschild's colt out of the first prize mare Belle Cole and sired by Birdsall Menestrel. Mr. J. W. Davy was reserve and he with another colt by the same sire. There was a bigger and better entry of filly foals, the first prize in this class going to Sir A. Henderson's filly out of the good mare Rickford Dorothy, and sired by Buscot Harold, a very shapely filly and growing well. Second prize was awarded to the Duke of Sutherland's filly out of the second prize mare, and got by Dunsmore Jameson, a very promising one; and third fell to the lot of Mr. Frank Farnsworth for the filly out of Ratcliffe Sunflower, sired by Ratcliffe Royal Harold. Three others were given cards.

Clydesdales.

Though the northern race of heavy mares compared very moderately with their great rivals of the south, still there was a better show of them numerically than we have seen at the Royal for some time. There was, however, a great want of uniformity of type apparent in them, and some were exceptionally light of build, whilst others were small, and, again, others leggy and wanting depth of ribs.

Stallions foaled in 1906 had for their leader a colt of Messrs. Montgomery's, of great promise, well-balanced, and full of quality, with a nice lot of bone and hair of the right kind, and put together well; he was sired by Everlasting out of a Prince Thomas mare. Two-year old stallions were a small class, the first prize and male championship being accorded to Messrs. Montgomery's Diploma, a very big, upstanding colt, got by Everlasting, which, with time, should make a real good stallion. The same exhibitors were also second with Gartly Bonus, another half-brother, and the third prize fell to Mr. A. B. Matthews' Baron Barsalloch. Three or four stallions foaled in 1904 faced the judges, three of the entries being the property of Messrs. Montgomery, these, however, were beaten for the first place by Mr. Walter S. Park's Clan Forbes, a very useful colt by Royal Chattan. The other prizes went to Messrs. Montgomery's Baron Monkton by Baron's Pride and Pride of Avon by Rathillet. There was rather a good class of two year-old fillies, the Seaham Harbour Stud coming in with Silver Pansy, a deep-ribbed beautiful filly with excellent limbs and feet by Silver Cup; this filly obtained the female championship. Messrs. Murdoch and Mr. J. E. Kerr won the other prizes.

Mr. H. B. Marshall's first-prize three-year-old Baron's Brilliant by Baron's Pride showed plenty of quality and beautiful parts and hair. The Seaham Harbour Company's second was by Silver Cup. There were only two mares with foal at foot, Mr. J. E. Kerr's Pyrene by Baron's Pride, and Mr. G. Gunter's Silver Princess by Silver Cup, which were placed as named, the first mare being full of quality and of good character. The foals of the mares also followed the placing of the

Prize-Winning Horses at the Royal Show.

1. Mr K. M. Clark's Suffolk Stallion Sudbourne Arabi, the Champion Suffolk Stallion.
2. Mr R. P. Evans Hackney Mare District Maid, and Foal, the Champion Hackney Mare or Filly.
3. Messrs. A. and W. Montgomery's Champion Clydesdale Stallion Diploma.
4. Mr. F. Farnsworth's Ratcliffe Forest King, the Champion Shire Stallion.
5. Major L Renton's Success, the First Prize Hunter Filly, foaled in 1904.
6. Mr. John Barker's Polo Pony Filly Deborah, the Champion Polo and Riding Pony Mare or Filly.

mares class; the first one was by Royal Favourite and the second by Gamecock.

Suffolks.

The show of this breed was very small, but their quality was on the whole very good, though many of them were rather light of bone. Mr. A. J. Smith was first with two year-old colts, and Mr. Kenneth M. Clark second, the colts being well grown; the former was by the famous sire S turn, the latter by Sudbourne Count. Mr. A J. Smith was third with Lord Nelson by Prince A bert; the first prize two-year-old was also second for the male championship. Mr. Kenneth M. Clarke was awarded the first prize and champion cup for his three-year-old stallion Sudbourne Arabi by Sudbourne Count.

Two-year-old fillies found the first prize winner in Mr. A. J. Smith's Rendlesham Wedgy by Saturn, and three-year-old fillies were in the hands of Mr. Kenneth M. Clarke and Sir Cuthbert Quilter, the former being first and second and the latter third.

Mares and foals were only two in number (of each), Mr. A. J. Smith's Sadie and Mr. R. Eaton White's Boulge Hebe, which were placed for honours in the above order.

CATTLE.

Shorthorns.

The very large entry of Shorthorns at Lincoln, notwithstanding that a large number of them were evidently sent for sale only, and without any pretensions to their being Royal Show cattle, were, numbers considered, the best lot that have ever been seen at any Royal Show. There was greater uniformity of character and symmetry about them, with greater evenness in the distribution of their wealth of flesh, and there was rather an increase than otherwise in their size, which is a great matter for congratulation. It would not do to establish a breed of Shorthorns of the short puggy kind, this would only tend to a preponderance of fat over lean meat and a total annihilation of milking properties.

Bulls calved in 1902, 1903, or 1904 had no less than thirty entries, and this means a great deal, for it not only means that there are a lot of first-class old bulls left in the country after the foreign invasion, but it also means that these bulls are and have proved themselves fruitful and good sires and with constitution, or they would not have lived through the heavy showyard feeding and other hardships that a showyard life necessitates.

First honour went very rightly to Mr. F. Miller's magnificent bull Linksfield Champion, the hero of so many battles, bred by Colonel Johnston, near Elgin, and sired by Scottish Prince; he is massive, fleshy, and weighty to a degree, and full of quality too. He left his Northern home in the first instance for Miss Staples' well-known herd in Ireland, from whence he made his *debut* at the Royal Dublin Societies' Spring Show last year, where he was purchased by Mr. F. Miller, his present owner, who has hired him out for service in Lord Powis' herd. The second bull, Sir R. P. Cooper's Meteor, is little less worthy; he was bred by Mr. Morgan-Richardson, and is a marvellously correct and stylish bull for his age, and a standing instance of the value of the white Shorthorn, a colour to which so many people, especially foreigners, object. Mr. Toppins' third prize bull, Moonstone, was bred in the same herd as the second prize one, and sired by Moonlight. So good is he that many good judges considered him quite likely to even stand in front of his now more highly-honoured opponents. His Majesty the King scored first honour in the two-year-old class with the heavy-fleshed son of Luxury called Royal Windsor, and Mr. Chatterton, whose name is generally associated with something good in the Shorthorn line, came second with a very good Scotch-bred bull, Avondale by Pride of Avon, Mr. J. Deane Willis only being able to secure third with his capital bull, Stonecrop, bred by Lord Brougham. In the younger class of two-year-olds Mr. John Handely, the Duke of Northumberland, and Mr. H. S. Leon were successful, the last named showing a very good bull in Ascot Wanderer, bred by Mr. Leopold Rothschild.

The two classes of yearling bulls (calfed from January to July and July to December) brought out quite an array of very promising youngsters, bulls with growth about them and full of Shorthorn character and flesh exhibited by breeders from all parts of the country.

Coming to the female classes, there was also considerable cause for satisfaction, as very few even of the aged cows showed signs of patchiness and too much fat, whilst the heifers of all ages were very even both in flesh and symmetry. There was, it must be confessed, not any too much milk, if enough in the classes not specially competing as dairy Shorthorns, the difference between the two sections is perhaps just a little wider than it should be. Of the non-dairy animals Lord Calthorpe's Sweetheart, bred by her late Majesty Queen Victoria and a well-known winner in the past, has held together remarkably well in all respects and well merited her first prize. Mr. George Harrison's Towy Princess and Mr. Robert Taylor's Donside Princess, sent all the way down from far Carnoustie, placed second and third respectively, were both very good, level, symmetrical animals. Three-year-old heifers in milk were not a very strong class, Mr. Rothwell's first (Lady Graceful) and Mr. T. Atkinson's second, (Takeley Jimny by Chewton Victor 6th) should make milk as well as beef.

The first prize two-year-old, Mr. Robert Taylor's Pitlivie Rosebud 2nd is quite a remarkable heifer and winner in a very good class, and the same must be said of Mr. F. Phillip's Roan Pansy placed second. In the yearling heifer class, too, there was a great show of first-class and most promising youngsters, H.M. the King, with Marjorie by Royal Chieftain, and Earl Manvers with Duchess of Ruddington 6th, taking first and second prizes. In the dairy classes were a great number of very good Shorthorns quite of the dual purpose type as this breed should be, and the fine animal of Mr. Adeane's Priceless Princess in the hands of her breeder is just about as good in all respects as could be desired. Lord Rothschild, Lord Calthorpe, Mr. Tyser, and several other noted breeders were also capitally represented in these classes.

Lincolnshire Red Shorthorns.

There was an all-round admirable display of this very useful dual purpose section of the great Shorthorn family, and what is most satisfactory to notice was the improved quality that characterised so many of the young stock classes, which showed very improved symmetry and with an increased aptitude for early maturity. The young stock, too, were in most cases well grown and brought out. Bulls calved previously to 1903 were first to be noticed in the catalogue, and of these there were five entries, the post of honour being filled by Mr. John Langham's Brandon Blend, a very big, massive, and well shaped bull with abundance of good muscular flesh; he was bred by his owner and sired by Brandon Lord Chancellor. Mr. Robert Chatterton's Under Porter, bred by Mr. W. Chatterton, and Mr. S. Crawley's Western Monarch 2nd, were the recipients of the other honours.

Bulls calved in 1903 or 1904 were eight in number, and this class brought out the champion bull, which was Mr. Benjamin Rowland's Scampton Exile, bred by Mr. G. E. Sandars, and the get of Keddington Ruby, his dam by King Hal; he is a very massive, wide, square set bull with masculine character and plenty of good flesh about him that should sire the right kind of stock for rent paying. Mr. W. J. Atkinson's Weston Monarch 4th by Royal Crest, and Mr. John Searby's Croft Aubourne by Calceby Marvel were the winners of the second and third prizes in the order named.

Bulls calved in 1905 were also a well-grown and generally good lot, Mr. G. E. Sandons headed these with Brandon Grenadier, bred by Mr. John Langham, and Mr. Robert Chattertons's Stenigot Violet Chief, and Messrs. Drewry and Son's Donington Baron followed in the order named.

Bulls calved in 1906 were last of the male section, and these made up a very improved lot as compared with a few years ago. Mr. Chatterton's Stenigot Duchess Beau, bred by his owner, out of Stenigot Duchess 10th, was accounted the best of them; Mr. John Evens taking the second place with one of his milky-bred youngsters, Burton Hermit 2nd by Burton Hermit out of Saltfleet Favourite; Mr. John Langham followed up with Brandon Grenadier 2nd by Brandon Majestic 2nd.

Cows in milk calved previously to or in 1903 mustered some six or seven entries, Mr. Joseph Grant Williams carrying off first honour with Nonpareil 9th, bred by Mr. E. H. Cartwright, a cow with good symmetry and quite of the twofold type; like the class generally, however, the udders were a little coarse. Mr. John Todd's Kirkby Nonpareil, bred by her owner, and Mr. George Marris's Keddington Pearl were placed second and third in the order named. Cows and calves brought out a class of seven entries. Mr. Williams was again first with Keddington Skipworth 5th, bred by Mr. E. H. Cartwright; Mr. Robert Chatterton's Cropwell Laura and Messrs. Farrow and Sons' Strubby Red Lady, all of them good cows with size and good form, were placed for the honours in the above order. Three-year-old heifers were rather a small turnout numerically last week, but their quality was very useful. Mr. George Marris's Keddington Favourite was the best of these, and Colonel C. A. Swan with Twilight, like the first prize one bred by Mr. E. H. Cartwright, was placed second. The exors. of the late Mr. T. B. Freshney taking third with Saltfleet Poppy, bred by Mr. J. W. Needham.

Heifers calved in 1905 brought into the winning list one or two fresh exhibitors. Mr. W. J. Atkinson was first with Weston Pink, Mr. Edward Abraham second with Atby Glitters 2nd, and the representatives of the late G. Laughton third. The heifers in this class, as well as in that for yearling heifers which followed, were remarkably uniform and well grown for age, with symmetry about them too as well as a great wealth of flesh. There were just upon thirty entries in the yearling class, and again a new name or two appeared, Mr. Edwin Bourne scoring first honour with Ruby Queen, Messrs. Farrow and Son second with Cardiff 3rd by Under Porter, and Mr. George Freir third with Sleeping Princess. Competition was very keen in this class. Cows in-milk calved previously to or in 1903 showing the best milking properties was a very important class, but was not too well supported. Mr. John Evens's herd has so long been bred upon milking lines, and so skilfully managed, that it was not surprising that his herd should come well to the front, and so it was, all three prizes falling to the herd. First was Burton Ruddy 5th, a deep, good cow with a well-shaped bag and good outline; she was bred by her owner; next came Burton Spot 5th, another milky-looking cow, also bred by exhibitor, and third Burton Violet, a very nice type of cow, with quality and style of breeding about her as well as milk. This cow has been a prize winner upon several previous occasions.

Heifers calved in 1904 showing the best dairy properties were all in the hands of Mr. Evens, and first, second, and third prizes were all awarded to them; all of these, too, were bred by exhibitor. These were Burton Margaret 3rd, Burton Prophetess 5th, and Burton Marjorie 3rd. All of them gave great promise of being good at the pail, and their udders were well shaped too, whilst the heifers were plain in their general appearance and breed character. Mr. J. J. Williams won the female championship with Keddington Skipworth 5th.

Herefords.

The show of Herefords was a good one, and included the majority of the winners at the previous summer shows. The top place and subsequently the male championship was given to Mr. Allen E. Hughes's Pearl King, a big, thick, level son of Commandant. In the class other places were occupied by the King's Admiral and the Earl of Coventry's Lama. Bulls, calved in 1905, were headed by Mr. Henry J. Dent's Perton, a thick, heavily-fleshed animal. Second was Rob Roy, bred by Mr. William Tudge, and exhibited by Mr. G. D. Faber, M.P. This bull is a big, heavy, deep youngster, of rare character, with the best of masculine heads. He was in front of Perton at Lord Tredegar's Show at Newport in November, and would probably have repeated that victory last week, besides making a bold bid for the male championship, had he been better furnished.

Mr. C. T. Pulley lead the way in the bull calf class with Eaton Masterpiece, the other honours being bestowed upon the exhibits of Mr. George Butters, Mr. Arthur P. Turner, and Mr. D. A. Thomas, M.P.

Cows were not strong in numbers, but quality was excellent. The previous female champion, the Earl of Coventry's Madame, was set back, being beaten in the class contest by Mr. H. R. Evans' Ma Belle. Mr. Joseph Rowlands got the third prize. The pick of the two-year-old heifers was Mr. W. B. Tudge's Princess Beatrice. The yearling heifers contained the female champion in Mr. A. E. Hughes's Lemster Plum, one of the best youngsters on the ground, and a prominent winner during May and June.

Devons.

The pretty red cattle from the West of England made an excellent display, and it is many years since the Devons were so numerous and so good at a Royal so far distant from their native haunts. The classifications and regulations at the Royal are different to what they are at other shows, and this accounted for several well-known animals particularly in the cow class, being absent. It was rather hard lines for the two-year-old bull having to compete with the more matured specimens. The Hon. E. W. B. Portman was first with that very level big bull Pound Pink Un, one of the now recognised prefitable Somerset type; second to him was placed the beautifully topped and modelled bull, Mr. J. C. Williams' Dianthus; the judge had either to do this or put it back fourth, which would certainly have been quite unfair. This bull was put reserve to the former one for the male championship of the breed. The third prize went to the big, strong bull, Rufus, exhibited by Mr. Charles L. Hancock. He is more even than Mr. Sanders Kidner's Bickley Quaker, which was reserved. Mr. Robert Breford's smart and growing young bull, which has hitherto successfully headed the two year-old class, Pound Bellringer, had to give way and be content with a highly-commended card. Mr. J. C. Williams was also highly commended with that smart young bull which was seen at the Royal Cornwall show, Macbeth. Commendations were given to the Earl of Londesborough's Warrior, Viscount Portman's Emperor and Mr. Charles Morris's Highfield Royal. The yearling bulls have dwindled down greatly from previous shows, there being only four present. His Majesty the King's Chieftain, a very pretty bull, rather light of bone, was first; the Hon. E. W. B. Portman's Hestercombe Baronet was second. This bull promises well for another sea-

Champion Cattle at the Royal Show

1. A parade of Cattle before H.M. the King. 2. Mr. F. Miller's Linksfield Champion, the Champion Shorthorn Bull. 3 Mr. A. F. Hughes' Hereford Bull, Pearl King, Champion Bull of the breed. 4. Mr. J. G. Williams' Champion Lincolnshire Red Shorthorn Cow, Keddington Skipworth 5th, and her calf.

son, the same exhibitor being reserved with Hestercombe Flip, Mr. J. C. Williams coming in third with Lupin, rather on the small side.

The Devon cows made an unexpectedly large class, Mr. E. C. Norrish's fine three-year-old heifer, which has been unbeaten as a three-year-old this year, and the dam of a very fine calf, was now selected to lead the matrons. Second was a very typical Somerset Devon cow, Mr. Charles L. Hancock's Pollie; the third going to his Majesty the King's Lucy, that has become somewhat patchy at the tail of late. The Hon. E. W. B. Portman finding his Spinach barred was content to send Telltale to be reserved. The Devon heifers made a brave show, and here the judge again brought that fine heifer of Mr. Tom Dibble's, Lady Escott 4th, which was such an excellent first out from her temporary set back, and made her again queen of her class, and she was put reserve champion to Mr. Norrish's Capton Royal Sally; second to her was placed Mr. Charles Morris's Royal Counties winner, that very fine yearling Pound Brassey 13th. The third went to Mr. Eland Clatworthy's hitherto successful Somerset type heifer, Cutsey Beauty, that is now somewhat growing out of her bloom, the same exhibitor was also commended with Cutsey Mary. The judge was rather free with his highly commendeds. His Majesty the King was so placed with Carolina, a nice heifer very light in bone, Mr. Charles Morris with Highfield Good Girl, and Viscount Portman with Bryanston Genteel. The Hon. E. W. Portman being commended with Jane and also with Lady Coot.

South Devons.

It was a pity that these gigantic bovines did not make larger classes in numbers, but the very bulky specimens on view were very typical of the breed It is seldom indeed that such a fine bull as Mr. J. Sparrow Wroth's Macbeth is seen; he is a fine fellow, of great length and big girth and yet symmetrical, and though weighing nearly 28 cwt. and six years old, walked with the ease of a youngster. Second to him was Mr. Fred W. Rowe's Odd Character, another immense scale bull, but scarcely so even, whilst third went to Mr. Wroth's Dan Leno, which was quite overshadowed by the others. The females were five in number, led by that beautiful cow, Messrs. Butland Bros.' Handsome; second to her was that nearly equally good cow Mr. Ben Luscombe's Queenie 2nd, both of these heavily fleshed cows are evidently deep milkers. The third prize went to that very growing heifer that needs but a little more filling out, Mr. W. P. Vosper's Orange Girl; the next heifer, Laura, being a year older, being calved in 1903, in the same exhibitor's herd.

Sussex.

The six classes of Sussex cattle made a fairly representative show, many of the Bath and West winners being forward, together with a fair sprinkling of new comers. The old bull class only produced three entries, and Mr. E. E. Braby won with Lord of Drungewick 5th—shown in fine condition, and which eventually was awarded the male championship; second prize went to Mr. John Aungier for Careless Duke. In the two-year-old class Mr. P. Saillard won with Bewbush Duke, eventually reserve champion from Mr. Braby's Alfred of Drungewick. The Earl of Derby was third, Mr. W. G. Fladgate r and hc, the Hon. R. P. Nevill hc, the whole of the class receiving recognition at the hands of the judges. Yearlings were another good class, the Hon. R. P. Nevill winning with Birling Prince, Mr. A. J. Hickman's Newport animal Sammy being second, and Lord Winterton's Shillinglee Bewbush 4th third, and the same owner's Guardian r and hc.

The female classes were even better filled, Lord Winterton's Sunlight 7th, the best in the cow in-milk class, won the championship, while second to her in the class was Lord Derby's Buttermaid, with Mr. W. F. Winch's Careless 90th third, and Lord Winterton again reserve. The two best of the two-year-old heifers both came from the herd of Mr. W. F. Winch in Tilsden Jessie and Tilsden Crumple, a pair of typical animals; Lord Winterton's Speculation 9th was third, Lord Derby reserve, and Mr. P. Saillard hc. The yearling class supplied the reserve female champion, this position falling to Mr. J. Aungier for Lynwich Beauty, while two other exhibits from the same herd got third and reserve. Second money went to Lord Derby for Braceline, reserve to Mr. Fladgatt, and hc, to Mr. Bannister.

Welsh.

In this section there was only a small display ten animals being entered in three classes. Messrs. Davies and Howells, from South Wales, headed the bull class, with Duke of Connaught, a very deep and lengthy bull, and Mr. R. M. Greaves and the University College of North Wales were the chief exhibitors of cows and heifers, dividing the prizes, and leaving the reserve card to a heifer shown by the Hon. F. G. Wynn.

Red Polled.

There was a very good and fairly numerous collection of this dual purpose breed of East Anglian cattle. In the bull classes the leading honours were accorded to the Right Hon. Ailwyn Fellows, Sir Walter Corbet, Bart., and the Marchioness of Graham, the chief prizes in the female section going to Sir Walter Corbet, Bart., Messrs. T. Brown and Son, and Sir R. P. Cooper, Bart.

Aberdeen-Angus.

The Polled Scotch breed made an excellent show in well-filled classes. Mr. Bainbridge's four-year-old bull Idelamere was champion, a position he also filled at the Royal Counties and Northumberland shows; and he beat Mr. Clark's handsome bull April Fool of Drumfad. Even more remarkable for quality are the ten younger bulls—those calved before December, 1905—in which class Mr. Findlay obtained the first place with Blizzard, bred at Cariston Castle, and purchased at Perth spring show last year for 200 guineas. Mr. Cridlan's Everwise, which was placed second, has greater substance than Blizzard, but is not so attractive. He was first at the Bath and West of England. The leading heifers were Mr. Kerr's Juana Erica, a four-year-old, bred by the Dowager Countess of Seafield; and Mr. Findlay's Prize, a Banffshire heifer, nearly two years younger, both with successful showyard careers.

Galloways.

These Scotch cattle make a brave show. There are only four classes of them, and the Tarbreoch herds take the palm. Mr. John Cunningham's champion bull Chancellor of Balleyboley was first at Park Royal as a two-year-old, and was champion at Derby. He is a finely set specimen, with a lovely head and outline, and a level back. The champion heifer, owned by Messrs. Biggar, of Chapelton, was bred at Tarbreech, and she was rather lucky in being placed before Netty 32nd of Tarbreoch, the Highland winner, and Doris of Kilquhanity, which obtained the medal at Derby last year.

Highland.

Four classes of Highland cattle provide an admirable representation of the breed. Mr. Ian Bullough's red bull Albannach, endowed with tremendous forequarters and fine hair, was placed before Mr. Stephens's grand old bull Loch Tay, a veteran champion, who has distinguished himself at many a Northern show. The first heifer, Shellay, bred by Mr. Stewart, has a very good horn, a nicely covered brow, and a good square frame. She was shown in excellent form, but was closely run by Mr. Sopper's handsome heifer Lunette, which was second.

Ayrshires.

Only two classes of Ayrshires were scheduled, and Mr. Howie's herd swept the board with his three bulls, which were all first in their respective classes at the Ayr Show this year. Spicy Sam, the first of the lot, is quite up to his Highland Show form, and looked as well as ever. So far he has an unbeaten record this season. Mr. Andrew Mitchell's Lady Douglas is one of the best cows seen at the Royal for some years. She was first at Castle Douglas, her first showyard appearance since calving, and as this Kirkcudbrightshire Show is particularly strong in Ayrshires, she begins the year in a promising manner.

Jerseys.

The show of Jerseys was for so far north quite satisfactory. The bull classes were well filled, so were those for cows and heifers, and the general quality was as good as at any show this year. Indeed, most of the leading animals of the season were being exhibited. Bulls calved in 1902, 1903, 1904, or 1905, were the first class. Mr. Cobb's Glorious Lad, a bull that stood out very conspicuously last year, and still in very good form, was first. Other winners were Sir E. D. Stern's Cupid, first in the yearling class, where Mrs. McIntosh's La Fosse Hero was third, the two being divided by Mr. Arthur Pocock's Sheriff, all of these bulls showed exceptional quality. Other winners in the older class were Lord Rothschild's Oxford Wrangler and Mr. A. Miller Hallett's Alfriston's Pride. Of cows Mr. Miller Hallett's Lady Viola, Lord Rosebery's Lady Rhymer, and Lord Rothschild's Oxford Snowdrop were placed for the prizes in the order named, but several others were very close up. Mr. Cobb, Lord Rothschild, and Lady de Rothschild were the winners in the three-year-old class, and two-year-olds were rather a weak class. The Tring herd was first in this class, and also in the yearling class with Frolic, one of the most promising yearlings out for some time. Mr. Pocock's Selwood May, that came second, is also very promising and full of quality and milk appearance.

Guernseys.

This breed has not been better represented at a Royal Show for a long time. Of the older bulls Mr. Fitzwalter Plumptre's Roland of Seaview was first, and is a handsome, rich bull, one of the best for a long time. Mr. F. Hargreave's Merton Signet (second) and Mr. E. A. Hambro's Itchin Royal (third) were also very good. Yearling bulls were not quite as rich. Mr. Hargreaves obtained first and third in this class, the two being divided by Lady Tichborne's Miss Raider.

The cow class was one of great richness, and with an extraordinary display of milk and quality. Mr. E. A. Hambro's fine cows, Fi-Fi and Express, were placed first and third, Mr. Hargreave's Felors being sandwiched in the second place. Winners in the heifer classes were not quite up to the same standard as those in the adult class; the best of these were Mr. Fitzwalter Plumptre's Ranunculus 5th, Mr. H. C. Stephen's Citron Blossom 25th, and Cholderton Belle. Mr. Hargreaves, Mr. H. C. Stephens, and Mr. Hambro were the other chief winners.

Longhorn.

These picturesque cattle, with their handsome horns and beautiful skins, made a fairish show. Four classes were equally divided among the sexes; for bulls of two years old and upwards Mr. W. L. Riley won with Fradby Conqueror from Mr. T. P. Levitt, third was Mr. W. Sale, while the reserve was Lord Gerard. Of yearlings there was only one, and Lord Gerard's exhibit secured the award.

Kerries and Dexters.

Three good classes of Kerry cattle and four of Dexter cattle added considerably to the interest of the show from the spectators' point of view. Among the Kerries the principal prizes went to Lady Greenall, Mr. R. T. Robertson, and Mr. Clifford Cory.

Dexters were shown by his Majesty the King, the Duchess of Devonshire, Mr. B. de Bertodhand, Mr. Godfrey Chetwynd, the Hon. Mrs. Claud Portman, and others, who divided the prizes in the various classes, the Countess of Sefton also taking a first in the junior heifer class.

SHEEP.

This year's entry will be a memorable one for years to come, particularly on account of that unequalled and record display of Lincoln Long-woolled sheep, the entry of this breed being a record one in every respect. Taken as a whole the uniform merit and quality found in the whole section could not but afford the fullest satisfaction to every flockmaster in the country. No better exhibition could well have been made, nor could a better and more striking advertisement have been given of the great variety of breeds of British sheep to the foreign, colonial, or export buyer than this.

Oxford Downs.

An average entry of marked uniformity of type and character represented this breed, in which Mr. J. T. Hobbs, with yearling rams and ewes, led the way in these two classes with animals of grand quality. The other winners in these two classes were, for rams, Messrs. J. Horlick, A. Brassey, and H. W. Stilgoe, whose entries were splendid specimens of the breed. Mr. J. Horlick was second for yearling ewes with a beautifully matched pen; third and fourth winners in this class went to Mr. George Hankins for two pens of ewes with fine colour and good fleeces. Mr. G. Adams, with a notably fine pen of ram lambs, led in that class; the second entry from this flock were r. A pen of the right sort, masculine in character and well grown, won second for Mr. H. W. Stilgoe, closely pressed by Mr. Reading's typical trio of well-grown lambs, leaving fourth honours for Mr. J. Horlick's capital pen. Mr. H. W. Stilgoe was well to the fore in the ewe lamb class, winning with a high-class pen; Mr. Reading was close behind with a pen of growthy and typical lambs, leaving third and fourth honours to Mr. G. Adams, whose lambs are not so fresh as they were in respect to touch; Mr. Horlick followed as reserve.

Shropshires.

In this section the two-shear ram class opened the schedule; this is as it should be, for in no other class can so good an exhibition of the mature sheep of the breed be given than in this class. Mr. T. S. Minton won with a ram of great scale, high merit, and typical character; next was a very choice ram owned by Mr. A. S. Berry, a typical stud ram of its breed; whilst in Sir R. Cooper's third winner was found a ram of very choice flesh, with grand fleece and type; Mr. F. Bibby was rn. A notably strong and even class of yearling rams faced the judges, whose high appreciation of its merit was indicated by the very large number of awards given. In this class the winner was not difficult to locate: it was that particularly handsome and choice ram that won for Mr. M. Williams the Mansel Memorial Challenge Cup at the Shropshire and West Midland Show—a ram of high merit and grand type. Next him came one owned by Sir Richard Cooper, a ram with excellent scale and very level fleece and beautiful skin, its flock mate taking the rn. Third honours went to Scotland to Mr. T. A. Buttar's well-known flock, a ram somewhat on the small side, but having merit and type sufficient to put him ahead of quite a number of thoroughly typical rams, amongst them those owned by Sir P. A. Muntz, Right Hon. Victor Cavendish, Messrs. A. Tanner, F. Bibby, &c.

A class of five yearling rams of any age is always one most difficult to judge, and this is particularly so in respect to the Shropshire breed, for this is one in which the uniformity of type and character is so striking a feature that it is only by most careful examination such awards can be made. The award of first prize to Sir Richard Cooper was a popular one, and one the grand exhibit fully deserved, for

the pen was of very special merit. Some difference of opinion was expressed in respect to the second award that gave Mr. T. A. Buttar precedence over Mr. T. S. Minton's pen, for the latter were of larger scale and more masculine character, combining with these merits, their supporters contended, the equal quality and typical character of the smaller and neater pen from Scotland. A pen of special merit was that which takes rn to Mr. Victor Cavendish; these were of excellent type, and come from one of the foremost flocks of the breed at the present time. Sir P. A. Muntz, Mrs. W. F. Inge, and Messrs. A. Tanner and Mr. Williams were hc, and several other pens secured the c.

The special selling class is peculiar to this breed. There was a very fine lot of rams entered, most of which were in the preceding class; first, second, fourth, and two hc's went to Mr. Buttar's choice rams, the Duke of Sutherland was third, and Mr. Victor Cavendish rn.

The yearling ewe class was of very choice quality; practically every pen was thoroughly good and typical of its breed. Sir Richard Cooper won with a pen that combined quality, type, and character to a marked degree. These were well matched in these respects by Mr. Victor Cavendish's splendid pen that took second honours, Sir P. A. Muntz's grand trio of high merit making a worthy third in this strong class, in which the rn went to Sir Richard Cooper's second entry. The latter exhibitor right well deserved the distinction he won by heading both the lamb classes with pens of outstanding merit and quality. Well-developed lambs, with good quality and plenty of substance, correctly describes these fine lambs. Second honours for ram lambs went to Mr. T. S. Minton—a fine pen, whose nearest competitor was Mr. E. Nock, who in the ewe lamb class won second honours with a beautifully matured pen that was in this class followed by Mr. Victor Cavendish's well-matched entry. Mrs. W. F. Inge was rn for ram lambs and Mr. Minton for ewe lambs.

Southdowns.

An entry that was highly creditable to the breed, and one which in some directions was above the average of recent years, represented this grand breed of mutton sheep.

The winning ram in the two-shear class was thought highly of by the judges, for they made him winner of the champion prize, the first time, we believe, Mr. W. M. Cazalet has won this honour; the ram well deserved its position. H.M. the King was second with one of fine merit, being followed by Mr. C. Adeane's well-grown and symmetrical ram that had a great wealth of flesh of very choice quality, as well as a grand fleece and skin. Sir T. V. S. Gooch's rn ram was one from Mr. E Ellis's well-known flock, now dispersed, and a hc went to the Duke of Devonshire.

The yearling class was fully an average one in respect to merit. Here the winner, a fine ram with good substance and flesh, owned by Mr. J. Colman, was selected for leading honours, and subsequently made rn for the medal for best male; next came a choice ram, owned by H.M. the King, whose closest competitor was a very fine ram with good masculine type and substance, owned by the exors. of Colonel H. McCalmont, Mr. C. Adeane's three entries being placed rn, and c for the other two, which were particularly choice rams in respect to type and merit. A class, somewhat small in number, but of very good average merit, was that for pens of three yearling rams. The exors. of Colonel H. McCalmont owned the winning trio, which were well matched; second and rn went to Mr. C. Adeane for two particularly good pens, leaving third honours to Mr. J. Colman for a pen of similar type to the winning yearling ram.

The Duke of Devonshire's lengthy and good pen of ram lambs won in their class. H.M. the King came in second with a very choice pen, followed by a neat, good-fleshed pen owned by the exors. of Colonel McCalmont, and the rn went to Mr. W. M. Cazalet. The yearling ewe class was particularly good in merit and uniform in quality. The competition was between the leading pens owned respectively by Mr. J. Colman and the Duke of Devonshire; the former pen won, for they were superior in carriage and movement when out of the pens. The medal and the rn followed these awards. The Sandringham pen followed as third, and a choice, well-brought-out pen from Sir J. Wernher was rn. In the ewe lambs, a notably good pen bred by H.M. the King beat the Duke of Northumberland's beautiful pen by the narrowest of margins for first place; the Duke of Devonshire followed, and the exors. of Colonel McCalmont was rn.

Hampshire Downs.

A grand entry, and one thoroughly typical of the breed was found in these good classes. Mr. James Flower was first and third for two-shear rams, followed by one bred by Mr. T. F. Buxton, an order that well represented the respective merits of these exhibits; Mr. D. P. Bouverie was rn. The yearling ram contest was a very close one for first place; Mr. Flower won with a grand type of its breed, its flock mate taking third place. A fine ram that moved grandly out of the pen was second for Mr. H. C. Stephens, and the rn went to a very choice and typical ram of Mr. Buxton's The ram lamb class was a strong one with evenly balanced merit, and the services of a referee had to be called in to decide the first award, which was worthily given to Mr. J. Flowers' beautifully wooled pen of rare good merit. Mr. T. F. Buxton's pen were second winners, a pen of excellent type and well grown and full of quality. The Marquis of Winchester was a good third with that fine pen of lambs, full of masculine type form, Mr. H. C. Stephens as rn. Sir W. G. Pearce's two grand pens of ewes were first and second in their class, with Sir A. Henderson as third, a very typical pen. In the ewe lambs Mr. James Flower was first with a notably fine pen which were made champion of their age, the flockmates, the leading pen of ram lambs, taking the rn for this honour. A fine good fleshed pen from Mr. T. F. Buxton was second, closely pressed by that grandly fleshed pen owned by Mr. Stephens, who were third, leaving the rn to Sir W. E. Pearce's typical pen.

Suffolks.

The small entry did not do full justice to the importance of this breed, but the merit and quality of the winners left no doubt as to the excellence of the exhibit as a whole. Mr. H. E. Smith won throughout in all the classes he competed, the exception was that for yearling ewes, in which class Mr. R. Barclay was first and second. Mr. Smith was also second for two-shear shearling and single ram lambs. Messrs. D. A. Green and S. R. Sherwood were the other two principal winners.

Dorset Horns.

The entry here was one fully typical of the breed, and it is satisfactory to note that there was increased competition. Mr. E. A. Hambro's exhibits were of superior quality, and his entries won first for yearling ram ewe lambs and yearling ewes, all grand pens of their breed, and third honours for ram lambs, a class in which a notably fine pen owned by Mr. R. Flower took premier honours, this breeder being also second for yearling rams and third for yearling ewes and ewe lambs. Mr. James Attrille who was second for yearling rams, came in for well-deserved recognition as second in the ram lamb class. Mr. F. J. Merson's entries were quite the best we have seen from his flock, particularly the yearling ewes that were third in a good class.

Ryelands.

The three classes for this breed were not largely supported, but the specimens exhibited were of notably good merit. Mr. F. E. Gough, who won in the old ram class, had in this ram a grand specimen of its kind; his yearling ram, likewise first, and his pen of ewes that came second were typical of the merits of the breed. In this latter class, a real good pen, owned by W. H. Davies, won first honours; whilst Mr. W. P. Barneby, whose entries are generally well to the fore, was represented by some real good specimens that were second and third for two shear rams and for yearling rams, as well as third for yearling ewes.

Kerry Hill.

This breed's initial entry at the Royal show is one that will make an increased reputation for this hardy breed, for those entries present at this show were of special good merit. Mr. Lawton Moore's two shears, first and third, the same owner's yearling rams, that fill the corresponding position in their class, and his second prize yearling ewes were of notably good merit, particularly when under hand. Mr. John Anwyl, who won in this latter class, had a grand pen which bore the closest examination well. Amongst the other successful exhibitors were Messrs. T. E. Kinsey, J. and R. Phillips, and W. P. and J. M. James.

Lincolns.

This exhibit was the feature of the whole show. No breed secured so unique and full representation as we witnessed in the special ring, given over entirely to this grand breed of mutton and wool producers. None will probably ever again see its equal, either in respect to number nor in respect to the number of breeders represented. It was as said an American, "an eye-opener," and one if the breeders in the United States could have seen it, that would have made them Lincoln breeders to a man.

The confines of space prohibit full justice being done to this grand entry, because the more one ponders over its immensity and value, the stronger the desire is to give fuller general details. The opening class of this great contest was for two shear rams, a grand and typical exhibit of the breed with seventeen choice selected stud rams in it. First and third honours went to a pair of rams, probably the last of the Old Nocton flock that will ever be exhibited in this country, a notable final success, and although not owned by Messrs. Wright, it must have been a source of gratification to them to have the privilege of witnessing their customer's (Mr. F. Miller) great triumph in taking, in addition to the above honours, the male championship of the show as well. Mr. H. Dudding's exhibit was another very choice stud ram, he was bred by Mr. F. Ward, a ram of whose sired the two Miller-owned rams, and a breeder whose flock provided the fourth prize ram in this grand class, a notable success that speaks highly in favour of the Quarrington flock. Messrs. S. E. Dean and Sons owned a particularly fine ram in the rn winner.

Thirty-three of the picked rams of Lincolnshire competed for the six prizes offered for two yearling rams, a notable assemblage of typical Lincoln sheep; the winner here was easily found, being Mr. H. Dudding's grand ram, first at Retford Show a few weeks back, and two of its flockmates came in for fifth prize and an hc. The winning yearling after a keen fight was made rn for the champion prize. Mr. Tom Casswell was second with a very superior and typical ram, and hc for another whilst Messrs. Dean were a very good third with a fine type of a Lincoln sheep. Mr. James Cartwright was fourth, the sixth place being filled by a real good ram owned by Mr. J. Pears, and Mr. George Marris filled the rn place. A corresponding class followed, open only to those who had never exhibited Lincoln sheep at the Royal before. Here Mr. J. Cartwright's fourth winners led the way, followed by the entries owned by Messrs. T. Spink, C. Featherstone, and F. Money in the order given.

Thirty-two pens of five yearling rams made up the next entry, a notable collection of sheep, numbering as they did in the aggregate 160 head. One wonders what other breed of sheep, either in England or elsewhere, ever before had an entry of yearling rams of this number competing for prizes in a single class. To say that the assemblage was notable as well as unique, is not in the least to exaggerate its importance. To lead in such a class was the wish of all, but only one of the whole could do so, and we are sure now were it possible to have polled the contestants, a unanimous vote would have been given in favour of that honour being given to Mr. Henry Dudding, the breeder, to whom the judges gave this notable distinction. His pen was a grand one, and one well deserving of its notable success. Mr. John Pears, another of the veteran breeders, had a grand pen of five that followed, whilst yet another of those great breeders that have done so much for the present prosperity of the breed, came third—namely, Mr. Tom Casswell. Messrs. Dean, whose pluck and energy on behalf of the breed is second to none, were fourth, and the two remaining places in the award list favoured Mr. C. E. Howard, one of the younger generation of breeders, and Mr. F. Ward, whose success was referred to in a preceding class as the winners; Mr. James Cartwright was rn.

A novice class, under the same conditions as the previous one of this description, but for pens of five, followed. Here Mr. Cartwright went to the fore, followed in the order named by the typical entries owned by Messrs. W. Bayles, J. Brocklebank, C. S. Dickinson, and C. Featherstone.

The choice class of ram lambs found its winners in Mr. H. Dudding's entry, a second one from this flock taking the rn. Messrs. Dean's two pens, with none the best of bulk, had to be content with second and third, having next them in the fourth place a well-grown pen of Mr. J. Pears'. The yearling ewes in full fleece was a capital class. Mr. C. E. Howard's fine stamp of deep-fleshed ewes were winners, beating a pen of first-rate quality and merit from Mr. H. Dudding's flock, that were second. Then came two beautifully matched trios from Messrs. Dean's excellent flock as third and fourth. The ewe lamb pen had again its leaders selected from Riby, for Mr. Dudding was well represented in this class, as his second entry came in first. Messrs. Dean, as in the ram lamb class, were compelled to take second and third places, leaving the rn to a capital pen owned by Mr. J. Pears. The class for ewe tegs, with its nineteen entries, was one of remarkable merit; it was in fact and deed a striking feature of this section. To be first winner in this grand class was an honour indeed, but to secure second prize as well is remarkable, yet this was Mr. Howard's record in one of the strongest classes of this description we have ever seen. Mr. Dudding followed with another notable pen, after which the following breeders came in the order named:—Messrs. T. Casswell, W. B. Swallow, J. E. Casswell, leaving the rn to Messrs. S. E. Dean and Sons, whose pen, as well as that which preceded, were of grand merit. The group prize, a special prize for the best collection of Lincoln sheep and rams from the three classes, fell to Mr. H. Dudding's lot, Mr. C. E. Howard taking two rn's.

Leicester.

The quality of this breed's entry cannot be questioned, neither can the type of most of the exhibits, but it is a matter of regret that so few of the breeders enter into the competition. Mr. G. Harrison won first, rn, and hc for yearling rams, and first and third for yearling ewes, together with second and third for ram lambs, and second for ewe lambs, Mr. E. F. Jordon second and third for yearling rams, second and hc for yearling ewes, and third for ewe lambs. Messrs. Simpson owned the winners in the with-lamb classes; these were about the best pens of the breed we

ave seen out for some time, and Mrs. Perry-Herrick, a well-known exhibitor, was rn, &c.

Cotswolds.

The small entry of this breed is much to be regretted, for there is a place in our country for sheep of this breed, and besides, it is a kind that has its value. The well-known flock of Messrs. Garne was first all through, as well as being second, &c., for yearling rams and ewe lambs. Mr. W. Houlton, who owns a capital flock, taking second honours in the two yearling sheep classes.

Border Leicesters.

For a breed so widely scattered as this one is to be so poorly represented, at what is really a North country show, indicates as an advertisement by its breeders. Mr. Robert a want of the true value of the show yard Taylor's first prize two-shear and champion ram was a grand sheep, as was also Mr. J. Kerr's entry of the same age. The breeder of the latter, Mr. D. Hume, with a beautiful ram, won first in the yearling class, its flockmate a grand ram was rn, second honours again going to Mr. J. M. Kerr for a fine typical ram. This gentleman won a well-deserved first in the yearling ewe class, followed by a very nice and typical pen owned by Mr. R. Taylor.

Kent or Romney Marsh.

This year's entry of Kent sheep was one of the best we have ever seen at the Royal Show, both in respect to number of entries and also in regard to the quality and merit of the entry as a whole. No greater monument to the value of the work accomplished by the association formed twelve years ago could be desired than the notable improvement in the greater uniformity of the breed as a whole, and the larger demand engendered by its efforts. Mr. Charles File last year led the way in the old ram class, a success repeated again this year with a notably well-grown ram of high merit. Mr. George Farmer's stud ram was deserving of its success also; then in the third place came a ram of Mr. J. E. Quested's, leaving the rn for Mr. W. Millin's entry, a ram many expected to have been placed much higher up. The yearling ram class numbered twenty-three, and here again the competition was a notably good one. Mr. C. File won first, fourth, rn, and c with a notably good entry. The winner here was the same owner's ram that was first last year, a ram greatly admired, whilst its successful flockmate came to hand well both for flesh and fleece. Second and third prizes and an hc went to Mr. J. B. Palmer for three thoroughly good rams, the two leading rams having grand merit. The ram lamb class was one of very high merit. The winners were about as good a pen of lambs seen out for a long while, and Mr. Millen, the owner, possesses in this pen three first-class lambs. Mr. J. B. Palmer's very even and well-grown pen followed, and then came a particularly taking pen, owned by Mr. A. Amos, that had grand type and good heads. Mr. E. Ascherson's nice and well grown pen were rn. In the yearling ewe class the competition was notably keen, Mr. Palmer again coming to the fore with a notably good pen of ewes, which showed plenty of strength and good character. Mr. W. Millen's pen were of grand merit, particularly the pen that were second, for the other entry from this flock secured a well deserved rn. Mr. C. File's two pens, showing fine type and scale, were third and hc, leaving fourth honours to Mr. H. Rigden's good-fleshed pen of very even type.

The ewe lamb class, like the other one of this age, had for its winners Mr. W. Millin's beautiful pen, ripe and choice in their flesh, with real good character, these are a very valuable pen indeed. Mr. J. E. Quested won second honours with another fine pen, which were followed by Mr. A. J. Hickman's well-grown and even trio, as third, whose neighbour Mr. J. B. Palmer had to be content with fourth honours in a very strong class, thus leaving to Mr. H. Rigden the rn for a neat pen.

Wensleydales.

In this section we found a real good and typical entry of the breed; few breeds were better represented in respect to quality, but here again both the number of entries and flocks represented was a matter of regret, for only two were in competition. Of these that owned by the Exors. of Mr. T. Willis went to the front, and deservedly so, in each of the three classes, Lord Henry Bentinck, the other competitor, being second and third.

Devon Longwool.

In this class Mr. F. White's success was complete, for six entries won three firsts and three second awards. It was a misfortune for him that no competitor turned up to try conclusions with him, for the high merit and quality of these exhibits were fully equal to successfully meeting with the best.

South Devons.

A thoroughly typical entry of the breed though only representative of these flocks. It is a matter of regret that Messrs. H. Fairweather, J. Stooke, and J. S. Hallett could not have induced more of their brother breeders to aid them in putting the breed more prominently before the best customers we have, all of whom were either at the show or represented there.

Dartmoors.

A small entry and hardly worthy of the known reputation of this hardy and thrifty breed of sheep, in which Mr. R. S. Luscombe and J. R. T. Kingwell shared the honours.

Exmoors.

A typical entry of a very picturesque breed of sheep, producing high quality of mutton. Messrs. H. Mardon and D. J. Tapp, both new competitors at the Royal, equally divided the honours.

Cheviots.

These fine sheep lose a great deal by the poor entry made on their behalf at the Royal Show. The merit, quality, type, and character of the breed leave no room to question the need of its being made wider known amongst the flock-owners abroad. Messrs. Jacob Robson, John Robson, and John Robson, jun., were the leading winners.

Lonk.

A breed that in its own district is much appreciated, but one that does not spread very far from its native spot. The entries made were of fine merit and most typical, and Messrs. D. Hague, John Blackburn, with Mr. E. Smith, were the principal winners.

Hardwicks.

Mr. W. J. Crossley, M.P., gives a yearly opportunity for flockmasters in different parts of the country to see this picturesque breed, which he alone exhibited this year, winning first and second awards for yearling rams and ewes.

Welsh Mountain.

This year's entry was highly gratifying in respect both to the number of competitors, and also to its very fine merit and quality. The University of North Wales owned the first rn rams, two excellent specimens of the breed, as was also Mr. J. L. Gratton's second prize-winner, a very typical ram indeed. In the yearling ewe class the winning pen, owned by Mr. R. E. Jones, was of superior merit. Quite one of the best-fleshed pens of the breeds we have seen for some years, while Mr. H. O. Ellis owned another pen much admired, and Mr. J. L. Gratton was rn.

Black-Faced Mountain.

The entry was a small one, but very typical of its breed. Messrs. J. Robson, jun., and Tom Irving were the principal winners.

PIGS.

Despite the swine fever restrictions contracting the entries from hitherto well-represented districts, this year's exhibition of pigs at Lincoln was without doubt the finest lot that has ever been brought together. Two breeds with which we were at some time rather familiar, the Small Whites and the Small Blacks, have vanished seemingly never to return, the desire of the age is rather for utility more than mere fancy in the mere pig line. However, if two breeds have gone out, at least one has recently come in, that of the Lincolnshire Curly Coated, a big pig that will have to alter its appearance somewhat before it can hope to extend its borders. It might be well in future if the classification was made more regular, as some breeds had extra classes through the energies of their breed societies put in, and this would tend to show that this breed was better backed than the others, evidently there is still room for some of the other breeds to expand themselves in this direction. The Large Whites are given pride of position, and on this occasion they did not disgrace it. On looking over these classes a general idea was formed that the excessive lengthening, which made two pens converted into one long enough for this breed, has been checked, and the slackness of the back overcome by strengthening it and deepening the sides, making a better quality animal from the bacon curer's point of view. In the old boar class Mr. Charles Spencer was placed first with Holywell Czech, a nice quality pig with plenty of, though not too much length, and he was put reserve for the breed champion gold medal; second went to a big, fine pig, Mr. W. H. and E. Wherry's Giant Goliath, a a boar that has been successfully seen out before this season; third went to Mr. R. Rathwell's Fullwood Roger, a very fleshy boar, with a lot of merit. The Earl of Ellesmere's Bottesford Worsley 2nd was put reserve; he is a good, all-round boar, but seemed a trifle heavy forward. The young boars were very variable as to size and matchiness. Mr. Dawell Daybell, without whose name the prize list for this class would not now appear to be complete, as usual again led the way with one pig, very nicely made, with finely-proportioned hams and even loins, and was third with another nearly as good. Mr. R. R. Rothwell supplied the sandwich with a very nice pig, rather lengthy. Sir Gilbert Greenall's reserve and highly-commended pigs were not of such even merit. The Lincolnshire Society's prize for best boar shown by a member of the society was taken by Messrs. Wherry with Giant Goliath, and Messrs. Duckering were reserve for the same with a very useful boar by Barkwith Eclipse.

The breeding sow class was a very large one, constituting a remarkably good lot. Mr. R. Millington Knowles was placed first with Colston Lass 13th, a very true-type sow, well let down, and popularly repeated her Bath and West success. Second prize went to Messrs. Dodd's Mollington Countess, a very level topped sow, and showing to be a good mother. Mr. Frost was third with Fullwood Carnation, a long sow, well covered with a nice coat. The reserve card went to Sir Gilbert Greenall's Walton Beauty 10th.

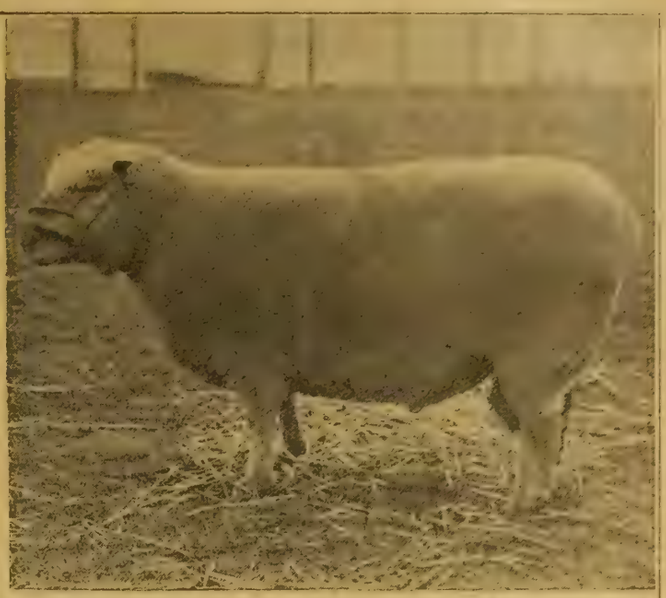
In the young sow class the first prize went to that beautiful sow, Sir Gilbert Greenall's Walton Lady Alice 23rd; a level even competitor to her was the same exhibitor's Walton Sunlight 12th. It is seldom that two such from the same herd is seen at the same show. Third went to the Earl of Ellesmere's Worsley Princess 28th, a nice sow, with bone neatly covered with flesh. Messrs. Wherry's Pretty Polly is far from being an insignificant competitor, though she was only reserved in her class.

The young class for three sow pigs made a large class with a lot of merit, although the difficulty of matching was apparent in many of the pens. The Earl of Ellesmere was first with the most matching lot and well grown, besides, this undoubtedly was the best exhibit from the Worsley Hall herd. Messrs. Wherry were second with three good single pigs, neither of which paired with the other. Mr. R. Rothwell came in third with a nicely-grown three, rather on the small side as compared with the others. Mr. R. Daybell had rather hard luck with his reserve pen. Though they could not be expected to lead the class they might at least have been seen higher up, and they were more matching than some of those that were placed before.

Middle Whites.

Much is said as to this breed being as popular as the Large Whites, but they did not make an entry even half as large, they in the aggregate not totalling forty, but the truthfulness of the adage small and good was exemplified here. There were but four boars, the leader being Sir Gilbert Greenall's Walton Clumber 4th, a wonderfully nice pig with grand top and walking well, the same exhibitor being third with Brockhall Clumber, the merit between this one and Mr. Chas. Spencer's second prize taker, Holywell Vicar, being very even indeed; the reserve went to Mr. Alfred Twentyman's Castlecroft Golliwog, which got the set-back from being the first at the Bath and West to that of reserve here. The class for young boars was a good one. Mr. Leopold Paget, who has fast pushed his herd to the fore, was now first and third with nicely-fleshed well-proportioned growing youngsters. The Hon. D. P. Bouverie was second with a very nice boar with a grand loin modelled by Coleshill Dandy. Mr. Paget was also reserved with another. The sow class was not over large in numbers, and here again quality reigned. There was no mistaking the merits of Sir Gilbert Greenall's Walton Rose 39th for first place, Mr. Leopold Paget being second with Holywell Barbara, and third with Warren Sweetbriar, two rare useful dams in any herd. Mr. Alfred Twentyman was reserved with that nice even sow Castlecroft Lobelia. Sir Gilbert Greenall secured the champion honours in this class with Walton Rose 39th and reserve with Walton Clumber 4th. In the young sow class Mr. Leopold Paget was again to the fore, winning with very even, forward gilts by Offley Dandy. The Earl of Sefton came second with a very lengthy pen, and Mr. Charles Spencer was third; these latter were well shown, but beaten on their merits, and ran rather close by the Hon. D. P. Bouverie's pen by Coleshill Dandy.

Tamworths.



The Tamworths made an unexpectedly large show, and it was somewhat noticeable that the bright golden-coloured coats are again becoming replaced by the darker coats that prevailed in the earlier days of the breed. But, probably this was somewhat due to Mr. D. W. Philip not exhibiting, he having taken the position of judging. His meritorious animals were missed, and not made up for by the efforts of the new names in this section. However, that veteran Mr. Robert Ibbotson, was in good form, or at least his animals were. He won first with his boar Knowle Don, a step up from the Newport decision, and he came in third with Lydney Red Gauntlet, a very useful type, bred by Mr. Charles Bathurst. The second prize went to a younger and smaller boar. Mr. W. H. Mitchell's Elmdene Magnum, that made its first appearance in any showyard. Mr. Egbert Hamel's Middleton Manuel was reserved.

In the young boar class Mr. Ibbotson again had his run for first with a very straight level top and bottom line pig, and third with another, which was not in it with the first; Sir Peter C. Walker was second with Osmaston Pride, that with a little more age will be a dangerous competitor to some others; Mr. Hamel again came in reserve.

The sows made a rather small class, but they were of excellent quality. Sir Peter Walker was first with Osmaston Marigold 3rd, a sow with size and quality, and evidently a mother, and second with Osmaston Daisy, that won because there happened

Champion Sheep & Pigs at the Royal Show.

1. Mr. F. Miller's Lincoln Two-shear Ram Nocton Energy, the Champion Lincoln Ram.
2. Mr. J. Flower's pen of Hampshire Down Ewe Lambs which won the Breed Championship for Ram or Ewe Lambs.
3. Sir Gilbert Greenall's Middle White Sow Walton Rose 39th, Champion Middle White Pig.
4. Mr. W. M. Cazalet's Southdown Two-shear Ram which won the Championship for Southdown Rams.
5. Mr. R. M. Knowles's Colston Lass 13th, winner of Special for best Large White Sow and Championship for best Large White Sow or Boar.
6. Mr. G. I. Inman's Berkshire Boar Highmoor Curio, the Champion Berkshire Boar.

to be no better, she has not the class or style of the other; Mr. J. W. Pitt was third with Alleynes; and Mr. Ibbotson's Knowle Doris reserve. The young sows made a good class; Messrs. Gbibert and Co. were first with Whitacre Grace, a beautiful young sow bred by Mr. D. W. Philip, and which was second at the Royal Counties, and took the same position at the Bath and West at Newport. She had a litter which were pulling her somewhat. Mr. E. Hamel was second with Middleton Morgana; a very characteristic specimen of smaller type, though of even quality was Mr. Robert Ibbotson's Knowle Sylvia, and she had a very nice companion for the highly commended card in Knowle Golden Queen. In the young sow class there was a lot of merit, Mr. Ibbotson taking first and second with two pens of not quite matching ones that showed the same line of breeding as the same exhibitor's prize-winning young boars. Mr. John Myatt was placed third with gilts that did not show the length of the others, though they had a lot of quality. Mr. Hamel was again reserved. Owing to one of the chief prize takers being of his own breeding, Mr. Philip asked Mr. Walker James to step in and award the championship, he placed Messrs. Gibbert and Co.'s Whitacre Grace champion, and Sir Peter Walker's Osmaston Marigold reserve for the same.

Berkshires.

The Berkshires were present in large numbers, though they showed more empty pens than all the other breeds put together. Here there is evidently a tendency to lengthen some of the exhibits, and this has taken away some of the compactness. In some of the classes the competition was particularly keen. The old boar class filled well, Mr. G. T. Inman being first with his justly-famed Bath and West winner, Highmoor Curio. It is a grand boar, and looks just as well outside his pen as when in it. Mr. R. W. Hudson was second with that big boar with a lengthy middle, Danesfield Robert. Mr. G. J. B. Chetwynd came third with that very typical boar, Highmoor Santoi, which owns blood relationship to the first prize taker. Mr. Holman was reserved with Dunby Lad, of Dorsetshire breeding. There was a very considerable number of minor honours bestowed in this class. The champion gold medal for best boar went to Highmoor Curio, and the reserve for the same to Danesfield Robert.

The class for boars farrowed in 1907 was again a good one here. Mr. J. G. Chetwynd came out in grand form, he being first, second, and highly commended with three capital specimens of Don Confidence's get. It is seldom, indeed, that such a trio has been seen in any class. But some judges might have desired rather more defined marking in one of these. Mr. G. T. Inman had a hard fight for his very nice compact boar, one of Highmoor Mikado's stock. Mr. Nathaniel Benjafield was his close runner here, and got into the reserve. Here a number of well-deserved minor honours were again bestowed.

The signal for another keen fight was when the Berkshire sows came out. The Duchess of Devonshire's Polegate Dorcas 2nd, one of the nicest sows that has been seen out for some time, was put first. She has length, depth, size, and comeliness, and she has won honours before and should do so again; having taken champion honours at the Bath and West, she confirmed them here. The Middlesex Asylum's exhibit, Belle of Balham 13th, is a wealthy one, but she did not carry herself either with the ease or the grace of the previous winner, practically full of years and of honours. Lord Calthorpe's Elvetham Beauty, four years old, showed that there is show form in her yet. The reserve went to Mr. J. Jefferson's Barford Rosa, one of the darker type of Berks, but looking a likely breeder. Minor honours ran freely here also. The champion gold medal went to the Duchess of Devonshire's Polegate Dorcas 2nd, the reserve being Elvetham Beauty.

The class for sows bred in 1906 was another fine one, and here the best had been sent to win; it was, indeed, a close contest. Lord Calthorpe here took first place with that very typical well brought out Maidenhead champion, Elvetham Fancy; she can carry and move with her weight without waddling. Second to her was the Duchess of Devonshire's Polegate Duett, but she somewhat lacks the length of the other, especially so when seen out. Mr. G. T. Inman was third with that very shapely one, Highmoor Mimosa, and sent a fitting companion in Highmoor Geisha to be highly commenned. Mr. Benjafield's Motcombe's Best was not handled quite as well as usually is the case with this breeder's exhibits, and in consequence became reserve. It was evident that the various exhibitors had not exhausted their strength in this class, as they sent some very fine exhibits in the class for gilts. Mr. Chetwynd was again here first with sisters to his young boars, and were equally good. The Hon. A. Holland Hibbert was put second with a very nice pen, hardly showing the size of the others. Mr. Nathaniel Benjafield came third with a capital trio, the reserve going to the Middlesex County Asylum's exhibit. The judge was exceptionally generous with the minor honours.

Large Blacks.

There is always a spice of interest with this breed, as there are two well-defined divisions between the breeders of the East and those of the West, and nothing delights these two sections more than to meet in friendly contest; but fixtures usually clash, and therefore the champions of either section at best only meet once or twice a year. The breed has vastly improved of late both in quality and a general levelling up of merit; as to numbers, they made their record of nearly seventy entries. The judge had no respect for former decisions, and seldom, indeed, has there been seen such a series of altered placings in a single season. In the old boar class Mr. H. J. Kingwell's Brent Pride, a big pig with not much coat, and which got nothing at the Royal Cornwall, was now placed first and champion, but won at Newport; Mr W Knight was second with Wintringham Ascetic Silver, a weighty strong boar with good hams; Mr. John Warne was third with his nice wealthy boar Treveglas Chief, his other boar, Treveglas Tenemper, which was now highly commended, which latter was third at the Bath and West and the second Royal Counties, and third at the Royal Cornwall, whilst Mr. Thomas Warne's first-prize winner at the Royal Cornwall was now unnoticed—a real change about.

The young boar class filled well. Mr. John Warne was now first with his very smart, wealthy pig which was second at Newport. Mr. J. Glover's Cornwood Viscount was second; it is a nice pig, full of growth. The third prize went to Mr. Kenneth Clarke's thickset pig from Sudbourne Hall; the reserve going to Mr. Thomas Goodchild, Essex, with very nicely-grown pigs that might be improved at the ears. The sow class was a grand one. Mr. John Warne was now put first with Treveglas Hopsful 2nd, one of the most true type of the Cornish Blacks, deep in the sides, with good hams and very level on top. Mr. C. F. Marriner was second with Hasketon Long Lady, last year's cup winner at Derby, and third with Hasketon Long Bess 4th, a very nice sow indeed, which was the cup winner at Park Royal. Mr. John H. Glover's Cornwood Lass 20th, a deep sow with quality, was reserved. In the sow class for those farrowed in 1906, Mr. Kingwell came in first with a very level, good, coated pig, the first time out, Brent Pretty Fanny attracted attention; the same exhibitor was third with Brent Susie, very level and good, that now goes to New Zealand. Mr. John Warne was second with a very straight, level, deep gilt, Treveglos Lass 2nd, the reserve went to Mr. James Warren's Ashmill Susie. The young sow class filled fairly well. Mr. Thomas Goodchild had a hard tustle with his three to win; Mr. Thomas Warne was second with pigs that showed more size, but did not match, and he was also put third with another pair, young, but matchy, Mr C. F. Marriner being reserved with his trio.

Lincoln Curly Coated.

This was an entirely new breed to most visitors, and created a great deal of interest; they are long, straight pigs, and the breeders have not yet become frightened of each other, therefore the breed and breeders were alike well represented. In the matter of type, that known as show type has not become quite fixed. There is room for some little fining down, and it was noticeable that there were some spots in the skin which is rather coarser than in some of the other breeds. The first prize went to Mr. Joseph Ward with Whaplode Curly, bred by Mr. C. Skinner. This was a very lengthy, as well as weighty, pig, not quite so even on top as could be desired; a very big pig, Midville Bob, won second for Mr. Henry Caudwell, third going to Mr. Benjamin Rowland's Wainfleet Ringleader, that was rough in the coat, and not so good in the loin as the others, Messrs. Chas. E. Harris and Sons being reserved with Hale Gentleman. In the young boar class there was an entry of thirteen, but as two were absent, it was not an unlucky number. Mr. Thomas Ward was first with a very lengthy pig with a good loin and very deep; second went to Mr. Henry Caudwell's nice straight pig, the same exhibitor's third prize taker appeared to have the most quality of the two; the reserve went to Mr. George Goodson for a big useful pig of Mr. R. A. Greetham's breeding.

The sow class disclosed a very representative display. Mr. Henry Caudwell was first with Midville A1, with nice length and more fineness; second went to Mr. H. S. Scorer's East Kirkby Alexander, that had plenty of curly hairs all down her back, but had rubbed herself somewhat; third went to Mr. J. Drewery's Donington Superior, somewhat rougher and harder in the coat than the others, the reserve going to Mr. George Frier's Deeping Pride. The young gilt class came out fairly representative. Mr. Caudwell was first with a pen of very big pigs for their age by Midville Bob, Mr. Thomas Ward was second with pigs by the same sire as with the previous winners, Messrs. S. E. Dean and Sons were put third, whilst Mr. Thorpe's pen was reserved. The special prize for best boar was taken by Mr. Joseph Ward's Whaplode Curly, Mr. Thomas Ward's younger boar being reserved. The special prize for the best sow was taken by Mr. Henry Caudwell's Midville A1.

PRODUCE.

The produce section, as usual, was one of the most attractive features of the show, and a good deal of interest was manifested in it.

The butter classes received a strong entry, and competition was very keen indeed. In the class for 2 lb. of fresh butter, to which a dozen prizes were allotted, the judges experienced considerable difficulty in separating the exhibits. Lord Rothschild was prominent amongst those who shared the premier prizes, and Miss F. Palmer, of Belham Farm, Retford, and Mr. J. Gretton, of Stapleford Park, Melton Mowbray, also obtained awards.

There was a fine collection of cheese, especially Cheshires and Stiltons, and for three of the latter of fine quality Mr. J. W. Miller, of The Beech Farm, Shelford, Notts, secured a first.

The cider and perry was exceptionally good, and the entries somewhat in excess of those of last year.

The show of wool, instituted some five years ago, is rapidly developing into one of the most interesting features of the exhibition. The collection in point of numbers and quality was a marked improvement of that at Derby, the Leicester, Lincoln, and Southdown fleeces being by far the best. Most of the wool, however, was well got up.

CHAMPION AND SPECIAL AWARDS.

HORSES.

Gold medal of the Hunters' Improvement Society for the best hunter filly not exceeding three years old in Classes 4, 5, and 6.—Mr. F. G. Colman's; r, Mr. E. Hodgson's Mab.

Special prize given by the Lincolnshire Agricultural Society to members for the best hunter brood mare in Classes 7 and 8.—Mr. O. Quibell's Diana; r, Mr. F. B. Wilkinson's Rosalinda.

Gold medal of the Hunters' Improvement Society for the best hunter mare four years and upwards in Classes 7 and 8 and 38 to 44.—Mr. J. A. Mullen's Everlasting; r, Mr. Mullen's Glow-worm.

Special prize given by the Lincolnshire Agricultural Society to members for the best hunter foal in Classes 9 and 10.—Mr. W. B. Swallow's Lady Diana; r, Mr. Swallow's Tulip.

Gold medal of the Polo and Riding Pony Society for the best stallion or colt in Classes 11, 12, and 13.—Mr. S. Mumford's Spanish Hero; r, Vice-Admiral Bridgeman's Carnival.

Gold medal of the Polo and Riding Pony Society for the best mare or filly in Classes 12 to 15.—Mr. J. Barker's Deborah; r, Mr. J. Barker's Miss Wembley.

Gold medal of the Hackney Horse Society for the best stallion in Classes 22 to 24.—Mr. A. Hall's Copmanthorpe Performer; r, Mr. R. P. Evans's Gartonius.

Gold medal of the Hackney Horse Society for the best mare or filly in Classes 25 to 29.—Mr. R. P. Evans's District Maid; r, Sir Walter Gilbey's Lively Beeswing.

Special prize given by the Lincolnshire Agricultural Society to members for the best Hackney brood mare in Classes 28 to 29. — Sir Walter Gilbey's Gallant Girl; r, Messrs. Cockayne Brothers' Paddock Queen.

Silver Medal of the Shetland Pony Stud Book Society, for the best pony in Classes 36 and 37. Ladies E. and D. Hope's Thoreau; r, Mr. R. W. R. Mackenzie's Strawberry.

Special prize given by the Lincolnshire Agricultural Society for members, for the best hunter gelding in Classes 38 to 44. Mr. J. H. Stokes's Black Pearl.

Gold Medal of the Hackney Horse Society for the best mare or gelding in classes 46 to 54.—Mr. J. H. Stokes's Whiskey; r, Mr. Stokes's Axiom.

Shire Horse Society's Champion Gold Medal for stallion.—Mr. F. Farnsworth's Ratcliffe Forest King; r, Mr. J. Gould's Lockinge Truffle.

Shire Horse Society's prize to breeder of champion stallion.—Mr. J. L. Harrison, Pailton Fields, Rugby.

Special prize of £10, offered by the London Lincolnshire Society, to be competed for by members of the Lincolnshire Agricultural Society only, for the best shire stallion exhibited in Classes 59, 60, and 61.—Sir P. A. Muntz's, M.P., Dunsmore Premier; r, Lord Rothschild's Hotspur 4th.

Shire Horse Society's champion gold medal for mare.—Mr. W. T. Everard's Bardon Marion; r, Lord Rothschild's Belle Colo.

Shire Horse Society's prize to breeder of champion mare.—Mr. J. W. Sanders, Gilmorton, Lutterworth.

Special prize of £10 for the best shire brood mare exhibited in Class 65 by a member of the Lincolnshire Agricultural Society.—Lord Rothschild's Belle Cole; r, Messrs. S. E. Dean and Sons' Roxby Starlight.

Special Prize, offered by the London Lincolnshire Society, for the best shire colt foal exhibited in Class 66, by a member of the Lincs Agricultural Society.—Lord Rothschild's; r, Mr. J. W. Davy's.

Special Prize of £5, offered by the London Lincolnshire Society, for the best shire filly foal in Class 67, by a member of the Lincs Agricultural Society.—Mr. J. W. Griffin's.

Clydesdale Horse Society's Champion Prize for stallions.—Messrs. A. and W. Montgomery's Diploma; r, Mr. W. S. Park's Clan Forbes.

Clydesdale's Horse Society's Champion Prize for mares.—Mr. J. E. Kerr's Pyrene; r, The Seaham Harbour Stud's, Ltd., Silver Pansy.

Suffolk Horse Society's Challenge Cup, value 50 guineas, for stallions.—Mr. K. M. Clark's Sudbourne Arabi; r, Mr. A. J. Smith's Rendlesham Major Gray.

CATTLE.

Champion prize, offered by the Shorthorn Society for the best bull exhibited in Classes 84 to 88.—Mr. F. Miller's Linksfield Champion; r, H.M. the King's Royal Windsor.

Champion prize, offered by the Shorthorn Society, for the best cow or heifer exhibited in classes 90 to 96.—Lord Calthorpe's Sweetheart; r, Mr. R. Taylor's Pitlivie Rosebud 2nd.

Special prize, offered by the Lincolnshire Agricultural Society to members, for the best bull in Classes 84 to 88.—Mr. F. Miller's Linksfield Champion; r, Mr. R. Chatterton's Avondale.

Special prize, offered by the Lincolnshire Agricultural Society to members for the best cow or heifer in Classes 90 to 96.—Lord Calthorpe's Sweetheart; r, Mr. G. Harrison's Towy Princess.

Champion prize, offered by the Dairy Shorthorn Association, for the best animal exhibited in Classes 94 to 96.—Mr. G. R. W. Adeane's Priceless Princess; r, Mr. G. W. Tyser's Lady Lee 21st.

Champion prize, offered by the Lincolnshire Red Shorthorn Association, for the best bull exhibited in Classes 98 to 101.—Mr. B. R wland's Scampton Exile; r, Mr. G. E. Sandar's Brandon Grenadier.

Special prize, offered by the Lincolnshire Agricultural Society, to members, for the best bull exhibited in Classes 98 to 101.—Mr. B. Rowland's Scampton Exile; r, Mr. G. E. Sandar's Brandon Grenadier.

Champion prize, offered by the Lincolnshire Red Shorthorn Association, for the best cow or heifer exhibited in Classes 102 to 108.—Mr. J. G. Williams's Keddington Skipworth 5th; r, Mr. E. Bourne's Ruby Queen.

Special prize, offered by the Lincolnshire Agricultural Society, to members, for the best cow or heifer exhibited in Classes 102 to 108.—Mr. E. Bourne's Ruby Queen; r, Mr. G. Marris's Keddington Favourite 4th.

Champion Prize, offered by the Hereford Herd Book Society for the best Hereford bull in Classes 110 to 112.—Mr. A. E. Hughes's Pearl King; r, Mr. H. J. Dent's Porton.

Champion Prize, offered by the Hereford Herd Book Society, for the best cow or heifer in Classes 113 to 115.—Mr. A. E. Hughes's Lemster Plum; r, Mr. R. Keene's Bloom.

Champion Prize, offered by the Devon Cattle Breeders' Society, for the best bull in Classes 116 and 117.—The Hon. E. W. B. Portman's Pound Pink 'un; r, Mr. J. C. Williams's Dianthus.

Champion prize, offered by the Devon Cattle Breeders' Society for the best cow or heifer exhibited in Classes 118 and 119.—Mr. E. C. Norrish's Capton Royal Sally; r, Mr. T. Dibble's Lady Escott 4th.

Silver medal, offered by the Sussex Herd Book Society, for the best bull in classes 123 to 125.—Mr. E. E. Braby's Lord of Drungewick 5th; r, Mr. P. Saillard's Bewbush Duke.

Silver medal, offered by the Sussex Herd Book Society, for the best cow or heifer in Classes 126 to 128.—Earl of Winterton's Sunlight 7th; r, Mr. W. F. Winch's Tilsden Jessie.

Special prize, offered by the Welsh Black Cattle Society, for the best bull in Class 129.—Messrs. T. and H. Davies' Duke of Connaught.

Champion prize, offered by the Red Polled Society, for the best bull in lasses 132 to 134.—Rt. Hon. A. E. Fellowes, Blake; r, Sir R. Cooper's Ashlyns Major.

Champion prize, offered by the Red Polled Society, for the best cow or heifer in Classes 135 to 137.—Sir R. Cooper's Ashlyn's Maid; r, Sir W. Corbet's Waxlight 2nd.

Gold medal, offered by the English Aberdeen-Angus Cattle Association, for the best animal of the opposite sex to that receiving the gold medal of the Polled Cattle Society.—Mr. T. H. Bainbridge's Idelamere; r, Mr. J. R. Findlay's Blizzard.

Gold medal, offered by the Polled Cattle Society, for the best Aberdeen-Angus animal in Classes 139 to 144.—Mr. J. E. Kerr's Juana Erica; r, Mr. T. H. Bainbridge's Idelamere.

Champion prize, offered by the Galloway Cattle Society, for the best bull in Classes 145 to 146.—Mr. J. Cunningham's Chancellor of Balleyboby; r, Mr. A. Montgomery's Tarbreoch Edward.

Champion prize, offered by the Galloway Cattle Society for the best cow or heifer in Classes 147 and 148.—Messrs. T. Bigger and Son's Flora Macdonald; r, Mr. A. H. Fox-Brockbank's Jasmine of Blackcombe.

Champion prize offered by the Highland Cattle Society for the best bull in Classes 149 and 150.—Mr. Ian Bullough's Albannach; r, Mrs. Ian Bullough's An Saighdear.

Champion prize offered by the Highland Cattle Society for the best cow or heifer in Classes 151 and 152.—Mr. D. A. Stewart's Laochag Bhuidhe 4th of Ensay; r, Mr. D. A. Stewart's Shellay.

A Challenge Cup offered by the English Kerry and Dexter Cattle Society for the best Kerry animal in classes 175 to 177.—Mr. R. Tait Robertson's La Mancha Diver; r, Lady Greenall's Aicme Cold.

A Challenge Cup offered by the English Kerry and Dexter Cattle Society for the best Dexter animal in Classes 179 and 182.—The Duchess of Devonshire's Compton Daphne; r, The Hon. Mrs. Claud Portman's La Mancha Hard-to-Find.

SHEEP.

Champion gold medal offered by the Southdown Sheep Society for the best ram in Classes 197 and 198.—Mr. W. M. Cazalet; r, Mr. J. Colman.

Silver medal offered by the Southdown Sheep Society for best pen of ewes or ewe lambs in Classes 201 and 202.—Mr. J. Colman; r, The Duke of Devonshire.

Champion prize offered by the Hampshire Down Sheep Breeders' Association for the best pen of lambs in Classes 205 and 207.—Mr. J. Flower; r, Mr. J. Flower.

Special prize offered by the Lincolnshire Agricultural Society for members only for the best ram in Classes 225 and 226.—Mr. F. Miller's Nocton Energy; r, Mr. H. Dudding.

Piece of plate offered by the Lincoln Long Wool Sheep Breeders' Association for the best pen of shearling rams.—Mr. H. Dudding.

Special prize offered for members of the Lincolnshire Agricultural Society for members only for the best pen of shearling ewes, ewe lambs, or yearling ewes, exhibited in Classes 231 to 233.—Mr. C. E. Howard; r, Mr. C. E. Howard.

Champion prize offered by the Society of Border Leicester Sheep Breeders for the best ram exhibited in Classes 243 and 244.—Mr. R. Taylor's Pilivie Brilliant; r, Mr. D. Hume.

PIGS.

Champion gold medal, offered by the National Pig Breeders' Association, for the best Large White boar or sow exhibited in Classes 273 to 276.—Mr. R. M. Knowles' Colston Lass 13th; r, Mr C. Spencer's Holywell Czech 2nd.

Special prize, offered by the Lincolnshire Agricultural Society, for members only, for the best Large White boar exhibited in Classes 273 and 274.—Messrs. W. H. and E. Wherry's Giant Goliath; r, Messrs. A. Duckering and Sons.

Special prize, offered by the Lincolnshire Agricultural Society, for members only, for the best Large White sow in Classes 276 and 276.—Mr. R. M. Knowles's Colston Lass 13th; r, Sir Gilbert Greenall's Walton Beauty 10th.

Champion Gold Medal, offered by the National Pig Breeders' Association for the best Middle White boar or sow exhibited in Classes 278 to 281.—Sir Gilbert Greenall's Walton Rose 39th; r, Sir Gilbert Greenall's Walton Clumber 4th.

Champion gold medal, offered by the National Pig Breeders' Association, for the best Tamworth boar or sow exhibited in Classes 283 to 286.—Messrs. F. W. Gilbert and Co.'s Whitacre Grace; r, Sir P. C. Walker's Osmaston Marigold 3rd.

Champion Gold Medal, offered by the British Berkshire Society for the best boar.—Mr. G. J. Inman's Highman Curlo; r, Mr. R. W. Hudson's Danesfield Robert.

Champion Gold Medal, offered by the British Berkshire Society for the best sow.—The Duchess of Devonshire's Polegate Dorcas 2nd; r, Lord Calthorpe's Elvetham Fancy.

Champion Prize, offered by the Large Black Pig Society for the best boar in Classes 293 and 294.—Mr. H. J. Kingwell's Brent Pride 2nd; r, Mr. J. Warne.

Silver Challenge Cup offered by the Large Black Pig Society for the best sow in Classes 295 and 296.—Mr. J. Warnes' Treveglos Hopeful 2nd; r, Mr. H. J. Ringwell's Brent Susie.

Special Prize offered by the Lincolnshire Agricultural Society, for members only, for the best curly-coated boar in Classes 298 and 299.—Mr. J. Ward's Whaplode Curly; r, Mr. T. Ward.

Special Prize offered by the Lincolnshire Agricultural Society, for members only, for the best curly-coated sow exhibited in Class 300.—Mr. H. Caudwell's Midville A1.

JUDGES.

IMPLEMENTS.

Swath Turners and Side Delivery Rakes: Sir Francis E. Walker, Bart., Swansfield House, Alnwick; Joshua Ball, Southworth Hall, Warrington. Miscellaneous Implements entered for Silver Medals: Thomas Stirton, Rendlesham Estate Office, Woodbridge; James Younger, Burradon Farm, Annitsford, Newcastle-on-Tyne.

HORSES.

Hunters and Polo Ponies: Captain C. Fetherstonhaugh, Bracklyn, Killucan; James Hutchinson, Manthorpe Lodge, Grantham. Cleveland Bay and Coach Horse: F. Wilson-Horsfall, Potto Grange, Northallerton. Ayrshire: Robert McKinlay, Hillhouse, Sandilands, Lanark. Jersey: William Adams, Woodside, Loughton, Essex; J. H. Shore, Whatley House, Frome. Guernsey: Caleb Barfoot, Lake, Bishopstoke, Hants; J. D. Toogood Parsons, Manor View, Rusthall, Tunbridge Wells. Longhorn: William Shaw, Junr., Fradley, nr. Lichfield. Kerry and Dexter: H. D. D. Betteridge, Drayton, Woodstock Road, Summertown, Oxford; John B. Ross, Estate Office, Whitney-on-Wye, Herefordshire.

SHEEP.

Oxford Down: Henry Overman, Kipton House, Weasenham St. Peter, Norfolk. Shropshire: Charles Coxon, Elford Park, Tamworth; Robert F. H. White, Aghavoe Grange, Ballacolla, Abbeyleix, Ireland. Southdown: William Brown, Challoners, Rottingdean, nr. Brighton; Allian Cooper, Norton, Bishopstone, Lewes. Hampshire Down: Henry Lambert, Babraham, nr. Cambridge; John Pain, Borough, Micheldever, Hants. Suffolk: J. C. Dawson, Nacton, nr. Ipswich. Dorset Horn: William A. Johnson, Stafford Park, Piddletown, Dorchester Ryeland: H. W. Taylor, Showle Court, Ledbury. Kerry Hill: Richard Morgan, Snowfield, Kerry, Newtown. Lincoln: Robert Fisher, Leconfield, Beverley; Robert Wright, Nocton Heath, Lincoln. Leicester: H. T. Allison, Stanghow, Boosbeck, S.O. Cotswold: Davis Brown, Marham Hall, Downham Market. Border Leicester: James K. Smith, Leaston, Upper Keith. Kent or Romney Marsh: Francis de B. Collard, Minster Abbey, Ramsgate. Wensleydale: Thomas Jackson, Netherbeck, Carnforth. Devon Long-Wool: Frank J. Merson, Farringdon, North Petherton, Bridgwater. South Devon and Dartmoor: Edward Cornish, East Charleton, Kingsbridge, Devon. Exmoor: James Yapp, Winsford, Dulverton, Somerset. Cheviot: James K. Smith, Leaston, Upper Keith. Lonk and Herdwick: J. C. Ashworth, Overtown, Cliviger, Burnley. Welsh Mountain: Thomas Roberts, Aber, nr. Bangor Black-faced Mountain: James Campbell, Tullich, Killin, Perthshire.

PIGS.

Large White: Colonel F. A. Walker-Jones, The Manor House, Burton, Westmorland. Middle White: W. T. Hall, Highclere Farm, Newbury. Tamworth: D. W. Philip, The Redlands, Whitacre, Birmingham. Berkshire: James Lawrence, Stall Pitts Farm, Shrivenham, Berks. Large Black: C. L. Hancock, The Manor House, Cothelestone, Bishops Lydeard. Lincolnshire Curly Coated: Thomas P. Horn, Elm Grange, East Heckington, Boston.

PRODUCE.

Butter: John Benson, The Buxton Dairy, Dale Road, Buxton. Cheese: John Pakeman, Chellaston, Derby. Cider and Perry: John Watkins, Foley Lodge, Foley Street, Hereford. Wool: Dr. F. H. Bowman, 4, Albert Square, Manchester; Arthur Whitehead, Bradford.

FARMS.

Classes 1 and 3: T. H. Hutchinson, Manor House, Catterick; Arthur Stretton, Manor House, Sibthorpe. Classes 2 and 4: Richard B. Burrows, Leadenham, Lincoln; Robert Fisher, Leconfield, Beverley.

THE COUNTY CLASSES.

There were many points in which unstinted praise was due to the Royal Agricultural Society's Council in connection with the Lincoln Show, but none in which we consider it was deserved than by making provision for these classes being added to its schedule.

No better opportunity could well have been given the tenant farmers of Lincolnshire, the backbone of the wealth, both of that and all other counties, to show the large numbers of visitors the superior stock kept in the county, the merit and quality of which was put to the severest test possible—namely, by being exhibited in the same ground in which it is admitted on all hands that one of the very choicest collections of live stock ever got together was to be seen.

How did these competing animals compare is, after all, the crux of the question, and we think, without room for cavil, it may be said particularly well.

Shorthorns.

In these classes there was an entry of 89, and many of them were animals of the choicest breeding, Messrs. E. H. Cartwright and W. Wright were the judges in this section, Messrs. R. Chatterton, Walter Ward, and H. Dudding were the winners for old bulls, the winner, Woodhouse Prince, a fine red bull. In the two year-olds Mr. H. Dudding with Moon King 2nd and Alastair 2nd took first and second, a very choice pair of bulls. Doubby Imperial and Imperial Wild Eyes 3rd, the winner sired by Messrs. S. E. Dean and Sons' noted 1,000 guineas stud bull won third, and won for these breeders another handsome pair of bulls. Eleven yearlings made up a grand class of this age here; first and third went to Mr. H. Dudding for those typical and choice bred bulls Strowan Kaiser and Strowan Butterfly, Captain J. Sherard taking second with Knight of Kesteven, a sappy and well-grown yearling, Mr. R. Chatterton's capital roan Marquis of Ballinchin taking rn. A grand class and a large one also was that for cows, no less than twenty-one entries being made, that grand type of a dairy cow Burton Quality 3rd, winning first honours for Mr. J. Evens. Mr. E. Bourne was second with Ruby 12th, and Captain E. M. Grantham third with Keal Nancy, a fine red, Royal Lily, taking rn to Mr. Dudding's. The latter breeder was second in a class of fifteen two-year-olds with Crystal Empress, a first-class heifer, which, however, had to take second to Messrs. Dean's beautiful Starlight, who well deserved her place, two of the herd mates taking rn and hc for the same owners, Mr. Dudding's Waterloo Winnow being third. Mr. R. Chatterton headed the yearling heifer class of twenty-six entries with Staveley Daisy, a beautiful roan of very choice merit. Mr. H. Dudding's trio, Natland Gerry, Newton Jealousy 3rd, and Damory Lady being second, third, and c, a deserved distinction; whilst in the rn and hc entries Messrs. Dean had a pair of very superior and choicely-bred heifers.

The Hunter classes were a credit to the county; the merit and quality of these were excellent. Mr. W. B. Swallow was first and second for brood mares, Mr. O. Quibell first for colt foals; in the filly foals, an excellent class of nine, Messrs. C. W. Cross, W. B. Swallow, E. H. T. Pulline, and F. Ward were winners. The yearling, two-year-old, and three-year-old classes were good Messrs. W. B. Swallow, C. J. C. Hill, and William Wood were principal winners, and in the four-year-olds Mr. J. G. Elsey won.

There was a grand class of brood mares in the class for mare with foal at foot, an entry of nineteen, most of which were of high merit, grand types of the Shire breed in nearly every case. Roxby Starlight, owned by Messrs. Denn, was correctly placed at the head of the excellent class, followed by Stenton Florence, owned by Mr. Kirk, with Lockinge Parlour, Mr. Griffin's, as third, and Smiler, from Mr. J. W. Davey, as rn. Mr. Griffin's colt foal was first in its class, and Mr. Kirk's filly foal in hers. There were fourteen entries in the two-year-old class. Mr. A. E. Smith's Surfleet Gem led, and Messrs. Bond and F. W. Griffin were second and third. Two-year-old fillies numbered nine, a good class, Mr. W. P. Glasier leading. The yearling-old colt class was led by Mr. Leggatt's Dogdyke Royal Ensign, and the two-year-old class with Mr. Sutton-Nelthorpe's Redlynch Senator.

The Lincoln sheep class were good, but, of course, not up to those of the Royal schedule, for all of the best of th ecounty were in these. However, the value of these classes was great, because they showed how many excellent rams of this breed there are. Mr. Tom Casswell led in the single ram class, followed by Messrs. Dean and Dudding in the order given. The latter breeder, with a real good trio, was first in the next class, Messrs. Dean taking second, and Mr. F. Ward third. Messrs. H. Casswell and G. Marris won in the next class for breeders who have never won a prize at the Royal; and in the yearling ewe class Messrs. Tom Casswell, H. Casswell, H. Dudding were the winners, with Messrs. Dean rn.

Londonderry Show.

The show of the North West of Ireland Agricultural Society, at Londonderry, last week, was the first held in the society's new and excellent grounds, and it is satisfactory to be able to record that there was a great increase in the number of entries, and also an improvement in quality, so that the new showyard was inaugurated under most auspicious circumstances.

The Shorthorn cattle classes made an excellent show, whilst as regards the Ayrshire, though the class was not a large one, several fine specimens came under the notice of the judge. There was a l round a capital section of Hunters and cross-breds for farm work, being perhaps as good as those entered in competitions at any Irish show outside Dublin. Sheep was a numerously and, so far as quality was concerned, a capitally filled section, whilst there were fair shows of pigs, poultry, and butter.

We would remind intending exhibitors at the Yorkshire Agricultural Society's forthcoming show at Barnsley that entries finally close with double fees on Saturday next, the 6th inst.

Implements and Farming Necessities at the Royal Show.

TRIALS OF SWATH-TURNERS.

In the implement trials for swath-turners, Messrs. Blackstone and Co., Stamford, took both the £15 and silver medal and the £10 and bronze medal, both awards went to swath-turners and windrowers.

Messrs. Blackstone and Co. also took the first prize (£15 and silver medal) for side-delivery rakes, this also being a windrower as well, and an elongation of the principle of the swath-turner.

The second award (£10 and bronze medal) went to the 8ft. machine shown by Martin's Cultivator Company.

New Implements.

Forty-six new implements were entered in the competition for the society's silver medals one of which was secured by Mr. F. M. Dossor, Doncaster, for his patent seed-dresser, a new machine for cleaning clover and other small seeds by the extraction, therefrom of docks, dodder, and other weeds, light seeds, and foreign matter.

Seeds.

The stand of Messrs. Sutton and Sons, Reading, is always a prominent feature, and so it proved last week, for it comprised specimens of all the various seeds and roots for which the firm has gained such a widespread reputation and over 300 medals. As an educational exhibit the cabinets of natural grasses, grass seeds, &c., as supplied to the several agricultural colleges, museums, &c., were a great attraction.

Messrs. Edward Webb and Sons, Wordsley, Stourbridge, had the next stand, No. 23, and it was attractively arranged with choice selections of farm and garden seeds, grasses, mangolds and swedes, potatoes of many and choice varieties, and a representative display of their guaranteed manures specially manufactured for turnips, mangolds, hops, wheat, barley, oats, potatoes, grass, &c., at their manure works, Saltney, Cheshire. It is not too much to say that there is scarcely an open root competition in the country where Webbs' mangolds have not been to the front in carrying off the leading honours, and the grand specimens shown on the stand were from the same crops as those that won premier awards at the principal shows in 1906.

Another well-known seed firm occupied the next stand—viz., Messrs. James Carter and Co., 97, 237, and 238, High Holborn, London, W.C. These exhibits included not only samples and products of their agricultural and horticultural seeds and roots, but illustrations of a new method of root selection according to highest feeding values, cabinets of grasses, both seeds and dried specimens, and a cabinet of insects injurious to crops. The last-named proved particularly interesting to many visitors.

Messrs. Harrison and Sons, 33, Market Place, Leicester, were represented at Stand 16 with a nice display of choice and new potatoes, dried and fresh natural grasses and clovers, and selections of vegetables.

Messrs. Gartons, Ltd., Warrington, had an excellent display of the new and improved breeds raised by the Garton system of plant improvement at Stand No. 17. Amongst the leading features was a distinct new breed of black oat named "Bountiful," for which it is claimed that it is equally suitable for autumn or spring sowing.

Messrs. Dickson and Robinson, Cathedral Street, Manchester, had a capital show of mangolds and swedes, which, together with the specimens of natural grasses adapted for permanent and temporary pastures, &c., made up an interesting stand.

A collection of dried specimens of grasses necessary for the formation of permanent and temporary pastures, rotation cropping, and alternate husbandry, with growing specimens of natural grasses, also occupied a prominent position on the stand of Messrs. Little and Ballantyne, Carlisle, who also exhibited specimens of agricultural seeds and choice and ornamental coniferous trees and shrubs suitable for parks, &c.

Further specimens of natural grasses and clovers were to be seen at the next stand, which was taken by Messrs. Dickson, Brown, and Tait, 43 and 45, Corporation Street, Manchester.

In addition to a choice show of farm seeds, mangolds, and potatoes, Messrs. Toogood and Sons, 65, Above Bar, Southampton, displayed a number of pedigree vegetable and flower seeds.

Specimens of grasses useful in permanent and temporary pastures were contrasted with grasses objectionable in pastures at the stand of Mr. A. G. Leighton, Newcastle, Staffs, who also had on view growing specimens of inherited permanent red clover and other farm seeds, and specimens of impurities extracted by patent machinery.

Messrs. Pennell and Sons, 312, High Street, Lincoln, had an interesting stand, their exhibits including collections of their agricultural seeds, consisting of clovers, grasses, mangolds, swede and turnip seeds; natural grasses of the eastern and midland counties, dried and in growth, showing the valuable varieties used in Pennell's prescriptions for permanent pasture and roots, and vegetables grown from Pennell's seeds.

Feeding Stuffs, Veterinary Medicines, &c.

Messrs. Day and Sons, Crewe, were at Stand No. 29, and here displayed to the best advantage specimens of their well-known veterinary medicines for horses, cattle, and sheep, these including blanch drink, red drink or cow drench, ewe drench, horse powders, &c.

Messrs. Day, Son, and Hewitt, 22, Dorset Street, Baker Street, W., had Stand No. 32, which was taken up with a large display of their medicines for horses, cattle, sheep, and pigs. Amongst others may be mentioned Broncholine for husk or hoose, and tapeworm in cattle or sheep, and Salodyne, for prevention and cure of fluke, or liver-rot in sheep and lambs.

The next stand, No. 33, was taken up with samples of Burton pale ale dried grains, dried by patent machinery owned by the English Grains Co., Ltd., 30, Union Street, Burton-on-Trent, who were the exhibitors.

The exhibits of Messrs. W. Cooper and Nephew's Chemical Works, Berkhamsted, Herts, were spread over their two stands (Nos. 309 and 412). At the former they showed samples of their sheep-dipping powder and fluid, sheep-marking liquid, "Weedicide" for killing weeds, a cattle-dressing and mange cure and sheep doser, &c., whilst at Stand No. 412 they had a number of their sheep dipping baths and swim baths, which have been used with such success in all parts.

A large variety of veterinary necessities, such as dips, disinfectants, embrocations, drinks for cattle and sheep, horse powders and balls, as well as a weed killer, were shown at Stand No. 310 by Messrs. Battle, Maltby, and Bower, Victoria Chemical Works, Lincoln, who also had on view a Jervis potato planter, which seemed somewhat out of place in connection with veterinary medicines.

Messrs. Ayre Brothers, The Avenue, Hull, occupied Stand No. 354 with a varied and interesting collection of the feeding stuffs for which they are so well known. The exhibits included samples of locust meals, lamb food, calf meal, feeding linseed, and the popular dairy meal "Maxilac."

Messrs. Stephen Pettifer and Sons, Malmesbury, Wilts, exhibited amongst other things samples of their registered "Santovin," a successful medicine for sheep and cattle, and also "Santoform," an antiseptic powder for wounds, sores, and injuries.

Jeyes' Fluid needs no introduction to the stock keeper, for its uses have long been appreciated, and the samples arranged at Stand No. 356 were typical of the company's numerous manufactures of sanitary compounds.

The Waterloo Mills Cake and Warehousing Company, Ltd., Hull, made their Stand No. 355 attractive with a display of specimens of the popular Waterloo feeding cakes, linseed cakes with a guaranteed purity of over 97 per cent., and under ¾ per cent. of sand; and Waterloo pure cottonseed cakes made from Egyptian seed only. Their linseed and cotton cakes are sold on the warranty required by the Royal Agricultural Society.

The well-known Cupiss constitution balls for horses, cattle, and sheep, together with cough balls for horses, physic balls, diuretic balls, balling guns, and drenching horns and tins were to be seen at Stand No. 369, which was occupied by Messrs. F. Cupiss, Ltd., The Wilderness, Diss, Norfolk.

The Stud Company, Victoria Mills, Longsight, Manchester, had a large assortment of "stud" medicines, &c., for the stable, cowshed, lambing pen, pig stye, and kennel, whilst the poultry yard was not forgotten, so that all classes of stock breeders were provided for at the stand, which was No. 366.

A large assortment of feeding stuffs was shown by Messrs. W. S. White and Co., 313, High Street, Lincoln, their exhibits including fine wheat sharps, Rangoon rice meal, maize germ meal, German wheat flour, feeding barley, bran from English meals, and linseed and cotton cakes, whilst another part of the stand was taken up with a selection of manures.

Messrs. Thomas Pettifer and Co., Eydon, Banbury, were represented at Stand 318 by numerous samples of herbal tonic mixture, white liniment, green oils, drenches, embrocation, colic or gripe mixture, condition powders, halt, ringworm, and mange or scab dressings, physic balls, cough balls, &c., as well as stock-keepers' and horse-keepers' medicine chests.

Stand No. 323 was taken up chiefly with samples of the Anchor feeding cake, calf meal, medicated lamb food and sheep dip, shown by Messrs. Jekyll, Glasier and Co., Exchange Arcade and Carholme Road, Lincoln. Their other exhibits included wheel grease and a black varnish, a preservative against decay or rust.

Messrs. R. Silcock and Sons, Stanley Hall, Union Street, Liverpool, exhibited amongst other items samples of an excellent fattening cake containing over 11 per cent. of oil, rearing cake for young animals, dairy cakes to cause a large flow of milk, and lamb and ewe cake, also for improving the flow of milk.

The "Uveco" cooked cereal foods for horses, cattle, sheep, and pigs were exhibited at Stand No. 332 by the manufacturers—The Uveco Cereals, Ltd., Brunswick Buildings, Corn Exchange, Liverpool.

Feeding cakes, including the celebrated Yorkshire oil and treacle cake, were shown in great variety at the stand occupied by Messrs. E. E. Keighley and Co., Ltd., Yorkshire Cake Mills, Hull.

Messrs. McDougall Brothers, 68, Port Street, Manchester, had two stands, one being devoted entirely to sheep-dipping appliances, whilst the other was confined to collections of sheep dips, cattle drugs, and "fly" oil, insecticides for hop and fruit growers, and an assortment of disinfectants for farm use.

The original Lincoln lamb food, together with porridge meal for calves, linseed and cotton cakes, and locust beans and meals, were shown at stand No. 371 by Mr. E. Mackinder, of the Lamb Food Mills, Lincoln.

Messrs. Osmond and Son, of the Animal Medicine Works, Spalding, had a most comprehensive show of animal medicines at Stand No 308, chief among which were, perhaps, the samples of the "Lincolnshire" life-saving medicines of every description, viz., brown draught for colic in horses, blown in beasts, scour, and exhaustion.

The letters "B. O. and C. M." are well known to stock-breeders in all parts of the country in connection with linseed and cotton cakes, dairy cakes, calf meal, lamb food, &c., for they represent the initials of the British Oil and Cake Mills, Ltd., Cleveland Street, Hull, whose manufactures of the articles named are widely known for their high-class quality.

Stand No. 324 was in the occupation of Mr. T. Mott, Littleport, Cambs., who had a large display of his well-known horse and cattle medicines, sheep drenches, pig powders, &c., whilst his "Cambridgeshire" medicine-chests, containing a selection of medicines for stud or farm, recommended themselves.

Further on we came to a good show of linseed cakes, cotton cakes, feeding cakes, and linseed and cotton oils, these being shown by Messrs. Chambers and Fargus, Ltd., 400, Wincolmlee, Hull.

Messrs. H. E. Hope and Co., 22, Billiter Street, E.C., had on view a good display of sheep-dipping fluid, non-poisonous, as well as sulpho-arsenical sheep-dipping powder and paste, together with disinfectant powders and fluids, weed destroyers and Restorine veterinary remedies. They also showed samples of cart grease and lubricating oils.

Messrs. Tomlinson and Hayward, Ltd., Lincoln, being at home, as it were, were well represented with samples of their well-known manufactures, such as Hayward's Yellow Paste and other sheep dips, both paste and fluid; Eureka weed killer; patent ear marks, brands, marking paints, &c., and sheep-dipping apparatus, as well as swim baths and dipping tubs. The above, together with other items, were spread over two stands, Nos. 96 and 339.

Messrs. Fletcher Brothers and Co, Wellowgate, Grimsby, made a speciality of their sheep dips, which are made in paste, powder, and liquid form, and have all been approved for sheep scab.

Dairy Appliances.

At the stand of the Dairy Supply Company, Ltd., Museum Street, London, great prominence was given to the new model Alfa Laval separators, which have won such popular success. Also included on the stand were two model dairies, completely fitted with separator, butter churn and worker, and all the smaller appliances required for a complete butter-making dairy of the number of cows mentioned, whilst complete collections of appliances for farmers producing and selling milk, town dairies, milk delivery, milk testing, butter-making, &c., were shown.

Messrs. Burmeister and Wain, Ltd., 12, Coleman Street, London, E.C., and 105, Middle Abbey Street, Dublin, showed two new implements—viz., a Gloria power separator, with a capacity of 220 gallons for separating and 300 gallons for cleaning purposes, and a new pattern Perfect separator. In addition, they had a variety of Perfect separators, churns, and butter workers, and a large assortment of dairymen's sundries.

The Alexandra Separator Company, 65, 67, 69, Mount Pleasnt, Gray's Inn Road, London, W.C., had at Stand 94 a big show of their well-known Queen and Titan cream separators of various sizes worked by both hand and power.

Stand No. 95 was taken up with a collection f the Meys cream separators, with capacities anging from 17 to 66 gallons per hour. They ere manufactured at Hennef, Sieg, in Germany, y the exhibitors, Messrs. J. Mays and Co., imited, whose London branch is 19, 20, and 21, ligh Holborn, W.C.

Messrs. Thomas Bradford and Co., Crescent ron Works, Salford, and 140 to 142, High Hol- orn, London, W.C., had Stand No. 85, and here howed churns of various sizes and varieties, utter workers and boxes, assortment of milk ans; in fact, everything required in the dairy, hilst, as usual, they had also a large display f washing and wringing machines, either sepa- ate or combined, and other utensils required in he laundry.

The Wolseley Sheep Shearing Machine Co., td., Sydney Works, Alma Street, Aston Manor, Birmingham, had two stands, Nos. 83 and 84. t the first they showed the famous Wolseley heep-shearing machines, whilst at the other they ad a representative display of cream separators, ncluding one entered as a new implement. This as a Wolseley-Pederson (with a capacity of 135 allons per hour), the chief features of which are s easy running, and that it is easily cleaned, all arts being accessible.

A new implement was also shown at the stand f Messrs. R. Boby, Ltd., St. Andrew's Works, Bury St. Edmunds. It was Garbutt's patent two minute butter churn, which has been to the fore o much of late. Other butter churns, together ith cream separators, haymakers, dressing achines, &c., went to make up an attractive tand.

As was only to be expected, the L K G. milking achine, of which we recently gave an illustrated escription, came in for a great deal of attention t the stands of Vacca, Ltd. (H. W. Bartram, gent), 7, Denman Street, London, S.E. Two of he machines, which, by the way, were manu- actured by Messrs. Lawrence and Kennedy, of Glasgow, were entered in the competition for new mplements, and with what success will be seen lsewhere. An oil engine and an electric motor or driving the machine were also shown here.

A Lawrence Kennedy milking machine was also n view at Stand No. 259, occupied by Messrs. P. and R. Fleming and Co., 29, Argyle Street, nd 26, Graham Square, Glasgow, who in addition howed an oil engine for driving the machine, Waugh's patent sheep dipping apparatus, and a Fleming potato and charlock sprayer.

Poultry Appliances.

Poultry houses were the feature of Stand No. 61, hich was furnished by Messrs. J. T. Hobson and Co., New Wharf, Bedford, and the variety of houses seen received much attention from those nterested in poultry. At the same time they were able to inspect a number of coops and runs, as well as a hatching box, fattening pen, and hurdles.

The Westmeria Company, Leighton Buzzard, made a feature of incubators, close on twenty of hese invaluable appliances to the up-to-date poultry breeder being exhibited. Other poultry appliances were also shown, including foster-mothers and brooders, coops, green bone cutters, &c.

Poultry houses also figured among the exhibits of Messrs. E. C. Walton and Co., Ltd., Muskham Works, Newark. The specimens shown included the Marvel, XL-All, and the Newcastle. Poultry coops, scratching sheds, and setting boxes were also exhibited amongst other portable buildings, such as dog-kennels, cucumber frames, greenhouses, &c.

Chaff Cutters, Corn Crushers, &c.

Among other items exhibited by Messrs. Powell Brothers and Whitaker, Cambrian Iron Works, Wrexham, were about half-a-dozen chaff cutters of the latest improvements, and, these, together with the oil-cake mills, root graters and slicers, potato raisers, &c., made an attractive stand.

A very large collection of chaff cutters, corn crushers, crushing and grinding mills, cleaners and feeders and graters and pulpers were exhibited by Messrs. Harrison, McGregor, and Co., Ltd., Albion Iron Works, Leigh, Lancashire, who also naturally had a big show of the celebrated Albion harvesters, mowers, and mowers and reapers combined. The extent of their exhibits may be judged when it is stated that they numbered sixty.

Mr. Robert Maynard, Whittlesford Works, near Cambridge, was represented at Stand No. 230 with a collection of chaff cutters fitted with a patent drum safety feeder and carrier, and also with the new patent riddle compensator, which does away with the shaking of the machine when at work, an advantage which has been much appreciated.

A few stands further on we came to the exhibits of Messrs. Richmond and Chandler, Ltd., Globe Works, Manchester, who, as usual, had a very large display of chaff cutters, including one with a new patent chaff sifter, which was entered as a new implement. The Climax, which has a patent safety feeder and lift-off fly wheel cover, was shown in various sizes, whilst there were corn crushers, oat, malt, and seed bruising mills, as well as grinding mills and elevators.

Messrs. E. R. and F. Turner, Ltd., St. Peter's and Grey Friars Works, Ipswich, were also amongst the exhibitors of corn crushers, &c., whilst they had a representative show of their well-known machines used in the manufacture of flour from wheat, also some steam engines, the whole making a display worthy of the firm.

Over forty exhibits were on view at Stand No. 263, occupied by Messrs. Barford and Perkins, of Peterborough, and naturally the stand proved a most attractive one. A couple of new patent water ballast motor rollers claimed considerable attention; whilst the other rollers, together with the mills, hay presses, oil-cake breakers, &c., also came in for notice.

Fertilisers.

Messrs. J. Fison and Co., Ltd., Ipswich, had at Stand No. 14 a nice display of fertilisers for all crops, and showed sheep dips, insecticides, hop and fruit washes, and disinfectants of various kinds for the farm.

In addition to samples of Thomas' Phosphate Powder, the chemical works, late H. and E. Albert, 15, Philpot Lane, London, E.C., showed some photos demonstrating the process of steel-making which yields basic slag as a bye-product, and also photos showing effects of basic slag on various crops.

Ploughs, Drills, Harrows, Harvesting Machines, &c.

Messrs. Ransomes, Sims, and Jefferies, Ltd., the Orwell Works, Ipswich, occupied two stands, Nos. 11 and 268, and on both had many attractive exhibits. At the first they showed lawn mowers of various sizes, for which they are famous, and devoted No. 268 to steam engines and ploughs, there being about twenty varieties of the latter, whilst cultivators and horse rakes also figured at this stand.

Displays of ploughs at Stand No. 71, shown by Messrs. G. Sellar & Son, Huntley, Aberdeenshire, was a small but none the less interesting one.

The Oliver plough, manufactured by the South Bend Ironworks, Indiana, U.S.A., was a prominent feature of the exhibits of Messrs. J. Wallace and Sons, Ltd., Graham Square, Glasgow, but these did not overshadow the Champion potato diggers nor the manure distributors, which, with other items, made up an attractive stand.

Chief interest in the stand of Messrs. Alex. Jack and Sons, Ltd., Maybole, Ayrshire, was centred in the Empire swath turner (Sargeant's patent), entered for the competition, but fair attention was also given the other exhibits, which included manure distributors, ploughs, and an Empire drill plough and manure distributor combined.

A collection of Medium Nonpareil and Strong Nonpareil corn drills comprised the exhibits of Messrs. J. Smyth and Sons, Ltd., of Peasenhall, Suffolk.

Drills of various sizes for manure, corn and seed, together with horses hoes and a collection of sack barrows, comprised the exhibits of Stand No. 112, which was in the occupation of Mr. F. Walker, Tithby, Bingham, Yorks.

Messrs. W. Elder and Sons, Ltd., Tweedside Implement Works, Berwick-on-Tweed, had a most varied assortment of useful implements, their exhibits numbering over forty, and including mowers, reapers, rollers, drill grubbers, harrows, hay collectors, carts, waggons, lorries, &c. An interesting exhibit was the turnip-cutting cart, which is fitted with two cutting barrels to cut finger pieces for sheep, and hopper, so that the turnips after being cut can be delivered on to the land, or into the hopper for feeding the sheep out of troughs.

Something like sixteen different ploughs were shown by Messrs. J. and F. Howard, Britannia Iron Works, Bedford, at Stand No. 215, and as may be imagined they made a fine show, especially in connection with the other large assortment of horse rakes, cultivators, harrows, &c., which were on view at the stand.

The stand of Messrs. Stanford and Co., Colchester, was taken up with a clover huller for thrashing, drawing, and dressing up clover and other seeds in one operation, and it came in for considerable attention.

As was the case last year, Messrs. G. C. Ogle and Son, Perseverance Works, Ripley, Derby, spread their exhibits over two stands, Nos. 167 and 392, and a fine show they made, there being over forty different items, amongst them being the Ripley patent horse rake, patent steel-tooth harrows of various weights and descriptions, land rollers, and carts, drays, and lorries, whilst mention may be made of the patent pitch-forks, which took up Stand No. 392.

Messrs. Samuelson and Co., Ltd., Britannia Works, Banbury, Oxon, showed chiefly reapers and grass mowers. The Omnium reaper shown had an apparatus for controlling the rakes, and a lever for instantaneously raising or lowering the points of the fingers.

The Walter A. Wood Mowing and Reaping Machine Company, of 36, Worship Street, London, E.C., had a big show of their well-known and prize-winning machines at Stand No. 168. Their mowers were in the majority, but harvesters and binders, together with drills and harrows, were also represented.

Mr. James Coultas, Perseverance Ironworks, Grantham, exhibited chiefly drills suitable for corn, turnip, mangold, and artificial manures, a large number of these being shown; but other interesting items, such as manure distributors, binders, harrows, cultivators, and chaff and turnip cutters were also on view.

Mr. E. A. Foley, Bourne, Lincolnshire, was amongst the competitors for the new implement prizes with a Hereward straw elevator, of telescopic pattern, with a patent angle gear, for hay, corn, or straw. The Invincible straw elevator also figure at the show, as did mowers, reapers, horse rakes, &c.

Ploughs were a prominent feature at the stands of Messrs. J. Shorey and Co., Trent Iron Works, Owston Ferry, Doncaster, but perhaps more interest was taken in potato diggers and sorters and a No. 1 Clipper horse hoe, fitted with reversible points, and Gosse's patent shares for early hoeing.

At Stand No. 118 there was an interesting collection of corn and seed drills; a Monarch drill, cultivator, and broadcast seeding machine combined; and a variety of horse hoes, the exhibitors being Messrs. L. R. Knapp and Co., Thames Valley Iron Works, Clanfield, R.S.O., Oxon

The chief item on the stand of Messrs. J. D. Allan and Sons, Culthill Implement Works, Murthly, Perthshire, was a new implement in the form of a potato dresser, which can be adapted for cleaning and sizing all kinds of seeds, grain, bulbs, and gravel.

Mr. W. Cook, Yaxley Works, Peterborough, was represented by a National elevator or stacker, the Paragon elevator, specially built for thrashing machine owners, and the Farmer's Friend sack-lifter.

An elevator also figured among the exhibits of Messrs. Cornish and Lloyds, Ltd., Bury St. Edmunds, who also showed a safety feeding lever chaff cutter, the bagging elevators of which are of a new type, which prevents blocking when cutting damp or short chaff.

Messrs. T. Hunter and Sons, Alloway Road, Maybole, Ayrshire, exhibited improved double mould or drill ploughs and harrows, including a Dickson double drill turnip cleaner; improved disc delivery double row drills for turnip and mangolds; and Anderson's patent scarifier.

Messrs. Bamford and Sons, Leighton Iron Works, Uttoxeter, had, as usual, a most comprehensive display of their manufactures, the well-known Royal mowers, Lion horse rakes, and the Rapid grinding and crushing mills being shown in various sizes, whilst there was a big display of chaff cutters.

A horse hoe, fitted with simple lifting lever arrangement, for root crops either on flat or ridge, together with an elevator and malt kiln floor tiles comprised the exhibits of Mr. J. H. Cornish, North Norfolk Iron Works, Walsingham.

A clip fork elevator for stacking or lifting hay, &c., to a stack by horse or engine-power, which can be managed by a lad was a feature of the stand of Messrs. Yorath, Grieves, and Co., 17, Quay Street, Cardiff.

A couple of interesting exhibits took up the stand of Mr. Oliver Rix, Eagle Iron Works, Sculthorpe, Fakenham. They were the well-known "King" elevator or stacker, for hay and corn, and an improved iron folding hurdle.

Single and double endless bands for thrashing machines, and indiarubber bands of various sizes and lengths, together with leather belting and laces, wire bound hose, boiler cleansers, and other necessities needed by users of machinery, comprise the stand of Messrs. George Thurlow and Sons, Ltd., Stowmarket, Suffolk.

The Lincoln Steel Castings and Vacuum Brake Company, Ltd., Sibthorp Old Mansion, Lincoln, entered for the new implement competition high speed steel cast ploughshares, and these together with steel castings were exhibited at their stand, No. 43

Engines.

The exhibits of Messrs. Richard Garrett and Sons, Ltd., of Leiston, Suffolk, consisted of six and seven horse-power traction engines, a thrashing machine, a portable engine, a steam motor tractor, and a clover-seed huller.

Messrs. W. H. Willcox and Co., Ltd., 23, 32, 34, and 36, Southwark Street, London, S.E., supply practically everything required by engineers in the way of repairs, and at Stand No. 190 they had a representative display of their wares. These included the Penberthy injectors for traction and portable engines and pumps, lubricating oils, leather belting, packings, and jointings of every description, asbestos, engine and boiler fittings, pulley blocks, hoists, &c.

A steam plough for six furrows, fitted with patent axle balance gear, was a prominent feature at the stands (Nos. 200 and 202) of Messrs. J. Fowler and Co., Ltd., Steam Plough Works, Leeds, whose other exhibits included a ploughing engine, a road locomotive, road roller, traction engine, and traction waggon.

Messrs. Savage Bros., Ltd., St. Nicholas Works, King's Lynn, confined their exhibits to two items, viz., a four horse-power tractor, which hauls 10 tons up a gradient of 1 in 10, and a steam

motor wagon of 1907 design, for which it is claimed it will take a load of 10 tons on trailer and wagon up a gradient of 1 in 12 with ease.

Messrs. Davey, Paxman and Co., Ltd., Standard Iron Works, Colchester, exhibited six and seven horse-power traction engines, a four horse power steam tractor, and a compound road locomotive for hauling purposes.

The celebrated Ivel motor was shown at Stand No. 231 by the Ivel Agricultural Motors Ltd., 45, Great Marlborough Street, London, W. The specimen shown was one of 18 to 20 horse power, and was fitted with an "Ivel" patent vapouriser, so that the machine can be run on paraffin, alcohol, or petrol. A plough suitable for hauling behind the motor, and which could be used either as two or three furrow, was also shown by the company.

The Britannia Engineering Co., Ltd., Britannia Works, Colchester, had a couple of their well-known oil engines at Stand No. 233, one suitable for electric lighting purposes, and the other for pumping, this being capable of delivering 2,000 gallons of water per hour.

Messrs. H. P. Saunderson and Co., Ltd., Elstow Works, Bedford, manufacturers of the well-known universal motor, entered two new implements, one being a new type of the agricultural motor for general work and for working all kinds of farm implements, and the other a new air-cooled type of motor engine. These were shown at Stand No. 239, where, of course, the Universal Motor was much in evidence.

The Campbell Gas Engines are known in every part of the country, and those who had not seen them at work had an opportunity of doing so last week, for at Stand No. 270 the Campbell Gas Engine Co., Ltd., Kingston, Halifax, showed a 20 b.h.p. gas engine, and also a Campbell horizontal oil engine of 18 b.h.p. working load and 20 b.h.p. maximum load.

Messrs. T. G. Slipper and Co., Brundall, Norwich, were represented by a couple of petrol engines, one of two and the other of seven horse-power, the latter for agricultural purposes and the former for driving pumps, &c., whilst they also showed a portable engine designed for general farm work. All were manufactured in the United States.

The next stand was in the occupation of Tangyes, Ltd., Cornwall Works, Lincoln, who had a representative display of their gas, steam, and oil engines, together with pumps, jacks, &c.

A couple of wind engines on four-post steel tower, one 40 ft. high and the other 30 ft., were the principal exhibits of Messrs. Wakes and Lamb, Mill Gate Works, Newark-on-Trent. They also showed a grinding mill and a 4 cwt. friction hoist.

Messrs. Boulton and Paul, Ltd., Rose Lane Works, Norwich, make a speciality of windmills for pumping and driving machinery, and some of these were shown at their stand, but chief interest naturally centred in the new implement—viz., a diaphragm pump for pumping water, manure, sand, or grit. It is claimed to be unchokable and frictionless.

Fencing and Gates.

A variety of good and at the same time cheap fencing for various purposes was shown by the Economic Fencing Co., Ltd., Billiter House, Billiter Street, London, E.C., whose Peignon patent chestnut pale fencing is so well known.

Samples of combined wood and wire fencing, together with sheep fencing and wicket gates of a similar description, were displayed at Stand No. 68 by Messrs. Cardon and Cresno, 61 and 62, Chancery Lane, London, W.C.

A large variety of gates and a set of improved gate hangings, which were entered for the new implement competition, were shown by Messrs. P. Patrick and Son, Wharfedale Saw Mills, Otley, Yorks.

Messrs. Hill and Smith, Brierley Hill Ironworks, Brierley Hill, had a good show of fencing hurdles and unclimbable railings, together with gates of various descriptions. These were shown at Stand No. 137, whilst at No. 302 the same firm exhibited a capital hay shed, a bicycle hut, and piggery, as well as sheets of galvanised corrugated iron.

The "Pittsburgh Perfect" electrically-welded fences, manufactured by the Pittsburgh Steel Company, Pittsburgh, U.S.A., were the feature of the stand occupied by Mr. T. Page, Bottesford, Nottingham. These fences are made of a specially-tested, heavily-galvanised steel wire, and a special advantage is that they possess no exposed rods to invite rust, and no wraps to hold moisture, whilst being electrically welded, the strength of the fence is materially increased.

Messrs. English Bros., Ltd., Wisbech and Peterborough, had a large display of creosoted wood fencing for various purposes, also creosoted field gates and posts, whilst other kinds of gates and fencing were also shown, including English oak fencing and field gates.

Miscellaneous.

Drinking troughs, including an automatic one, which was entered in the competition for new implements, comprised the exhibits of Mr. A. C. Mundt, 102, Fenchurch Street, London, E.C.

Carts of various descriptions and floats for farm and dairy purposes, together with wheelbarrows help to make up an attractive stand at No. 126, the exhibitor being Mr. George Ball, North Kilworth, Rugby.

A large show of carts for various purposes was also to be seen at Stand No 147, the exhibitors being Messrs. Hayes and Sons, Scotgate Works, Stamford, and Seagrave Road Earl's Court, S.W.

Messrs. J. H. Keyworth and Co., 35, Tarleton Street, Liverpool, entered a couple of interesting new implements, one was an improved neck yoke and collar coupling, and the other a patent combination of ploughing crupper and backband, consisting of four straps and a crupper dock which parts from the crump off to both sides of the horse to above the girth and down the hip. There are meter carriers for connecting to the traces, on which are patent fittings preventing entanglement, and having buckles to regulate the size. The front carrier does entirely away with the ordinary ploughing backband, and has rein rings for the reins to pass through. There is no weight on the back when working, the cruppers acting for a double purpose, as they carry the traces in two places, thus preventing the horses getting their legs over the traces. No extra weight on the back, and the ordinary ploughing backband done away with.

The Bristol Wagon and Carriage Works Co., Ltd. Lawrence Hill, Bristol, had on show about eighteen carts, wagons, vans, &c., ranging from a pony cart, costing £17 5s., to a game van offered at £107 10s., and between these were dairy floats, market carts, and a new patent roller tip wagon.

Messrs. G. Lewis and Son, Queen Street Iron Works, Kettering, had a variety of exhibits, for they comprised horse hoes, safety starters for oil or gas engines, sack barrows, and sack lifters; whilst they had a milk lifter for coupling milk cans or churns with tank for supplying separators, &c.

One need hardly mention what comprised the exhibits of Messrs. J. Rands and Jeckell, Ipswich, for their rick cloths and stack sheets, sheep and lamb sheltering cloths, and waterproof covers of various descriptions are so well known and extensively used. Their display was evidently worthy of their reputation.

A large variety of waterproof covers also formed the major portion of the stand of Messrs. W. Singleton and Flint, Newland Works, and St. Mary Street, Lincoln, whose other exhibits included an assortment of brushes for machines such as tube, screen, &c. A farmers' scavenger and bass brooms, sacks of various descriptions, and samples of Singleton's improved waterproof for dressing and redressing covers.

Carts for distributing water and liquid manure with capacities ranging from 50 to 200 gallons, were the feature of the stand of Messrs. F. Randell, Ltd., St. Nicholas Works, North Walsham, Norfolk, but they also had on show a variety of barrows, tanks, &c.

Messrs. T. Glover and Co., Ltd., Eagle Works, Warwick, also had a representative display of carts, including milk floats, water carts, brewers' drays and floats, scavenging hand-carts, and other varieties of carts, whilst they devoted a portion of the stand to a display of the Little Eagle oil-engines, of from two to four horse-power.

Messrs. Penney and Co., City Steel and Iron Works, Lincoln, had a large display, their exhibits including patent adjustable corn screens, and other seed-cleaning machinery; and an improved potato separator, which riddles and divides the potatoes into three sizes at one operation. They also had some pumps, wheelbarrows, ladders, safes, &c.

Messrs. J. H. Peck and Co., Ltd., Tarpaulin Works, Wigan, Lancashire, had their usual comprehensive display of rick, stack, wagon and cart sheets, horse cloths, sacks and bags, &c., for which they have such a widespread reputation.

Messrs. S. M. Wilmot and Co., Albert Road, St. Philip's, Bristol, had a large collection of their specialities, these including improved lamb feeding troughs, sheep and pig troughs of various patterns, and cattle cribs and cattle troughs of all sizes and shapes; whilst cisterns, corn bins, and galvanised iron stable fittings were also included.

The Safety Water Elevator Co., 104, Leadenhall Street, London, E.C., were represented at Stand No. 281 with well gear or safety water elevators of three different sizes.

Although summer has not yet really put in its appearance, a glass of cider is none the less welcome, hence the stand of Messrs. J. Symons and Co., Ltd., Totnes, and Ratcliff, London, E., with its display of cider, perry, and the firm's Sydrina temperance beverages, was appreciated by many.

Cider and perry from an equally well-known firm—Messrs. H. Whiteway and Co., Ltd., The Orchards, Whimple, Devon, was on view in both cask and bottle at Stand No. 358.

An interesting feature of one of the two stands occupied by Messrs. Foster and Sons, Wisbech, was the display of their patent lockwing roofing tiles, which were shown on a temporary building. Their other exhibits included fencing and gates of various descriptions.

The Imperial Accident, Live Stock and General Insurance Co., Ltd., of 17, Pall Mall East, London, S.W., had Stand No. 401, and here exhibited pamphlets relating to the advantages of insuring horses, cattle, vehicles, &c., against accidents, and indemnity to employers against drivers' accidents, personal accidents; also workmen's compensation insurance and domestic servants.

LINCOLNSHIRE FARMERS AND THE GROWTH OF SUGAR BEET.

A largely attended meeting to consider the question of the beet-sugar industry in this country was held on Tuesday at the offices of the Lincolnshire Agricultural Society in the show ground. The principal speaker was Lord Denbigh, who has taken a great deal of interest in the question. The chair was taken by Mr. A. L. Jessopp, and he was supported by General Sir Mildmay Wilson, Mr. John Tomlinson, Mr. Bevis Coulson, Mr. W. Sneath, Mr. F. Godson, Mr. George Godson, Mr. S. Ellis Dean, Mr. W. H. Watson, Mr. W. S. White (chairman of the Lincoln Chamber of Commerce), Mr. Colin Campbell (chairman of the Lincolnshire Farmers' Union), Mr. R. M. Earl, Mr. A. W. Wellesley Dean, Mr. Joseph Greetham jun., Mr. Edward Tomlinson, Mr. R. Pattinson, Alderman W. S. Fox, and Mr. H. L. Lawrance. Mr. Ortwin Neagele, who has been giving expert advice, was also in attendance.

The chairman, in explaining the position, said that the meeting had been unexpectedly called together. At a meeting held at Sleaford some time ago it was practically decided to start the beet-sugar industry. The industry, if started, would not only have benefited the agricultural interest and the people who put money into it, but it would also have pecuniarily helped the labouring classes during the winter months. The committee completed all the necessary arrangements for the purchase of a site at Doddington, a most convenient situation, with an excellent water supply. It was near the districts where large quantities of beet would have been grown, and direct railway communication would have been available. Satisfactory rates with the railway companies had also been arranged.

Lord Denbigh remarked that our annual bill for sugar imported into this country was eighteen millions a year. Anyone who realised this must see that there was an opening for the sugar industry in this country. Unfortunately most people were ignorant about the matter, and very few really understood the question. His lordship went on to say that he did not think there was much danger of the direct bounties being resorted to, but if the Kartels were restarted they would do as much harm. The only hope of the farmer of this country lay in taking an interest in this great agricultural question and educating the people in this direction.

It appeared to him that it was a great pity that the question had been made a political one. When the Convention was agreed to by the late Government there was a great drought on the Continent and a shortage of 1,200,000 tons. The consequence was that sugar went up from 6s. to 12s. per cwt. This rise caused great loss and inconvenience to the confectionery trade. But it was absurd to abuse the Convention simply because the price rose. As a matter of fact, prices since the passing of the Convention had been lower than they were before.

If agriculturists wanted to see this great beet industry established they must show their interest in it as the confectioners did. Their only hope was in demonstrating that they had a real grievance, and in asking the help of their members.

Mr. White said that he believed that if they persevered they would be successful. For the present, and for the present only, they might allow the matter to stand in abeyance. But the question would in all probability be brought before the public in 1909. By that time they would know exactly what the Government were going to do, and what action Germany and France would take so far as bounties were concerned. Nevertheless, it was a great disappointment to have to drop their project for twelve months or so. It was of no use bringing people back to the land unless they were given profitable employment. He saw in the beet-sugar industry a remedy for the ills of agriculture.

Mr. Colin Campbell moved a resolution regretting the action the sub-committee had been compelled to take, and requesting the committee to call the guarantors together when the position of affairs justified them doing so.

Alderman Fox seconded, and the resolution was carried.

The Local Committee of the Oxfordshire Agricultural Society have selected Wednesday and Thursday, May 21 and 22, for the annual show next year at Abingdon. These dates will doubtless be confirmed by the General Committee.

SOCIETY ANNOUNCEMENTS.

SUSSEX COUNTY AGRICULTURAL SOCIETY.

MEETING AT HASTINGS, AUGUST 14 & 15, 1907.

ENTRIES for OPEN and LOCAL CLASSES close as follows:—
Agricultural Horses, Milking Trials, Dairy Cattle, Shorthorns, Sussex, Aberdeen-Angus, Jersey, Guernsey and Dexter Kerry Cattle, Southdown, and Kent or Romney Marsh Sheep, Wool and Butter close July 8.
(Post Entries at double fees, July 13).
Hunters, Hackneys, &c., July 15.
(Post Entries at double fees, July 20).
Harness and Jumping Classes finally close at noon, August 12th; Implements and Machinery, July 15.
Prize Schedules and Entry Forms on application.

F. B. DYER,
Secretary.

182a, High Street, Lewes.

THE EAST BERKS HORSE SHOW SOCIETY

will hold its 11th ANNUAL SHOW at Hawthorn Hill Race Course, near Maidenhead, on THURSDAY, AUGUST 22, 1907. Entries close July 30, or, with double fees, August 6. Schedules, &c., of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C. Telephone: No. 5148 Gerrard.

WALTHAM CROSS & THREE COUNTIES HORSE & FOAL SOCIETY

(Essex, Herts and Middlesex). President 1907, B. S. Faudel-Phillips, Esq. (High Sheriff of Herts). The ANNUAL SHOW will be held at Hartham Mead, Hertford (by permission of the Corporation of Hertford), on MONDAY, AUGUST 5, 1907 (Bank Holiday). Prizes and Cup to the value of over £500 will be offered, including a Challenge Cup valued 100 guineas (presented by R. W. Partridge, Esq.) and other prizes for Leapers. Entries close July 5. For schedules and entry forms apply to the Secretary, Mr. J. CRAWTER, Cheshunt, Herts.

HARROGATE & DISTRICT AGRICULTURAL SOCIETY.

President: HY. WILLIAMS, Esq., J.P.

Will be held JULY 25, 1907.

Horses, Cattle, Sheep, Pigs, Poultry, Pigeons, Four-in-hands, Jumping, &c.

Entries close July 18.
Schedules from the Secretary,
G. SAVELL.
Park View, Harrogate.

GAINSBOROUGH AGRICULTURAL SOCIETY.

ANNUAL SHOW,
MONDAY, AUGUST 5 (Bank Holiday).

£225 in Prizes.

Open Classes in Hackney, Hunter and Shire Horses, Driving, Jumping, &c. Entries close July 30. Schedules from
T. J. DIXON, Hon. Sec.

WEST GLO'STER FARMERS' CLUB SHOW.

DURDHAM DOWN, BRISTOL.

AUGUST 5, 1907
(Bank Holiday).

Open Classes Cart Horses, Harness Horses, Speed and Action.
£22 Open Jumping Class.

Entries close July 6.
Post Entries (double fees), close July 13.
HENRY NICHOLS, Secretary.
Iron Acton, and
26, Nicholas Street, Bristol.

ARUNDEL & DISTRICT HORSE, AGRICULTURAL, HORTICULTURAL and POULTRY SHOW,

at ARUNDEL CASTLE PARK, AUGUST 6, 1907.—For particulars, apply to E. J. MOSTYN, Estate Office, Arundel, Secretary Horse Show; or to C. BARTLETT, General Secretary, Tulchan, Arundel.

ROYAL LANCASHIRE AGRICULTURAL SOCIETY.

Patron: H.M. THE KING.
President: The Right Hon. THE EARL OF ELLESMERE.

1907 SHOW to be held at BOLTON on AUGUST 1, 2, 3, and 5.

£4,352 IN PRIZES.

Live Stock Entries finally close July 8.

Prize Lists, &c., from
EDWARD BOHANE,
Secretary,
Preston,
And Show Yard, Bolton.
Telegrams: "Bohane, Preston."

HIGHLAND & AGRICULTURAL SOCIETY.

GREAT SHOW at EDINBURGH, JULY 9, 10, 11, and 12.
T.R.H. the PRINCE and PRINCESS OF WALES will VISIT the SHOW on WEDNESDAY & THURSDAY.

ADMISSION.
Tuesday (during Judging), 8 a.m. to 5 p.m., 5s.
Wednesday, 8 a.m. to 5 p.m., 3s.; 5 p.m. to 8 p.m., 1s.
Thursday, 8 a.m., to 5 p.m., 2s.; 5 p.m. to 8 p.m., 1s.
Friday, 8 a.m. to 4 p.m., 1s.
Parades of Horses and Cattle.
Great Jumping Competitions.
Military Band and Pipers.

TRING AGRICULTURAL SOCIETY.

Patron—HIS MAJESTY THE KING.
President—
THE RIGHT HON. LORD ROTHSCHILD.

SHOW DAY,
THURSDAY, AUGUST 8, 1907.

£
200 SHIRES.
200 HUNTERS, HARNESS, and JUMPING.
450 SHORTHORNS, JERSEYS (one Cow can win £75), GUERNSEYS, MILK and BUTTER TESTS.
177 SHEEP, PIGS, SHEEP-DOG TRIALS.

Also Cups and Medals in every section.

ENTRIES CLOSE FRIDAY, JULY 5.

Schedules now ready. Apply to—
F. J. BROWN, Secretary,
41, High Street, Tring.

NEWBURY HORSE SHOW.

17th Annual Show.

AUGUST 21, 1907, on the Newbury Race Course.

Prizes range from £20 down and total in all about £350.
14 Classes Open to All England.
Schedules and all particulars of E. J. FORSTER, Sec., Broadway, Newbury.

WARRINGTON AND DISTRICT AGRICULTURAL SOCIETY.

President—Sir Gilbert Greenall, Bart.
Vice-President—Colonel Legh.

18th ANNUAL SHOW
To be held in
WALTON PARK, near Warrington,
on THURSDAY, AUGUST 15, 1907.
Prizes, Cups and Medals value £700.
Jumpers, Turnouts, Shires, Hunters, Cattle, &c., &c.
Prize List, &c., may now be obtained from the Secretary—
H. BERESFORD MELVILLE.
Estates Office,
Bold Street, Warrington.

ROYAL DUBLIN SOCIETY.

HORSE and SHEEP SHOW,
AUGUST 27, 28, 29, 30.
For Prize Lists and Entry Forms apply to the Agricultural Superintendent, Leinster House, Dublin.
(By Order) RICHARD J. MOSS,
Registrar.

MALTON AGRICULTURAL SOCIETY'S SHOW.—WEDNESDAY, JULY 24, 1907.

President: The Rt. Hon. Viscount Garnock. Entries close July 6. Special Prizes for Tenant Farmers' Hunters Brood Mare and Foal, Hackney Stallions, &c., &c. Schedules and entry forms on application to the Secretary—THOS. MITCHELL, The Mount, Malton.

MELTHAM & DISTRICT AGRICULTURAL SHOW.—The 16th

Annual Show will be held on JULY 27. Horses, Cattle, Sheep, Pigs, and Produce; Leaping, Driving, and Hunters; Dogs, Poultry, Pigeons, Rabbits, and Cats. Entries close July 20. Schedules and particulars from J. BRAMLEY, Secretary, Carlile Terrace, Meltham.

DURHAM COUNTY AGRICULTURAL SOCIETY.—President,

The Most Honourable the Marquis of Londonderry, K.G. The ANNUAL SHOW will be held on THURSDAY, AUGUST 15, 1907, in the picturesque grounds of Wynyard Park, Stockton-on-Tees (generously granted by the President). Upwards of £1,000 given in prizes for Horses, Cattle, Sheep, &c. Also two pieces of Silver Plate to cost not less than £25 each (the gift of the President) to be won outright in the classes for Shorthorn Cattle. Entries close Tuesday, July 30, 1907. Prize schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flass House, Durham. Prize schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,
WM. CHRYSTAL.
Houghton-le-Spring.

COLESHILL HORTICULTURAL and HORSE SHOW,

TUESDAY, AUGUST 6, 1907.
Jumping, Driving, Hunters, Turnouts, &c. Nearly £170 in prizes.
Entries close July 23, 1907. For schedules, apply to—
W. H. M. BARTON, Secretary.
Coleshill, near Birmingham.

CAMBS. AND ISLE OF ELY AGRICULTURAL SOCIETY.

Forty-fourth Annual Show at Cambridge, JULY 18, 1907.
Nearly £700 offered in prizes. 94 Classes. Over 200 prizes. Classes open to all England.
Schedules and Forms of Entry sent post free on application to
R. PETERS, F.C.I.S., Secretary,
7, Downing St.,
Cambridge.

MID-KENT AGRICULTURAL ASSOCIATION.

12th SUMMER SHOW at MOTE PARK, MAIDSTONE (by kind permission of Sir Marcus Samuel, Bart.), JULY 10, 1907.

Prizes offered for Shire, Hackney, Harness Horses and Hunters, Horses, Cattle, Sheep, Poultry, &c., and Agricultural Implements Jumping Competitions—35 Classes open to the World.
List of Prizes, Entry Forms, and Terms for Ground Spaces may be had of the Hon. Secretary.
G. TYRWHITT DRAKE,
Hon. Sec.,
36, High Street, Maidstone.

NORTHUMBERLAND AGRICULTURAL SOCIETY.

TYNEMOUTH SHOW,
THURSDAY AND FRIDAY,
JULY 18 & 19, 1907.

£1,000 IN PREMIUMS.
Prize Lists on application to the Secretary—
W. J. BOLAM, Land Agent,
Berwick-on-Tweed.

GREAT YORKSHIRE SHOW AT BARNSLEY

AUGUST [illegible]
£2,000 offered in Prizes.
Late Entries [illegible]
For Prize Schedules & Forms of Entry apply to
JOHN MACKAY, Secretary,
Blazer Street, York.
Telegrams: "[illegible] York."
Telephone 617.

THE PETERBOROUGH AGRICULTURAL SOCIETY, 1907.

Patron: HIS MAJESTY THE KING.
President for the year:
GEO. C. W. FITZWILLIAM, Esq.

ANNUAL SHOW

Of Horses, Cattle, Sheep, Pigs, Implements, Butter, &c., will take place at PETERBOROUGH on TUESDAY, WEDNESDAY, and THURSDAY, JULY 9, 10, and 11.

About £1,400 in Prizes.

Schedules, Forms of entry, and particulars may be had on application to
J. E. LITTLE,
Secretary.
Offices: Queen Street, Peterborough.

GREAT CHESTERFORD COLT and FOAL SHOW,

JULY 4, 1907.

Open Classes: Horses, Hackneys, Hunters, Jumping.

Schedules: W. C. EMSON, Hon. Sec., Strethall Hall, S. Walden, Essex.

WIRRAL and BIRKENHEAD SHOW

(President: Alfred H. Read, Esq.),
At BEBINGTON, JULY 10 and 11,
Champion Prize No. 21, should read: For the best Shire Filly (Foal, Yearling, or Two-year-old), District Competition; other conditions as per schedule.—ARTHUR H. EDWARDSON,
Secretary.
6, Hamilton Square, Birkenhead.

THE CLEVELAND AGRICULTURAL SOCIETY.

The 74th Annual Show will be held at Redcar on
WEDNESDAY, JULY 31.

Nearly £400 in Prize Money and Specials. Schedules from THOS. TURNER, Agent, Eston, R.S.O., Yorks.

SOUTH Durham and North Yorkshire HORSE, CATTLE AND DOG SHOW.

JULY 17TH, 1907.

Comprehensive Classification and Liberal Prizes for
Horses and Ponies, Shorthorn and Grazing Cattle, Wensleydale and Crossbred Sheep, Dairy and other Produce, Sporting and Non-sporting Dogs.

Many New Classes in all Sections of the Show.

ENTRIES CLOSE JULY 8th.

Schedules sent post free on application to the Secretaries, W. PARLOUR (Horses, &c.) and G. CLARK (Dogs), 6, Arden Street, Darlington.

WELSH NATIONAL AGRICULTURAL SOCIETY,

President:
The Rt. Hon. the EARL OF PLYMOUTH,
Will hold its
ANNUAL SHOW OF STOCK AND IMPLEMENTS,
At ABERYSTWYTH,
On JULY 23rd and 24th, 1907.

Over £1000 in PRIZES.

N.B.—There will be an AUCTION SALE of STOCK on the second day of the Show, JULY 24th.
Schedules and further particulars from the SECRETARY, Cambrian Chambers, Aberystwyth.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an Inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

HEATH HOUSE, NOCTON, LINCOLN.

THE DOWSBY HALL

Shorthorn Herd and Lincoln Long-wool Flock,

THE PROPERTY OF

Messrs S. E. DEAN & SONS, Dowsby Hall,
Bourne, and Heath House, Noctor, Lincolnshire.

Important Sale of SHORTHORN CATTLE and LINCOLN LONG-WOOL SHEEP

from this celebrated Herd and Flock on

FRIDAY, JULY 12TH, 1907,

The day after the Riby Sale, by

JOHN THORNTON & CO.

(In conjunction with Messrs. SAUL),

on the premises at Heath House, Nocton, aforesaid. A choice selection of 50 Shorthorns, which comprise many fine specimens of BATES BLOOD of the famous

DUCHESS, WATERLOO, OXFORD, THORNDALE ROSE, AND WILD EYES TRIBES.

Bulls from the Herds of Mr. C. R. Lynn, the late Mr. Jonas Webb, the late Mr. W. S. Marr, and Lord Lovat have been largely used.

The Stud Bull BARON BROADHOOKS 90785 (sire of many of the calves), bred by Lord Lovat, will be on view.

The 75 Lincoln Long-wools will consist of 50 Yearling Rams and 25 Yearling Ewes, and include this year's prize-winners.

The successwhich this flock has obtained at the Royal, Lincolnshire, Smithfield, and other Shows will commend this selection to breeders at home and abroad.

The LINCOLN BREED CUP and the £50 CHAMPION PLATE at Smithfield for all Long-wool Breeds have been won by this Flock the last four years in succession, and each year the Breeder's Gold Medal.

Sale after 11.30 Luncheon.

A train will leave Stallingboro' Station after the Riby Sale, on Thursday, July 11th, for Lincoln. Messrs. S. E. Dean & Sons will be pleased to welcome their Colonial and Foreign friends on Thursday evening, at the SARACEN'S HEAD HOTEL at Lincoln.

Particulars as to train service, &c., in Catalogues, which may be had of Mr. A. W. Dean, Dowsby Hall, Bourne; Mr. J. H. Dean, Heath House, Nocton, Lincoln; of Messrs. Saul, Auctioneers, Bourne; and of JOHN THORNTON & Co, 7, Princes Street, Hanover Square, W.
Telegrams—"DEAN'S NAVENBY."

FRIDAY, JULY 19, 1907.

THE

WATERS' PLACE HAMPSHIRE DOWN FLOCK,

The Property of Mr. T. FOWELL BUXTON.

Registered in the Hampshire Down Flock Book.

NOTICE OF SALE OF THE

GRAND BREEDING FLOCK

OF ABOUT

500 EWES in ages,
150 EWE LAMBS,
70 RAM LAMBS and
20 Older RAMS,

AND WHICH

Messrs. WATERS & RAWLENCE

(in conjunction with Messrs. JACKSON & SON)

are instructed to SELL by AUCTION, at Waters' Place Farm, two miles from Ware (Hertford Branch), and three miles from Roydon (Cambridge Line) Stations, G.E.R., on FRIDAY, JULY 19, 1907.

The dispersal of the Waters' Place Flock is undoubtedly one of the chief attractions of the season in the Agricultural World; it comes at a time when the Hampshire Down Breed is very much to the front, both at home and in all mutton producing countries, as it every day becomes more apparent that no breed of sheep is so valuable for producing the finest quality of mutton, in the shortest possible time as the Hampshire Down, whilst they readily adapt themselves to all climates, and for crossing purposes are unrivalled.

Messrs. Waters and Rawlence have fixed the Sale at the earliest possible date to accommodate all foreign buyers, and as regards English Breeders it is well known what wonderful results have been attained by the introduction of Waters' Place Blood, and the Auctioneers are satisfied that they will get the most genuine support from the leading Flockmasters, whilst to those desirous of establishing a Flock of this popular Breed such a chance may rarely, if ever, occur again.

Conveyances will meet the trains at the above stations.

Sale at 12 o'clock. Luncheon will be served during the Sale.

Catalogues of Mr. J. H. HURFORD, Waters' Place Farm, Ware; of Messrs. G. JACKSON & SON, Auctioneers, Hitchin; or of WATERS & RAWLENCE, Canal, Salisbury.

Lincolnshire Notes.

THERE is only one subject of interest this week. The show of the Royal Society has been a distinct success despite the sternest threats of the weather. Fortunately the meteorological bark was worse than its bite, for after Tuesday morning, or to be correct, from the moment of the King's arrival, the sun has shone gloriously, and all has gone merry as a marriage bell. The extra half-crown day will more than compensate for the loss of attendance on the first two days, and altogether the show will be accounted a historic success.

LINCOLNSHIRE figured well in the prize lists. The special breeds of cattle and sheep were a much noticed feature of the show. The Shorthorn Society's bull championship went to Mr. B. Rowland, of Wainfleet, while a similar award for cows was won by Mr. J. G. Williams. Mr. Rowland was also the favoured competitor for the Lincolnshire Agricultural Society's special prize for red bulls.

BUT the sensation of the section was the success of Mr. J. Evens in the dairy classes. Mr. Evens practically swept the deck. He brought two novitiates into the ring, who both beat the celebrated Burton Violet in the milking competitions. His famous animals took all before them, and Mr. Evens can now claim to possess the most valuable dairy herd in the kingdom.

THE exhibition was described as the best all round that has ever been seen of the Lincoln Reds. The animals were numerous, more uniform in build, and better in quality than anything that has ever been put into the ring. This is a fact worth all the trouble of the Royal Society's show to achieve.

THE Lincoln sheep are described as not merely a satisfactory, but a most extraordinary show. In one class, that for shearling rams, there were no fewer than 150 entries, and the competition was exceedingly keen. The exhibits were a very smart lot and thoroughly representative, but heavier sheep have been received from the Lincolnshire flockmasters.

THE championship created a spendid competition, and the winner was a fine two-shear ram, which had been bred by Messrs. R. and W. Wright, of Nocton Heath. The animal was sold for exportation to Buenos Ayres, but his purchaser, Mr. F. Miller, kept him back to show him in England.

LINCOLNSHIRE Agricultural Society's special prize went to the representatives of Mr. C. E. Howard's noted flock at Nocton Rise. The shearling ram was a fine animal belonging to Mr. Henry Dudding, of Riby Grove.

THE four classes of Lincolnshire Curly-coated pigs brought out some wonderfully big animals. The best in the section was undoubtedly the splendid 70-stone boar of Mr. J. Ward, of Spalding, which came in for much admiration. But generally speaking the pigs were heavy, well bred, and full of promise to the butcher.

BUT Lincolnshire figured fairly prominently in the open classes. Mr. Robert Chatterton, of Stenigot, came a good second to his Majesty in the class for Shorthorn two-year-old bulls, and Mr. Dudding was commended in the same section, as well as in that for Shorthorn heifers. The Earl of Londesborough, from his Blankney estate, received commendation for Captain Warrior, his splendid Devon bull. Messrs. H. Dudding and R. Booth were commended in the list of Shorthorn bulls calved in 1905.

AMONGST the horses Mr. H. B. Addey, of Claythorpe, Alford, was awarded third prize in the hunter filly class, 1906, and Major Kenton, the member for Gainsborough, received first prize for hunter filly, 1904, Mr. R. W. Riggall, of Ulceby, coming second. In the mare class Mr. K. Surfleet, Beckingham, Gainsborough, was placed reserve, while in the filly foal class the same gentleman's exhibit took first place. In the colt foal class Mr. G. Cartwright and Son, Dunham-on-Trent, took second prize, and Mr. J. W. Davy, of Great Carlton, Louth, was placed in the reserve.

SO that altogether it was a brave list, and one doing credi tto the county. As to the show itself, it has been a liberal education for many an experienced agriculturist. The arrangements have been all but perfect, the show has proceeded without a hitch, and everybody is congratulating everybody else. The society have had some very appreciative things to say of local enterprise, and Lincolnshire has returned the compliment by the assurance that it will ever remember and never regret having been the centre of the Royal Show of 1907.

June 28, 1907.

Distemper in Dogs.

The President of the Board of Agriculture and Fisheries has appointed a committee to inquire into the nature of distemper in dogs in Great Britain and the methods of its infection, and to report whether any—and, if so, what—preventive or remedial measures, exclusive of ordinary medical treatment, can with advantage be taken with respect to it.

The committee is constituted as follows:—The Duke of Beaufort, the Lord Middleton, the Lord Leconfield, Sir John McFadyean, M.B., B.Sc., M.R.C.V.S., Mr. Edward Barclay, Mr. Stewart Stockman, M.R.C.V.S, Chief Veterinary Officer to the Board of Agriculture and Fisheries, and Mr. William Musgrave Wroughton.

The chairman of the committee will be the Lord Middleton, and Mr. James Ralph Jackson, M.R.C.V.S., Veterinary Inspector, Board of Agriculture and Fisheries, 4, Whitehall Place, S.W., will be secretary.

The cost of the inquiry will be defrayed by subscription and guarantees, and no charge in respect of it will fall upon public funds.

On Tuesday Earl Carrington and Mr. John Burns discussed with representatives of various municipalities the position of local authorities with regard to the promotion of forestry. Mr. Burns assured the conference that the Local Government Board would co-operate with the Board of Agriculture in furthering any practical scheme of afforestation; and, as President of the Local Government Board, he should be pleased to consider any applications for additional borrowing powers or other facilities sought by municipalities.

Fertilisers and Feeding Stuffs.

Fertilisers and Feeding Stuffs at the Lincoln Show.

With the exception of a few important exhibitors, these two branches of industry were, as on previous occasions, poorly represented at the show. It would appear that the manufacturers of these important agricultural commodities do not consider that the advantage of exhibiting would compensate them for the trouble and expense. They thus miss a unique opportunity of getting into direct touch with new buyers and of cementing friendship with old customers.

A description of the exhibits will be found in our general report of the show.

From another point of view one would have thought that it would have been worth the while of the manufacturers to take a more practical interest in the show. We often hear it said that in questions connected with the trade they do not receive from the authorities and the public the consideration due to the importance of the services rendered by them to agricultural circles, and we are inclined to agree with them in this respect.

If they would utilise such occasions as the Royal Show to bring their trades into more prominent notice and to illustrate their general importance, it might be expected that there would be less reason for them to complain of such neglect.

Appearance of Plants as Guide to Supply of Fertiliser.

Insufficiency and light colour of leaves indicate deficiency of nitrogen. Excess of foliage, on the other hand, indicates too large a proportion of the stimulator fertiliser, and may be counteracted by supplying more potash.

Sourness, softness, and lack of colour in the fruit may be corrected by the same means. It should be borne in mind that any excess of potash is not subject to loss as in the case of nitrogen, but remains in the soil until utilised by the crop.

This may also be said of phosphate of lime, but not so of nitrate of soda, which is so extremely active and soluble that it is liable to be lost if not taken up by the plant during the first season.

The manufacture of sulphate of ammonia from coke oven works is developing in a remarkable manner. Last year it reached the quantity of 43,677 tons, against 30,732 in 1905, 20,848 in 1904, 17,438 in 1903, and 15,352 in 1902.

Concentrated Foods for Dairy Cows on Pasture.

It is generally assumed, and naturally so, that there is an advantage in supplying cows on pasture during summer with a small ration of concentrated foods, especially during the later portion of the hot weather.

However, if one can judge from the result of experiments conducted by the Armstrong College, and published in Offerton Bulletin No. 2, it would appear that the cost of the extra foods is not compensated for by a corresponding improvement in the yield of milk or by the gain in weight of the animals.

The period during which the trial was conducted was twelve weeks, from June 19 to September 12, divided into two periods of six weeks. Lot I. received during the first period—

2 lb. maize meal.
2 ,, Bombay cotton cake.
2½ ,, straw chaff.
Grass.

Second period :—

4 lb. maize meal.
4 ,, Bombay cotton cake.
3 ,, straw chaff.
Grass.

Lot II. received only grass.

The concentrated food and chaff given to Lot I. were made into "crowdy" and fed to the cows twice a day, before the noon and evening milkings. The cows had access to water at all times, being out night and day except at milking times.

It was found that the milk of the cows getting only grass was as good as that of the cows receiving the concentrated foods in addition to the grass, and, taking the results all round, it is claimed that the experiment clearly shows that on pasture of average quality it is inadvisable to give much concentrated food to milking cows, having regard to the yield and quality of the milk only, and that it is doubtful whether any such food should be used at all, except a small amount perhaps towards the end of the summer.

The general conclusions of this important experiment are summarised as follow :—

1. The advantage of giving dairy cows which are out on grass during the summer months a supplementary ration of from 4 to 8 lb. of concentrated food, consisting of Bombay cake and maize meal, is exceedingly small as regards the yield of milk, provided the pasture is of average quality.

2. Any small benefit derived from concentrated food so employed is observable only towards the end of the season, when the pasture is beginning to become stale and the nights cold.

3. Having regard to actual profit, it is doubtful whether any concentrated food of this description should be used at all on grass during the summer, provided always that the pasture is of average quality, the season normal, and the cows in a healthy and thriving condition. It is certain that these experiments conclusively show that the cost of the concentrated food, when used at the rate of from 4 to 8 lb. per cow per day, is out of all proportion to the value of the increase in the milk yield, which occurred only towards the end of the season.

4. The cows receiving nothing but grass gave, relatively, a much more profitable return than those which were supplied with concentrated food, the milk costing nearly double to produce in the latter case what it did in the former.

5. To increase the concentrated food as the season advances is not to be recommended, for it does not, except temporarily, cause an increase in the milk or even check the fall in the yield which always takes place as the lactation period advances, while owing to the extra cost of the food the profit is relatively reduced.

6. As regards the quality of the milk, there does not seem to be any advantage whatever, on the average, from using concentrated food on pasture of the description employed in these experiments. The quality of milk is mainly dependent upon the character of the cows, and, provided the animals receive adequate nourishment, no increase in the ration is likely to affect the quality to any appreciable extent.

7. It is not to be assumed that concentrated food given to cows on grass necessarily causes an increase in the live-weight of the cows, and that what is not recovered in the milk is always, even partially, recovered in this form, as is undoubtedly the case when cows are indoors. Cows receiving concentrated food under these conditions may on occasions actually lose more weight than those which receive none.

8. On the principal point under discussion—viz., the effect of an extra allowance of food on the quantity and quality of milk generally—these experiments confirm those previously carried out at Offerton, and show that on the average, whether cows are indoors or on pasture, provided the cows

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).										
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d
Ammonia, organic as in Guano and Bones	17 6	12 6	15 0	—	—	12 6	—	—	15 0	15 0	—	—	—
,, in Sulphate of Ammonia ...	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
,, calculated from Nitrogen in Nitrate of Soda ...	—	—	—	13 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	—	—	2 0	—	—	—	2 0	—	2 0	2 0	—	—	—
,, assimilable	1 6	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
,, insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercia cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soi and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June 1906.

Cakes and other Feeding Stuffs.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.		s. d.
Albuminoids	2 8	to	3 0
Oil or fat	2 8	,,	3 0
Carbohydrates	1 1	,,	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.			Feeding units.
Albuminoids	22·1	×	2½	= 55·2
Oil	5·2	×	2½	= 13·0
Carbohydrates	33·2	×	1	= 33·2
Total feeding units				101·4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

receive *enough food to keep them in a thriving condition*, there is no advantage, having regard to profit, in giving them more than this. Presumably, when cows are fed on fairly good grass in the summer, they do not require much additional artificial food, and when such is supplied it is at a loss as far as the milk is concerned. Confirmation is also given to the conclusion previously formed that no addition to the food could prevent, except temporarily, the falling off in the milk yield as the lactation period advances, and there is nothing in these results which makes it necessary to modify the suggestion that in general the most economical method of feeding cows would be to make the amount of food supplied largely dependent upon the amount of milk produced, provided that the cows are at all times adequately fed.

Clover Mildew.

Some clover plants, believed to be attacked by a fungous disease, were found by the Board of Agriculture expert to be suffering from clover mildew. Summer spores are formed throughout the season, these enabling the disease to spread with great rapidity. In the autumn, winter spores are produced on the dead leaves lying about, and these commence the disease the following season.

Ploughing before the winter spores are produced is the most certain remedy. After the spores are formed in the autumn ploughing is of no avail, as the buried spores retain their vitality for some years and are certain to come to the surface again sooner or later. The fungus is common on many leguminous weeds, and such should therefore be kept down.

Prices of Fertilisers.

The season's demand for plant foods in the shape of fertilisers is now dragging along to its close, but it is noticeable that prices, instead of showing a tendency to be lower as is usually the case when orders are few and manufacturers anxious to clear out, remain remarkably firm.

This is due to the condition of the market for the raw materials used by manufacturers of fertilisers; phosphate of lime especially is very firm in price, and it is said that important chemical-manure makers both on the Continent and in this country have entered into contracts for supplies over several years ahead at a high range of values.

Nitrate of soda and sulphate of ammonia, for forward delivery, are also dearer, so that we fear farmers must expect to pay more for their supplies.

The demand throughout the world is enormous, and is continuing to increase by leaps and bounds to an extent that the energies of the providers of the raw material and of the manufactured articles are taxed to the utmost to cope with it; and then labour, freights, coal, bags, all cost more money, with the results which are reflected in the high prices shown in price lists.

A Year's Importation of Fertilisers into the United States.

	1905 6. Tons.		1904-5. Tons.
Guano	19,300	...	34,400
Phosphate, raw	31,000	...	131,000
Nitrate of Soda	374,000	...	282,700
Bones	4,000	...	5,500
Potash Salts	379,000	...	240,000
Fertilisers, not classed	128,000	...	130,000
	935,300		824,300

The large increase of nitrate of soda and potash salts may be noted. The U.S. supplies of phosphate come from their own mines in Florida and Tennessee, and they have the advantage of enormous quantities of nitrogenous material from the slaughterhouses in Chicago, St. Louis, and other places.

Horse Shows are now coming on. Get at once **Mott's Condition Powders & Powder Lotion** and have your Horses fit. As used in all the leading studs in Great Britain. **Mott' Grease Cure** 4 dozen 47s., 1 dozen 12s., sample packets 1s. 3d. **Mott's Condition Powder,** 21s., 11s. per case. Sample tins, 5s., sent carriage paid.

THE STANDARD

FOR QUALITY—PURITY—ECONOMY.
It carries the Highest Guarantee.

Of Practice & Science.

The remarkable success of **Silcock's Fattening Cake** has brought it to the forefront as a **Standard Food** for rapid and economic fattening. Breeders and feeders speedily realised the benefit to be derived from using a cake compounded specially for one purpose, and the enormous demand has taxed their extensive mills and machinery to their utmost. It has done more, however; it has produced the inevitable crop of imitators. These camp-followers of every successful pioneer are remarkably alike in their methods.

We ask you to consider the following points:—

WHY do they claim that their cake is just as good as Silcock's?

WHY do they make their cake look like ours?

WHY do they sell at a slightly lower price than ours?

BECAUSE Silcock's Fattening Cake is recognised as a Standard Food for fattening Cattle and Sheep.

BECAUSE ours is a good-looking cake and is as good as it looks.

BECAUSE they can well afford to do so, for their cake is not as good as ours, or anything like as good as it looks.

Purchasers of these foods are really buying a more expensive and much less valuable food. Remember that analysis and feeding value are not identical. You may get an analysis as high as ours, but the feeding value may be much lower, for it is possible to produce a cake, showing a good analysis and yet of poor feeding value, either from the use of unsuitable or unsound materials.

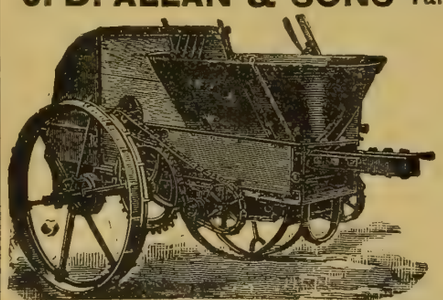
We make only one quality—the best.
We test the cake regularly in our Laboratory and at our experimental farm.
We guarantee to pay the cost of analysis and three times the value of any deficiency, should such be found.

We use only the best and purest materials.
We are among the largest buyers of raw materials in the market, buying for cash at the lowest price
We have our mills equipped with the most modern labour-saving machinery.

THEREFORE we can and do sell at the lowest possible margin of profit.

No Firm can supply a similar quality at a lower price than we quote.
. . . . . Lower Rates simply mean Poorer Cakes. . . . . .

BUY SILCOCKS FATTENING CAKE—THE STANDARD BRAND.



It is the best and cheapest on the market for quality and rapid fattening. Why buy imitations when you can secure the real article? You cannot lose, you will certainly gain, by using our brand, for we make one food do one thing well.

CAN WE SEND YOU A TRIAL ORDER?

THE LINCOLN ROYAL.

The lively anticipations of a week ago concerning the Lincoln Show of the Royal Agricultural Society have been more than realised. The interest taken in the show by the citizens of Lincoln and the farmers in the county of Lincolnshire have combined to make the 1907 show a great success. It was a foregone conclusion that the show as a show would be one of which any country might be proud, and would worthily represent "the stud farm of the world." but it was not at all sure that the show would be a success in other directions. The weather this year has been very much against all open-air fixtures, and the agricultural shows that have already taken place have suffered greatly from this cause. Fortunately the Royal experienced better weather, and although the numbers paying for admission have by no means created a record, they have been eminently satisfying, and once more prove that the future of the Royal Show lies in the provinces, not in a permanent showyard in the country or elsewhere.

The show of stock was a very comprehensive one—the various sections will be found dealt with in our critical report—but there are one or two things which specially strike the visitor from the Colonies and abroad. The institution of auction sales of live stock has become a very popular feature of the show, and led to a great amount of business being transacted in the showyard. It has its drawbacks, however, and this was to be seen more plainly, perhaps, among the Shorthorns than in any other section. An enormous entry of our premier breed was obtained, but a large proportion of them were not up to the standard of animals expected to be on view in the Royal showyard, many of them were admittedly sent for sale, and by no means properly represented the best of the British Shorthorns. The result was that the foreigner, seeing so many of what were comparatively poor specimens, did not form such a good impression of our live stock. This point is one which is worthy of serious consideration, and we shall hope to return to it on a future occasion.

The result of the Lincoln show must have delighted all those who have the interest of the society at heart, and it was a sign of the times that the annual meeting, in the words of one of the speakers, resolved itself into "a mutual admiration society."

This was in striking contrast to those held during the past few years, for in the past when the formal request was put from the chair asking for suggestions or improvements, the result was a torrent of criticism which frequently led to a certain amount of argument and wrangling.

The Royal Agricultural Society has now entered upon better times, and the successor of the second series of movable shows, which was so brilliantly commenced at Derby, has been maintained and accentuated at Lincoln.

Notes of the Week.

The Lincoln Show was indeed a Royal Show.

It seemed quite like old times, and as if the disastrous experiences at Park Royal were only a bad dream.

His Majesty brought fine weather with him on Wednesday, and everybody down to his humblest subject was pleased to see him.

It is said that no occupant of the Throne has been to Lincoln for over two hundred years.

Lincoln was *en fete* to receive the King. The decorations were exceptionally good, and the arches surmounted with the words "Lincoln's Wealth," over which a full-sized model of steam engines, a threshing machine, or a plough was peculiarly appropriate.

The show ground was very nicely laid out, but it was too big. Concentration would have been a virtue.

It was remarkable how quickly the heavy rains of the early part of the week dried away under the influence of the sun and wind.

The attendances were very good, and it will mean another nice balance on the right side of the book.

The stock was a good lot, but it was obvious that a large proportion of them were entered for sale only.

Anything really good was eagerly bought for South America, Lord Brilliant, a yearling Shorthorn, making 1,000 guineas in the sale ring.

Lincolnshire farmers visited the show in strong force, and their union was a striking object lesson of what can be done by combination.

There will be only one result with which they will be satisfied, and that will be a National Farmers' Union.

All honour to Lincolnshire for the good work they are doing.

Have you seen the flowers? was question to be heard on all sides.

Two large tents were occupied by the floral display, which was indeed magnificent.

This feature, which is only in its second year, was immensely popular—and deservedly so.

Now as to the future. Newcastle for 1908 has long been settled.

The Mayor of Gloucester was on the ground on Tuesday, and tendered an invitation for that city in 1909.

Local subscriptions have been obtained to the necessary amount, and, barring accidents, we shall be in the city on the Severn in 1909.

Manchester for 1910?

Anyway, this is the suggestion, and we hope it will materialise.

Following soon after the great show of the Royal Agricultural Society at Lincoln comes the important meeting of the Highland and Agriculture Society.

It opens at Edinburgh on July 9, and the officials of the society are looking forward to a great success.

The most important agricultural show on the Continent, that of the German National Agricultural Society, was recently held at Düsseldorf.

Considered as a nation the German people study and understand agriculture more than we do in England.

This is shown by the way in which they crowd into the shows. At Dusseldorf 235,870 people paid for admission.

Last year the show was held at a suburb of Berlin, when 326,000 visited the show.

Contrast this attendance with the result of our Royal Shows at Park Royal.

The son of the Emperor, Prince August William, opened the show amid great festivities, and spoke strongly in favour of agricultural interests.

We noted last week the mottoes of our Royal and Bath and West of England Societies.

The German Prince closed his address with a latin motto, very suitable to the occasion.

Nil melius, nil homine libero dignius quam agricultura :—

(Nothing is better, nothing more worthy to a free man than the pursuit of agriculture.)

Londoner on a Scotch mountain: "You have a fine view here, you can see a great way!" Scotch Shepherd: "Ay, ay, a ferry great way." "Ah, you can see America I presume." "Farrar than that." Farther than that? "Ye jist wait till the mists gang away and ye'll see the sun."

The weather prophets are now trying to console us with the prediction that it will be fine and sunny about the middle of August, and will be hot in September! Perhaps better late than never in the season.

A medical officer of health has protested against the butchers' practice of blowing out carcases to improve the appearance of the meat.

It is a most unpleasant idea, and involves danger to customers if the blowing is done by consumptive persons.

There is an active demand at present on the Continent for English horses, and good prices are being made.

At the sale at Chatteris the other day foreign buyers bought extensively. Some people are saying that all the best horses now go abroad.

Insect pests inflict great damage in this country, but in some parts of the world the injury they do is terrible. The Argentine Government has just appropriated two million pounds to combat the plague of locusts.

GENERAL MEETING OF R.A.S.E.

The customary meeting of governors and members of the R.A.S.E. took place at mid-day on Thursday under the presidency of Lord Yarborough, who said that was the first opportunity which he had had of speaking to a general meeting of members, and it gave him great pleasure to see such a large attendance. The weather was, unfortunately, not propitious on the opening day, but it delighted them to find such a magnificent day for the visit of his Majesty. It was quite "King's weather." He proceeded to acknowledge the whole-hearted manner in which the mayor and citizens of Lincoln had worked to promote the success of the show, as it was owing in great part to their efforts that the Lincoln Show was proving one of the finest that had been held. The attendance had been large enough to satisfy the hopes of all, and it was a matter for gratification that the attendance at that moment was larger than had been experienced at a similar hour on a half-crown day for many years. The arrangements in the showyard were such as to excite admiration, for which they were indebted to Sir Gilbert Greenall, the hon. director. Alluding to the financial position of the society, the chairman said it was much stronger than a year ago. The reserve fund amounted to £17,000, but to make their position more secure they required a greater membership. The farm prize competitions were next referred to, the chairman paying a tribute to the help given by Sir Richard Cooper, who provided the £150 prize money for the society's two classes, and defrayed the cost of judging.

Mr. F. S. W. Cornwallis proposed a vote of thanks to the Mayor and Corporation of Lincoln for their cordial reception of the society, remarking that the inhabitants of the city, which was not so largely populated as some they visited, had risen nobly to the occasion, and given a reception worthy of the society. He hoped there would not be another lapse of fifty-four years before the society met in Lincoln again.

Mr. Ailwyn Fellowes seconded, and the motion was carried.

Sir Gilbert Greenall, who met with a most cordial reception, moved a vote of thanks to the Lincoln Local Committee, expressing high appreciation of the efforts of those gentlemen to make the arrangements as perfect as possible.

Mr. Percy Crutchley seconded, and the motion was carried.

The president then put the usual formula as to whether any members had any suggestions to make, and Mr. Mackenzie, Wye College, congratulated the council upon the re-introduction of the farms competition.

Mr. Tinniswood (Carlisle) also said there was no better educational feature of the show than the Farms Competition.

Mr. Watt (Carlisle) thanked the council for having secured a rebate in railway fares to members of the society, and urged the necessity of securing similar concessions to exhibitors and the attendants upon the cattle, &c., who still had to pay full fare. English railway companies might take a tip from the railways across the Border, who had souls above the making of dividends, and whose mission was to serve the community. The Scottish companies carried exhibitors and attendants to the national show at single fare for the double journey. But in England no consideration was shown to the exhibitors either as to rates or fares.

The chairman remarked that the question was a hardy annual, and was at the present time engaging the attention of the council. They would not rest satisfied until they secured some concession. The matter was discussed at a meeting between the council and the railway managers of the country in May, but nothing had as yet been heard from the Clearing House.

A special general meeting was subsequently held, at which a resolution was passed to alter the by-laws in order that any county showing an increase of membership should secure increased representation on the council during the time of a triennial election.

THE FARMERS' DIARY.

TUESDAY, JULY 2.—Council Meeting of the Central Chamber of Agriculture, 11 a.m., at the Surveyors' Institution, Great George Street, Westminster—Discussion on the Small Holdings Bill—Horse Sale at Derby—Army Contracts, Sending-in Day, Horse Guards, Whitehall—Sale of Shorthorns and Pigs at Elvetham, Hampshire—Ipswich Horse Sale—Selby Horse Show—Agricultural Fairs at Penrith, Kington, Swansea, and Thurles—Sending-in Day for March Horse Show—Leeds Horse Sale.

WEDNESDAY, JULY 3.—East Kent Agricultural Show at Folkestone, first day—Woolton Agricultural Show (near Liverpool), special classes for Cab, Car, and Hackney Horses—Agricultural Fairs at Birkenhead, Hereford, Oswestry, and Royston—Sale of Dexters and Kerries at Bletchley—Doncaster Show—Cork Horse Show—Chatteris Horse Show—Scunthorpe Agricultural Show.

THURSDAY, JULY 4.—East Kent Agricultural Show at Folkestone, second day—Alford Horse Show—Great Chesterfield Horse and Foal Show—Sale of Sir Oswald Mosley's Shorthorns at Rolleston, near Burton-on-Trent—Special Horse Sale at Carlisle—Agricultural Fairs at Montgomery, Devizes, Wakefield, and Uttoxeter.

FRIDAY, JULY 5.—Sale of the Whittlebury Pigs and of Mr. Cooper's Herd of Jersey Cattle at Whittlebury, near Towcester—Special Horse Sale at Cockermouth—Lichfield Horse Sale—Horse, Cattle, and Pig Fair at Lincoln—Agricultural Fairs at Hertford, Lancaster, Newbury, and Moy—Pocklington Horse Show.

SATURDAY, JULY 6.—Ashton-under-Lyne Agricultural Show, also Dog and Poultry Show—Duke's Great Sale of Sheep at Dorchester; 10,000 already entered, including lambs—Sale of Aylsham Steam Roller Mills at the Agricultural Hall, Norwich—Agricultural Fairs at Chesterfield, Easingwold, Dorchester, Bedale, and Gloucester—Sending-in Day for Taunton Horse Show—Sending-in Day for Malton Show

MONDAY, JULY 8.—Special Sale of Hampshire Down Sheep at Tring—Special Horse Sale at Tattersalls—Agricultural Fairs at Alnwick, Warwick, Oakham, and Stamford—Sherburn-in-Elmet Agricultural Show—Sending-in Day for Hastings Show.

TUESDAY, JULY 9.—Highland and Agricultural Show at Edinburgh, first day—Peterborough Show, first day—Millers' Convention opens at Exeter—Special Sale of Merton Herd (selection), forty first class Shorthorns, at Edinburgh—Special Sale of Pedigree Hackneys and Harness Horses at Peterborough—Sending-in Day for Salisbury Sheep Show—Sales of Store Cattle at Lynn and Ipswich—Agricultural Fairs at Denbigh, Wirksworth, Stockport, and Haverfordwest—Holland Park Horticultural Show, first day.

Railway Rates. In reply to a question in the House of Commons by Mr. Montague, M.P., who asked whether the President of the Board of Trade had undertaken his promised inquiry into the grievances suffered by British traders and farmers at the hands of British railway companies, whether the inquiry was approaching completion, and whether he could make any announcement as to the remedial action he contemplated, Mr. Kearley stated that inquiries on the subject were in progress, but the Board of Trade could not say when they would be completed, or what action it might subsequently be desirable to take.

Cattle Sales at the Royal Show.

These sales, which have now become an important feature of the show, are deserving of having proper arrangements made for them, so that all who are interested can obtain, without troubling the auctioneers, a full list of prices made. This, at any rate, so far as regards the Press, could easily be arranged, by each auctioneer's clerk having a proper book with carbon, so that as each sheet was completed one of these could be sent to and posted in the Press room, and the other retained by the auctioneer. The general interest in these sales demands that this convenience to the Press should be given, and it will also relieve the auctioneers of untold worry and trouble.

This year's sale of Shorthorns was eminently successful, and quite a number of excellent prices were realised. The top price for bulls was 1,000 guineas, as against 610 guineas last year, and for females 210 guineas as against 270 guineas. The general average of the sale was £87 5s. for 115 head, last year's corresponding average being £99 15s. for 109. The following are the details of this sale :—

		Gs.
BULLS.		
Mr E. Abbiss' Skiddaw	Mr Glover	26
Mr W J Atkinson's Waterloo Jet	Mr Glover	26
Right Hon A J Balfour's Sensation	Mr Sidey	40
Mr J Budgen's Fair Emperor	Mr Wilkinson	48
Marquis of Downshire's Missel Thrush	Mr G Taylor	40
Mr G Harrison's Pioneer	Dr Anchorina	50
Messrs Halsam's Vimrose	Dr Anchorina	50
Lord Moreton's Torton Knight	Mr Wilkinson	72
Mr J C Price's Royal Warmington Kerr	Mr Colville	170
Mr R G Wordsworth's Ideal Archer	Dr Anchorina	52
TWO-YEAR OLD BULLS.		
Captain Behren's Chiddingstone Victor	Mr Household	26
Mr J Colman's Galton Baron	Mr Glover	26
Mr J Cresswell's Hawford Boy 12th	Mr Household	23
Mr Dargue's Jabberwock	Mr Sidey	150
Mr T B Earle's Alboro' Augustus	Mr Maclennan	400
Viscount Enfield's Weston Gay Lad	Mr Maclennan	105
Mr A T Gordon's Lord of the Isle	Mr Maclennan	70
Mr C O Hall's Emperor of Oxford 15th	Mr Candy	50
Mr J Handley's Pearl Chief	Mr Sidey	100
Dr V Hurley's Lucan General	Mr Nelson	150
Messrs Halsam's Cyril The Knight	Mr Wylie	30
Mr C A Hirst's Sahara	Mr Davis	105
Mr J Kerr's Ilton Oxford 2nd	Mr Candy	50
Mr J Kerr's Lord Abbotsford	Mr Wilkinson	27
Messrs Law's Graceful Thistle	Mr Sidey	140
Mr J Lawson's Duke of Lune	Mr Nelson	50
Lord Lilford's Earl of Eglinton	Mr Candy	81
Mr F W Monckton's Warren Clipper	Mr Candy	23
Mr T S Roskrudge's Kilblair	Mr Savage	61
Mr W Snowball's Look Ahead	Mr Sidey	50
Mr J M. Strickland's Prince of Avon	Mr Nelson	150
Mr G J Wilson's Czarowitz	Mr Burton	28
Mr H Baker's Chidlow Challenger	Mr J Handley	320
Mr J Cresswell's Improver	Mr McCarthy	51
Mr J Handley's Rosedale Diamond	Mr Rogers	700
Mr S Hills' Hercules	Mr. Brownfield	23
Messrs Hobbs' Kelmscottian 24th	Mr Casaris	105
Mr J C Holford's Viscount Oxford 21st	Mr J Cooper	27
Mr W J Hosken's Hayle Yeoman	Mr Pena	100
Mr R W Hudson's Danefield General	Mr Reynolds	25
Mr F W Monckton's Warren Duke	Mr Avis	21
Mr J Swann's Dr Bates	Mr Nelson	40
Mr W H Rider's Cheddleton Beauty	Mr Dunmock	22
Exor. J Webb's Secret Wanderer	Mr McCarthy	83
Mr H Williams's Napoleon	Mr R Wright	190
Hon T Willoughby's Eccelin Arthur	Mr Wilkinson	46
YEARLING BULLS.		
Mr A D Acland's Eccelin Kirklevington 2nd	Mr J T Hobbs	31
Mr A F Bassey's Tehidy Irish Duke	Mr R Wright	23
Mr A F Busset's Tehidy Penynage	Mr R Wright	50
Mr A F Busset's Tehidy Portreath	Mr G Taylor	31
Capt C Behrens' Swinton Royal Fame	Mr Snow	23
Mr R Booth's Queen's Equerry	Mr Nelson	30
Mr J E Casswell's Laughton Rodes 5th	Dr Anchorina	40
Mr J A K Falconer's Wanderer's Charm	Lord Kesteven	30
Mr J. A K Falconer's Wanderer's Pride	Mr W H Bates	19
Mr A A Haley's Whitewall Royal George	Mr Thompson	30
Mr J Handley's Spicy Baron	Tiromé, Son, and Co	75
Dr V. Harley's Notlaw Sir	Mr. Hale	51
Mr G Harrison's Gainsford Prince Albert	Mr A Yeomans	100
Mr W J Hoskin's Hayle Viceroy	Mr R Wright	610
Messrs Midd and Moon's Shamrock 3rd	Mr Avis	27
Messrs Midd and Moon's Shylock	Mr Avis	28
Mr A F Nichol's Baron Augustus	Mr Avis	20
Mr A F Nichol's Baron Desmond	Mr Nelson	26
Mr J Preece's Duke of Barrington 9th	Tiromé, Son, and Co	155
Captain J S Reeve's Knight of Kesteven	Mr Jordan	250
Mr R R Rothwell's Lord Brilliant	Mr Rogers	1000
Mr W M Sott's Red Duke	Mr Burt	19
Mr T Stokes' Blue Blood	Dr Anchorina	105
Mr R Stratton's Roysterer	Mr Casares	80
Sir J Swinburne's Red Duke 2nd	Mr. Candy	37
Sir J Swinburne's Royal Emperor Oxford 19th	Mr Handyside	47
Mr H J S Tory's Damory Cavalier	Mr Handyside	43
Lieutenant Colonel Turner's Pinkey Marquis	Mr Appleyard	30
Hon T Willoughby's Hildersley Warrior	Mr. Candy	25
Mr T Winter's Lotherton Rosador	Mr Hall	66
Mr A C Brown's Chatley Boy	Mr Hobbs	21
Mr J A K Falconer's Silent Wanderer	Mr Garset	86
Mr G Harrison's Gainsford Speculator	Mr Rider	20
Mr J Lawson's Wesham Alto	Mr Emerson	35
Lord Middleton's Birdsall Braham	Mr McCarthy	40
Mr R R Rothwell's Misty Mantle	Mr FitzHerbert	27
Rev R Mitchinson's Barby	Mr J Thoday	24
COWS.		
Mr W J Hoskins' Lilac	Mr Cartwright	80
Mr W J Hoskins' heifer	Mr Cartwright	35
Mr J A Williams' Cluny Augusta	Mr Lee	37
TWO-YEAR-OLD HEIFERS.		
Mr A A Haley's Whitewall Millicent	Mr Candy	50
Dr V Harley's Notlaw Beauty	Mr Candy	50
Mr W F Monckton's Warren Pansy	Mr Hobbs	19
Mr J A Preece's Waterloo Princess 39th	Dunstan, Fox, and Co.	51
Mr H Williams' Jessica	Dunstan, Fox, and Co.	51
Mr R Wood's Butterfly 9th	Mr Candy	95
YEARLING HEIFERS.		
Mr A F Basset's Tehidy Royal Dickson	Mr Candy	50
Mr A C Brown's Onyx	Mr Swann	20
Mr J Cresswell's Dewdrop	Mr Fitz-Herbert	41
Mr J Cresswell's Ruby	Mr Walter Ward	17
Captain Duncombe's Waresley Corona	Mr Fitz-Herbert	23
Captain Duncombe's Wild Duchess of Waresley	Mr Walter Ward	35

The three Shorthorn Yearling Heifers shown above are the property of Messrs. S. E. Dean & Sons, Dowsby Hall, Bourne, and will be included in the sale to be held on the 12th inst. These heifers, the names of which, reading from left to right, are Dowsby Sea Lady, Duchess 150th, and Dowsby Waterloo, are by the noted bull Imperial Favourite, which was sold in the Argentine Republic for £1,045.

Messrs Dyke's Duchess of Barrington 59th
Mr Villatte 210
Mr A A Haley's Whitewall Buttercup
Mr Candy 52
Mr A A Haley's Whitewall Emma 2nd
Mr Earle 110
Mr A A Haley's Whitewall Millicent 2nd
Mr Candy 120
Mr A C Hall's Rollwright Seraphina
Mr Fitz-Herbert 71
Dr V Harley's Notlaw Gold Mr Candy 51
Dr V Harley's Notlaw Sunflower 2nd
Mr Candy 25
Captain Harrison's Aldersham Kitty 4th
Mr Knowles 50
Mr W J Hoskins's Hayle Gwynne
Mr G Harrison 200
Captain J S Reeve's Tulip 6th
Mr Fitz-Herbert 25
Mr T S Roskrudge's Roan Ruth
Mr Fitz-Herbert 34
Mr R Rostern's Orphan Queen
Mr Fitz-Herbert 41
Sir A C Stepney's Lady Faithful 3rd
Mr Walter Ward 39
Mr H J S Tory's Damory Maud 3rd
Mr Walter Ward 29
Mr H Williams's Perdita Mr Candy 60
Hon T Willoughby's Lady Milona 5th
Mr FitzHerbert 39

DAIRY COW.

Mr T S Roskrudge's Carnation
Viscount Southwell 34

The demand experienced for the other breeds of cattle also sold by Messrs J Thornton and Co. was not so large as that for the Shorthorns, but it was better than in the previous year's, for there were more of the animals bid for close up to the reserve prices. Two Highland heifers Lunette, from Mr W Sopper's, and Maud of Dunmaylun from the same breeder to the Hon C B Portman, at 16 and 18 guineas respectively. The Red Polled Ashlyn's Ben, from Sir R Cooper's herd, went to Mr Raby at 28 guineas. The same buyer took the Devon Bull Emperor at 25 guineas, the Lincoln Red bull, from Mr. G Marris, Kirrington Twin at 28 guineas, to Mr C Lamb; Digbey Herald, Mr P F Brown's, to Sir J Robinson at 27 guineas; and Mr T Turner's Harpswell's Baron was sold at 25 guineas. Mr R Chatterton gave 28 guineas for Mr Todd's Kirkby Bellows 2nd. Two Kerries were sold, Mr Cory's bull Llantarnam Lackey to Mr Rabey at 13½ guineas, and the same buyer gave 9½ guineas for the Duchess of Newcastle's Hardwick Julius.

Messrs. Dean and Sons' Shorthorns and Lincoln Sheep.

On Friday, the 12th inst, a choice selection of pure bred Shorthorn cattle and Lincoln Longwoolled sheep belonging to Messrs. S. E. Dean and Sons, Dowsby Hall, Bourne, and Heath House, Nocton, Lincoln, will be offered for sale by auction at Heath House, and seeing the high class quality of both herd and flock a large attendance of buyers may be anticipated.

Messrs. J. H. and A. W. Dean, who farm about 4,500 acres in South Lincolnshire, in 1887 purchased a few pure bred Shorthorns of Bates blood, including Wild Eyes J and K of the Wild Eyes tribe, at Mr. Ellis's sale, near Guildford, in Surrey. Other purchases, principally of Bates blood, followed from the Marquis of Exeter at Burghley Park, Mr. J. H. Casswell, Mr. C. R. Lynn, of Stroxton, and other breeders. A large herd of Lincolnshire Red cattle was also kept, but these were dispersed at Mere, in April, 1905.

Among the earliest sires used was Mr. C. R. Lynn's fine red bull Cambridge Duke 30th 60441 of the Red Rose tribe; he was followed by Dowsby Waterloo Duke 66918, bred by the late Mr. Jonas Webb, of Melton Ross, from whom was purchased several fine females of the Duchess and Waterloo tribes, as well as some choice animals from Mr. H. Dudding's extensive herd at Riby. Recourse was then made to the Aberdeenshire herds, from the late Mr. W. S. Marr, of Uppermill, the fine red bull Virtuoso 69763 was bought; he was by Mr. Duthie's Pride of Morning, from Princess Royal 39th by William of Orange, and left remarkably good stock, some of the cows for sale being by this sire, who was followed by Baron 82777 of the Broadhooks tribe, bred by Lord Lovat. Jack Scott, 86255 brought in the Bates and Knightley blood, and was descended from the late Mr. J. S. Bult's Berthas, a fine old Knightley tribe, which has produced several Smithfield prize winners: he and his son Dowsby Northern Light 91508 and Dowsby Royalist 91509 were also used.

In 1903, the celebrated bull Imperial Favourite 86233 was purchased at Mr. Marr's sale when a calf of eight months old for 600 guineas; he was by Mr. J. Deane Willis's Bapton Favourite from Princess Royal 36th by William of Orange. Imperial Favourite, after winning a number of prizes and leaving very fine stock (his sons now being in service), was exported to Buenos Ayres, where he was sold for a large sum, equivalent to 1,000 guineas. At the Perth sale last year Lord Lovat's Baron Broadhooks 90785 by Master Millicent from a daughter of Rose of Underley 2nd was purchased for 700 guineas; many of the cows and heifers are in calf to him or to Dowsby Imperial Duke and other sons of Imperial Favourite.

The herd has been bred with a view to milk as well as to type and flesh; the animals are in excellent condition and in a good breeding state, the large number of fine red two-year-old and yearling heifers and bulls being particularly well worthy of notice.

After the Shorthorns, about 100 shearling rams and gimmers from the celebrated flock of Lincoln Long Wools, which is bred from pure strains, and been successfully exhibited at the Royal, County, and Smithfield Shows, will be offered.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

HALF the year is over, and pretty nearly half the show season, for the Royal Agricultural Society's gathering may fairly be said to mark the middle of the summer show season. July and August are busy months, as the two preceding months are, but though there are a few important shows in September, they are only a few after all. So that it seems a fitting time to take a look round and see what our position is as a horse breeding nation. I think it may fairly be urged that the various horse shows of the country throw a strong light upon our progress or decline, and it is to them that I would turn for evidence on this occasion.

IN the first place, I think we may reasonably claim to have made considerable progress in Hunter breeding in recent years. Let us take any important show that has been held during the last two months and we shall find that excellent classes of brood mares and young stock have been shown, and that in the majority of instances both numbers and quality are an improvement on what was seen a very few years ago. At the Royal Show last week there were two famous classes of brood mares, and one strong class after another of high class and promising young Hunters. Now, Hunters have never made a very prominent feature of the Royal Show except when it has been held in Yorkshire or within close touch of the county, until the last two years at Derby and Lincoln and the increase of over 33 per cent. of this year's entry conveys to me the idea that we are breeding more Hunters and better Hunters.

THAT we are breeding and have been breeding better Hunters for the last three years is, I think, pretty evident from the class of horses we see in the riding classes. Slowly, but none the less surely, the standard of the show Hunter has been changed. If we take the weight carrier of say ten or fifteen years of age, by which I do not mean an odd horse or two that stood right out by themselves, but the rank and file of the 14 and 15 stone classes, and compare them with the rank and file of the 14 stone classes of to-day, we shall find that the latter are far more like carrying a man to hounds, that they show much more quality, and they gallop in a much better style. Overgrowth and clumsiness, which some theorists seemed to think were indispensable in a horse that had to carry fifteen or sixteen stone to hounds, has disappeared from the show ring. It has also disappeared to a considerable extent in the hunting field.

NOW let us see how this very desirable state of things has been brought about. Or rather, let us see first how it has not been brought about. It has not been brought about by the half-bred sire, for though we have heard a great deal of the half-bred sire and the good that he was going to accomplish for the last quarter of a century, there are too few of him to have had any distinguishable effect upon breeding, so that we may, I think, fairly claim that it is by an increased interest in breeding and by a more intelligent use of the materials to hand that the improvement has come about. Especially do I think that more attention has been devoted to the brood mares, and the improvement in the class of brood mares is one of the most encouraging signs of the day.

WHEN we come to Hackneys, however, our surroundings appear scarcely so satisfactory. At many district shows where the Hackney classes used to be well filled there is a very moderate show indeed, three or four being found in classes which a few years ago would have numbered their entries in double figures at the least. In many districts the Yorkshire farmers have said that it does not pay to breed Hackneys now, and that they have given up breeding them, and no doubt fewer Hackneys are bred now than were bred a very few years ago. Indeed, I do not think it an exaggeration to say that the falling off in Hackney breeding is quite 25 per cent.

BUT, as I pointed out, when speaking of the recent International Horse Show at Olympia, there is plenty of demand for high-class Hackneys, and probably such good prices were never realised as can now be obtained for the very best. So the motor car is not driving the Hackney off the roads as some of my Yorkshire friends would have us believe. I hold that the falling off in Hackney breeding is more apparent than real. For a very few years ago there was such a boom in Hackneys that many men mated their mares with a Hackney sire, no matter whether they were adapted for breeding Hackneys or not. They seemed to have an idea that if only they had foal by a Hackney sire they were on the high road to wealth. For this there was perhaps some little justification, for some very curiously bred ones realised handsome prices. But in every breed an occasional chance-bred horse turns out a wonder, which is no reason why indiscriminate and unscientific modes of crossing should be adopted. Many men took to breeding Hackneys who knew little of horses but thought they could judge a Hackney by his action. The consequence was that a lot of very moderate horses were bred, and when the boom came to an end, as all booms do sooner or later, there were a lot of horses for which no profitable market could be found. Those men who were careful in selecting and mating their mares had no reason to regret having undertaken Hackney breeding, as the full classes at Olympia, Richmond, and other places show. But when any industry has been overdone the reaction is inevitable.

THE same remarks apply to Cleveland Bays and Yorkshire Coach horses as to Hackneys. There was a boom, much indiscriminate breed from indifferent mares and a deplorable selling of good mares out of the country. There came a time when a moderate horse could not be sold, and half-hearted breeders, instead of improving their methods gave up in disgust. But those who kept the good old mares and bred carefully have had no reason to regret their enterprise. Such horses as Mr. John Letts' Special Light, Mr. H. C. Stephens' Cholderton Silkstone, Mr. G. Scoby's Rookbarugh, Mr. Stericker's Breaston Prince, Mr. Elder's Aislaby Warrior, and Mr. Grandage's Woodland May will always find a market at a remunerative price.

I MENTIONED above that some men were tempted to enter into Hackney breeding because though they were not horsemen in the best sense of the word, and did not know much about breeding light horses, they thought they could tell a Hackney and judge of his action. My experience tells me that there is nothing so difficult to form an accurate opinion about as the action of the Hackney. All Hackneys go—we know that, but how! Many of them move as they ought to do. It requires a trained eye to tell when a Hackney is using all his joints properly and in unison as it were. A horse may move in a very showy way, but there may be some fault in the way he puts his foot down or in the way he flexes his hocks—trivial enough it may appear to be—but that comes out in accentuated form in his stock. Opinions are very freely given as to the relative merits of the action of horses, but judges know how difficult it is to tell it.

A WORD remains to say about our heavy horses. I think no one who has watched the classes of heavy horses at the principal shows this year can come to any other conclusion than that the improvement in heavy horse breeding which has been so marked in recent years is being well maintained. Shires, Clydesdales, and Suffolks, are very different to what they were twenty, aye or even ten years ago, and the young ones this year look like keeping up the present high standard.

BUT though the situation taken all round is a satisfactory one, it by no means follows that there is not room for further improvement. There ought to be fewer second-rate horses of all breeds than there are, and our breeders must see to it that they keep progressing. Standing still in horse breeding, as in so many things, means going back.

THE LOOKER-ON.

Notes and Jottings.

THE attendance at the Sheep Breeders' Conference was a very representative one. Upwards of forty breeders were present, representing North and South America, Argentine, Australia, Tasmania, New Zealand, besides our home flocks.

SUCH gatherings as these are of interest, and, we believe, of value. They afford opportunity for an interchange of opinion that seldom occurs elsewhere, and if the suggestion made by Mr. A. Amos is found to be a practical one—namely, for future conferences to be followed by a dinner—it is more than probable the value of these meetings would be still further increased, because after what may be termed the formal business has been got over and the ice broken, the interchange of experience and ideas would come more readily and with greater freedom.

THE paper itself was of great interest. But the two most striking features were the generous admission of the great value of British stud sheep, and the firm and striking expression of opinion by the writer of the paper that the closing of the British ports to Argentine live sheep was one of the greatest benefits the Argentine estanciero and his country could have had.

THIS admission of an Argentine breeder is of immense importance to the live stock breeders of this country, because it proves that not only are they supported in their position, but that one of those countries which were to be particularly hard hit by the stoppage of this trade is stated to have been benefited to so large an extent by one of its leading live stock authorities.

THE North Americans present, both Mr. McKerrow and Mr. Wing, were emphatic in their opinion that the North American competition in our mutton market was not likely to be of serious character, the tenor of their remarks being all the other way. The interesting and valuable speech of Mr. Burbury from Tasmania was quite one of the best given during the discussion. This gentleman was particularly strong in his denunciation of the continued existence of sheep scab, and he pointed out that it was this disease, and this alone, that kept the period of quarantine at its present length in the Australian colonies. It is well that this point should be well emphasised, especially at the present time, for it proves we or those who are stud sheep breeders have good ground in asking for the stringent measures being taken at the present time to be continued until success be secured.

THE discussion on this question of sheep scab was of interest, because it showed that, whilst there was every desire on the part of the flockmasters present to do all they could to see full benefit was obtained, in some directions there was need of alteration in the present form of administration.

THIS point was alluded to by several speakers. A gentleman from Wales suggested rigorous inspection by the officials of the Board of Agriculture. Others, including several closely interested in administering the present regulations, suggested that every effort should be made to carry out the regulations, and any suggestion for improvement should be made known to the Board of Agriculture, who were, as stated by Mr. S. Kidner, only too desirous to secure all information possible, and determined to do their best to frame for future use the most complete regulation that time and experience could give.

FLOCKMASTERS are reminded it is no use to grumble and growl and do no more. What is wanted, and what should in every case be done, is for any that find the present regulation working to the detriment of their business to let those who are responsible for the framing of the regulation and who control its working to be put into full possession of the result of their practical experience and observation.

TIME after time we have been told that the export demand for sheep will not continue, but if we may judge from the emphatic language used by Mr. Burbury particularly, there does not appear much likelihood of this being the case. This breeder, as did also both M. McKerrow and Mr. Wing, distinctly indicated that the need of continued importation was paramount. It was said that, so far as regards the present, there was no indication other than that renewal of blood from the fountain head was an essential.

ONE speaker said why sheep in this country did not—as they did in other countries—tend to revert to the species from which they were originally evolved, could only be accounted for by reason of the close care and attention given them by the English flockmaster. This was a compliment to the English breeder, and one well deserved, for no one who has any connection with our live stock interests can but acknowledge the kindness and care these breeders exercise in their flock management.

THE perfected specimens of the present day, those to which full reference is made in our report of the Royal Show, are a striking example; and those amongst the older breeders who can remember away back to the previous Royal Show at Lincoln, and others, too, can realise how rapidly has this close attention of breeders borne fruit and brought to them and their successors of the present time an income far greater than many of other classes of live stock enjoy.

THE showyard report gives full details of the keen contests witnessed in all the classes of the sheep section. The Lincoln was represented by an entry unequalled at any previous show in respect to both its merit and number. It will be years, probably, before another such an entry of this breed is seen at the Royal Show. It is not often the Royal comes so close to the general run of Lincoln sheep breeders, and it is satisfactory to note full advantage was taken of the opportunity.

ROMNEY MARSH breed was also very largely represented, and made, considering its distance from home, a notable entry of great merit. The Down breeds, most of which were a considerable distance from home, were represented in good numbers and grand quality; in fact, after an experience of well over thirty years the writer can safely affirm that at few, if any, previous Royal Shows has there been an entry of so generally good merit and even character

The three Lincoln Long Wool Shearling Ewes shown above were bred by and are the property of Messrs. S. E. Dean & Sons, Dowsby Hall, Bourne, who will include them in their sale on the 12th inst. These ewes won First Prize and Championship at Otley Show last year, and First at both the Newark and Leicestershire Shows.

SHEEP SALES AT THE ROYAL SHOW.

The demand experienced for the Lincoln sheep offered was a disappointing one, but when the quality of the animals offered was looked to, the prices made were not so much to grumble at. The number sold was sixteen, all yearling rams, and the average made was to £10 12s 9d, Mr G Morris 18 guineas, the top price of the sale from Mr A A Haley's lot of three that averaged £14 10s 6d. Mr C Featherstone for the same number averaged £13 12s, top price 17 guineas to Mr W H Robinson. Three of Mr J W Letts averaged £10 13s 6d, two from Mr H Smith, junr., 10 guineas, two from Messrs Hensman £6 13s 10d, and Major General Wilson £6 11s 3d. Mr H Smith's ewes average 5½ guineas each. Messrs Mansell and Co found a very excellent demand for the Down breeds, Buyers came from a wide area, including Canada,

United States, the Continent, Chili, Uruguay, New Zealand, Tasmania, Australia, and many of the leading flocks at home, quite a number going over to the Isle of Man. The Shropshires sold at an excellent run of prices, the forty-one yearling rams making an average of £30 3s 3d, the three yearling ewes £21 14s, and the ewe lambs £9 19s 6d, giving a general average for the whole sale of £27 4s 8d for fifty head. The top average was Mr T S Minton, who sold two at 80 and 50 guineas, both kept in England. Sir Richard Cooper's seven came out with an average of £53 8s, 100 guineas the top price went to Mr C Coxom, Messrs D Fox and Co, Chili, gave 65 guineas for another, and others 43 and 41 guineas, &c The Duke of Sutherland for three averaged £40 5s, Mr Cox taking one to Canada at 70 guineas; Mr T A Buttars six averaged £37 9s, 61 guineas, the top priced ram, going to Mrs Inge; another at 50 guineas went to Mr Victor Cavendish. This breeder's average for six was £23, his best price was 60 guineas to Mr J T Cole. Sir W O Corbet's three made £21 each; Mr E Nock's three £15 1s; Mr A S Berry's five 14 guineas; Mrs Inge's two £16 10s, &c. For yearling ewes Mr Victor Cavendish made 22 guineas, the top price, to Thornton and Co. for export; Mr R Miller from Canada took the six ewe lambs, three at 10 guineas and three at 9 guineas. The Hampshires sold well, six two-shear rams making an average of £12 17s 6d.

Mr H C Stephen's made top price, 20 guineas, to Mr Cavan, of Canada, five yearling rams of this breed were sold, the top price paid was 55 guineas for one of Mr H C Stephen's, purchased by Dunstan Fox and Co for Chili. The ram lambs were not in strong demand; seven were sold at £6, Sir W G. Pearce sold six yearling ewes which averaged £15 6s 3d, Mr Cavan taking four to Canada, and Dunstan Fox and Co. two to Chili. A two shear ram of the Suffolk breed made 8 guineas, and one of the Ryeland breed 6 guineas.

WOOL FAIRS AND SALES.

Bury St. Edmunds.

At Bury St. Edmunds annual wool sale 24,000 fleeces were offered in the presence of a large company representing the principal manufacturing districts. The wool was shown in improved condition, but as compared with last year's high rates, there was a decline in value of from 1½d. to 1d. per pound in Southdown wool, and in unwashed wool the decrease was from 2d. to 1½d. The top price was 13½d. per pound for Southdown wool from Earl Cadogan's home farm at Culford. The next best figure was 13½d for hogged wool consigned by the Duke of Grafton from his home farm. Other Southdown parcels sold at from 13d. to 12¾d. Black-faced hogged wool from Earl Cadogan's Neville Farm made 12¼d., as did similar quality from the Marquis of Bristol and Lord Cranworth, other rates ranging down to 11½d. per pound. Half-bred hogget wool fetched from 12½d. to 11⅜d For unwashed wool 8½d. to 8d. was the general price, but some went up to 9¼d.

Ipswich.

At the annual wool sale at Ipswich, 45,000 fleeces were offered, and the prices, taken all round, were not quite so good as in 1906 and 1905, but better than in 1904. The best rates for washed wool came out at 13½d. for Southdown hogget, and the same figure was reached for Southdown ewe. Blackfaced hogget ranged from 8d. to 12¾d., and Blackfaced ewe from 7½d. to 12½d. Half-bred hogget made 9¾d. to 12½d., and half-bred ewe from 11½d. to 12¼d. For the unwashed wool the lowest point touched was 7½d., and the highest 12¾d.

The top price of the sale was shared by Mr. E. G. Pretyman, Sir Thos. Gooch, Bart., and Mr. J. Taylor, for Southdown hogget, and Mr. W. E. Long for Southdown ewe—namely, 13½d., which was exactly 2d. less per lb. than the best price last year.

Sleaford.

At Sleaford wool fair about 7,000 fleeces were offered. Competition was not quite so keen as last year, but prices came up to about what flockmasters expected. The top price was 1s. per lb. for clip which contained about two-thirds half-bred hogg fleeces. Other lots of Lincoln Longwool, containing about half hogg and half ewe fleeces, realised from 11½d. to 11⅜d. per lb.

Glasgow.

The first of the season's sales of Scottish wool at Glasgow took place last week with Blackfaced and sundries. Owing to the continued wet and cold weather the quantities of these classes were much under the average, and there was only a small attendance of buyers. Little actual business was done in Blackfaced wool, the general uncertainty as to the course of the English wool fairs preventing competition, and with the exception of a few inferior lots at 8¾d. to 8⅞d. per lb., no wool was sold publicly. Sundries were cleared out, but the bidding was slow.

Chepstow.

Chepstow Wool Fair was held on the 22nd ult., when only a small quantity was brought in. Southdowns made 11½d., cross-breds 11d., lambs' wool 8d., Welsh and Radnor 9d. per lb. These prices represent a drop of 3d. as compared with last year.

Leicester.

At Leicester wool fair held on Tuesday over 60,000 fleeces changed hands. The new crop was in better condition than had been anticipated, and competition ruled fairly active all round, but fine good-conditioned cross-breds and the best short wools were most in favour, and evoked spirited bidding.

The following were representative transactions: Highest price, 12⅝d., for very finely grown half-hogg and ewe Shropshire; Shropshire and half-bred hogg and ewe, 12⅜d.; half-bred hogg, 11⅝d.; unwashed half-bred hogg, 8⅜d.; black-faced hogg, 12⅛d.; good Shropshire hogg, 12¼d.; half-bred Hampshire hogg and cross-bred ewe, 11¼d.; long-wool hogg and ewe, unwashed, 11¼d.; cross-bred hogg, 12⅛d.; Scotch hogg and ewe, 8d.; cross-bred and Cheviot ewe, 10⅜d.; Masham ewe, 8½d.; unwashed cross-bred ewe, 8⅜d.; long-wool hogg and ewe, 10⅝d.; Oxford hogg and ewe, 12¼d.; very good long-wool, 11⅜d. per lb. The bulk of the wool changed hands at these rates, which are from 2d. to 2½d. per lb. less than last year. Choice clips made 28s. 6d. to 30s. per tod of 28lb., good lots 27s to 28s., medium 26s. to 26s. 6d., and unwashed 20s. to 22s.

Bury St. Edmunds Lamb Sale.

At this event held on Wednesday about 2,500 lambs and ewes, amongst which were 1,100 Suffolk ewe and wether lambs, 800 half-bred lambs, 200 Southdown lambs, and 150 ewes, from well-known breeders in the district, were offered and met a good trade. Suffolk lambs made up to 49s, this, together with 48s. 6d., being, however, exceptional prices, the general range being from 25s. to 42s. First-class lambs made from 33s. 6d. to 37s. 6d., Southdowns up to 35s. 6d., and half breds from 25s. to 36s. 6d.

Sheep Breeding in the Argentine.

The Royal Show invariably attracts sheep-breeders from all parts of the world, and the National Sheep Breeders' Association is wise in improving the occasion by holding a conference at which the world's flockmasters can compare their views. At Lincoln last week a paper was read by Mr. Herbert Gibson, of Buenos Ayres, on the position of the industry in the Argentine. In his opinion the present outlook for sheep-breeding in Argentina is more favourable than ever it was before. The present market value of wool and mutton is remunerative. Large sums of money have been expended on the improvement of the flocks. The plough has sweetened the old lands, and the sheep are returning to them. The great pastoral country to the south and to the west is being opened up. Patagonia the mysterious is becoming Patagonia the sheep country. The sheep capital of the country is once more on the increase.

A factor not yet recognised, but which is leading to the appreciation of live stock value in Argentina, is the increasing demand for local consumption. We have now an agricultural population which consumes meat and does not produce it. The Argentine people are a meat-eating people. There has of late been much comment by statisticians upon the limitation of live stock available for export in the shape of frozen or chilled meat, and they have pointed to a presumable decrease in our capital as the cause. It is not so. We are not producing less; we are consuming more. This information may convey a crumb of comfort to the home breeder.

At no time has the prospect of sheepbreeding—by which is meant the production of wool and mutton as distinct from the speculative value of a given breed enjoying popularity—been more encouraging than at present. Man has made many inventions, but though he has attained the art of manufacturing a hen's egg, and may succeed in hatching therefrom a chicken with cellulose feathers and a liver of sawdust, he has not yet discovered a substitution for sheep's wool. It is the value of the fleece that grows on the sheep's back which entitles it to claim the first place in all sections of rural industry. Through times of depression it is the fleece that has paid the rent and kept the wolf from the door, and when times have bettered, it is the fleece that has constituted the most positive part of the flockmaster's revenue.

A meeting of the directors of the Scottish Chamber of Agriculture will be held at 5, St. Andrew Square, Edinburgh, on Wednesday next, at 10 o'clock a.m., the business being as follows: (1) Arrangements for autumn conference with President of the Board of Agriculture; (2) evasions of the Ground Game Act; (3) sheep stock valuation; (4) expenses of successful defenders in milk prosecutions; (5) Friars Courts and prices; (6) letter from Sir T. H. Elliott regarding Lord Carrington's visit to Highland Society's Show, &c.

PIGS.

PIG SALES AT THE ROYAL SHOW

For the Large White breed the demand was not good, or the reserves were higher than the buyers were prepared to pay, for none were sold.

The Middle Whites met with a good demand, twelve making an average of 11 guineas, the whole were purchased for South America, 14½ guineas was top price for yelts, and 13 guineas for boars.

Tamworths did not sell readily, the sows making an average of £3 12s.

There was a keen demand for Berkshires, twenty selling at an average of £15 2s. Boars made up to 53 guineas, paid by Mr E Stathe for South America, Lord Manvers giving 45 guineas for another, Mr J D Errecaborde 30 guineas for South America, and Mr Currie 25 guineas for Hampshire. The top-priced sow also went to South America at 23 guineas.

Sixteen Large Black pigs were sold at £11 6s 11d, the best prices were 20 guineas for boars, 11½ guineas for sows, and 12 guineas for yelts. A similar number of Lincolnshire Curly-coated pigs were sold, 52 guineas being paid by Mr Walter Ward for the first prize boar for service in his herd, another for export to Argentine; the top price for sows was 10 guineas.

Transactions in Store Stock.

(*Reported to the Department of Agriculture and Technical Instruction for Ireland.*)

At Clifton Fair, co. Galway, on Tuesday, there was a small supply, consisting almost entirely of Polled cattle. There was a good attendance of buyers, and demand brisk, especially for heifers, and a good clearance was effected at prices favouring sellers. Calves, 3rd class, £2 7s. 6d. to £3; yearlings, 2nd class, £6 5s. to £7; 3rd class, £4 10s. to £5 5s.; two-year-olds, 2nd class, £8 12s. 6d. to £9 10s; 3rd class, £6 10s. to £7 12s. 6d.; three-year-olds, 2nd class, £10 10s.; 3rd class, £8 to £10 5s.; springers, 3rd class, £7 10s. to £8 15s.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended June 22, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (8,679) 12,713; sheep and lambs (808), 140; horses (361), 472.

Fresh meat:—Beef (111,626 cwt.), 120,396; mutton (106,184), 93,144; pork (3,918), 5,846.

Salted or preserved meat:—Bacon (85,451 cwt.), 129,431; beef (3,338), 3,383; hams (29,256), 32,752; pork (3,662), 5,361; meat (15,154), fresh, 10,781; salted, 1,205; meat, preserved (9,202), 2,820.

Dairy produce and substitutes:—Butter (104,812 cwt.), 83,459; margarine (17,484) 14,317; cheese (66,587), 60,188; milk, cream (135), 112; milk, condensed (19,624), 16,790; milk, preserved (75), 173.

Eggs (great hundreds):—(398,800), 497,012; poultry (value £2,624), £6,778; game (value £1,025), £12; rabbits, dead (not tinned) (4,680 cwt.), 1,415; lard (42,284 cwt.), 54,367.

Corn, grain, meal, and flour:—Wheat (2,803,800 cwt.), 3,220,849; wheat meal and flour (275,770), 290,085; barley (158,700), 45,600; oats (464,000) 253,904; peas (26,550), 20,530; beans (370), 1,750; maize or Indian corn (1,104,700), 673,976.

Fruit (raw):—Apples (8,825 cwt.), 17,793; cherries (32,847 cwt.), 23,109; gooseberries (5,765 cwt.), 8,177; strawberries (9,041), 8,548.

Hay (3,783 tons), 1,710; straw (1,754), 1,087; moss litter (1,268), 1,610; hops (641 cwt.), 854; locust beans (22,894), 11,737.

Vegetables (raw):—Onions (28,959 bshl.), 60,226; potatoes (458,137 cwt.), 661,165; tomatoes (7,207 cwt.), 31,834.

The Board of Agriculture consider it desirable, in view of the unsettled character of the weather, and of the consequent difficulty in securing the hay crop, to draw the attention of farmers and others to the system of ensilage as a means of conserving crops of grass and clover. Copies of Leaflet No. 9, which describes this process, may be obtained post free and free of charge upon application to the Secretary, Board of Agriculture, 4, Whitehall Place, London, S.W. Letters of application so addressed need not be stamped.

According to a note in the *Chemical Trade Journal*, the trade in fertilisers in India is continually expanding. Colombo firms are said to be stocking artificial manures—basic slag, bone meal, sulphate of ammonia, nitrate of soda, sulphate of potash, dissolved guano, muriate of potash, fish guano, kainit, nitrate of soda, &c.

Live Stock Record.

DIRECTORY OF BRITISH PEDIGREE STOCK OWNERS.

**** The charge for Advertisements (if set in small type) under classified headings in this section is one penny per word each insertion.*

HORSES.

SHIRES.

BLAGDON SHIRE HORSE STUD. (Established 1879). Proprietor, CLEMENT KEEVIL Billington, Leighton Buzzard, Beds. (late of Blagdon, Malden, Surrey). High-class animals for sale of all ages and both sexes also massive sound Stallions to let for the season.

CONCHAR, JOHN, Wylde Green, Birmingham. Breeder of High-class SHIRES and HACKNEYS. Several have been successful in the showyard. Colts and Fillies by the leading Stallions of the day.

CROSS, J. L., Catthorpe Towers, Rugby. Shire Stallions, Mares, &c. Also Red Shorthorn Bulls from milking strains, and Oxford Down Sheep.—Apply F. CAMPBELL, Catthorpe, Rugby.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Hereford. Stud Horses: Lockinge Lord of Misrule and Lockinge Bonny Lad, both by Lockinge Forester, full brother to Lockinge Forest King. Colts and Fillies for Sale.

MUNTZ, FREDERICK ERNEST, Umberslade, Hockley Heath, Warwickshire. Shire Stallions, Mares, Fillies, prize-winners.—Particulars from Mr. JOHN T. B. HARTLEY, Estate Office.

MUNTZ, Sir P. ALBERT, M.P., Dunsmore, Rugby. — SHIRE-BRED STALLIONS, COLTS, MARES and FILLIES. About a hundred of all ages. Prize winners London and other leading shows. Also high-class Shropshire SHEEP, winners first prize at Royal Agricultural, 1886, second in 1887, and first in 1888.—Apply THOMAS EWART, Dunsmore.

NOTTINGHAM CORPORATION, STOKE FARM.—Shire Stallions, Mares, Fillies, and Geldings of fashionable breeding, including prize-winners, on Sale. Inspection invited. Visitors met.—Address A. AVIS, Stoke Bardolph, Nottingham.

ROWELL, JOHN, Bury, Huntingdon. Breeder Shires and Hackneys; Stallions for sale, hire, or service at home; mares and fillies for sale.

HACKNEYS, &c.

MOORE, HENRY, Burn Butts, Cranswick, Hull. Pedigree Stud of HACKNEYS, including many prize-winners, yearlings, two years, and others.—Can be seen on application to Henry Moore.

SHETLAND PONIES.

BEALE, Mrs. A. J., Cacketts, Cudham, Kent. Prize-bred Pedigree Shetlands for sale; three grand Stallions at stud.

PONIES.

MILLER, W. S., Forest Lodge, Brecon, South Wales. Extensive Breeder and Exporter of best class of Welsh Mountain Ponies and Cobs.

CATTLE.

SHORTHORNS.

COWLEY Manor Shorthorn Herd, property of James Horlick, Esq. Bulls and Heifers of choicest breeding. Cruickshank and Bates blood, successful in dairy and showyard.—Apply, W. HITCH, Estate Office, Cowley, near Cheltenham.

PREECE, JOHN ADNEY, Drayton Home Farm, Thrapston, Northampton.—Herd of 250 Shorthorns, best Bates and Scotch blood; stock Bulls, Duke of Barrington 70th, Primrose Earl 89341, and Royal Baron 93192; Bulls and Heifers for sale.

ROTHWELL, R. R, Much Hoole, near Preston. Pedigree Shorthorns, chiefly Scotch blood. Stock bull Strowan Marquis 13th, winner of many prizes. Young bulls and heifers always on sale.—Apply to D. COLLYER, Estate Office, Miller Arcade, Preston.

TAYLOR, GEORGE, Cranford, Middlesex.—Bates' Shorthorns, deep milkers. Winners Milking Competitions, London Dairy Show, 1905-6. Bull Calves for Sale. Stock Bulls: Beau Fabreur, Drumcree, Rowbury, and Kirkcharm.

WORDSWORTH, Duffcarrig, Gorey, co. Wexford, Ireland. Pedigree Dairy Shorthorns (Cruickshank and Scotch strains). Successful in dairy and showyard. Young Bulls and in-calf Heifers of good colours for sale. Exportation orders executed.

SUSSEX.

BANNISTER, T., Limehurst, Haywards Heath, Sussex (mile from Station, one hour from London). Pedigree Sussex Cattle (descended from the oldest and best strains of blood), unrivalled for their early maturity, the production of the best beef and working oxen, and ability to thrive in all weathers on the roughest fare. Bulls, Cows and Heifers for Sale.

HEREFORDS.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Herefordshire. Pure-bred Hereford Cattle, with pedigrees dating back to very early volumes of Herd Book. Bulls and Heifers for Sale at reasonable prices. Shire Horses and Shropshire Sheep.

PULLEY, CHARLES THORNTON, Lower Eaton, Hereford.—Noted prize-winning herd of HEREFORD CATTLE. First prize Royal winners, Protector 19660, 1900; Eaton Champion 21351, 1903; and Ashleaf 3rd, 1905. This herd is headed by Eaton Champion and Glendower 2nd 22196, also a Royal winner. Bulls and Heifers for sale. Also prize-winning Shropshire Sheep.—Apply Mr. HEDLEY JONES, Lower Eaton Estate Office, Hereford.

THE SHEEPCOTE HEREFORDS, property of Peter Coats. Established 1960. This herd has in 1904 1905 and 1906 won more first and champion prizes than any other in England. Headed by Endale, Bago Protector, and Fusilier. Young stock on sale. Inspection invited. —Apply, J. K. HYSLOP, Estate Office, Sheepcote, Clifford Herefordshire.

CATTLE—*continued.*

HEREFORDS—*continued.*

TAYLOR, HENRY, WILLIAM, Showle Court, Ledbury (Railway Station, Stoke Edith; Telegrams, Tarrington).—HEREFORD CATTLE.—Young bulls and heifers for sale. This herd has won hundreds of prizes. RYELAND SHEEP.—Kept pure for 60 years, no older flock in existence.

DEVONS.

BOWERMAN, ALFRED, Capton Williton, Taunton, Breeder of Pedigree Devon Cattle. A speciality for large size, with quality and robust constitutions; colour dark red. Sent to all parts of the world. Prices moderate.

SOUTH DEVONS.

ROWE, F. W., Trevego Lostwithiel, Cornwall. Breeder of pure-bred South Devon Cattle of best and purest strains of blood. Bulls, Cows and Heifers for inspection and sale.

ABERDEEN-ANGUS.

BRIDGES, J. H.—This old established herd of Aberdeen-Angus cattle of the leading families can be seen at Langshott Home Farm, Horley, Surrey (near Horley Station, L.B. & S.C.R.), and catalogues obtained on application to Mr. Albert Pulling.

For Sale.

PRIZE BRED POLLED ANGUS COWS, BULLS, and HEIFERS.

Finest Strains. Inspection Invited.

GEORGE HOYLES,
Skidby Manor, near Hull.

HURSLEY PARK HERD OF ABERDEEN-ANGUS CATTLE, the property of Sir George Cooper, Bart., comprising Erica, Pride, Miss Burgess, Lady Ida, Matilda, Jemima of Morich families. Prizes won during 1906: 7 firsts, 3 seconds, 3 reserves, 1 challenge cup, 2 silver medals, 3 reserve champions. Bulls, Cows, and Heifers for sale.—Catalogues on application to V. F. Leese, Estate Office, Hursley Park, Winchester.

AYRSHIRES.

WALLACE, JAMES, J.P., Auchenbainzie, Thornhill, Dumfriesshire, Scotland. Breeder of pedigree prize-winning Ayrshire Cattle; hardy, healthy, good milkers; bred for dairy purposes, beauty and style. Bulls and Heifers for sale.

RED POLLS.

CRANWORTH, Rt. Hon. Lord, offers reasonably, from his prize-winning herd of Red Polls, Bulls, Cows, Heifers, from good milkers.—Apply C. F. STEBBING Letton, Thetford.

JERSEYS & GUERNSEYS.

CARY-ELWES, V., Billing Hall, Northampton. Breeder of Jersey cattle.

JERSEYS and pure Alderney, Guernseys, fresh calved and near calving. Prices, particulars.—WHEADON, Ilminster.

MERTON GRANGE GUERNSEYS.—Property of Frank Hargreaves, Esq. This Herd contains Champion Bull Royal Counties, Portsmouth, and Champion Cow Royal Derby, 1906. Bulls, Cows and Heifers of best Breeding for Sale.—Telegrams and particulars, W. J. EMPSON, Merton, Gamlingay.

STERN, Sir E. D., Fan Court, Chertsey, Surrey. Herd of pedigree Jersey Cattle. Bulls, Cows, and Heifers for sale.

TICHBORNE PARK, GUERNSEY.—Yearling Bulls and Heifers for sale.—Apply, D. MICHIE, Estate Office, Tichborne, Alresford, Hants.

GALLOWAYS.

GRAHAM, ROBERT, Auchengassel, Twynholm, breeder fashionable Galloway Cattle, winners at Royal and Highland Societies Shows. Pedigree Bulls, Cows, and Heifers, also Blue-greys for feeding, for sale. Commissions carefully executed.

KERRIES & DEXTERS.

THE DUCHESS OF DEVONSHIRE'S PRIZE-WINNING DEXTER HERD.—During 1904 and 1905 this Herd won more prizes than any other three Dexter Herds combined, including both first and second milking prizes Royal, 1905, and first London Dairy Show, 1906. Bulls, Cows, and Heifers generally for Sale.—CHILD, Compton Place, Eastbourne.

(*Continued on page 36.*

The Riby Grove
Lincoln Flock and Shorthorn Herd,

The Property of

Mr. HENRY DUDDING, Riby Grove, Great Grimsby, Lincolnshire, England.

Important Sale of
SHORTHORNS and LINCOLN RAMS

from this celebrated Herd and Flock,

On THURSDAY, JULY 11th, 1907.

Breeders of Shorthorn Cattle and Lincoln Sheep will this year have an opportunity of visiting that historic home of these breeds of Live Stock, which is famous all over the world as being a source from whence many leading animals have been procured, including the 1,450 guinea and two 1,000 guinea Champion Rams. The occasion referred to is that of the periodical Home Sales, held by Mr. Henry Dudding, at Riby Grove, Great Grimsby, Lincolnshire, England, who never exports on his own account.

Mr. Dudding has fixed this year's Sale for Thursday, July 11th next, upon which day he will be pleased to see his friends.

RIBY GROVE SALE 1907.

MOON KING 2nd (92594)—LOT 42. **STROWAN BUTTERFLY 23rd—LOT 50.**

The selection of Shorthorns will be a notable one on account of the very superior merit of the animals offered. Particular attention is called to the very large proportion of young Heifers included in the Sale. The whole of these animals combine the best old English strains of blood, topped by the now fashionable Scotch blood.

Many leading bulls have been in service. Amongst those most recently used are Prince Alastair 89647, a noted winner and sold for 1,000 guineas at the Riby Sale, 1906, to Mr. R. F. Pearson; Scottish Daisy Duke 79916, a son of Best of Archers from Scottish Daisy by Master of the Ceremonies 56162; Merry Squire 5th 85626, Stratton Squire 80062 of Lord Lovat's Broadhooks Tribe; Bapton Favourite 76080, Wanderer's Chief 80210, Royal Pearl 89959, Royal Marksman 89962.

Space will not allow of the great Show Yard successes of the Herd or Flock, but it may be stated that as year succeeds year it continues with so marked a uniformity that proves without question that high merit and typical character are fully maintained. The record Sale last July, when 51 Shorthorns and 56 rams were sold to average 125 guineas each, realising a total of just under £14,000, is a sufficent proof.

GROUP OF PRIZE RAMS.

The selection from the renowned Riby Flock will be comprised of Yearling Rams and Ewes. The strains of blood that will be represented are the same that have been so uniformly successful for one hundred and fifty years, and which have in all parts of the world gained a high and notable reputation.

Mr. Henry Dudding will welcome his Foreign and Colonial friends, at the Yarborough Hotel, Grimsby, on Wednesday evening, 10th July next, the night before the Sale.

JOHN THORNTON & CO., Princes Street, London, will give full information, and Catalogues of the Sale, or from the Owner, Mr. Hy. DUDDING, Riby Grove, Great Grimsby, Lincolnshire.

A. KNIGHT, HAYNES PARK, BEDFORD.

Agricultural Politics.

BY A LOBBYIST.

Who should Bear the Financial Burden?

Several facts have been made patent during the week in connection with the Small Holdings Bill. The first is that there is a growing Parliamentary sentiment against mulcting the local rates—in other words, county councils—in the carrying out of this great national experiment. It is increasingly felt that this is very far from being a mere local matter—as a fact, Mr. Lewis Harcourt's speeches have made it indisputably clear that he does not regard it in that light, and that the financial responsibility associated with it ought to apply to the nation. I opine that it is the Ministerial comprehension

Sir James Blyth, Bart., One of the New Peers.

of this fact to which we must attribute the grant from the Treasury towards the initial expenses. This grant is, I admit, somewhat unusual in its character; but even now, it is not, I can assure Mr. Harcourt, sufficient to lull the county councils into entire acquiescence in his project. After all, there should be with the right hon. gentleman no logical excuse for refusing to associate the financial resources of the nation with his legislative anxiety. Mr. Harcourt has avowed his resolution that his scheme shall be conducted on absolutely businesslike lines—in other words, that it shall not be a compassionate purpose in which a mistaken philanthropy is to seduce the rural public into acceptance of it. If it is to be a businesslike project, and conducted with a narrow regard for financial stability, the Treasury might, without being possessed by any serious fear of loss, accept financial responsibility. This would greatly ease the mind of the county councils, and probably render unnecessary that gingering process of which Mr. Winston Churchill is so enamoured.

The County Councils and the Commissioners.

Mr. C. Masterman, M.P., is a product of the Radicalism-cum-Socialism of modern Oxford. He is an æsthete in appearance, but cultivates the burliest and reddest of political sentiments. In this matter he regards county councils with the jaundiced eye of suspicion. He looks upon them as the born enemy of the small holder. He will pen and utter—utter in a pleasant staccato voice—the most piquant of epigrams to prove his point. Mr. Chaplin half believes that co-operation between the county councils and the State officials in establishing these small holdings is an impracticable idea. Mr. Masterman is not so much concerned with its impracticability as he is with the conviction that rural county councils are possessed with a double dose of original and ineradicable sin. For my part, I am heartily glad that the Government reveals a growing affection for utilising local influence in fostering this purpose. The ejection of local influence from the scheme would mean the establishment of a bureaucracy which would be entirely indifferent to the growth of local rates. It is to local influence we must look for putting some curb—indirectly, of course—upon these Commissioners, who, in Mr. Collings' vividly-inspired opinion, are going to rove about the country seeking over-burdened ratepayers to devour. I do not believe that these county councils will prove impracticable and ruthlessly antagonistic. I rather believe that they will see that complaisance will be their best protection against that which they most fear—tyrannous demands upon them to bear financial deficits. Complaisant and sympathetic county councils will draw the claws of these Commissioners.

The Commissioners and their Character.

I rather fear me that we are too fevered in our anticipatory pictures of the Commissioners. We make these pictures too bloggy. Whether we should give them power to ascertain whether there is a demand for small holdings "either actual or prospective"—very wide, nay appalling, powers, in all sooth, will that word "prospective" bestow—is a debatable question; but, frankly, I do not believe that the one purpose of their existence will be to unsettle local conditions, which may have been satisfactory, to fancy a necessity which does not exist, to coerce authorities into the provision of holdings which are not wanted, and to place an Atlas-like burden of rates on the county councils. Mr. Chaplin's very admirable achievement in securing from Mr. Lewis Harcourt the promise that they shall be practical men who have a knowledge of agriculture is the best assurance that they will not have this character. "A practical knowledge of agriculture"—why the very phrase calls up a vision of a solid, unfervid, cool-tempered, perhaps slow-moving man who has no desire to create an earthquake and doubts his own powers to do it. I repeat that I like not altogether that word "prospective"; but the innate conservatism of the agricultural temperament—and if these Commissioners be not actual agriculturists, we may be certain that they will possess this—will be the best safeguard against extravagant designs and exaggerated conceptions. The Commissioners will be practical men. In this we have the assurance of a moderate policy that will at least impress the county councils into co-operating acquiescence. Of this I am persuaded.

Why Tenancy is still Preferred.

But what, I hear it being asked, about the great issue—that of peasant proprietorate versus tenancy? Well, there is a pretty proposal being quietly made that the Government should permit *in certain instances* of purchase after a period of tenancy—that, in a word, the process should be, under certain conditions, evolutionary in character. The Government will never accept it, and in my view it is idle to urge it. If this evolution is to be permitted at all, it must be permitted generally. Every tenant must be given the opportunity of ascending to the dignity of ownership. There can be no differentiation. That would simply mean the wrecking of the whole scheme. It would mean more than this to the Government—if it did not mean the imperilling of the Bill, it would mean the arraying against it of a mass of Radical and Socialist opinion, and the birth of an anti-Ministerial sentiment that would pertinaciously seek insidious opportunities for asserting itself. This may, of course, inspire the Government's opponents on the committee to a more vigorous espousal of the principle of purchase. It matters not. Mr. Lewis Harcourt is too astute a statesman—and a statesman he has certainly shown himself to be—to put a rope under the neck of himself and his colleagues.

At the last meeting of the Lydney and District Farmers' Club it was reported that the Whitsuntide show resulted in a profit of £21,000, which was very satisfactory considering the cold weather which prevailed on the show day. The income was £282, as against £320 last year, whilst the expenditure was £260 and £290 respectively.

The King's Birthday Honours.

We are pleased to see that agriculturists were not altogether forgotten in the selection of H.M. the King's birthday honours made known on Friday. Sir James Blyth, Bart., has been made a peer and Mr C. Judd, the well known Hampshire Down sheep breeder, has been made a knight.

Neither of these recipients of well-deserved honours need any introduction to agriculturists, but it may be mentioned that Sir James Blyth, who was born at Chelmsford in '841, belongs to a family long associated with agriculture and stock breeding, and has himself always taken a keen and practical interest in matters agricultural, as the success of his Jersey cattle, Shire horses, and Southdown sheep in our various showyards have testified.

Sir James is, perhaps, better known to the general public for the services he has rendered in the work of combating tuberculosis. Ever since the urgency of investigating the scourge became apparent, he has been prominently identified with the business of inquiry. Even before the appointment of the Royal Commission he had, first as an original member of the Council of the National Association for the Prevention of Consumption, and afterwards as treasurer of the International Congress on Tuberculosis in London in 1901, been intimately connected with the movement for checking the disease. His chief aid in that direction was rendered immediately after the appointment of the Royal Commission. Recognising that the Commission would have to carry out elaborate experiments, and that extensive land and premises would be required, he placed two of his farms and other accommodation for two or three years at the disposal of the Government for the use of the Commissioners. At a later date he informed these gentlemen that they might continue in the occupation of the holdings for such time as might be necessary for the purposes of complete investigation; and after six years farms are still in the hands of Government.

Mr. George Judd is the tenant of several thousands of acres in Hampshire where he has his

Mr George Judd, who was made a Baronet in the Birthday Honours.

famous flock of Hampshire Down sheep. Mr. Judd lives in hopes of being an M.P. one of these days for he has already fought three elections in the Liberal interest, and at the last general election was only defeated by seventy-nine votes in his contest for the Andover division.

Mr. William Wallet, auctioneer and live-stock agent, Castle Douglas, acting for a gentleman in Northamptonshire, recently executed an order for fifteen pedigreed Galloway in-calf heifers and one pedigreed Galloway bull. These, when dispatched from Castle Douglas, formed the finest lot of "blackskins" which has left the Stewartry for some time. All the best herds in the district were visited, and, where at all procurable, drafts were made from the oldest prize-winning stocks, and the best blood of the breed has therefore come to England in this consignment.

The following resolution was carried unanimously at the last meeting of the Bucks Chamber of Agriculture:—"That this Chamber of Agriculture, while it will support any measure to retain the people on the land, strongly objects to the proposals of the Small Holdings and Allotments Bill to coerce the county councils to hire land compulsorily at the cost of the rates, and with no compensation, and views with regret the refusal of the Government to encourage individual ownership."

The Growing Crops.

Home Reports.

We hear a good deal this week about boisterous, cold winds and low temperature, and of the effects thereof in the plantations. We town-dwellers are personally aware of the abnormal character of the recent climate. Expecting that we have entered into the enjoyment of summer when June arrives, we cannot understand the necessity for occasional fires in our sitting-rooms, and we grumble accordingly. And as this has been our experience lately, we can believe that our friends in the country must have had an anxious time. They have doubtless examined their plantations with some concern as they looked for weather-marks upon the plants, which, as yet, are hardly sufficiently advanced to be indifferent to rough usage. The majority of the reports before me speak of damage done in the gardens, the retardation of growth, and certain changes from apparent health to a somewhat sickly condition. There is probably much truth in these statements as regards gardens that occupy exposed positions, but I gather from other information that it can hardly be concluded that the growth, as a whole, has been materially checked. Despite the climatic disadvantages, I am rather inclined to think that, although progress is not so rapid as we might expect at this period, it is fairly satisfac tory, and that there is thus far no cause for interference with our previous ideas concerning the probabilities of the final yield. The vermin alarm appears to be subsiding, and although washing is still in evidence, it is continued rather by way of prevention than cure. Iam by no meansdesirous to talk about heavy crops, as I believe they cannot be beneficial to our struggling planters. I would much rather see a scarcity of hops this year, but am compelled by the exigencies of my position to report impartially the facts as they present themselves. We have now commenced the two critical months of the growing season, and if the weather during July and August is normally favourable, we may reasonably expect that the plant will advance, as the strength of the bine is generally well established, and there is sufficient of it to produce a plentiful supply of fruit. Let us hope that the weather will be helpful to the quality, for after all, this is more important than quantity. The world now grows too many hops for its requirements, and English planters should aim to be at the top of the tree in the points of quality and condition, and thus be independant of their numerous foreign competitors.

The Continent.

BADEN.—The growth is slow, being hindered by the prevailing low temperature and the appearance of vermin, but the planters are generally expecting an average crop.

ALSACE.—Unseasonable weather is checking the advance of the bine, and in some places vermin has appeared, but on the whole there is not much to complain of, and the outlook is fairly satisfactory, supposing that normal climatic conditions are experienced during the next two months.

ALTDORF.—Hops are developing fairly well, although here and there the bine is attacked by vermin. Planters who are training on wire are the best satisfied, as their bine looks more healthy and grows more rapidly than in those grounds where the old pole system is used.

BAMBERG.—Despite a severe attack of ground fleas, the bine has made good progress during the past few days. It is generally healthy, but warmer weather is required, and additional manuring is recommended to stimulate the growth.

MAINBERG.—In some plantations the growth is backward, but in the majority the bine has reached three-quarters of the height of the poles. General progress is clearly perceptible, and growers are well satisfied with their prospects.

WEILDERSTADT (Wurtemberg). — The present outlook favours a good crop, as the condition and growth of the bine, which is quite free from vermin, are normal and satisfactory.

ENTRINGEN.—Fortunately the recent spell of wet, cold weather has ceased, and a more favourable condition has commenced. The bine is fairly healthy, but very backward, and a higher temperature, especially at night, is necessary for further development.

SAAZ (Bohemia). — With genial rains and warmer weather the progress of the hop plant is evident. Some plantations are in arrear, but the general condition is satisfactory and promising for a full crop. We are completely free from vermin, and with favourable weather shall be satisfied when the harvest arrives.

NUREMBERG.—The traders, who are well posted up as to crop prospects, are content with the reports that reach them from the whole of Germany. They declare that there is no general reason for complaint concerning the present condition of the plantations, and are anticipating ample supplies from the new growth.

BELGIUM.—All alarm as to the recent attack of vermin has passed away, and with the arrival of more genial weather, the crop prospects have become much brighter. The bine is now reported to be generally healthy and vigorous and to be making rapid progress.

America.

NEW YORK STATE.—Some irregularity in condition and growth is reported, the yards in certain districts having made a good start, while others are very backward. The weather at the opening was not favourable, but improvement has recently set in, and a warm wave is now exercising its influence. It seems to be generally expected that a smaller crop than last year will be harvested on this side.

PACIFIC COAST.—Contradictory reports are circulated, the "bulls" declaring the certainty of only a moderate yield this season, and the "bears" taking exactly the opposite view. An impartial examination of the evidence inclines me to think that the future prospects of the growers are not likely to be favourable with respect to prices, as the crop outlook, thus far, indicates heavy production. Unless a big foreign demand should set in the Coast planters will most probably find themselves with more hops than they can sell.

The Markets.

I need not occupy much space in my report of the trade this week. In London the position is unchanged. Some unimportant spasmodic business is done daily, but the low rates do not induce speculation, nor are traders aroused to action by the cold weather, the rumours of the continuance of blight, or the statements concerning the interference with the growth by the high winds. Both consumers and merchants are absolutely indifferent to all these assumed risks, and the market remains in the same dull condition as before. There is just about sufficient demand to keep prices steady, and that is all that can be said.

In Nuremberg the promising position of the plantations is producing its natural effect. The values of choice lots are nominally maintained, but it is not difficult for buyers to obtain concessions when they wish to operate. In the entire absence of demand for export, quotations for the lower grades have fallen considerably, and a general dullness prevails which is likely to continue.

The Belgian markets are in a similar condition. In proportion to the improved crop prospects the values of spot hops are lowered, but the speculative quotations for 1907 crop reman steady.

In America hops are being pressed for sale, and meet with very little response. The slight advance in prices previously noted has disappeared, and the markets have fallen back into a state of dullness, from which it is somewhat improbable they will soon recover.

Evidently the whole of the trade is waiting further crop developments, and as far as we can judge by present appearances, a very quiet time is in store for all concerned.

DAIRY.

Preston Cheese Fair.

There was an unusually large attendance of dealers and factors at the June Cheese Fair, held at Preston on Tuesday, when the pitch consisted of 103 lots, comprising 1,638 cheeses, and a clearance was rapidly effected. Medium quality made 55s. to 57s., fine 58s. to 60s., and a few exceptionally choice dairies realised up to 63s. 6d. per cwt. Prices were on a par with those of twelve month ago, but showed a slight reduction compared wi t those of the last fair.

Nantwich Cheese Fair.

At Nantwich Cheese Fair on Thursday ther e was a a pitch of 80 tons. Factors were well represented, and the tone of the market was good. Sales were readily effected at the undermentioned prices. Finest Cheshire from 54s to 57s 6d per cwt; medium from 50s to 53s; lower qualities from 46s per cwt.

An attractive programme has been drawn up by the Doncaster Agricultural Society for their show on Wednesday and Thursday next, and given fine weather there should be a large attendance of visitors on both days.

CORRESPONDENCE.

To Dip or not to Dip?

SIR,—To the careful and experienced reader it will be obvious that the letter from Mr. C. Wadkin, which appears under the above heading on p. 728 of the issue for June 17, refers, not to the dipping of sheep for the destruction of vermin and the prevention of scab, but to washing as a preliminary to shearing.

To wash or not to wash sheep will always be a matter of individual opinion and personal convenience dependent on the environment of the sheep, and we need not discuss it; but it may be useful to point out that the question, "To dip or not to dip?" can only be answered in the affirmative, and in the interest of the sheep master as well as the well-being of the sheep, the flock should not only be dipped, but dipped twice in the year.—Yours, &c., M R.C.V.S.

The Two Things Farmers Want Now.

SIR,—There are two things just now that we are specially hoping for. First, is for fine weather; second, that we may have the chance of selling the growing crop of wheat and oats at something like the present prices.

The realisation of these hopes would make all the difference as to whether 1907 will be reckoned amongst the good or bad years so far as agriculture is concerned.—Yours, &c.,

EAST ESSEX.

The Views of a Young Farmer.

"Men of other trades do seem
To think the farmer very green,
And criticise as to what ought to have been,
With their knowing advice which they think so keen."

SIR,—I do not know if you care to hear from young readers of your paper, as I have not seen any evidence of same; perhaps you do not, but I trust you will grant me the space for rather a long letter. Now I am writing I may as well do the thing thoroughly, or, to quote the old proverb, "I may as well be hung for a sheep as a lamb."

You may deem an introduction advisable, so perhaps I had better give you one.

I am the son of a large farmer, and, by the way, the youngest (who, as in the "days of old," is often the most romantic and enterprising), 6 ft. 2½ in. as I stand in my boots, age nineteen-twenty. I left school when I was fifteen years old and started work as a shepherd boy, and worked my way from one thing to another until I have been through the whole process; and there is not a single thing attached to a farm that I cannot do or show others how to do, anything in the correct manner, which is most important to every farmer, but a thing which I am sorry to say is often overlooked.

Now, I have given this description of myself, as I have no wish for people to think me a "kid-glove farmer," and I am proud to say I am an ordinary working man.

Having read the letters from your correspondents regarding criticism by counter-jumpers, &c., of the farming methods, and not only the farming methods, but insinuating base, sarcastic, personal remarks of the farmer, I thought I should like to give my opinion. How often when travelling the country, go where you will, one hears our fellow cousin from the town making light of the farmer and his calling. How often one hears their favourite scornful remark, "Only an old farmer chap." The majority of farmers take no notice of these words; but how strongly are they rejected by the younger generation. Personally speaking, I have often had cause to suppress some of them by main force, but then one would have a considerable undertaking to curb the whole of them in this manner, but an occasional shake-up serves to remind them that the old farmer chap is superior in strength and skill, even if his particular calling is inferior to theirs; but I maintain that it is not. I am inclined to think that the farmer's son is vastly superior to them in every way, but *n'importe*, someone has to be the farmer, or they would be in a sorry plight. Well then, if it is so, why make light of him until he is ashamed of his existence and ashamed to acknowledge his trade.

Farming in this country is a thing of the past, and the farmers that are left are about as important as the remaining Britishers in South Africa (as Lord Milner rightly terms the "Under Dog"), kind of stepping-stones for others to dance on.

I was most sorry to read the account of the "Farmer's Son" in your paper of May 27; but he might be in a much worse position than he is at present. If he makes the best use of his time it will be to his advantage rather than disadvantage in the end.

I should advise him to go to Western Australia (which is in my opinion better than Canada); he can get a reduced passage and 160 acres of free land with a climate that would be hard to equal (if not impossible).

Under no circumstances should he remain in this country (if he is not afraid of work) when such great opportunities are offered in the Colonies.

Perhaps when all the young and plucky are drained out of this country, so that only the aged and faint-hearted remain, our Government may awaken to the fact; but not until then, and then only, will things begin to improve.

It is a great pity that parents do not encourage their sons to emigrate and put them in positions there, instead of preaching about the diseases and dangers that they run. If our forefathers had practised the same doctrine, what would have been the result? Is that following in the footsteps of the Briton? No; most decidedly not.

But in spite of these danger cacklers, some of their sons do emigrate, and you will find that they generally make great men in the end. I intend going myself and chancing my luck before long. When I have had a little experience I will send you a report for the benefit of young fellows in a similar position.

Of late years a great many farmers' sons have served in the Imperial Yeomanry, which is not only a benefit and a change to themselves, but at the same time—at present—a very efficient corps; but if Mr. Haldane carries out his idea of reducing their pay, &c., what will become of this present efficient corps? Will they remain in the Yeomanry for nothing, when they could be earning three times as much on the farm at the rate of pay at present received, without reducing the pay further? If the pay is reduced the farmers' sons will bid the Yeomanry farewell. If the Government wish to ruin the Imperial Yeomanry they are most certainly going the right way to work.

I think it would be far better to copy the naval idea, and have a nucleus Yeomanry.

Now, I have written rather a long letter, but not half so long as I should like to have seen it; but this is a busy time of the year, so I cannot be a scribe and a haymaker at the same time, but I hope to write later on.—Yours, &c.,

DABROWN.

Preference.

SIR,—If your correspondent "Mid-Oxon" will compare his letter with my former one on this subject, he will find that his quotation therefrom is not correct. My letter was a reply to an argument in the form of a question contained in a previous issue of the MARK LANE EXPRESS, viz.: "What would it matter to the small holder whether that brutal competition were foreign or colonial in its character?" And in no part of my letter did I mention foreign corn, the taxing of which would not directly benefit farmers either large or small in this locality, because they buy more corn than they sell. As to his question, "What do I think would be done with surplus foreign corn if a duty was put on it?" it is not in my thoughts to care what becomes of it, so long as that which is sent to England pays a tariff to the revenue equal to that imposed by other grain importing countries. And to give our colonies preference—other than in name only—the tariffs imposed on foreign imports must be sufficiently high to enable colonial produce to undersell the foreign in the British markets, and in return our colonies should and would give British manufacturers similar facilities to compete in theirs.

If the tariffs are arranged and regulated by men of common-sense, they will be graduated so as to exclude those things that the British Empire can produce herself, and encourage the importation of those foreign goods that we really want.

For instance, I would not tax maize, but allow it to come in free to be converted into beef, mutton, pork, and the produce of the dairy and poultry run, by the British farmer, small holder, or otherwise—and these things must certainly be protected against foreign competition. Again, I would put the tax on flour much higher than on wheat, to give English millers a chance, and prevent the anomaly of bran being worth more per ton than wheat, as was the case last winter.

In fact, the whole system of importation must be placed under control, or the present system, which is equivalent to riding without reins, will land us into the ditch.—Yours, &c., A. J. R.

June 25, 1907.

Milk Fever.

SIR,—The two last weeks letters have appeared in your journal from two practical men—or at least I should take them to be so—on the subject of milk fever.

The treatment they advocate in each case is calculated to be bewildering, being just the reverse. The one advises milking the cow two or three times before calving, and the other not until twenty-four hours afterwards. For myself I should say milk beforehand, as it appears reasonable to relieve the cow's system of the superabundance of milk as much as possible, which, in my opinion, would agitate and aid the fever.

But when two such practical and experienced men disagree, the opinion of your veterinary surgeon would be much appreciated on the subject, if he will kindly favour us with same. As milk fever is such an important and dangerous malady, it is most essential that there should be no hesitation or doubt as to its prompt and proper treatment.

I think that this time of year, with the flush of grass, together with its attendant results in the *freshness* of the cow, the latter is more liable to an attack.—Yours, &c.,

June 26, 1907. GLOUCESTERSHIRE.

Butter Not Keeping Fresh.

SIR,—I shall be much obliged if any of your readers can tell me why the butter will not keep fresh this year. With 24 hours of being made from beautiful fresh cream it is rancid and unsaleable.

The same thing happens here for a few weeks each spring, and again during the fall of the leaf. I have always attributed it to the presence of some herb in the spring pastures, while in the autumn the local people put it down to the cows picking up the fallen ash leaves.

But I have never known the nuisance prolonged to such an extent as at the present time. For fully two months we have had to waste nearly all our make three times a week.

Has the cold weather and the absence of sun kept the noxious herb out longer than usual.

The subject has baffled me for some years here. Every precaution is taken with the pans and churn, while salt has been tried in different quantities and the cream scalded, but all to no purpose.

This place is situated 500 feet above the sea on the chalk downs of Surrey, and the whole place and dairy are very open and healthy.

The soil is very light loam (about five inches only) on hard chalk. The cows are Dexter Kerry and one Guernsey.—Yours, &c.,

A PUZZLED SUBSCRIBER.

June 28, 1907.

The Hop Trade.

SIR,—In cheap years total British wants exceed 700,000 cwt.; past and present years were overcheap.

Total British supplies, 868,254 cwt., in 1905-6; 433,301 cwt in first nine months, 1906-7. America cannot fill the gap, and the Continent has nothing to spare. An official survey of Germany's stocks shows their total inferior to one month's normal German consumption.

In September, 1906, brewers held heavy reserves, in 1907 sheer want will compel them to buy before September.

America is sure to pick a short crop; it got two record ones in succession, and three full yields never follow in succession. Its reports about stocks and prospects vary as they come from bulls or bears, as a fact Pacifics are dearer in Frisco than in London, and America's firm offers are being retired, which does not point to fair stocks or prospects.

Extensive grubbing was done everywhere this winter, while everywhere consumption is increasing.

In Europe spring was and summer continues adverse to the bine—little warmth and sun, much cold and wet.

The fearful losses due to this year's unjustifiable panic crippled and demoralised the trade, in normal times values would rule at over double their present level.

Yet brewers do not stock up; they imagine growers will go on ruining themselves to enrich them.—Yours, &c.,

VAN WINT AND CO.

Antwerp, June 27, 1907.

The death is announced of Mr. J. L. Winter, of Bridgetown, Totnes, who for so many years was secretary to the Devon County Agricultural Association. His connection with it began in 1858, as assistant to Mr. Oldrieve, secretary of the old South Devon Society, which was merged into the county society, and in 1875 he succeeded Mr. Oldrieve as secretary, and held that office until November, 1904, when in consequence of indifferent health he resigned, with a retiring allowance. For over thirty years he was also the hon. secretary of Totnes Union Agricultural Society, and his death will be regretted by members of both societies.

In the course of a discussion on the Small Holdings Bill, at a meeting of the Somerset Chamber of Agriculture, resolutions were passed objecting to the clause which empowered the Board of Agriculture to appoint commissioners to go behind the county council and exercise powers now entrusted to that body; against the clause in the Bill which transfers the powers and duties of the district councils to the parish councils and parish meetings, and also against allotments being increased to five acres.

Nottinghamshire Notes.

THE great event of the present week has undoubtedly been the holding of the Royal Show at Lincoln, practically everything of local interest to farmers being abandoned in its favour.

MR. ARTHUR S. GIBSON, of the Elms, Ruddington, Nottinghamshire, who for so many years was steward for the late Mr. Philo L. Mills, has received a similar appointment in South Lancashire, where he will remove shortly after his return from judging at the great Canadian Show at Winnipeg next month. He was one of the judges of Shorthorns at the Royal Show this week.

MR. WILTON ALLSEBROOK, the secretary and manager of the Midland Farmers' Co-operative Society, informs me that members continue to join the association, and that he has a large number of promises to join after harvest.

I UNDERSTAND that Colonel Vere Wright, J.P., of Shelton Hall, near Newark, has purchased the Shelton Manor farm for about £4,500. For about ten years Mr. Frederic Smith was the occupier of this farm, and had some enormous crops. He removed from there about eight years back, and went to reside at Seagrave Grange, near Barrow-on-Trent, Notts, but retired from farming two years back. Mr. Benjamin Smith now has the farm, and it is considered to be one of the cleanest in the county. The area of the farm is about 160 acres, but there is a tithe charge of about £50 per annum, which can be increased to £70 when wheat makes 45s. per quarter.

HAYMAKING is now in full swing in the county, thousands of acres of meadow grass having been reaped during the present week. At Burton Joyce two or three fairly large haystacks have already been put up, and after the fine weather of Wednesday and Thursday a good acreage will have been gathered before Sunday if the weather continues fine.

SWEDISH farmers, a number of whom have been at the Royal Show this week, will pay a visit to the agricultural college at Kingston, Notts, on Monday, for the purpose of studying the methods adopted in the dairy there, and also an inspection of the experimental plots devoted to root and corn crops.

CHARLOCK can be got rid of has long been admitted, yet we still have a number of farmers who are sceptical of the results to be obtained from the use of a solution of sulphate of copper. However, I have personally witnessed some experiments at Kegworth, where a crop of oats was being smothered by the yellow flowers. They were sprayed on June 6, and when I visited the field last evening the results then witnessed were truly surprising, and I hope that farmers will heed, mark, learn, and inwardly digest what I am writing. On ninety-nine stems of charlock out of a hundred all the flowers had dropped off, and simply the stalk remained. True, some of the flags of the oats had turned brown, but from this the crop will recover. But the fact that all the flowers have dropped is sufficient proof that the solution has done its work. Professor Hutchinson, of the Notts Agricultural Institute, remarked to me, if the same field is given a similar dressing for five or six years the unsightly "ketlocks" will have entirely disappeared. One word of warning, however, is necessary, and that is, on no account should a crop be sprayed on a damp or wet day.

BEAN crops in this district are looking remarkably, the stems being filled with flowers, many of them having set. The recent heavy rains has kept them free from flies, which only too often infest these plants with such disastrous results.

WHAT a good thing it is to reside within a few miles of a large city like Nottingham for farmers. They are enabled to make tip-top prices of their dairy and garden produce, but never before have I heard of a farmer turning rubbish into profit. Such has been the case with a man living a few miles east of Newark. He had a field of oats which was one mass of poppies, but with an eye to business he obtained a number of boys and girls after school hours to pull them. He then sent them to Nottingham and actually realised between £12 and £13 in a fortnight. The cost for labour, &c., was only £3. This method of making money, I think, is somewhat unique.

MANGOLDS in nearly every instance in Nottinghamshire have been gapped and taken on the whole they are good plants. Swedes, too, have hit well, but farmers complain that the rubbish cut up by the horse hoes continues to grow owing to the recent bad weather. Sunshine is, without doubt, badly wanted.

June 27, 1907. R. K.

The Darlington Chamber of Agriculture, after a lengthy discussion on Monday, passed a resolution to the effect that the Chamber, while in sympathy with the general idea of small holdings, entirely disapproved of the bill now before the House of Commons.

POULTRY.

Second National Poultry Conference, 1907.

The arrangements for the above conference to be held at Reading, July 8 to 12, are now complete, as indicated by the official programme, which, together with forms of application for membership, can be obtained from the hon. secretary, Mr. Edward Brown, F.L.S., 12, Hanover Square, London, W. Upwards of 150 delegates and members are already registered, and it is anticipated that this number will be considerably increased. A large number of public bodies, county councils, agricultural and poultry societies, colleges, colonial agencies, chambers of agriculture, &c., are sending representatives, and many ladies and gentlemen interested in the poultry industry have entered as members. Others who have not already done so are invited to forward their names at once, so that the necessary arrangements for their accommodation may be made.

On Monday evening, July 8, a reception to delegates and members will be given in the Town Hall, Reading, by the Mayor and Mayoress, after which the official opening will take place. The chair will be occupied by Sir Walter Palmer, Bart., chairman of the General Committee, and the address will be given by the Right Hon. the Earl Carrington, K.G., G.C.M.G., President of the Board of Agriculture. The sessions will be held on Tuesday, Wednesday, and Thursday, July 9, 10, and 11, and about thirty papers dealing with various branches of poultry-keeping will be read. Excursions have been arranged on the River Thames and to the College Poultry and Experimental Farm, Theale, and visits to places of interest.

On Wednesday and Thursday, July 10 and 11, a display of breeds of poultry will be held, representing nearly all the breeds and varieties of poultry, both British and foreign, as a large number of specimens are being sent from the Continent. In all there will be about 300 birds. This will be a unique collection. At the same time cases of eggs from many countries will be shown and also the method of candling eggs. The exhibition will close at 7 o'clock on Wednesday and 8.30 on Thursday.

Spalding June Cattle Fair was held on Tuesday, when young beasts sold from £10 to £12 about £14 10s. for two-year-olds, and £16 to £17 for strong store beasts. The best fat beasts made £22 to £23, and others £16 to £20. Some Scotch beasts sold by auction fetched £16 to £17 each.

FARMS, BUSINESSES, &c., TO LET.

FARMS TO LET of various sizes in Kent, Sussex, Surrey, &c.—LANGRIDGE & FREEMAN, Agricultural Valuers and Auctioneers, Tunbridge Wells, Kent, and 28, Queen Street, London, E.C.

BAXTER, PAYNE & LEPPER, LAND & ESTATE AGENTS, AGRICULTURAL VALUERS, SURVEYORS, & AUCTIONEERS.
Special Agents for
DAIRY, FRUIT, STOCK AND MARKET GARDEN FARMS.
Particulars on application.
All applicants stating details of requirements will have a selected list of Farms answering thereto forwarded free of charge.
MESSRS. BAXTER, PAYNE & LEPPER'S AGENCY has proved a valuable medium for Owners and others to secure substantial Tenants for FARMS, ESTATES & COUNTRY PROPERTIES.
Landed Estates managed and owners advised upon the best method of dealing with Farms to meet the circumstances of present times, and so protect interest and income.
Offices: 69, King William Street London, E.C., and Market Square, Bromley, Kent.

SUMMER TRAIN SERVICE.—The Great Northern Railway Company's Time Tables for July indicate a number of important additions, particularly to the Holiday Resorts served by the Railway. The East Coast express between London and Scotland will be considerably augmented.
Special season tickets, which are issued for periods varying from one month to six months at rates equal to 6d. by 1.9 per day, will be available by boat train. Full particulars on application at any of the Company's offices.

LINCOLNSHIRE.—For immediate SALE, a capital agricultural Estate of 500 ACRES, in Lincolnshire, one-third pasture; 3 farm houses, buildings, and cottages; 1½ miles from Station; occupied by good tenants; rental £538 p.a.; tithe and land tax together under £40; price, freehold, £11,500.—Full particulars and plan of BENJAFIELD & WOOD, Land Agents and Auctioneers, Lincoln.

To Buyers of Farms.—WHEN YOU ARE AT LINCOLN.
9,000 ACRES, genuinely, FOR SALE, in Farms and Estates ranging from 20 to 900 Acres, and comprising some capital Agricultural Properties. Send us an outline of your requirements.—BENJAFIELD and WOOD, Land Agents and Auctioneers, 219, High Street (opposite the Saracen's Head Hotel), Lincoln.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

Agents, Situations Wanted.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

TO Auctioneers and Estate Agents.—A Young Gentleman, educated at the Bedford County School, and possessing a good knowledge of shorthand and typewriting, is seeking a situation in the offices of a firm either in London or country. Small commencing salary.—Address "J. T. H.," care of this office.

ADVERTISER (20), having had 2 year's experience on good Farms, desires place as Assistant, to help in work and management on mixed farm in Midlands or Herefordshire. Knowledge of Machinery. Comfortable home.—"No. 25," Office of M.L.E.

WANTED, to rent, within reasonable distance of London, Wind or Water Mill with good grist trade.—Apply "No. 443," care of M.L.E.

AUCTIONEERS, AGENTS.

Mr. Farmer,—One sees most trumpery efforts made by waggoners to patch up harness, such as piecing straps with boot-laces, and tying loose buckles on with bits of string. Such attempts are only temporary at the best, and generally speaking risky. In fact, much damage to harness, horses, and carts can be traced to these gim-crack ways of effecting repairs. One cannot expect a farmer to be sending a set of harness to the shop every time a strap gets loose or a buckle comes off, and if the waggoner is anything of a handy man, and has a few Bifurcated Rivets, he can effect these simple repairs himself. The remedy is use **SELF-PIERCING BIFURCATED RIVETS.**

Send us 1/- for Box, assorted, and Hand Tool if you are unable to obtain them from your Ironmonger.

Abundant success where other means have failed!

"MOLASCUIT."

(REGISTERED TRADE MARK.)

HUGHES' PATENT.

This valuable addition to the feed of all animals is made entirely from the Sugar Cane, a natural grass, by the Hughes' process of separating the digestible interior tissue of the crushed Sugar Cane from the rind.

THE BOARD OF AGRICULTURE in leaflet No. 74 state, "Molasses are now largely employed as a Cattle Food when absorbed by the pith of the Sugar Cane. In this form the food is more convenient to handle than when in a liquid state."

Although this is useful information, there are other important facts to be known. The pith or interior tissue of the Sugar Cane is digestible, more so than Hay, and it will absorb four times its weight of Molasses. Again, when Molasses are absorbed by this natural product they can be dried. By this means the water of ordinary Molasses is replaced with good feeding material. "MOLASCUIT" contains less indigestible fibre than Linseed Cake. It should be used with Linseed or Cotton Cake, Grains, and/or all other rations in proportion to the Albuminous matter present in the other foods.

Obtainable from all leading Corn Merchants and Dealers throughout the United Kingdom.

For further particulars, apply to—

OGLE'S Patent Paragon Horse Hay Fork

Is by far the Simplest and most Improved Implement for the Building of Hay, Clover, or Loose Straw Stacks. By its use Stacks can be Built Cheaper and in Less time than by any other Implement in use. The Low First Cost and Simplicity of the Implement is a great recommendation in itself. It is Light, Portable, and can be quickly erected. With this Fork we guarantee to deliver 35 feet high a large 2-horse cart load of hay in less than four minutes. We also guarantee our Elevator to do more work in less time and with considerable less labour than any other appliance made for the purpose of elevating hay or straw. It will work equally well on a load of hay that is sweating as on one that has been newly built.

Can be sent anywhere on approval.

Further particulars had on application to

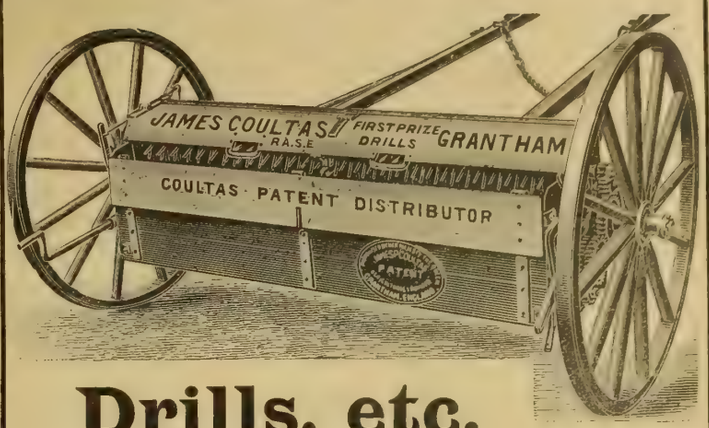
C. C. OGLE & SON, Perseverance Works, Ripley, Derbyshire.

FOLEY'S SILVER MEDAL TELESCOPE ELEVATOR.

THESE Machines are exceedingly useful, being specially adapted for all kinds of harvest work, as well as for threshing purposes. They are very simple to manage and are made from the best materials, and as light as possible consistent with strength. They are constructed on the telescopic principle, and the top trough is operated in and out by our improved rack system; the troughs are raised by two strong iron lifting bars worked by chains round a spindle driven by a worm and wheel so that it is self sustained. The chains and pulley are of very best material and of a pattern that cannot slip. The rakes are of ash and fitted into box links on the chains which makes them perfectly secure. The elevator can be worked at any angle by means of a patent gearing which makes it very much easier to set it to any threshing machine. Fitted on iron wheels and can be drawn with either shafts or drawbar.

Price £42.

Copies of unsolicited Testimonials on application.



We are the only makers of a Special Large Elevator, **"The Giant,"** with a trough 45 ft. long. We solicit enquiries. Any other pattern made to order.

Horse gears to work the above as Stackers. Prices on application.

Seasonable Topics.

The Weather.

OUR only excuse for referring to this subject again is that the weather happens to be the most seasonable and generally-discussed topic just now both in agricultural and all other circles. We are now in July, the longest day is past and gone, and at the moment of writing we are still waiting for summer and sunshine. So far as crops are concerned, we have not much complaint to make, but the world wants settled weather—in fact, a taste of summer. Haymaking has commenced in earnest, because the matter could be deferred no longer, but haymaking in gloomy and catchy weather is an expensive as well as a worrying task, as most farmers know from experience. We have had no great weight of rain, but for weeks past it seems to have been a continuation of storms and showers, with gloomy skies in between and a glimpse of sunshine now and then. There is certainly some excuse for depression of spirits, but we trust that by the time these lines appear in print matters will have improved, and we shall be enjoying the summer for which we have waited long and patiently.

The Topic of the Moment.

THERE can be no doubt that the most-discussed topic in the agricultural world just now is small holdings and their possibilities for good or ill. Public meetings have been held to discuss the question, chambers of agriculture have argued about it, and every other man you meet asks your opinion on the prospects of small holdings. We are not writing this with the object of expressing any views either one way or the other, and while we believe that the promoters of the scheme have the interests of agriculture at heart, we hold the same opinion regarding the views of those who fail to see how the Small Holdings Bill can prove to be of much benefit. There is something to be said on both sides, but after every argument has been employed both for and against, the proof of the pudding will have to come in the eating, and time alone will show whether there are the benefits to be derived from small holdings which the advocates of the measure claim. That public interest is keen there can be no doubt, but curiously enough, we hear less about the matter from the people who are to be the small holders in the future than from anybody.

Some Would-be Small Holders.

IN connection with the question of small holdings we would draw attention to certain extremists to be found in most village communities who are tremendously enthusiastic when a fresh thing is introduced, and when they have got it they find out that they do not want it. We had some experience of these individuals when parish councils were inaugurated, and the cry then was for allotments. Allotments they would have at any price, and what have they done with them in many cases? We have a case before us of a man who was instrumental in getting allotments in a certain village, and he posed as one who would benefit materially by the acquirement. He took several of the plots himself, but the excitement of the thing soon wore off, and he cultivated his land so badly that it was taken away from him. Now this very individual is a strong advocate for small holdings in the parish, and if he has one its fate will doubtless be similar to that of the allotments. Largely through the action of such people allotments have turned out to be white elephants in more than one place, and it is desirable to avoid a similar experience with small holdings.

ON A KENTISH FARM.

Harvest Beer.

IS it a good thing for a farmer in his own interests and that of his workmen to supply the latter with intoxicating liquor when employed in hay harvest? Advocates of total abstinence say no, and contend that men can do more and better work without beer than with it. Ask, however, the old labourer, who has been used to harvest beer all his life, until the habit has become almost second nature, and he will tell a different story. Speaking for ourselves, we have a perfectly open mind in the matter, but we are averse to dropping the beer, as some have done, and not giving its equivalent in money. The subject is one that might well be discussed in the correspondence columns of the MARK LANE EXPRESS, and we should like to hear the views of those who have tried both ways. Hay harvesting under a broiling sun is hard work, and apart from any question of quenching the thirst, the point is whether the stimulating influences of beer are effectual in sustaining energy and vigour. We know, of course, that a line must be drawn or the beer makes the harvester useless, and the farmer who is too liberal is foolish in his own interests, neither is he acting kindly towards his men.

The Destructive Insects and Pests Bill.

IT is an ill wind that blows no one any good, and whether the Destructive Insects and Pests Bill proves beneficial to fruit-growers in the future, some credit for its introduction must be given to the American gooseberry mildew, which has created almost as much sensation of late as the famous Colorado beetle did years ago. In reply to a question asked in the House of Commons recently, Sir Edward Strachey said he hoped the Bill would receive the Royal assent shortly, and it would impose on local authorities the duty of taking the necessary steps to prevent the spread of the above disease. It has been felt in certain quarters for some time past that a Bill of the above character was needed in the interest of fruit-growers, and the gooseberry mildew has brought matters to a climax. What it is possible to do by way of legislation remains to be proved, but gooseberry mildew is only one evil, and there can be no question as to

the extent to which fruit crops suffer every season through injurious insects. It will be soon enough to say more when we see what provisions are made by the new measure.

Potato Disease.

SINCE our last batch of seasonable topics was written, we have seen several fields of potatoes attacked by the dreaded blight (Phytopthora infestans), the presence of which is due to the dull, damp weather we have experienced of late. What is to be done? If the weather improves—and we sincerely hope it will before long—the spread of the disease may be checked by climatic conditions, but, otherwise, the only remedy is spraying. We do not wish to appear pessimistic, but it is no good locking the stable door when the horse is stolen, and when disease appears, as it has done this year in June, the outlook is ominous. Not very much potato spraying has been done in the past few dry seasons, though last year, dry as it was, crops suffered a good deal through disease, but the effectiveness of Bordeaux mixture as a means of prevention has been proved over and over again. Where potato crops are affected already, prompt spraying would tend to check the spread of the disease, but the great thing is, if possible, to prevent, and spraying with Bordeaux mixture is a means to this desirable end.

More Insurance.

THE new Act is now in force, and if the ordinary maid-of-all-work, who is not famous for her carefulness as a rule, meets with an accident her employer is liable to pay compensation. The accident might happen any day, and the amount payable by the employer of the servant—say a struggling tradesman or a small farmer—would be a serious matter if it had to come out of his own pocket. One means of protection is open to him—he must insure with one of the companies that are offering favourable terms. Having done this, the employer feels that he has removed his responsibility, and the thing left to him is to pay the premiums. Taken individually the latter do not appear high, but collectively they mount up, and insurance premiums are getting to be a serious item with the employer of labour and the ordinary man of business. Still, there is the mandate of the law, and there is no alternative, so the best thing is to make proper provision. We merely refer to the matter here because there may be some of our readers who have not thought seriously of the responsibilities enforced upon them by the Act which becomes law on the first of this month.

Agricultural Politics.

BY A LOBBYIST.

Has the Bill been Hurried?

Frankly, I think the Central Chambers of Agriculture, in describing the Small Holdings Bill as being hurriedly forced through Parliament, has been guilty of the crime of ungenerosity. What justification is there for the assertion? First of all, the question of small holdings was deliberately before the electorate at the general election—and long before it. Next of all, men like Mr. Rider Haggard—no wild intransigeant he—have persistently kept the question before the country ever since. Then the Radicals themselves clamoured incessantly for the introduction of a Bill. The measure introduced, the House did not, in its unanimous sympathy, even divide upon the second reading, and men like Mr. Walter Long, Mr. Chaplin, and Mr. Jesse Collings had full opportunity of expressing their views. Finally, it is being considered by a committe on which every rural interest is represented, and which has practically the ability to consider not merely every section and every sub-section, but every line and every phrase, and which is assuredly devoting to the duty of examination a care, an anxiety, a knowledge, and a lucidity for which we can find no recent parallel. The discussion in this committee stage of the Bill does infinite credit to all concerned. It must be fraught with the most admirable consequences. The Bill is passing through a friendly crucible, from which it must emerge having a more practical character. Wherein, I again ask, is the evidence of the measure being hurriedly forced through Parliament? Use epithets by all means, messieurs of the Central Chambers; but see that they are deserved.

Who Should Bear the Cost?

It is becoming more and more evident that unless Ministers make the expense, cost, and possible loss entailed by the Small Holdings Bill an Imperial charge they will themselves have neglected to secure a safeguard for the success of their policy. Of course, I am not one of those who declaim against the county councils being made (with conditions) the operative authority in this matter. However, I do perceive—and there is a growing perception of the same fact in the House of Commons itself—that if the county councils have to bear the financial burden any inherent sympathy they may possess with the principle of small holdings will be dwarfed and stunted. "They would be less than human if this were not the case," said a Liberal Member, who has a great knowledge of the influences which move municipalities, to me. With the fear before the eyes of the county councillor of an electorate enraged at the growth of the rates—this was the point this politician made to me—how could he be otherwise than chary of launching out upon a possibly expensive experiment? At this moment there is a growing sentiment in Liberalism in favour of making the cost of education an Imperial charge. This is attributable—and I beseech Mr. Harcourt, the Minister in charge of the Bill, to heed this—to the conviction that the fear of the growth of the local rates is the real enemy to a practical system of education given under the best conditions. Small holdings are an Imperial matter. We are told that they are one of the influences which may stem the tide of depopulation. The expense of legislation having Imperial consequence ought to be an Imperial charge. If it be not an Imperial charge in this instance, Mr. Harcourt will have built up for his purpose a justifiable local distrust.

The Railing at the County Councils.

I wonder if my friend Mr. Masterman, M.P., and his allies are possessed by the belief that they are making the small holdings evangel easier of realisation by their eternal girdings at the county councils? What county council has Mr. Masterman experience of that he should be possessed by the belief that they are all possessed by a double dose of ineradicable sin? The Government would have been worse than foolish if it had not sought to enlist local sentiment in connection with the small holdings business by utilising the machinery of the county councils. To entrust the grave duty which will belong to the county councils to a central authority would be to establish an irksome and meddling bureaucracy. The bureaucratic official coming into a district would regard the matter with a mere mechanical, two-foot-rule eye. Having imbibed certain machine-like ideas of what ought to be done he would proceed to apply them. The arrogance begotten of his position making him indifferent to local sentiment, local anxieties, and, what is of more importance, local prejudices. The county councils should be the operative body. Those county councils will place upon any new-born, vivifying, ill-regulated enthusiasm for small holdings the judicious restraint of sagacious consideration, and of full and personal knowledge. Let the county councils be rid of the fear of being mulcted in the cost of establishing small holdings or the loss resulting from them—and, despite the assurance of Mr. Harcourt that they must not take land which they they cannot let economically there may be loss—and then the Mastermans of our Parliamentary civilisation will soon find that their suspicions are ungenerous and unfair.

A Suggestion for Lord Denbigh.

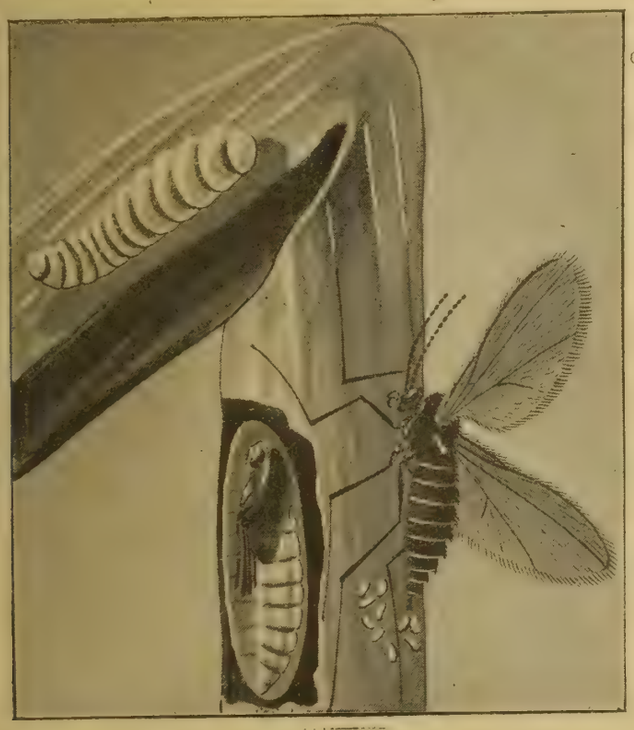
Lord Denbigh had, in his beet-sugar enthusiasm, much better beseech a bonus from the Government than seek to interrupt the withdrawal of Great Britain from the Sugar Convention. The Government must withdraw from that instrument. That the Convention would be an advantage to the growers of beet-sugar in England, I confess. Here is a fact which is, however, being pressed upon the Government by its supporters: In the sugar-year of 1901-02—before the Convention—1,701,997 tons of sugar, value £16,715,871, arrived in the United Kingdom, while in the year 1904-5 after the Convention—1,373,001 tons, valued at the much greater sum of £20,363,540, were only imported. With those supporters clamouring for Britain's withdrawal from the Convention—which they regard as the chief cause of this lowered consumption and this heightened price—the Government dare not resist. This is the plain fact. Lord Denbigh's clever philippics were therefore foredoomed to fall on barren soil. If a grant from the Treasury for small holdings, why not a grant for beet-sugar culture? There, my lord, is a suggestion 'twould be well to heed.

The Irish Board of Agriculture.

I am fain to confess that the report of the inquiry into the constitution of the Irish Board of Agriculture gratifies me personally. It is not merely a justification of the existence of this Board—it is a justification of Sir Horace Plunkett. I have never concealed my view that no department in the British official organism has done such valuable work for the subjects of its experiments as has this Irish Board; I have never concealed my view that, though undeniably necessary that it should have a spokesman in the House of Commons, the path of the Irish Board was rendered all the easier by the detachment of its chief from the vitriolic, venomous, and absorbing politics of the island. This is the view of the committee. The fact that this committee suggests that the vice-president need not of necessity occupy a seat in Parliament and deliberately advises that the position should be tenable for five years, the occupant to be then subjected to reappointment, is evidence of a wise comprehension that the progress and evolution of Irish agriculture does not depend upon the particular political and religious faith its official adviser may lisp. Crops will grow just as well under a man who sighs for a Parliament on College Green and a Catholic University, as it will under the man who regards Catholicism as abomination and desolation, and to whom College Green is *anathema maranatha*. A Board detached from the bitter maelstroms of Irish politics—this is the meaning of the report, and in particular of its appreciation of a nominated rather than an elective body. The Irish Board has been by this report rescued from a vicious menace.

The Landlord's League.

Of course, landowners have the same right to combine as have tenants or labourers. If I may paraphrase Shakespeare I would ask: "Hath not a landlord eyes? Hath not a landlord hands, organs, dimensions, senses, affections, passions? Fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer as a farmer or a labourer has?" I am not, however, sure that the new Landowners' Association will achieve its object—that is, the welding of landlordism as a whole into an offensive and defensive league. For such a body to have success it must have the qualities of dispassion and non-partisanism? Wherein is the evidence of this in this new body? Of course, Lord Onslow and Mr. Walter Long have every right to speak for landlordism, so, too, has Mr. Chaplin, though no longer the Squire of Blankeney. But wherein do we find the alloy of their undiluted Conservatism? Surely not in the importation of Mr. Jesse Collings, a most estimable politician, a true friend of the countryside, but who by no stretch of the imagination can be described as a landlord? Surely not in the importation in a friendly *rôle*—this, I understand, is more than probable—of the Rural Labourers' League, again a most valuable body, but one scarcely free from the infirmity of partisanism? Landlordism has, I repeat, every right and justification for organising in defence of its imperilled interests; but it would be well, at least at the outset, to deprive that organisation of the appearance of being simply another rung in the Party ladder. This, at all events, is how the organisation is regarded in the House of Commons.



Obiter Dicta.

"Rural depopulation," quoths Col. Kenyon Slaney, "is due to the death duties." The death duties were enacted in 1894. Why did not the Colonel persuade his friends who were in power for ten years to repeal the duties? As a consequence, we should have had the land overflowing with population. "We got medals for this," says one of the Brothers' Griffiths, the acrobatic clowns, by way of comment upon one of their own performances. "Did we!" exclaimed the other in astounded surprise.

SOME CORN FLIES.

As the result of inquiries, I believe that it is necessary to warn farmers to be on their guard against the depredations of a few flies which are capable of inflicting extensive damage on growing corn if allowed to carry on their pestiferous work unchecked. The very fact that such enemies may not have been recently observed in any great numbers is likely to render many cultivators careless in regard to the possible dangers connected with them, or, indeed, have resulted in a remissness of attention amounting to a forgetfulness of the flies' existence. Hence a few hints relative to the matter may be welcome. It is the smaller foes that possess the most terrible ability to spread havoc, and which manifest themselves as exceptionally difficult of eradication unless early and determinedly handled.

It is outrageously annoying, after spending money, labour, and care on the preparation of soil, in which as a reward the corn appears to be making vigorous headway, to suddenly become aware that all is not right. Studious farmers will already be aware of the various signs and their significance; but undoubtedly many among the profession, or their employees, still need to learn the truth about what often appears to be the results of mere climatic influence or weakened constitution of the plants.

The Hessian Fly, its Maggot, and Chrysalis within its case in stem (all magnified). This fly is the cause of corn stalks bending over at joints near the soil, thus becoming helpless. The actual size of the fly is about 1-10th of an inch, and of the maggot about 1-9th of an inch.

There are three very small flies whose pernicious work exposes corn to devastation, and each attacks systematically quite a different part of the growing vegetation. In each case their work is so conspicuously revealed as to give no excuse for mistake on the farmer's part. Often barley, wheat, &c., after growing sturdily to a goodly height, will be found bent sharply down at the first or second joint from the bottom of the stalk rather near the ground, with the remainder lying helpless and inert. It is erroneously supposed by many farmers inexperienced in entomology that these effects are due solely to the power of the wind; whereas the prime cause is the notorious Hessian fly, the name of which, at any rate, must convey pictures of terrible damage to some of our readers. I will describe this pest soon.

Another phase of corn ruin which thrusts its symptoms before one's notice too strongly to fail of identification is the abnormal swelling in the vicinity of the forming ear while it still remains within its sheath. Whereas it should swell symmetrically and not unduly, in such a way that the spike shall burst forth from its covering with its well-formed contents ready to be ripened into good grain, the whole of the parts enlarge tremendously, and give rise to the "gout" so dreaded by careful growers. This is due to the work of one or more species of gout flies. Even should the ears raise themselves properly to the sunlight they are exposed to another kind of insect so far resembling the Hessian fly that a separate illustration of it is hardly needed. This lays its eggs within the flowers, and cause the familiar red-maggots, to which excessive harm is often attributable.

Dealing first with the Hessian fly, which was either unknown or unrecognised prior to 1886, this is a black creature, varying from $\frac{1}{8}$th in. to $\frac{1}{10}$th in. long, with very hairy wings and long, slender legs. Microscopically considered, it is a fairy gem, but is not so to the farmer. This issues from hibernation in May, and lays its eggs in wheat, barley, or rye during May and June, or on autumn stubble, seldom, if ever, attacking oats. Winter wheat often escapes them by the lateness of sowing. As many as 150 eggs on half a dozen plants have been observed to be laid by one female; but the average seems to approach nearer 100, which number I have squeezed out from a captive fly after death. They have no rule regarding a specific number of eggs to certain plants, some of the latter receiving only a few, others many. The eggs are orange-coloured and dotted with red, the shape being clearly enough rendered in my illustration.

The maggots hatching from these eggs, generally on the fourth day afterwards, creep down to the junctions of the sheaths with the stalk, between which they squeeze their way and commence feeding, head downwards. These maggots (one-fifth of an inch long) are legless and whitish-yellow in colour, and continue feeding for a couple of months, during which time the removal of substance continuously from one particular side of the stalk so weakens it that it eventually leans over and snaps as described. Hence, while wind may have an effect thereon, it is only one of acceleration, and not the real cause of the mischief. At the end of two months the maggot pushes itself close up against a joint of the stalk, and becomes a pupa, the skin hardening considerably and becoming a brown colour, while the flesh of the maggot actually shrinks away therefrom, leaving a kind of shell. Within its own transformed skin the maggot turns right over so that its head may be conveniently uppermost when it makes its exit as a fly. Then it becomes converted into a chrysalis, as depicted. At this period it is known to farmers as a "flax-seed" (one-sixth of an inch long or thereabouts), though truly enough there is nothing whatever in the nature of a seed about it except its appearance, though I believe that many old farmers still imagine it to be one, and that it has become enveloped during the growth of the corn and been prevented from sprouting on its own account. Still, those who know its true character hardly realise the wonderful process it undergoes during its metamorphosis.

When ready for its final change—two weeks after ceasing life as a maggot—the chrysalis wriggles out from the brown maggot-skin and works its way up the stalk, out of which it pokes itself. Very close examination near the ruptures will reveal these objects sticking out curiously from infested plants. When the fly itself hatches out the chrysalis skin remains in its position just referred to.

Of course, all these actions seriously interfere with the proper development of the grain, even in cases where neither their onslaughts nor the wind has been sufficiently strong to completely break them. Occasionally it might be thought that the grain had not suffered in any way; but it should never be used as seed, because there would certainly be some detractive weakness inherent in it, making it unsuitable and unprofitable for the purpose in the long run.

The lowness of the position of the maggots and the chrysalises in the cornstalk is such that, as I have described, when the time of harvest arrives and cutting commences the insects escape interference, and are not in any way hampered from continuing their depredations; so, if they have been detected in serious array the stubble should be *burnt* if possible. If this course is inadvisable, then the affected stubble should be quickly and deeply ploughed in, or later on farmers may repent their own oversight.

(To be continued.)

The Weather and Crops in the Midlands.

Sunshine and warmth are declared by Midland agriculturists to be necessary to prevent the present unfavourable season proving a disastrous one. On the whole the reports from various correspondents as to the effect on the crops of the unusually inclement weather this year indicate that the damage has not been so serious as might have been expected. On the heavy lands the prolonged rains and cold nights have been very injurious, but on the lighter soil the outlook for farmers is of a brighter character.

With regard to the fruit crops, the anticipations formed by market gardeners earlier in the season as to the yield have not been realised, but the damage through rain and want of sunshine has not been as extensive as many people thought. Although the farmers and market gardeners have not given up hopes of fair crops, the absolute need of warmer temperature and plenty of sun to get the moisture out of the ground and ripen the fruit is recognised on all hands to mean the difference between a ruinous year and a satisfactory return from land culture.—*Birmingham Daily Post.*

Farm Prospects in North Devon.

The *North Devon Herald* has obtained numerous reports from various districts in North Devon concerning the farming outlook, and the general conclusion is that while the continued cold and wet have retarded the progress of the crops, the prospects are on the whole good. Though it would take a long memory to recall a year in which people have been going about in overcoats and gloves after Midsummer Day, there is the consolation, says the journal named, that the average temperature of one year differs very little from that of another, so that if the summer has been long deferred we may expect a warm autumn and a back-end of genial mildness running well on towards Christmas.

Crop Prospects in the North.

In view of the prolonged spell of wet and unseasonable weather, the *Yorkshire Herald* invited a number of representative agriculturists to express their views as to the condition and prospects of the various farm crops in Yorkshire and the North, and nearly all their correspondents recognised that the season is an exceptional one on account of the long-continued rainfall, the prevalence of cold winds and intensely cold nights, and the absence of sunshine.

The reports generally indicate that notwithstanding these drawbacks the field crops, though late and backward, are healthy and fairly heavy, and may give an abundant yield if there is a speedy change in the weather, with plenty of sunshine. All classes of crops are suffering from want of the warmth of the sun's rays. Unless there is an early change in the weather the results to the farmer may prove very serious.

The Board of Agriculture consider it desirable, in view of the unsettled character of the weather, and of the consequent difficulty in securing the hay crop, to draw the attention of farmers and others to the system of ensilage as a means of conserving crops of grass and clover. Copies of Leaflet No. 9, which describes this process, may be obtained post free and free of charge upon application to the Secretary, Board of Agriculture, 4, Whitehall Place, London, S.W. Letters of application so addressed need not be stamped.

THE WEEK'S SHOWS.

DONCASTER.

The Doncaster Agricultural Society's show was held on Wednesday and Thursday last on the new lines adopted for the first time last year, and as the arrangements have proved satisfactory on both occasions they are likely to be permanent. It may be recalled that the new arrangement provides that instead of bringing up all the stock for judgment on the first day, and keeping it for a second day's public inspection, the catalogue is divided, and there are really two separate one-day shows. This is an advantage from many points of view. It obviates the necessity of putting up expensive shedding to afford a night's shelter for the animals, and it enables tenant farmers and others who can spare one day and not two for themselves, their men, and their stock, an opportunity of competing.

Unfortunately for the success of last week's show the weather was far from favourable, and the attendance did not come up to expectation on either day. As regards the entries, horses were more numerous than for several years past, being 311, against 285 twelve months ago, but cattle dropped to 57, as compared with 85 last year, and sheep were 22, against 23. Other entries were :—Poultry, 97 ; pigeons, 201 ; butter, 36 ; eggs, 17 ; flowers, 68 ; and cage birds, 60 ; whilst there were 749 dogs. The grand total was 1,618, as compared with 1,148 last year, and 995 in 1905.

Hunters made a moderately good show, but two or three classes stood out conspicuously. The brood-mare class was one of them. So good was the quality that an umpire had to be called in, and he gave the premier award to Mr. W. B. Swallow's old winner, Tugela, a roomy mare with a nice foal by Wales at her side. Tugela also secured the Hunters' Improvement Society's gold medal. Mr. Edward Harrison's Miss Melbourne was placed second in the class competition. Half a dozen Hunters in the aged class sorely puzzled the judges, who had again to resort to a referee. Mr. J. H. Stokes's Axiom, a grand weight carrying horse, with the honours of Olympia, the Royal, and Selby fresh upon him, was singled out for the leading place, whilst second prize was bestowed upon Mr. J. S. Rigg's grand weight-carrying Hunter, Sir Lancelot who was third in the weight-carrying class at Olympia. A quartet of capital four-year-olds entered the ring, and of these the best was Sportsman, Mr. Edward Hodgson's useful grey, showing some of the best qualities of his sire Wales. Mr. Stokes's Lord Crafty is a blood horse of beautiful quality, but not up to the weight of some in the class, and in placing him before Messrs. Ward's chesnut, the son of Khartoum, the judges reversed the Selby verdict. They agreed with the Selby decision in regard to the respective merits of Mr. Wilkinson's Royal winner, and Messrs. Ward's Adonis, though here both these chesnuts were superseded by Major Leslie Renton's chesnut filly Success and Mr. Swallow's Red Morne. As at Selby, Mr. Wilkinson's two-year-old gelding, His Grace, topped his class, a Wales—Tugela bay occupying second place. The Hunters' Improvement Society's silver medal for filly not exceeding three years old was awarded to Mr Wilkinson.

The Hackneys made a nice show, quality being quite up to the average. Miss Dora Schintz's Knowle Belinda, which was second at the Royal, was among the brood mares entered, but she was not on the ground, and, therefore, the issue lay between Mr. J. A. Green's Lady O'Neill and Messrs. Cockayne's Paddock Queen, a winner at Lincoln in the class under 15 hands 2 in., and reserve for the special prize of £10 offered by the Lincolnshire Agricultural Society. Lady O'Neill, a beautiful chesnut by Garton Grand Duke—Rosador, rightly got the verdict, though the Sheffield mare, which is three years older, was a good second. Foals made a useful display, and they were headed by a beautiful filly by Beckingham Squire, the property of Mr. R. Surfleet. A trio of moderate yearlings lined up before the judges. First honours went to Mr. J. H. C. Wasden's Yews, a bay by St. Thomas, while Mr. Sydney Clarkson claimed the second award with a Paddock Polonius filly. Two-year-olds were likewise short in numbers, but they formed a very meritorious quartette. Silver Star, the stylish road gelding from Mr. W. H. Wellstrop's stud at Bishop Wilton, was, as at other shows, placed at the head, second being given to Messrs. W. and J. Ferguson for Lively Titania, also a well known winner. A strong class of three-year-old included Mr. Clark's Skeffling Lily, and Mr. W. J. Tennant's Special Beauty, which at the Royal Show were placed in the order given, but at Selby on Tuesday that verdict was upset, and the judges now followed the Selby example, Special Beauty being put before the East Riding filly.

The saddle class for Hackneys between 14 and 15 hands produced Mrs Fred Holmes's noted four-year old chesnut, Dainty Kate, and Mr H Rodwell's chesnut gelding, Prince Fortunatus. They are really good animals, and moved with great freedom in the ring. Eventually the mare was assigned the premier position. Prince Fortunatus, however, turned the tables when tried in harness.

Mr. S. R. Tennant's Olympia and Royal winner, Authority, headed the saddle class, and Mr. J. W. Featherby's Astonishment was adjudged the best in the harness class held on the first day of the show.

The display of heavy horses, though it did not include many prominent show winners, was nevertheless a good one and quite up to the standard of previous years. One of the best classes was that for brood mares which was headed by Mr. Samuel Skirrow's Bonny Lass, the stylish, high-quality five-year-old that won three firsts and the Shire Horse Society's silver medal at Selby. The Selby judgment was likewise confirmed in regard to Mr. Thomas Burton's Bramhope Lilly and Mr. J. C. Jackson's Woodlands Fashion—second and third respectively. Notable also were the three-year-olds, though here the judges disagreed with the Selby verdict, and placed Mr. Burton's Sandcliffe Daisy before Mr. J. C. Jackson's Knottingley May Queen. The winner, to whom was also awarded the Shire Horse Society's silver medal, is an active mare, with capital legs supporting a thick body. In this class the aid of an umpire had to be summoned. Two year olds likewise were a creditable lot. Mr. Burton's Sandcliffe Pansy, a mare of typical Shire character, stepped up from her Selby second place to front rank, again beating Lord Middleton's Birdsall Dahlia, who had previously taken first honours at Nottingham and Otley.

With a few striking exceptions the cattle classes were not remarkable for the excellence of the quality which they disclosed. The best proof of this is forthcoming in the fact than in both Shorthorn and Channel Island sections, the chief prizes were gained by two exhibitors, Mr. George Harrison, of Gainford Hall, Darlington, in the former instance, and Mr. R. J. Streatfield, of Rossington Hall, Bawtry, in the second. The absence of Mr. Henry Dudding, of Riby Hall, Grimsby, usually a successful exhibitor at Doncaster, doubtless materially affected the results, and the fact that the well-known Lincolnshire breeder had refrained for once from contributing to the cattle classes was generally regretted. Bulls above two, and not exceeding three years, were headed by Lord Armstrong's Baron Merry Mean by Baron Hopeful, which has both size and depth, with true Shorthorn character, and has to his credit previous successes at the Royal Show and the Essex and Stroud exhibitions. Mr. George Harrison was both second and reserve. The class for bulls of two years and under, however, brought Mr. Harrison to the front with his fine roan, Gainford Ensign, by Royal Ensign, which was, however, commended at Lincoln, whilst the first prize for bull calves also fell to Mr. Harrison, and this did not by any means exhaust his successes, for he won in the old cow class with Towey Princess by Cashier, which was second at Dublin and the Royal, was first for heifers of three years and under, with Montrave Wondrous, which was second both at Dublin and at the Bath and West ; was first in the class for animals of two years and under with Gainford Fragrance and, finally, in the last class in which he was represented for heifer calves, again won with Gainford Goldie. In the last case, however, it was a nearer thing, for Messrs. Whitworth's Wath Warlight 3rd by Barbarossa, made a very strong bid, and Mr. Harrison's calf's advantage in point of age stood him in good stead at the finish.

The dairy classes were highly creditable, whilst in the Channel Island classes Mr. R. J. Streatfield was in the remarkable position of being a large contributor to the prize fund in the section and of taking all the prizes in the three classes The entries were only small, and Mr. Streatfield's representatives were easily in front of anything opposed to them.

Never a particularly strong section at Doncaster, the sheep did not present much difficulty to the judges, and the five pens sent by Messrs Dean were the outstanding features of the display. The Dowsby exhibits had matters all their own way in the two classes of which they formed a part. Both the rams and the gimmers have achieved previous successes in the show ring, and Newark, Leicester, and the Royal may be instanced as having seen several of the animals well to the fore this season.

EAST KENT.

Folkestone welcomed this society on Wednesday and Thursday last. Unfortunately the weather was unfavourable, or otherwise the attendance would probably have been as good as was the case five years back, when the show was last held in the town.

The great source of attraction in the morning was the judging of the Kent or Romney sheep classes. This was one of the keenest competitions we have seen at this show, for at none other we can call to mind was the general average of merit so high and uniform as upon the present occasion.

Messrs. W. E. Long and F. Austin Bensted were the judges in this section. The yearling rams numbered thirty-nine, and although there was, as is always the case in large classes, a tail end, the top end was of the highest merit. Mr. C. File with his Royal winner was again to the fore, first and rn for championship honours recognised its undoubted merit ; two others from the same flock were rn and hc, both very good rams ; then came two from Mr. J. B. Palmer's flock, the second being the same as at the Royal, and its mate in the third place was one overlooked there—this, like the winner, was a grand ram, excellent in flesh and good in fleece. Mr. F. Neame's fourth prize ram was particularly even in the quality of the fleece, a very choice and masculine type of its breed. The entries owned by Messrs. A. Amos and W. Millin were c, and Mr. Palmer's third entry took a similar distinction.

The two-shear ram class had the Royal winner at its head. This ram, owned by Mr. C. File, wins the champion this year, an honour for which it was rn last year at Ramsgate. A capital ram of masculine character won second for Mr. G. Farmer, and Syndall No. 11 of 1905 takes a well-deserved third for Mr. Millin. Mr. E. Hambrook, who has a typical flock, one not generally found represented at summer shows, got the rn for a fine type of its breed. The stud ram class had a pair of real good sires for its winners, both from Mr. H. Rigden's flock. These were first and rn.

The yearling ewe class was a capital one of level merit. The winners were a remarkably good lot of ewes that came from Mr. W. Millin's flock, having excellent flesh, good fleeces, with plenty of bone and good heads. Close up were that trio representing Mr. Charles File as second ; after which came a pen of the right sort from Mr. Rigden's flock, followed by a pen owned by Mr. S. Kingsnorth, in which one particularly fine ewe was noticed.

In the ram lamb and ewe lamb class Mr. W. Millin led the way. Both in respect to the ram lambs and ewe lambs there was a general agreement that these were notably fine pens. In the latter class second honours were also won. The Exors. of Mr. Elvy, with Messrs. E. Ascherson and G. C. Swindells took second, third, and rn in the order given in the ram lamb class, a well-deserved hc being also given to Mr. J. Blake, whose pen were not so good matched, but in which there was one specially good lamb ; Mr. A. Amos had third in the ewe lamb class with a very fine pen indeed, even and well grown, Sir H. E. Dering was rn, Mr. Blake hc, and S. Kingsworth c.

Mr. F. Webb judged the Southdowns, and he found in these classes a very good and typical representation of the breed. It is not often at this show to find both the Royal champion and the rn, but this was the case to-day, and the result of Mr. Webb's careful examination was that the Royal award was confirmed, Mr. W. M. Cazalet taking first and champion with his grand two-shear, and Mr. J. Colman the rn champion and first for yearling ram with that choice sheep first at the Royal entries class ; Mr. Elmer Speed was second, and Mr. F. Plumptre third, both very good sheep, leaving the rn to Mr. Colman's other exhibit. Mr. Plumptre was second for old rams with a very typical and good ram from Mr. C. H. Brewer's flock, leaving a particularly good fleeced ram from Colonel W. W. Hammond's flock rn. The pen of ram lambs from Mr. Elmer Speed that won were capital specimens of their breed, excellent in flesh and touch, a point in which they excelled that neat and well matured pen from Fairlawn, Mr. J. Colman's pen taking third, leaving the rn to Colonel Hammond's pen, which were of high merit. Mr. Elmer Speed's ewe lambs were of particularly choice quality, as were also those two pens that came second and third for Colonel W. W. Hammond ; few better pens than these have been seen, out this season. Mr. Cazalet was rn.

The pigs judged by Mr. D. D. Crawford were of high merit, but very small in number, Mr. G. P. Inman winning for the Berkshires, and Mr. G. M. Goodson for the Whites.

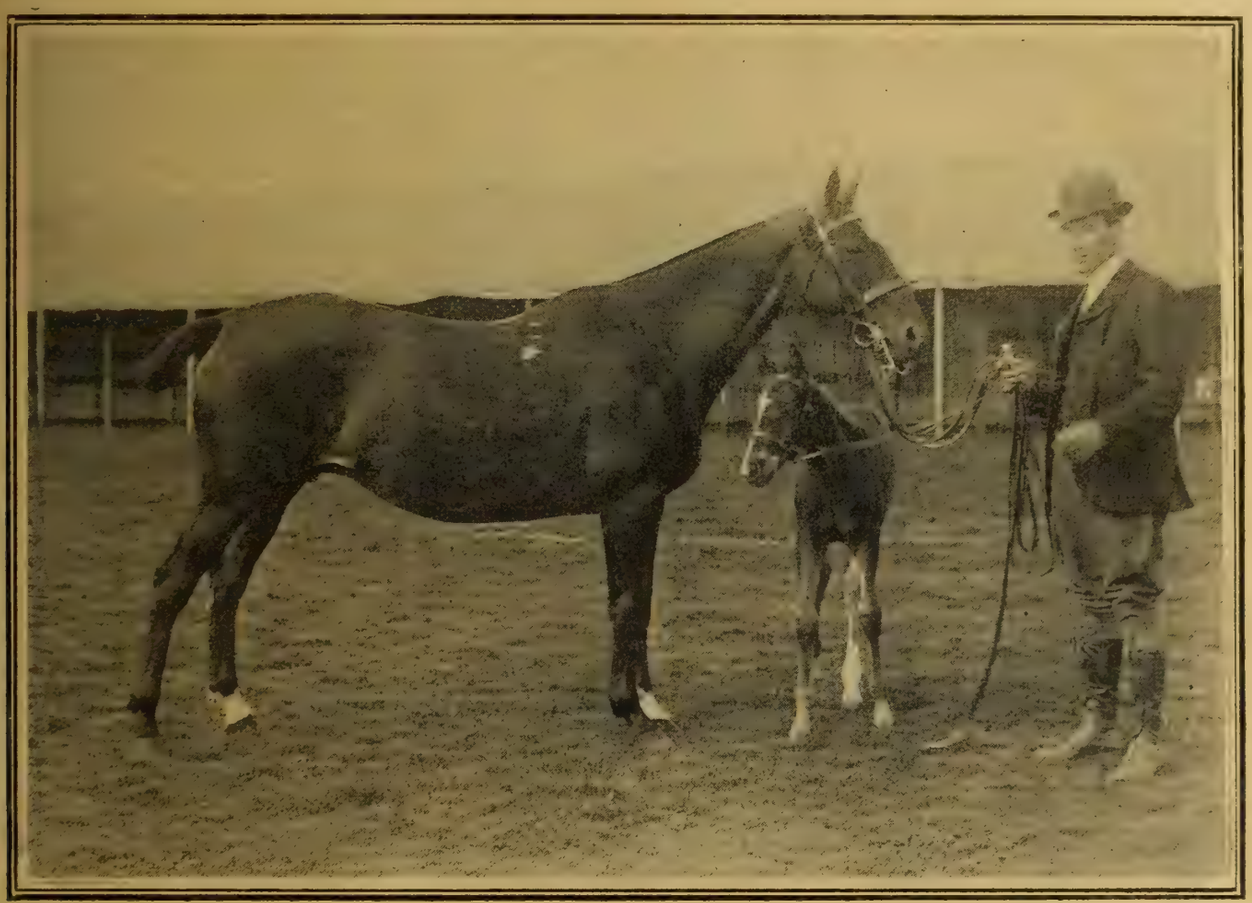
There was an excellent competition in the Kent

wool classes, Messrs. F. Newman, H. Rigden, and R. S. Strouts were the three winners; Messrs. H. and G. W. Finn, and E. and B. Kelsey took the second prizes. Messrs. W. Dockeray and H. FitzWalter Plumptre won for Down wool.

There were five classes of Shires, Mr. John Nix being the judge. This entry was one that indicates contined improvement in the local exhibits, whilst those from the distance were good specimens of their breed. Mr. Max Mi-Chaelis won in all the classes with very excellent horses, his foal by King of the Forest III., out of the first prize mare Wimbleton Fuchsia, was a promising one. King of Tandridge won in the stallion class, Fuchsia of Tandridge in the yearling, and Queen of Tandridge in the two-year-old class. The Marquis of Camden, the Hon. R. P. Nevill. Sir Walpole Greenwell, and Mr. F. de B. Collard were the other leading winners. The latter exhibitor was very successful in the twelve tenant farmer classes, in which also leading honours were won by Messrs. A. Amos, A. T. Miles, and J. G. Wright. These tenant farmer classes were most satisfactory in respect to quality, but deficient in number of entries.

Mr. G. Drummond had no difficulty with two particularly fine specimens of the Aberdeen-Angus breed in the class for pure bred cattle.

Redruth.



The Redruth Agricultural Society is to be congratulated on the complete success of its show held on Wednesday and Thursday last, and it added still further to its reputation as one of the best held in the West of England. To start with there was record number of entries—1,800, exclusive of horticultural exhibits—and then on the second day of the show there was a record attendance of visitors. The total for the two days, however, owing to not altogether favourable weather on the first day, fell somewhat short of the 1905 figures (last year the society amalgamated with the Royal Cornwall), but was above the average so that a financial success should also be recorded later. Horses were the feature of the show, and they were, perhaps, the best lot ever seen at Redruth. Hunters were the best, both the heavy weight and light weight classes being exceptionally good. Agricultural horses have been stronger, as have all the harness classes, but they include some

Society's silver medal went to a Menestrel filly, shown by Mr. W. J. Webster.

Selby.

The Selby Agricultural Society's tenth annual show took place on Tuesday, and was as usual confined entirely to horses, of which there were 245 entries, a total larger than the previous two years, and quality all round was high. The open classes of Hunters included some well-known stock, and the heavy-weights were as fine a quintet as one could wish to see, and it took the judges a long time to settle the order of merit. Eventually they gave the premier award to a winner at the recent International Show and at the Royal, Mr. J. H. Stokes's six year-old Axiom, a fine type of weight-carrying Hunter.

Hackneys, harness horses, and riding horses also made a capital show. The most notable fact was the reverse of the Royal verdict in the three-year-old class. Here Mr W. J. Tennant's Special Beauty was put first. She is a well-built filly, and this seemed to outweigh, in the minds of the judges, the more stylish movement of Mr W H Clarke's Skefilling Lilly, from Hull. A strong

Our illustration above is of the Polo Pony Mare, Silver Star, and her Foal, which at the Royal Agricultural Society's Show at Lincoln won First Prize for Polo and Riding Pony Mares (with foal at foot) not exceeding 14·2 hands. Silver Star was foaled in 1894, sire Knight of the Laund, dam by Acrobat, and was bred by Mr. G. Hutchings, Claremont, Paignton, Devon, but is the property of Mr. John Barker, M.P., The Grange, Bishops Stortford.

The light horse section was, as is always the case at this show a very good one, and some interesting and attractive displays were given in the ring.

The cattle section was a disappointing one in regard to number of entries. In neither of its sub-sections was the support given as large as it ought to have been.

Mr. Herbert Padwick judged the Jerseys, for which there were five classes. Sir E. Stern and Mrs. McIntosh were the leading winners for bulls, Ladies E. and D. Hope, Mrs. McIntosh, and A. Miller-Hallett in those for females. The general quality of the exhibit as a whole was very good indeed.

Mr. F. N. Webb judged the Shorthorns, in which Violet's Pride won first for Messrs. Denny in the bull class, Lord Wolverton's Irvine Scotsman taking second. Mr. J. Colman's Snow Queen won in the cow and heifer class, followed by Mr. H. J. Balston's Duchess 138th, a fine type of her breed. In the heifer class Mr. Balston was to the fore with a particularly fine heifer, Daydream, followed by Mr. Walpole Greenwell's Royal Blossom.

The small entry of Sussex cattle were meritorious in quality. The Hon. R. P. Nevill won for bulls with Lord Percy, and for yearling heifers with Birling Countess, and the Earl of Derby with Buttermaid in the cow class.

animals of the right stamp. Other features of the show were a big display of dogs, poultry, and pigeons, and numerous well-filled classes for cage birds, rabbits, cavies, whilst there was a splendid show in the horticultural section.

Market Weighton.

The thirthy-ninth annual show of the Market Weighton Agricultural Society, held on Thursday, fully upheld the reputation of the district as a famous horse-breeding centre, for, although the numbers were short in comparison with some past records, there was a really good display of young Hackney stock, together with a sprinkling of animals which have already attained distinction. The foals, as a whole, made a capital display, with the produc of Kirkburn Toreador to the fore; and Mr. F. W. Buttle's most promising colt by that sire won the foals' silver cup. The winning foal shown with its dam was a good-actioned daughter of Royal Denmark; and the most successful yearling a charming filly, with fine limbs and action, sired by Crake Noble, and shown by Mr. S. Cliff. This latter also won the Hackney Horse Society's silver medal. Hunters were comparatively few, but there was both substance and character about most of the winners, whilst agricultural horses were hardly more numerous, but made a good average show. The Shire Horse class of brood mares included the winner of the Hackney Society's silver medal, viz., Queen of Newton, shown by Mr. Henry Watson, of Newton Kyme.

In the Shire section there was another fine display, and one of the principal winners was Mr. Skirrow, of West Haddlesey, whose Bonny Lass, handsome five-year-old mare, won three prizes—one in the class for tenant farmers in the Bramham Moor country, and two in the open classes—and was also awarded the Shire Horse Society's silver medal.

Eye.

Eye Colt Show, as the result of additions to the classes, has long outgrown its title, but the name is still—and rightly so—retained, for under this designation the show is known throughout East Anglia. The twenty-first of the series was held on Monday, and proved worthy of the coming of age, the entries in the thirty-two classes being well up to the average both in quality and quantity. The Suffolks occupied the first place in the catalogue as usual, and viewing them in their entirety they were a credit to both the show and their exhibitors. The Shires and cross-breds also showed up well, especially the younger ones, whilst the Hackneys and harness classes were highly creditable. Cattle and sheep were also in-

cluded in the catalogue, but these sections were poorly represented as regards numbers, though some good quality animals were shown.

SHOW GOSSIP.

A meeting of the Bath and West and Southern Counties Society's Show Dates Committee was recently held at the Town Hall, Dorchester, in order to consider what would be the most suitable dates for the society's 1908 exhibition at Dorchester. The mayor presided, and it was unanimously resolved to recommend to the society's council that the exhibition be opened on Wednesday, June 3, and closed on Whit-Monday, June 8, a very strong opinion having been expressed by those well acquainted with the locality that these would be the most suitable dates for Dorchester that could be selected.

A deputation from the society, consisting of Lord Wynford, Colonel the Hon. C. Byng, the Hon. J. R. de C. Boscawen, Major Sherston, Colonel Parry Okeden, and Messrs. A. H. Gibbs, T. E. Studdy, G. Gibbons, A. O. Sillifant, C. L. F. Edwards, J. Rossiter, and T. F. Plowman, secretary, accompanied by the Mayor and other members of the local committee, then visited the site proposed for the exhibition, which is the same as that occupied by the society on its two last visits—viz., in 1872 and 1887. The exhibition having considerably grown in extent in recent years, it was found necessary to add eight acres of adjoining land.

A public meeting in connection with the arrangements for the show of the Royal Agricultural Society of England, to be held in Newcastle next year, took place the other day in the Town Hall, Newcastle, there being a large and influential gathering. The Lord Mayor (Mr. J. M. Oubridge), who presided, thanked those present for having come in such large numbers, and said he thought it augured well for the success of the Royal Agricultural Show in the year 1908. They hoped to make that show as great a success as, if not even greater than, the one held twenty years ago in that city. The local committee and various officers were then elected, the Duke of Northumberland being chosen as president.

In thanking the meeting for the compliment paid him, the Duke of Northumberland said he took it for granted that they all wished to give a hearty reception to the Royal Show when it came amongst them; and he thought they had special reasons for wishing that meeting a success, because, as they knew, the society had passed through some rather sharp vicissitudes lately. It gave up for a time its policy of being peripatetic. He had always considered that it was a great mistake to have done so; and he thought the proof of the pudding had been in the eating of it, for certainly their career since they became stationary had not been what its well-wishers would have hoped for.

His lordship added that he was glad that they had changed that policy, and he thought it should be their desire not merely to do, as he might say, the ornamental part, not merely to give them a hearty reception in the ordinary sense of the word, but so to direct their efforts that these movable shows should be made successful, and that the Royal Agricultural Society might have an encouragement to continue in their policy, which, if they agreed with him, he believed would be the proper one. And as in that matter pounds, shillings, and pennies were an important factor, he hoped they would remember two things—first of all that they should not encourage the Royal Agricultural Show in anything which might be called extravagance, because that would lead to disaster in the end, and on the other hand that they should liberally support the show locally, so that the fair share of the burden which ought to be borne by any locality to which the show paid the compliment of visiting it should be willingly and cheerfully borne by them.

The entries for the chief sections of the Highland and Agricultural Society's Show at Edinburgh to-morrow (Tuesday) and three following days show a considerable increase on those received for last year's show at Peebles, but they do not compare altogether favourably with the figures of the last show at Edinburgh in 1899. Cattle this year number 370, as against 253 at Peebles, but are 16 short of the 1899 total, whilst horses, when compared with the last Edinburgh exhibition, show a marked decline—460, as against 518. Sheep, too, are not so numerous, the respective figures being 351 and 477, but they are more than last year, when the total was 291. Pigs, poultry, and dairy produce all show an increase, the figures for these sections being 581, 594, and 89, as compared with 40, 138, and 72 respectively at Peebles, and 46, 551, and 44 at Edinburgh in 1899. The returns for the show are, however, above the average, and a first-class display of cattle, horses, sheep, pigs, &c., may be looked for.

Special interest attaches to the Edinburgh Show this year on account of the visit of the Prince and Princess of Wales. Their Royal Highnesses, who will visit the show on the second and third days, will be the guests of the Duke and Duchess of Buccleuch at Dalkeith House, and will drive from there to the show each day.

The financial statement for the Nottinghamshire Agricultural Society's show at Retford shows that on the first day the gate money amounted to £199 6s., and on the second day £231 19s. 7d., which, with the sale of catalogues, &c., brought the total amount to £444 10s. 6d. The receipts at Colwick last year amounted to £680, but this was the highest on record, and the society had then to pay £125 for rent of the field, whereas this year the grounds at West Retford were given free, and the local committee collected and paid over to the Notts Society £300, £84 15s. for the Bassetlaw prizes, and £60 as rent of field. It is anticipated that the Bassetlaw Farming Society will benefit to the extent of £100. Considering the wet weather at Whitsuntide this is very satisfactory.

The Berkeley Hunt Agricultural Society have still further increased their prize schedule, and this year offer the handsome sum of over £750 for competition at their sixteenth annual show to be held in a field near Berkeley Castle on August 5. With a view to obtaining even better competition than hitherto, the society has taken out all the classes for pairs in the cattle department, substituting the single animal in each class, and probably this will attract a good many new competitors. Prizes for sheep and pigs have been increased, whilst those for horses are numerous. An alteration in the height of the racing ponies has been made, an extra inch being allowed in each of the three classes. Classes for cheese of various makes, butter, poultry, cider, &c., are also included in this comprehensive schedule, and it is satisfactory to notice that extra prizes are offered for the milking contest for young labourers. Several other interesting items figure in the catalogue, and will no doubt help to make up an altogether attractive exhibition. Entry forms, prize schedules, &c., can be had of the secretary, Mr. G. Clark, Severn Lodge, Berkeley.

SHOW SECRETARIES.

Mr. G. CLARK,
Berkeley Hunt Agricultural Society.

The prize schedule for the Whalley Agricultural Association's annual show, to be held at Whalley on Saturday, the 27th inst., contains over 200 classes, which provide for horses both light and heavy cattle, sheep, pigs, butter, eggs, cheese, implements, poultry, pigeons, rabbits, and dogs. Quite a number of special awards are offered, and the total sum assigned in prizes for competition must run to a good figure. The society is a member of the Lancashire Federation, so that entries will definitely close at the times stated, which are for dogs, Monday, July 22, other exhibits, July 23, the time being 10 a.m. on both days. Prize schedules, entry forms, &c., can be had of the Secretary, Mr. J. M. Rawcliffe, Whalley, near Blackburn.

The twelfth annual show of horses, dogs, poultry, and pigeons at Upholland will take place on Wednesday, July 24, in the Abbey Lakes Pleasure Grounds. In addition to good class prizes, a large number of specials are offered for competition, and should attract a good entry. The society is affiliated with the Lancashire Federation, so that entries will definitely close at 10 a.m. on July 20, except for dogs, which close 10 a.m., July 19. The hon. secretary is Mr. G. H. Scrivener, Greenfield, Upholland, Wigan.

The Peterborough Agricultural Society's annual three-day show opens to-morrow (Tuesday) and promises to be as successful as any of its predecessors, all that is required being fine weather. An attractive programme on similar lines to last year has been drawn up, and it is safe to assert that given fine weather, there will be the usual large and distinguished attendance of visitors from all parts of the country.

The report to be presented at the annual meeting of the West of England Fat Stock and Poultry Society states that last year's exhibition resulted in a loss of £18 1s, leaving a credit balance at the Naval Bank of £30 15s. 3d. The last show was considered the best in the history of the society in every way, comparing it with the previous, although a loss of £18 1s. was sustained on the last, and the previous show a profit was made. There was at the last show £25 odd more prize money paid, £9 more for fitting up the show, a loss on gate money of £16, and £11 less in subscriptions. The thirty-seventh annual exhibition will be held at the Market, Plymouth, on Wednesday and Thursday, December 11 and 12, 1907, and it is to be hoped this will prove a financial success.

At a meeting of the local committee for the Devon Agricultural Association's show at Bideford the town clerk (Mr. W. B. Seldon) reported a balance in hand of £109 15s. 6d. The finance committee recommended that the secretary be paid £40, instead of £30 as estimated; that £50 be refunded to the town council towards the £114, the cost of laying the water main to the show; and that 15 guineas and what balance, if any, there may be after defraying the cost of advertising the balance-sheet, &c., be paid to Bideford Infirmary. —These recommendations were adopted.—The Mayor (Mr. J. M. Metherell), who was specially thanked as a moving spirit in the reception, said the County Association was more than satisfied, and would, he thought, be only too pleased to come to Bideford again. He believed their balance-sheet was also on the right side, though he had been told they expected to lose £500 by the visit.

Judges at the Royal Dublin Horse and Sheep Show.

The following have agreed to officiate as judges at the above show, viz.:—

Thoroughbred stallions and brood mares to produce weight carrying hunters.—William H. Dunn, Wallingtons, Hungerford; C. W. Tindall, Wainfleet, Lincolnshire. Thoroughbred brood mares and yearlings.—J. Simons Harrison, Hurn Lodge, Beverley; Ernest Turner, Heath Lodge, Newmarket, Cambs. Referee for thoroughbreds.—The Rt Hon. the Earl of Coventry, 1, Balfour Place, Park Lane, London. Hunters and young horses suitable for hunters.—W. Henry Barber, Culham Court, Henley-on-Thames; Gordon Cunard, Thorpe, Lubenham, Market Harborough: George Gordon, Wincombe Park, Shaftesbury; W. G. Lambarde, Bradbourne Hall. Sevenoaks; Major A. Hughes Onslow, Brannston, Oakham; The Rt. Hon. the Earl of Orkney, The Tythe House, Stewkley, near Leighton Buzzard; The Rt. Hon. Lord Southampton, Park Place, Englefield Green: Thomas Wickham-Boynton, Burton Agnes Hall, Driffield. Referee for hunters.—Owen C. Wallis, West Haddon Hall, Rugby. Riding cobs and ponies.—Sir Merick Burrell, Bart., Knepp Castle, Horsham. Harness horses —William Foster, Mel-Valley, Moseley, Worcestershire; R. G. Heaton, The Ferry, Charteris, Cambs.

Border Leicester Sheep. — James Jeffrey, Duchrie, Prestonkirk, N.B. Roscommon Sheep. —James McCullagh, Glaslough, co. Monaghan. Lincoln Sheep.—J. E. Caswell, Laughton, Folkingham, Lincs. Black-faced and Cheviot Sheep. —James Allen, Balnacoole, Shiskine, Arran, N.B. Shropshire Sheep.—Thomas A. Bulltar, Corston, Coupar Angus, N.B. Oxford, Hampshire, and Southdowns and Suffolks.—Robert W. Hobbs, Kelmscott, Lechlade.

The entries for sheep close on July 18, and for horses on July 25. Applications for entry forms, &c., should be addressed to the Agricultural Superintendent, Leinster House, Dublin.

THE ROYAL SHOW.

Prizes for Farm Servants.

A feature of the Lincolnshire county show has always been the classes set apart for farm servants and continuous farm service. This year the idea was incorporated by the authorities of the Royal, and with marked success. Mr. John Stainton, of the Grange Farm, Winterton, obtained the first prize for working agricultural foreman or bailiff. For thirty-nine years he has been with Mr. Calvert Popple and his family. The second prize-winner proved to be Mr. William Holmes, of Rothwell Vale, Caistor, who has been an equal number of years with Mr. S. McAulay and his predecessors the third prize went to Mr. Edward Holmes, of Mere Hall Farm, Lincoln, with over thirty-seven years' service with the family of Messrs. S. E. Dean and Sons, and the fourth to Mr. John Thorpe, of Wilsford, Grantham, with thirty-five years' service.

Eleven shepherds of long service competed in a class of their own. The winner was Joseph Baker, of Skellingthorpe, Lincoln, with thirty-seven years' continuous service; the second, Charles Ogden, Wellingore, Lincoln, with a similar record; the third, John Rippingale, of Welton, Lincoln, with thirty-five years; and the fourth, John Thornton, of Birthorpe, Folkingham, with thirty-four years to his credit. Prizes were also offered to shepherds who had reared the greatest proportionate number of lambs from not less than 200 ewes and gimmers belonging to the same person or partners. In this class the winners were:—1, Ranyard Edward, of Anderby Grange, Huttoft, S.O. (who had reared 551 lambs); 2, William Graves, Baumber Park, Horncastle (348 lambs); and equal 3, William Beckett, Wellingore, Lincoln (292 lambs), and William Waby, Broughton Vale, Brigg (317 lambs).

There were prizes for the labourers who had brought up and placed out the greatest number of children without having received parochial relief. Premiums were also given for farm waggoners, servants with the longest continuous service, working blacksmiths or carpenters, and for female servants, all these classes proving most successful.

Milk Yields and Butter Tests.

The milk yields and butter tests resulted in a remarkable victory for the Lincoln Red Shorthorns. Burton Vic 2nd, a nine-year-old cow belonging to Mr. John Evens, Burton, Lincoln, gave 63·2 lb. of milk, containing 3·77 per cent. of butter fat, in the twenty-four hours; or, roughly, 6¼ gallons. With this she accordingly won in the Shorthorn class, and afterwards took the special prize over all the breeds, in the butter tests. She also achieved a further victory in the butter tests, where she beat all the Jerseys except one, her yield of butter in twenty-four hours (from the above milk) being 2 lb. 5¾ oz., the ratio being 26·75 lb. of milk to 1 lb of butter. The winning Jersey in the butter test was one shown by the Marquis of Winchester, which gave 2 lb. 7 oz. of butter in twenty-four hours.

COLONEL RUSTON,

Who, as Mayor of Lincoln and President of the Local Committee, did so much to ensure the success of the Royal Agricultural Society's Show at Lincoln.

Meetings of Societies.

Shorthorn Society.

The annual general meeting of the Shorthorn Society of Great Britain and Ireland was held in the showyard on the third day. The report of the council, which was adopted, stated that the society now consists of 593 life members and 1,058 annual members, making a total of 1,651 members on the register. The balance in the hands of the society's bankers was £620 19s. on the current account, and £1,500 on deposit, the society's reserve fund in the consolidated stock (valued at 85 per cent.) being £8,670 on December 31, and £850 (valued at 85 per cent.) purchased since that date. The fifty-second volume of Coates's Herd Book, issued in 1906, contained the pedigrees of 3,371 bulls and 6,054 cows. For Volume LIII. the pedigrees of 3,801 bulls and 6,846 cows had been received. The number of exportation certificates issued during the past year was 1,772, South America taking, as usual, the great majority. This number, although short of the phenomenal number issued in the previous year, showed a very healthy trade, and there was every indication that the demand for good animals for export would continue.

It was reported that the election of seven members of the council had resulted in the following gentlemen being appointed:—Mr. J. D. Fletcher, Mr. W. T. Garne, Sir Walpole Greenwell, Bart., Mr. George Harrison, Lord Polwarth, and Mr. Edmund Potter.

Mr. John Thornton suggested that at the next year's Royal Show the group class for bulls should be "bull and his offspring," instead of "bull and his male offspring."

The chairman promised that the matter should receive the consideration of the council.

Votes of thanks to Lord Moreton, the president, and to Lord Northbrook, who presided in the absence of the president, brought the meeting to a close.

SOCIETY ANNOUNCEMENTS.

SUSSEX COUNTY AGRICULTURAL SOCIETY.

MEETING AT HASTINGS, AUGUST 14 & 15, 1907.

ENTRIES for OPEN and LOCAL CLASSES close as follows:—

Agricultural Horses, Milking Trials Dairy Cattle, Shorthorns, Sussex, Aberdeen-Angus, Jersey, Guernsey and Dexter Kerry Cattle, Southdown, and Kent or Romney Marsh Sheep, Wool and Butter close July 8.

(Post Entries at double fees, July 13).

Hunters, Hackneys, &c., July 15.

(Post Entries at double fees, July 20).

Harness and Jumping Classes finally close at noon, August 12th; Implements and Machinery, July 15.

Prize Schedules and Entry Forms on application.

F. B. DYER, Secretary.

182a, High Street, Lewes.

HARROGATE & DISTRICT AGRICULTURAL SOCIETY

President: HY. WILLIAMS, Esq., J.P.

Will be held JULY 25, 1907.

Horses, Cattle, Sheep, Pigs, Poultry, Pigeons, Four-in-hands, Jumping, &c.

Entries close July 18.

Schedules from the Secretary,

G. SAVELLI.

Park View, Harrogate.

COLESHILL HORTICULTURAL and HORSE SHOW, TUESDAY, AUGUST 6, 1907.

Jumping, Driving, Hunters, Turnouts, &c. Nearly £170 in prizes.

Entries close July 23, 1907. For schedules, apply to—

W. H. M. BARTON, Secretary.

Coleshill, near Birmingham.

WORTHING & West Sussex Horse Show and Jumping and Driving competition, in Beach House Park, Worthing, Wednesday, August 7th, 1907. Handsome Prizes. Entries close July 24th.

Schedules of Prizes and Forms of entry may be obtained of WALTER PAINE, Worthing.

HIGHLAND & AGRICULTURAL SOCIETY.

GREAT SHOW at EDINBURGH, JULY 9, 10, 11, and 12.

T.R.H. the PRINCE and PRINCESS OF WALES will VISIT the SHOW on WEDNESDAY & THURSDAY.

ADMISSION.

Tuesday (during Judging), 8 a.m. to 5 p.m., 5s.

Wednesday, 8 a.m. to 5 p.m., 3s.; 5 p.m. to 8 p.m., 1s.

Thursday, 8 a.m., to 5 p.m., 2s.; 5 p.m. to 8 p.m., 1s.

Friday, 8 a.m. to 4 p.m., 1s.

Parades of Horses and Cattle.

Great Jumping Competitions.

Military Band and Pipers.

UP-HOLLAND & DISTRICT SHOW (Lancashire Federation), Wednesday, July 24th, 1907. Judges: Cattle, Pigs, and Heavy Horses.—G. H. Dean, Esq. Light Horses and Turnouts.—G. Pimlott, Esq. Dog entries close July 19, at 10 a.m.; other Exhibits July 20, at 10 a.m. Schedules, G. H. Scrivener, Up-Holland, near Wigan.

BAKEWELL FARMERS' CLUB. President for 1907, A. S. Marsden-Smedley, Esq., Darley Dale. The 59th Annual Exhibition of Horses (Shires, Hunters, Jumpers, Hackneys, and Turnouts), Cattle, Sheep, Pigs, Wool, Roots, Cheese, and Butter, also open Trotting and Galloping Races, will be held at Bakewell, on Wednesday, August 14th, 1907. Upwards of £450 in Prizes, Challenge Cups, and Medals. Live Stock and Produce entries close Monday, August 5th. Racing, August, 9th. Schedules and entry forms, may be had on application to WILLIAM J. CLARK, Secretary, Farmers' Club, Bakewell.

THE CLEVELAND AGRICULTURAL SOCIETY.

The 74th Annual Show will be held at Redcar on

WEDNESDAY, JULY 31.

Nearly £400 in Prize Money and Specials. Schedules from THOS. TURNER, Agent, Eston, R.S.O., Yorks.

DURHAM COUNTY AGRICULTURAL SOCIETY.—President, The Most Honourable the Marquis of Londonderry, K.G. The ANNUAL SHOW will be held on THURSDAY, AUGUST 15, 1907, in the picturesque grounds of Wynyard Park, Stockton-on-Tees (generously granted by the President). Upwards of £1,000 given in prizes for Horses, Cattle, Sheep, &c. Also two pieces of Silver Plate to cost not less than £25 each (the gift of the President) to be won outright in the classes for Shorthorn Cattle. Entries close Tuesday, July 30, 1907. Prize schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flass House, Durham. Prize schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,

WM. CHRYSTAL.

Houghton-le-Spring.

FELTON AND WARKWORTH AGRICULTURAL SOCIETY.

FELTON SHOW, MONDAY, August 5th, 1907.

£130 in Premiums for ordinary classes.

Special Prizes for Leaping. Open Competition.

Entries close July 18th, 1907.

Price Lists on application to the Secretary.

J. BARKER, High Stanners, Morpeth.

WEST GLO'STER FARMERS' CLUB SHOW.

DURDHAM DOWN, BRISTOL.

AUGUST 5, 1907 (Bank Holiday).

Open Classes Cart Horses, Harness Horses, Speed and Action.

£22 Open Jumping Class.

Entries close July 6.

Post Entries (double fees), close July 13.

HENRY NICHOLS, Secretary.

Iron Acton, and 26, Nicholas Street, Bristol.

ARUNDEL & DISTRICT HORSE, AGRICULTURAL, HORTICULTURAL and POULTRY SHOW, at ARUNDEL CASTLE PARK, AUGUST 6, 1907.—For particulars, apply to E. J. MOSTYN, Estate Office, Arundel, Secretary Horse Show; or to C. BARTLETT, General Secretary, Tulchan, Arundel.

MALTON AGRICULTURAL SOCIETY'S SHOW.—WEDNESDAY, JULY 24, 1907. President: The Rt. Hon. Viscount Garnock. Entries close July 6. Special Prizes for Tenant Farmers' Hunters Brood Mare and Foal, Hackney Stallions, &c., &c. Schedules and entry forms on application to the Secretary—THOS. MITCHELL, The Mount, Malton.

GAINSBOROUGH AGRICULTURAL SOCIETY.

ANNUAL SHOW, MONDAY, AUGUST 5 (Bank Holiday).

£225 in Prizes.

Open Classes in Hackney, Hunter and Shire Horses, Driving, Jumping, &c. Entries close July 30. Schedules from

T. J. DIXON, Hon. Sec.

KEELE AGRICULTURAL SOCIETY.

Keele Estates and North Staffs Hunt Show.

THURSDAY, AUGUST 8th, 1907. £750 Prizes.

Entries close July 29: double fees later—dogs excepted.

Open Classes. Turn outs. Horse Leaping. Sheep Dog Trials.

Schedules ready.

Silvrrdale, Staffs, W. A. BENSON.

ROYAL DUBLIN SOCIETY

HORSE and SHEEP SHOW, AUGUST 27, 28, 29, 30.

For Prize Lists and Entry Forms apply to the Agricultural Superintendent, Leinster House, Dublin.

(By Order) RICHARD J. MOSS, Registrar.

WHALLEY Agricultural Show (Est. 1810). (Lancashire Federation.) Annual Show, Saturday, July 27th. Many open classes, with valuable prizes for Hunters, Hackneys, Shires, Jumpers, Cattle, etc. Prize Lists, from J. M. RAWCLIFFE, Whalley, Blackburn. Entries close 10 a.m., July 23rd.

National Cattle Breeders' Association.

At the meeting of the National Cattle Breeders' Association, held on the second day, a suggestion from the Hereford Cattle Breeders' Association regarding the application of the tuberculin test was considered. The association urged that all animals which reacted to the test should be excluded from the Royal Show. After some discussion it was agreed to have the full debating of this important question held over until October. It was further pointed out that the existing Australian rule regarding the application of the test bore severely on exporters. In the meantime animals must be tested within ten days of shipment, but it was argued at the meeting that this did not give shippers a fair chance of filling up blanks. The Australian authorities are to be approached on the subject.

National Pig Breeders' Association.

The annual general meeting of the National Pig Breeders' Association was held in the large tent on the show ground on the first day of the show, June 25. In the absence of the president, the president-elect, Sir G. Greenall presided.

The report and balance-sheet, which had previously been sent to the members, were adopted. The report stated that the satisfactory condition of the association still continued, there being an increase in the membership of twenty-five, bringing up the number to 192; of these, thirty are life and 162 are annual members. The association is in a very satisfactory financial position, the balance in hand at the end of the year being £75 18s. 3d., with £700 invested in securities which, considering that £54 was given to the R.A.S.E. for extra classes, compares favourably with previous years. Only one subscription is in arrear for 1906.

A very great increase has taken place in the number of entries for Vol. XXIII., the total 1,660 being an increase of nearly 700 over Vol. XXII., and 270 more than the previous highest number. They come from 159 breeders and 347 owners, and are divided as follows:—Large Whites—boars 356, sows 905; total, 1,261. Middle Whites—boars 43, sows 112; total, 155. Small Whites—boars 2, sows 2; total, 4. Tamworths—boars 87, sows 153; total, 240. The greatest increase is in the Large Whites, but that in the Tamworths is very satisfactory.

The conditions of entry for Vol. XXIV. are as follow:—For a boar, that the sire and dam are registered. For a sow, that the sire and dam are registered, or that the sow proposed to be entered has four crosses of registered blood—viz., that the sire, sire of dam, sire of grand dam, and sire of great grand dam are registered boars. All sows whose sire and dam are already entered or eligible for entry must be registered. The name, age, and breeder of the dam, grand dam, and great grand dam when not registered must be given. The prefixes of the breeders only will be allowed, but owners may use their own affixes.

The scrutineers reported that they had examined the voting papers, and declared Messrs. Ashforth, Daybell, Heaton, Ibbotson, and Woollam duly elected members of the council.

On the proposition of Mr. Howard Taylor, seconded by Col. Walker-Jones, Sir G. Greenall, Bart., was elected president.

Mr. Stuart then moved the following resolution:—"That the council of the N.P.B.A. request the council of the R.A.S.E. to make three classes for boars—viz., for boars farrowed in the year of the show, for boars farrowed in the preceding year, and for boars farrowed before the preceding year—and that the association contribute something towards the extra class." A short conversational discussion ensued, and it was ultimately decided to ask the council of the R.A.S.E. to divide the boar classes into three ages.

Mr. Stuart Heaton moved that, if the three classes for boars were granted, the boars farrowed in the year of the show should be for three in a pen instead of a single animal. This, however, after discussion, was negatived by 18 to 12.

Mr. Stuart moved that, in the event of three classes being granted, the ages for boars should be the same as for sows.

Mr. Heaton moved as an amendment that the age be limited to 2½ years. The amendment was declared lost, and Mr. Stuart's resolution was carried.

Mr. Ibbotson then moved the resolutions standing in his name:—

1. "That after January 1, 1908, the charge for registering a prefix and affix be £1."

2. "That all prefixes and affixes granted and registered by the association are the property of the grantee so long as he shall remain a member of the association, but are not transferable unless authorised by the council."

3. "That in the case of an application for the transference of a prefix or affix, the council shall satisfy themselves that the whole herd of pigs as represented by such prefix or affix are *bona fide* transferred to a member of the association likely to continue the herd on similar lines as the former owner; that such application shall be made in writing and signed by the vendor, his heirs or assigns, as well as the purchaser; and that the usual fee of £1 shall be charged as for a new prefix."

4. "That any existing bye-law conflicting with these resolutions be rescinded."

The first resolution was seconded by Mr. Hughes and carried.

Coming to the second resolution, the chairman explained that by the articles of association it was laid down that the prefix and affix was the personal property of the member to whom it was granted, and could not be transferred either by his own act or by operation of law. After considerable discussion, and it being pointed out that it would be an expensive matter to alter the articles of association, the resolutions were by leave withdrawn.

A vote of thanks was accorded to the council of the R.A.S.E. for the use of the tent, and to Sir G. Greenall for presiding

A meeting of the council was then held, when it was decided to again offer medals in 1908 to societies complying with the conditions laid down by the association. Twelve new members were elected and six applications for prefixes were granted.

In response to a communication received from the secretary of the American Tamworth Record Society, it was decided to change volumes of the Herd Books with that organisation. It was arranged that the next meeting should be held, as usual, on the Tuesday in the Smithfield Show week.

Agricultural Organisation Society.

The annual meeting of the Agricultural Organisation Society was also held in the showyard, and Mr. R. A. Yerburgh, as president, moving the adoption of the report, announced that there were now 153 affiliated agricultural co-operative societies, with a membership of 9,000. He criticised the Government's proposals on small holdings, and declared that the work proposed to be delegated to the county councils was such that they could not perform. They could not call on the ratepayers to stand at the back of a trade organisation that would compete with farmers.

The report, which was adopted, stated that the directors had received the most gratifying assurances from every part of the country as to the results from the farm seeds supplied to societies through the federation. The prices of seeds had been brought down all over the country, while the directors had taken steps to develop the seeds business in the coming year by issuing a comprehensive catalogue of prices for garden and vegetable seeds available in quantities to suit the largest users and the small allotment cultivators.

THE DOSSOR PATENT SEED DRESSER.

The Dossor Patent Seed Dresser.

Mr. F. M. Dossor, of 15, Auckland Road, Doncaster, was one of the competitors in the new implement section at the Royal Show at Lincoln, and he was awarded a silver medal for his patent seed dresser, an illustration of which we give on this page.

This machine marks a new departure in the method of cleaning clovers and similar small seeds. The work is done by a series of overlapping belts combined with covers and hoppers which check and redistribute the seed to each belt. Seeds of light weight, irregular shape, rough surface, &c., are caught and thrown over the tops of the belts, and issue at the side of or into the tray of the machine. Good and heavy seed continues its passage downward, and is discharged in front of the machine.

Docks, dodder, mallow, chickweeds, carrot, parsnip, stonecrop, owlscrown, thistles, sorrel in the cosh, and many other varieties of weeds, dross and dirt, &c., are extracted in the same operation from any clovers in which they are separately or collectively present. The appearance of the seed is, by frequent contact with the belts, brightened and improved. With the Chilian Red (probably one of the most difficult seeds to clean) the machine is most successful. The work is thoroughly done at much less cost than is usual with other methods. Seeds dressed on this machine may be guaranteed free from docks.

The dressings can be reduced to contain practically nothing but weeds and dirt, and the waste of good seed is avoided. Indeed as regards dressings it is claimed that this machine can start where others leave off, for 50 per cent. of saleable seed is frequently recovered from the waste of other machines.

The capacity of the machine is from 15 cwt. to 20 cwt. per 9 hours day, the feed being regulated by the foulness of the seed to be treated, and the degree of cleanliness desired.

The machine occupies a floor space of under 4 ft. square, it is 7 ft. 9 in. in height, can be moved about if desired, and is not liable to get out of order.

It can be easily driven by one man or by small motive power. Where power is used one man can handle three or four machines.

Mr. Dossor claims that his machine is capable of more varied work, and that it will give cleaner seed with less labour and less waste than any other machine now on the market.

Farming Necessities at the Royal Show.

(*Concluded from page* 16).

The Sulphate of Ammonia Committee, of 4, Fenchurch Avenue, London, E.C., were amongst the few exhibitors of fertilisers, their stand naturally being chiefly confined to samples of sulphate of ammonia as produced at gas, coke oven, shale oil, &c., works in the British Isles. The remainder of the stand was given to specimens of agricultural produce grown by the aid of sulphate of ammonia, and they bore excellent testimony to its efficacy.

Manure distributors were the feature of the stand of Messrs. J. and R. Wallace, Castle Douglas, N.B., who also showed a milking machine which won a silver medal at the Park Royal Show of 1905, and a sheep dipper; the sheep is put into a perforated cage, which is then lowered into the dipping tank, and by its use two men can dip as many as 200 sheep in an hour.

Rats and mice are such an unmitigated nuisance that farmers are always willing to hear of something that will exterminate them; thus the stand of Messrs. Evans, Sons, Lescher, and Webb, Ltd., 56, Hanover Street, Liverpool, and 60, Bartholomew Close, London, E.C., who exhibited the Liverpool "Virus" for exterminating rats and mice received much attention. The "Virus," which is manufactured by the Incorporated Liverpool Institute of Comparative Pathology, has been used with the greatest success without danger to human beings, domestic animals, game, or poultry, and without smell—an important feature.

In our notice of the stand of Messrs. Tangyes, Ltd., the address was given incorrectly. It is, of course, Cornwall Works, Birmingham.

Messrs. Thomas and Son, 64, Broad Street, Worcester, had a fine display of windmills, together with "Climax" syphon pump, artesian pumps, and a "Climax" irrigation pump. The windmills had towers ranging from 30 ft. to 40 ft., and were especially suitable for agricultural purposes.

Mr. A. Morten, Beeley Poultry Farm, Rowsley, Derbyshire, confined his exhibits to the "Hall" patent poultry house and scratching shed, which was unsuccessfully entered in the competition for new implements. The feature of this house is its perfect ventilation, and has won for it several prizes, including first and silver medal at the London Dairy Show last year.

Messrs. P. J. Parmiter and Sons, Harrow Works, Tisbury, Wilts, made a feature of harrows, and these were shown in various sizes, both double-tined flexible, for general arable and pasture work, and the flat bow single tine. Rakes and horse hoes also figured at this firm's stand, among them being a five-row patent sectional hoe made to take from three to six rows of roots, whilst it can be used as a spring cultivator by changing tines.

Horse hoes were also a prominent feature of the stand of Messrs. J. Bentley Fenton and Sons, North Road Works, Sleaford; but equally prominent was their display of the Little Wonder and Little Gem ploughs.

Corn-dressing and seed-cleaning machinery made up the stand of Mr. W. J. Elsey, 2, Coltbridge Terrace, Murrayfield, Edinburgh, and a most attractive one it proved, the variety of the machines there were over half a dozen—adding much to the interest.

The crops on the farm of Mr. J. Evens, of Burton, the first prize winner in the farming competition at the Royal Show, were grown by the aid of chemical fertilisers supplied by Messrs. Lindsey and Kesteven Co., of Saxilby, Lincolnshire, which is a farmers' company established in 1864, of which Mr. William P. Jackson has long been the manager.

If a record had been taken of what was considered the most interesting exhibit in the various stands we think the vote would have been given to the L-K-G. milking machine, shown by Vacca, Ltd., 7, Denman Street, London, S.E. Among those who took an interest in the machine was H.M. the King, who, in the course of his inspection of the showyard noticed the exhibit, and had the manager to explain the method of operation. His Majesty expressed surprise that cows should stand quiet under the operation, and inquired particularly as to whether the animals used were trained. When he was told that they were not only not trained but were to some extent wild, the King remarked that that was an invention which should succeed.

CORRESPONDENCE.

The Outlook in North Westmorland and East Cumberland.

SIR,—One half of 1907 is now a matter of history so far as agriculture is concerned, and so far as weather is concerned, which is the chief promoter of prosperity or adversity in agriculture, it has been a season of extremes and upon the whole unfavourable to agriculture.

February fully sustained its proverbial uncertainty of fill dyke with either black or white, as it supplied us plentifully with both. March, though not unfavourable to out-door labour, was cold and ungenial throughout, but the latter part of it and the early part of April supplied us with a good seed-bed for spring corn, which germinated quickly and healthy; but May proved one of the coldest and wettest months the oldest inhabitant can remember, and almost suspended all operations for the cleaning of land for green crop, more especially on cold, strong land, and although June is now past, we have had little else but rain, which has rendered it impossible to properly till the ground for green crop and committing the seed to the ground.

The result is, up to the last week in June, hundreds of acres intended for potatoes and other green crop remained unsown, therefore the prospects for green crop for all but dry soils are very unfavourable indeed, and cannot but have an unfavourable effect upon the price of all store stock in the autumn.

To add to the difficulties of farmers and landlords, an edict has been issued by the Local Government Board to compel the providing of 800 ft. of air space for all dairy cows, and the said board is presided over by an absolute autocrat whose knowledge of agriculture is absolutely nil.

What about the cuckoo cry of back to the land? Why, it is neither more nor less than a mockery, a delusion, and a snare.—Yours, &c., T. B.

July 2, 1907.

Marking of Foreign Eggs and Poultry.

SIR,—With dismay for some months now I have noticed the action that is being taken by certain persons, supposed to be interested in poultry, with regard to the marking of foreign eggs and poultry. As the Poultry Conference was due so shortly, I thought there could not be a better matter or opportunity for discussion. On May 22, I approached Mr. Brown on the subject. It was referred to the committee, who said it was political and contentious, and could not well have a place in their programme, but if occasion offered perhaps I might introduce it in the course of discussion in certain papers. This would only give it a minor position instead of a prominent one, which latter I think most necessary, for if those persons succeed in obtaining what they ask for, my opinion is, and has been for a long time, that the British industry will be ruined. I am glad to see that at last there is a sign of others sharing that opinion. But I note that various societies and committee meetings have passed resolutions in favour of the marking. Have they thought at all of the natural consequences? Have not these resolutions been passed, as most resolutions are nowadays, without discussion, in the following manner: Resolution proposed, seconded, and declared unanimously carried, all in one breath (four at a meeting and all wanting to get away)? Why should the subject be made political? The fact of the Government interfering spells disaster in some form or other.

I will endeavour to point out what is most likely to happen should foreign produce be marked. The foremost reason advanced in favour is that the tradesman sells foreign productions for British. Because the tradesmen in the British Isles deal fraudulently, why should the producers suffer? Would it not be more reasonable to deal with the person who commits the fraud? Now, if it were possible to mark all this produce, as suggested, the following would be the inevitable result: The tradesman has it in his shop with the date on; therefore it must be sold immediately. He will push it all he can in preference to those that are not marked (that can wait until stale). He will do a greater trade than ever. And the foreigners will benefit, and chuckle at those fools of English, who are ever wishing to cut their neighbours' throats but only succeed in cutting their own. Does not the Danish Consul foresee this? He is perfectly willing to have the marking done.

Now take the consumers' side. They see a certain date on an article. They know exactly then its freshness, and deal accordingly. But will they have anything unmarked? No! Because it might be months old, and probably in many cases the surmise would be correct, and of course there is no guarantee (?) that the process is of a certain date.

So that both tradesman and consumer would combine to defeat the supposed end of these agitators, and, as usual, the poor down-trodden producer would suffer. Further, why should an attempt be made to debar the consumer from having what the home producer is utterly unable to supply? Let there be open markets for all the trade, and no politics be drawn into the question. Unless new-laid eggs and poultry are supplied direct from farm to consumer, there is not much chance of the English produce being fresh. The tradesman buys eggs when they are cheap and keeps them until they are dear and stale, then sells them at the enhanced price. The customer gets bad eggs and complains, the tradesman says they come from a certain farm, and then the farmer gets condemned.

I do not belong to the National Poultry Organisation, but I thoroughly believe they are going the right way to work to improve the poultry industry, and this last fad will probably upset all their good work if carried out. Let poultry breeders, therefore, first of all go for the dishonest trader, middleman or merchant, and themselves deal in an honest, straightforward manner, after the style of the National Poultry Association. If that society will only combat this present proposal of marking foreign produce, then I say join that society, and protect the industry by fair means.—Yours, &c., E. MOUL.

Hollybank, Woking.

Migratory Farmers.

SIR,—According to an old saying a rolling stone gathers no moss, but it is equally true that a sword may hang up till it rusts. It is all a question of circumstances, and whereas one man acts wisely in spending his lifetime in the place of his birth, another does better by moving away and seeking fortune elsewhere. Taking them as a whole, farmers are not a migratory class of men, and the names of certain families have been familiar in certain places for generations.

Owing to the changed conditions of agriculture, however, farmers have been compelled to move about more of recent years, and in most counties one meets with farmers who are natives of some distant shire. It must be said also that a farmer who has moved and settled in another county is not quite the same individual as he was in his home. When he moves he leaves a good deal of his native conservatism behind him, because in rubbing shoulders with the world he meets with different people and sees different ways, with the result that his ideas are broadened.

It is a very easy thing to get into a rut. One is brought up amid narrow surroundings and taught to conform to a certain set code of methods and ideas until it becomes part of one's nature. The code may be good in its way, but it does not follow that it is the only one, or that there is not a better, and when a man is brought into touch with the ways of other people he has an opportunity of judging as to whether they are superior to his own. An infusion of fresh blood is always good, and when a farmer gets into a new district he takes with him ways and ideas which may be criticised at first, but in many cases are eventually adopted by his neighbours. A farmer who leaves one county and commences business in another must necessarily become a learner to a certain extent, and perhaps this is why we generally find him with a more receptive and open mind, less prejudiced, and more ready to learn than the men who have been born and bred in the district.

The restless native spirit of Scotchmen is proverbial, but they possess a faculty of enterprise which stands them in good stead, for wherever the Scotch farmer goes he generally succeeds. As a case in point, I may mention the instance of a man of my acquaintance who was brought up in one of the potato-growing districts of Scotland. He came south, and one of the first things he did was to commence growing early potatoes for market. Such a thing had never been heard of in the district before, and his neighbours, in a kindly manner, attempted to persuade him out of adopting such a sure and certain way of losing his money. But Scotchmen can generally see the end of a job when they are at the beginning of it, and it was so in this case, for the potato growing succeeded, and has since been taken up by the critics who condemned it.

After recording this instance I hasten to add that when a farmer moves from one county to another he should go slowly at first. The methods adopted may be different from those he has been used to, and perhaps they are not in accordance with his ideas altogether. They are the ways of the locality, however, and owing to some peculiarity of circumstances, they may be the best. This is what the new-comer has to find out for himself, and in his own interests he acts wisely if, at the beginning, he falls in with the methods and customs of the district. After he has done this for a time he can prove for himself whether his own methods are qualified to answer better, and, if so, he can easily apply them. One hears occasionally of the failure of men who have gone into a new district and commenced straight away to work in opposition to set ways and customs. No greater mistake could be made, for the strong argument in favour of at first adopting native methods is that they have been tried and have answered. It does not follow from this that better ways cannot be introduced, but the thing is to prove the old before experimenting with the new.

Finally, though I am no advocate of any wholesale system of migration, I believe to a certain extent it is good, and when farmers from one county settle down in another they often succeed where natives have failed. New associations are also good at times. We can all learn from each other, unless we are absolutely stupid, and the coming of a strange farmer into a district is not infrequently beneficial to him and also the people amongst whom he settles.—Yours, &c., LUX.

Agricultural Notes from Kent.

SIR,—I was about to write that haymaking is becoming general, but this would not be quite correct. I can only say grass cutting. With the weather we have had lately it is impossible to "make hay."

Almost everywhere there is an abundance of grass, and farmers have been hoping against hope for the desired change of weather that has not come. June was cold, wet, and dismal nearly all through, and July has so far shown an inclination to carry on the depressing conditions.

The older farmers are beginning to wonder whether 1907 is to resemble 1879, when no crop could be secured in anything like fair condition, corn standing and growing in the shocks till November, and then, of course, comparatively worthless. Already the land has been drenched with a superabundance of rain, and, considering the low range of temperature and absence of sun, it is almost surprising that crops have progressed as well as they have.

Fruit has suffered no less than other crops, and now that the strawberry harvest is beginning, the constant washings they undergo must have a very prejudicial effect upon the quality, and no fruit can be good without sufficient sunshine, which alone can give the flavour that characterises the English produce.

Not only fruit, corn, and hay, but hops, potatoes, and, indeed, everything that grows is sadly needing sun and warmth. Should a favourable change occur (alas! there seems to be no immediate prospect of it), it is not even now too late to ensure a good ingathering; but the change must come soon if the year is to avoid being described in the agricultural annals as a disastrous one. We can only wait end hope on.—Yours, &c.,

SOUTH-WEST KENT.

July 4, 1907.

The Small Holdings and Allotments Bill was discussed at length at the last meeting of the Cheshire Chamber of Agriculture. Various views for and against the proposals of the measure were advanced by members, but finally a resolution was unanimously adopted declaring that the Bill "is capable of providing a practical means for enabling the rising generation to attach themselves to the land for a livelihood, and as a means of improving the standard of labourers engaged on the farm with advantage both to themselves and their employers, and with ultimate advantage to the country at large," and trusting that the Bill would soon become law.

Reports from the Plantations.

England.

The continuance of unsettled weather is gradually influencing the tone of the reports I have received. At the beginning of the week I found that the occasional improvement had here and there shown some good results, the bine having rapidly responded to the more genial atmosphere. Many of my correspondents were able to speak of healthy progress without qualification, although it is true that others reported weakness and slowness of growth. But as we have again experienced cold nights, and boisterous winds with chilly rains, I am not surprised to receive later reports that are almost uniformly unfavourable.

From these I gather that blight is increasing, that growth is being generally checked, that the foliage is assuming a more sickly appearance, and that mould is more evident. The present aspect of the plantations therefore induces me to conclude that we have arrived at a very critical position. There is little doubt, however, that thus far there is sufficient healthy bine to produce an average crop if the climatic conditions become more seasonable. We are entirely dependent upon the weather; should we be visited by sunshine and warm air, the plant will respond, and the flowering and fruitage will be satisfactory; but should the recent unpropitious climate be continued for only a short time longer, the prospect of even an average yield may be dismissed as improbable and almost impossible. Our future is therefore resting, as the ancients would say, "in the laps of the gods," and at the moment no one can venture to prognosticate what the issue will be.

America.

My correspondents on the Pacific coast write me this week as follows:—"The hop crop in Oregon, Washington and California is in a normal condition. The weather is favourable for the growing crop, and with a continuance of good climatic conditions, the Coast should produce a crop which will estimate conservatively as under:—

Oregon	150,000 bales.
Washington	50,000 ,,
California	100,000 ,,

"The New York growth, owing to the cold, unseasonable spring, is quite backward. Some yards have suffered to such an extent from the cold weather that they cannot recover sufficiently to produce an average yield. In this State, however, they are now having warm, forcing weather, and the vines are progressing well. But we do not think New York will harvest over 50,000 bales, and possibly this estimate will not be reached."

Bavaria.

A sudden change in the temperature has been experienced, and last week the weather was cloudy, with strong wind, and much colder. Comparatively little rain has fallen, and the soil, dried by the S.W. winds, is much in need of moisture. But, despite the retardation of growth caused by the long extension of the wintry climate, the plant is generally strong and healthy, and vermin is practically absent. Growers are therefore fairly well satisfied with present conditions, and are anticipating full average crops.

Bohemia.

Growth has been recently checked by a recurrence of low temperature, and as the plantations are somewhat uneven in appearance, latest reports are not quite so favourable as formerly. In some grounds it is said that the burr is coming out, and as the plant is not yet sufficiently developed for flowering, this precocity is not looked upon as advantageous.

Belgium.

Although the weather has taken an unpropitious turn, checking growth to some extent, the general aspect of the plantations is satisfactory. The vermin attack has practically ceased, and a good average crop is generally expected. More sunshine and higher temperature are, however, earnestly desired.

The Market Barometer.

London.

During the past week the Borough has been evidently aroused from its previous attitude of complete indifference, and has become much more interested in the state of the weather, and the reports from the country resulting therefrom. It is not the policy of buyers to manifest any excitement, but I think we can see indications that their thoughts as to our future prospects are being stirred, and that they are now entertaining the idea of a possible shortage in this year's crop. It is quite evident that our factors have had more inquiries, and that sales have been effected much in excess of the possibilities of a fortnight ago. I hear in some quarters that an advance of a few shillings has been obtained for several lots, and although this is not the experience of all our traders, it is universally admitted that we can recognise a better tone in our affairs, and that the present tendency favours an early improvement in values all round. I congratulate holders upon these indications, which, although they may be but of little immediate importance, are sufficiently satisfactory to encourage the hope for better business. The stocks of available hops are very small, and it is surely incumbent upon holders to make the best of their present opportunity. Much money has been lost during the past season by all concerned in the hop trade, and I earnestly hope that the future may have some recompense in store for some of us.

Nuremberg.

The volume of business has been small during the last few days, but nevertheless the sales have exceeded the arrivals, and stocks have been therefore reduced. Values are fairly maintained, medium qualities realising 70s. to 85s., and better sorts 90s. to 95s. Some small choice parcels have been sold at 100s. to 105s.

Brussels.

Although the trade is limited as to quantity, prices are well supported. Spot hops of 1906 crop are quoted at 43 to 44 francs for Alosts, and 32½ to 34 francs for Poperinghes, contracts being made for 1907 crop at 60 and 55 francs.

America.

My friends report as follows:—"Since our last letter the markets have not undergone any material change. Farmers have held fairly firmly at the last low level reached several months ago. There are now, however, signs of a further weakening, and we believe a great many will try to get out during the next month. Speculators have given up all hope, and are endeavouring to unload. There still remains of the last crop, in growers' possession, about 50,000 bales in the United States, and besides the supplies in the hands of growers, speculators and dealers hold pretty fair stocks."

Agricultural Implements for Manchuria.

In a Consular report issued by the Washington Bureau of Manufactures, it is stated that Manchuria should, within a short time, be a very good market for nearly all kinds of modern agricultural machinery and appliances.

The northern part of the country is very fertile, and embodies exceedingly large tracts of as rich agricultural land as can be found in any part of the world. This land up to the present has only been cultivated in the old crude Chinese way, and there are many large areas which are still in a virgin condition. Settlers are flocking in from other and more densely populated parts of China; but until modern implements are introduced to the farmers' notice the old conditions will continue to prevail.

Now that the inhabitants are turning their attention to farming and other industrial pursuits with renewed zeal, it is believed that within a few years Manchuria will be the best market for agricultural machinery and farming implements in all Asia.

Lincolnshire Notes.

LINCOLNSHIRE is beginning to seriously think about making its hay. The cutting has well begun, and from all appearances the harvesters will have a flattering tale to tell. The crops are heavy and well grown, notwithstanding the too solid skies which have so obstinately declined to let the sunshine through. Indeed, I am told that the harvest will probably be the best for many years. Lincolnshire being one of the driest counties in England—yes, I am quite aware of its ancient reputation—the untoward weather has not rotted the roots as it has in some other parts of the country, and the meadows look wonderfully well.

BUT there comes in the rub. Even the driest county in England must have sunshine to realise its hay harvest. At present the farmer wears a worried look, for he sees possible disaster on the very verge of his success. And all the time the skies are threatening, the winds blow dour and chilly, and the showers keep falling. What is going to be the end of it all? Are we, after all, going to see one of the most promising seasons the farmer ever enjoyed spoiled just at the moment of its realisation? Will not anything penetrate the obduracy of the clerk of the weather. Heavens, can it really be the middle of July!

THE complaints of Mr. John Eastland, a South Lincolnshire farmer, regarding the decision of Earl Carrington to break up the Crown lands, have been considerably reduced under investigation. It seems that he did succeed in bringing his grievances to the ear of Parliament, although no newspaper appears to have deemed the matter of sufficient interest to report it. But a question was asked, and the following reply from Sir Edward Strachey to Sir Walter Long puts the alleged grievance in its true proportions:—

"The right hon. gentleman has been misinformed as to the facts of this case. Mr. Eastland has not been tenant of this farm for sixty years. He only holds it at present as executor of his mother, who was the Crown tenant, and who died in January, 1906. Mr. Eastland was joint tenant with his mother from 1893 to 1898, but his tenancy was then terminated on the ground that the farm was not well managed, and it was subsequently relet to his mother as sole tenant. On his mother's death Mr. Eastland applied to take the farm, which comprises nearly 950 acres, but he was not considered capable of managing so large a holding, and notice to quit at Michaelmas next was therefore given in September last. All this was done before the property was transferred to the management of my noble friend.

"With a view, however, to enable Mr Eastland to retain the old home, my noble friend has offered to let him the farmhouse and principal buildings with about 368 acres of land, and it is proposed to let the remainder for small holdings, for which there is a great demand in the neighbourhood, and for which the land is well suited.

"The 350 acres referred to by the right hon. gentleman consists of marsh land in a very exposed position, and it is not land which is well adapted for small holdings. For some years past the grazing has been let by auction each year in small lots, the rent receivable for the current year being £1,270."

FROM which it will be seen that whoever may be reasonably aggrieved Mr. Eastland is not. Meanwhile the work goes on merrily, and small holdings will soon have another brilliant example in the county of Lincolnshire.

"ON your present lines you have got the best and most hopeful thing that has ever been established in the interests of agriculture." The Lincolnshire Farmers' Union must have blushed under the steady volume of compliment which poured into its stand at the Royal Show at Lincoln last week. The expression I have quoted was Earl Carrington's, who made a bee line for the "red, white, and blue" on entering the show ground on Wednesday.

OTHERS not less complimentary came from Mr. Ailwyn Fellowes, a former President of the Board of Agriculture; Sir E. Strachey, representative of the Board of Agriculture in the House of Commons; Major Craigie, Assistant Secretary of the Board of Agriculture; Major Renton, the member for Gainsborough; Lord Charles Bentinck, Colonel Rolleston, Mr. H. L. Reynard, of Newark, one of the big farmers of the Argentine; Mr. A. H. Mathers, of the Central Chamber of Agriculture; Mr. C. M. S. Pilkington, agent to Lord Middleton; Mr. R. Pattinson, Mr. H. Dudding, Mr. Turton, who is a winner of one of the society's farm prizes; Lord Willoughby de Eresby, and a long list of other notable visitors. The Farmers' Union has made a great scoop. It increased its membership by well into three figures, it showed the ways of organisation to representatives from nearly every county in England, and it has in tow meetings for Peterborough, Thrapston, Oakham, Uppingham, Derby, and Doncaster.

I SHOULD like to make some appropriate comment, but it is quite unnecessary, excepting to say that the message of the Lincolnshire Farmers' Union is "other counties please copy." They have but to write to the headquarters at Lincoln, and Mr. Palmer will be all activity on their behalf. We want that British Farmers' Union.

I THINK pretty well all Lincolnshire saw the show, or as much at any rate as could be seen in one day. Friday was the countryman's day, and as the returns show the attendance was far the greatest on that day. They would have been greater but for the failure of the railway companies, whose rolling stock proved quite unequal to the demand, and who left many hundreds of people disappointed on the station platforms. Lincolnshire's verdict was that it was the biggest thing in the agricultural world—the biggest and best. I hope we saw all there was to see. It is a far cry to Newcastle, and it will be a good many years before we get the Royal Show of England in the county of Lincoln again.

JULY is keeping up the record. On Tuesday it brought us a thunderstorm which pretty well devastated the fens and killed some valuable stock in South Lincolnshire. Huge hailstones fell, and the atmosphere was distinctly wintry. What next on the meteorological programme? Will it be the Lincolnshire skating championship?

MESSRS. DEAN, of Dowsby, had an easy victory at the Doncaster Show. Their five pens practically swept up the two classes in which they were exhibited. Mr. G. Marries, of Kermington, Brocklesby, however, came a fair second in the shearling rams. Amongst the Hunters Mr. W. B. Swallow, of Wooton Lawn, Ulceby, won well in the brood mare class with his famous Tugela, and Mrs. C. Wilson, of Kettleby, Brigg, came second amongst the Hunter foals, Mr. Swallow's Diana and Tulip taking the third and the reserve tickets. Mr. Swallow was also first in the yearling colt or filly class with Recruit, and second in the two-year-olds with Alpha. In the class confined to the Badsworth, Lord Fitzwilliam or Lord Galway's hunt, a good third was won by Mr. E. T. H. Pulleine, of Owston, for Perry, whilst Mr. Swallow completed his successes in the Hunters Improvement Society's gold medal for brood mares, and the reserve place for the silver medal for fillies. A notable absentee from the cattle classes was Mr. Henry Dudding, of Riby Hall, who, it was suggested, was probably concentrating his attention on his Riby sale.

July 7, 1907.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended June 29, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (14,305) 9,514; sheep and lambs (891), 643; horses (499), 287.

Fresh meat:—Beef (108,194 cwt.), 163,581; mutton (41,103), 135,998; pork (3,590), 6,404.

Salted or preserved meat:—Bacon (105,708 cwt.), 109,698; beef (2,656), 3,473; hams (26,520), 24,080; pork (4,922), 6,780; meat (8,821), fresh, 16,445; salted, 921; meat, preserved (9,859), 5,652.

Dairy produce and substitutes:—Butter (91,657 cwt.), 86,894; margarine (17,656) 15,369; cheese (94,078), 65,858; milk, cream (115), 115; milk, condensed (17,560), 4,808; milk, preserved (26), 30.

Eggs (great hundreds):—(447,454), 336,482; poultry (value £6,956), £2,202; game (value £ —), £6; rabbits, dead (not tinned) (467 cwt.), 93; lard (44,514 cwt.), 35,876.

Corn, grain, meal, and flour:—Wheat (2,588,400 cwt.), 2,260,700; wheat meal and flour (227,200), 271,800; barley (244,600), 34,400; oats (458,300) 293,100; peas (19,840), 15,070; beans (3,040), 4,100; maize or Indian corn (927,700), 864,200.

Fruit (raw):—Apples (546 cwt.), 1,089; cherries (32,968 cwt.), 25,068; gooseberries (6,871 cwt.), 8,151; strawberries (5,083), 6,437.

Northern Notes.

WE in the North are far removed from that blissful state of Arcadian happiness we would fain enjoy. The elements are still against us, and our business. Maids this morning are lighting drawing-room fires; and it is hard to realise that we have entered on the month of July, when crowds of holiday-makers should be enjoying life by the "sad" sea waves—(why sad?)—carried thither by accelerated train services.

WE are putting on the best and pleasantest faces we can under the depressing circumstances. A meteorologist has just left me a record of rainfall for the past six months, from which I find that in May and June more rain fell than in the previous four months together. The figures are:—January, 0·827 in.; February, 1·625 in.; March, 1·300 in.; April, 1·685 in.; May, 3·360 in.; June, 2·880 in.; total, 11·677 in.

THESE two dripping months in succession have been a severe trial to the heavy-land farmer at this period of his agricultural year, and one fears there is much dirty land to be contended against for which the weather is alone responsible. It will be impossible to hoe a large number of fields this season, or to do much effective scruffling. Weeds grow as fast as they are disturbed. Hand-picking would be the only effective treatment, but this slow and expensive process is an impossibility.

TAKE the pulling of charlock, for instance. Time was when wagons laden with schoolboys were brought on to the farm from the market towns in agricultural districts to clear the fields of this plant. Where are the boys now? Kept religiously to their desks and books. Farmers are deprived of useful little labourers and parents of the 1s. a day additional income.

TURNIP sowing is not nearly completed, and a waggish farmer suggested the other day that he might finish off his unsown land with a crop of watercress. A low-land farmer reports that in his district mangolds and swedes, along with the "hands," are having a hard struggle against the weather and the rubbish. "My twenty acres," he says, "have cost me three times as much in labour as they should have done, but though the plants are getting to cover nicely the land is still a bit lively."

ON the wolds of Yorkshire the crops all round are in a healthy state, and there is a prospect of a good harvest if the much-needed sunshine comes quickly. Wheat promises well, but on heavy land, where badly farmed and where the outfalls and ditches have not been kept in order, the crop in some cases has almost perished. Oats are above the average, and the prospect is the best for years past.

BARLEY is beginning on these same wold farms to feel the effect of the bad weather, and is looking rather yellow. There will be plenty of straw, and no doubt a good yield. Turnips have been sown rather late, but where the land is in good order, roots are doing fairly well. Beans and clover are exceptionally good, and a heavy yield of hay is anticipated. Haymaking has begun.

THIS "rosy" coloured picture of the farm outlook on the best of wold land must not be accepted as an indication of the general aspect up north; far from it. We heard from the lips of a farmer who had been in business fifty years, that he never knew the barleys to be in a worse predicament than they are this season. This crop has, on some lands, suffered more than any other; the stems are yellow, and the yield must now inevitably be reduced, according to the most moderate computation, by five to six bushels per acre.

THE destructive turnip fly has done already considerable damage to swedes. Usually this pest has been considered to cause the greatest damage in hot, dry weather. This year, however, proves that even in cold, wet weather, the fly can do equal, if not greater damage. Few fields have escaped.

SOME farmers in Ryedale have sown twice, and a second time the fly has destroyed the plant. They have appeared in large numbers on the "runch," and fear is entertained for the young clover, for which the fly has a partiality. A sprinkling of quicklime has usually been effective when other preventives have failed. This is said to be the most cloudy and cold summer for over sixty years.

FOR some time now the papers have not chronicled "abatements" and "returns" of rents. These were pretty frequent in the bad

farming years, and the announcements served a good purpose. The recipients of these abatements and returns, of course, did not need to read about their good fortune in having a portion of their rents handed back; it is the outsiders, the tenants on other estates who wish to know these things, then they can judge whether in their opinion their landlords are behaving as generously as others.

LAST year in a certain locality in the North, a very destructive storm of hail swept across a tract of country, and literally threshed out hundreds of quarters of barley and other grain. Some farmers suffered more than others. The "others" were the men who had got their corn in. The farms of several landowners were affected. One owner immediately sent an assessor on to the holdings of his tenants who had suffered damage, and it is understood these farmers have had their losses made good or largely shared by their excellent landlord.

ANOTHER farmer on an adjoining estate, who suffered to the extent of £300 to £400, has not up to the present received a farthing of consideration. Generous deeds are too frequently hidden. In this particular case, if one landlord had permitted it to be known that he had recouped, or partially recouped, his tenants for the losses sustained by the storm, and for which they were not prepared by insurance, the other landlords would have followed the same generous policy. The withholding of a piece of "good news" may thus be the means of depriving others of like benefits.

A STORM incident has just been reported on the Yorkshire Wolds by a cattle dealer coming from the neighbourhood of York Dale. He says he saw two dense clouds apparently meet and then burst like a great avalanche. The roadways were flooded, also a line of railway to the depth of 3 ft., and the water moved away like a swift river. Several occupants of cottages in the valley were obliged to get up into the hills for safety, and their small possessions of live stock were drowned. The arable fields were almost entirely denuded of the soil, and laid bare to the chalk rock. Thunderstorms had been prevalent in the locality for three or four days.

July 4, 1907.

PUBLICATIONS RECEIVED.

"Davy's Devon Herd Book" has now reached its thirteenth volume, and in this details are given of bulls from Nos. 5686 to 5942, and cows from Nos. 21097 to 21790. As usual, the volume is a fairly large one, nicely got up and printed, and containing, in addition to the entries of bulls and cows, considerable information concerning pure-bred Devon cattle and the Devon Cattle Breeders' Society. A word of praise can be accorded the illustrations, which are out of the ordinary run that one sees in herd and flock books.

"Volume XVIII. of the Wensleydale Flock Book," recently issued by the Wensleydale Long Wool Sheep Breeders' Association and Flock Book Society, is on similar lines to the preceding volume, giving, as it does, particulars of flocks, a register of rams, and details of rams bred in 1905, together with other information of interest to breeders of the Wensleydale Long Wool Sheep.

The Suffolk Sheep Society has now issued volume 21 of the Suffolk Flock Book, and it gives particulars of the establishing and replenishing of flocks, with list of sires used in 1906, a register from Nos. 9320 to 9780, a record of prize winners in 1906, and other interesting details, such as the veterinary report for 1906, an article on Suffolk sheep, with their record up to 1906, and as a frontispiece a photo of the late Mr. Thomas Keeble, who held a leading position as a breeder of Suffolk sheep.

An interesting advertising novelty relating to the Norfolk coast holiday resorts has been issued by the Great Eastern Railway Company, and should do much to further the popularity of such places as Cromer, Mundesley, Sheringham, &c. The novelty consists of half a dozen oval or egg-shaped pieces of thick paper fastened together and labelled "Norfolk Nooks," and it gives some concise and illustrated details of the places mentioned.

The Great Eastern Railway Company have issued a handbook of convenient pocket size entitled "Summer Holidays," in which prominence is given to some less known districts in East Anglia, and to the country between the Cromer coast and the Norfolk Broads. Numerous facsimile water-colour and pen-and-ink illustrations are given, and form quite the feature of the work, which is altogether an interesting one.

Nottinghamshire Notes

WHETHER at the market, in the railway train, or in a farmer's house, the chief topic of conversation at the present time is the weather. We have one hour of sunshine each morning, and showers peculiar to April rather than to July for the remainder of the day. That this weird weather we are experiencing is serious for agriculturists is recognised even by residents in the towns. At the present time there are thousands of acres of meadow grass and clover lying on the ground waiting for sunshine. The crops in many districts are extremely heavy, but in the course of my travels this week I have seen a tremendous lot of grass which is practically rotten where it has been laid by the rain. Especially does this apply to spots in the meadows where feeding-troughs were placed, and under the shade of hedges where sheep have lain and so thoroughly manured the land that the grass has grown too long.

LONDON'S halfpenny Press seems to be badly edited so far as agricultural topics are concerned, for I noticed in the *Daily Mail* on Wednesday that the Lincolnshire "root crops are seeding well." A farmer in Nottingham Cattle Market asked me what was meant, but I had to admit that I was puzzled.

ALTHOUGH a good deal has been made of the serious loss to farmers, regarding the hay crop, caused by the wet weather, in the daily Press, I have noticed it stated that beekeepers are also seriously affected. Probably many of my readers are unaware of the large number of hives of bees which have died during the past six weeks. On Tuesday a farmer residing in the little village of Flintham, near Newark, showed me six straw and three box hives, and in only one of these were the bees living, while as yet he has not had a single swarm. The reason for this, he assured me was that they had been unable to get out owing to the inclemency of the weather. To-day I passed through a number of villages and made inquiries from farmers who go in for apiculture, and remarkable to relate, I elicited the fact that the complaint was general, and with the exception of one village—viz., Keyworth, several hives of bees had died. Where the workers are still alive they are being fed as though it was winter.

LOUGHBOROUGH wool sales were a trifle disappointing to farmers, who had looked forward to making 32s. to 34s. per tod. Messrs. German and German sold 8,000 fleeces, and the highest price made was only 12½d. for some very good cross-bred wool. The general run of prices was from 10½d. to 11½d. per lb., which is 2d. to 3d. less than in 1906. Unwashed wools were not wanted, and where a sale was effected only 8d. to 9d. per lb. was made.

MANY people in the country have been commenting upon the success of the Earl of Ellesmere as a pig breeder, though there are only a few who really know that the manager of the herd is no other than Mr. Richmond Daybell, a son of Mr. D. R. Daybell, of Bottesford, who has long been noted for his Large White Yorkshire breed. Last week, at the Royal Show, Mr. Daybell, of Bottesford, which is just over the border of Nottinghamshire, was again a first prize winner for his pigs. It is interesting to note that Mr. Daybell has taken first prize for young boars at nine out of the last ten Royal shows, which is truly a remarkable achievement. Two years ago Mr. Daybell's son succeeded in obtaining the first award for Earl Ellesmere's pigs.

MR. WILLIAM R. DAYBELL, of Bottesford, who is well known among farmers in Lincolnshire, Nottinghamshire, and Leicestershire, has been successful in his application for an annuity from the Grantham Farmers' Benevolent Institution of £25 per annum. Mr. Daybell obtained 338 votes, Mr. Moulds, of Sproxton, who came next, securing 230. The old gentleman is now sixty-nine years of age, and on reaching seventy the annuity will be increased to £30 a year.

AT Bingham Petty Sessions to-day a remarkable case came before the bench. For some time Mr. John Elliott, farmer, of Langar, has had a cow which gave a very small quantity of milk, and stated in court that he had thought of putting her out for this reason. The cow in question had hitherto been regarded as a good milker, and the cause of her falling off so quickly was a mystery to him. But early this morning Police-constable Huffer discovered the solution to the problem which had puzzled Mr. Elliott. He saw a man named Joseph Flint, of no fixed above, who is known locally as "Robinson Crusoe," milking the cow. On the constable entering the field Flint threw away an old tin can which had contained milk, and in response to a query as to what he was doing there coolly replied, "Looking for mushrooms."

SUCH a statement, in face of what the constable had witnessed, was absurd, and Joseph was thereupon arrested and searched. In his coat pocket were three fairly large bottles all filled with milk, and when brought before the bench they rewarded him for his early morning adventure by sending him to gaol for two months' hard labour, the chairman (Mr. T. B. T. Hildyard, of Flintham Hall, a large land owner) stating that "Robinson Crusoe" had lived for eighteen years by stealing eggs, milk, vegetables, &c., from farmers and others.

MANSFIELD and Worksop butchers had a "field" day on Tuesday. Headed by a brass band, they paraded the streets of Mansfield and took up collections for the local hospital and nursing fund. They afterwards amused themselves with a game of cricket, and a block test competition and tug-of-war were other items in a very successful day's programme, the charities named benefiting by a good round sum.

AT the Doncaster Agricultural Show, on Wednesday, Mr. Wilkinson, of Edwinstowe, North Nottinghamshire, was successful in obtaining second prize in the Hunter class for his filly Lady Bird by Woosthorn, which was first at the Newark and Selby Shows, and second at the Royal last week. In the same class Mr. Oliver Quibell, of Newark, took the third prize with Dawn by Red Eagle. But Mr. Wilkinson took high honours with a fine chesnut gelding, His Grace by Erskine, carrying off premier award. This animal was awarded the premier in the Hunter class at the Agricultural Hall, London, in March, and has taken first prizes at the Newark, Retford, and Selby Shows, and was second to Zealot at the Royal Show. For heifer calves above five months and not exceeding twelve months old, Mr. G. H. Elliott, of Colston Bassett, was reserve with Colston Mary. The judge for butter and eggs at the show was Miss Wyles, of Bassingfield, Nottinghamshire, who is well known in our local dairy sales.

SOME people are constantly saying that land never makes more than £100 an acre in these days, but on Tuesday evening a field of grass containing exactly three acres sold for £660, or £220 an acre, at Kimberley, a village about six miles distant from Nottingham.

July 4, 1907. R. K.

West Country Notes.

WHEN one hears the comments on the present as a wet June, one is tempted to ask what constitutes "a wet season." Clearly, if memories are not treacherous, whose owners declare they have never known so wet a time for June, there must be something more than the actual recorded rainfall which goes to the making of a wet season. We certainly seem to have had very few dry days during the month, yet the actual fall recorded is in some cases a little below, and in others scarcely above, the average. We have had in my neighbourhood only about half an inch more rain than last year, and in 1902 and 1903 this year's amount was far exceeded; 1890 and 1883 were also very wet Junes. The weather was warmer, however, and the rain fell on fewer days in 1902 and 1903.

CHILLINESS of the atmosphere counts for a great deal, as well as the fact that the rain has this year fallen in small and frequent doses. Yet vegetation at the present seems healthy. What it may become with a sudden burst of heat is another question.

DORSET agriculturists have been convened to discuss the Small Holdings question, and also sheep dipping, and they met lately at their county town to exchange ideas. They like neither the one nor the other, and have resolved upon a campaign in favour of amendments of the Bill and of trying to secure some better arrangement than at present with regard to sheep dipping. Devon men have also met on the subject.

A NOVELTY in West Country farming has been discovered, I am told, near Bath; and I shall certainly take an early opportunity of paying a visit to the establishment. Kangaroos are the live stock which give the peculiarity to the enterprise, and they are said to do exceedingly well.

STRAWBERRY croppers of the Mendips are now in full swing of picking and the crop is a heavy one, though sun is badly needed to

bring out the quality. The colour is better than one could have anticipated.

ST. NEOTS in Cornwall has just been holding its annual farm work contests. One or two of these are novel, but very useful. Rope-making is one, spear-making another. Stone-walling—in a different sense to the cricketers' use of the term—marks a very important phase of West Country agriculture. These particular contests have been going on for a third of a century.

CAMBORNE magistrates have had before them a charge of adding boracic acid to milk. The Cornwall County Council had, it was stated, upon receipt of the circular of the Local Government Board, decided to take steps to put a stop to any practice that existed of using this ingredient. In this instance a fine of 10s. and costs was imposed.

NEARLY a ton of beef was the record of one animal which visitors to Newport saw alive, and weighing then 32 cwt., at the Bath and West Show. It was slaughtered and weighed at Plymouth last week end. The owner, Mr. W. J. Crossing, of Woodford, Plympton, is probably justified in believing this was the record weight of any breed. No other South Devon is recalled of such a size, and probably no breed can excel this for bulk. One of the fore-quarters went over a quarter of a ton, and the actual total of dressed meat was 18 cwt 7 lb. The flesh was very highly praised. A hide weighing nearly two cwt. was removed from the carcase, and the loose fat weighed 19 score.

AT the meeting of one of the county small holdings committees the other day, composed mostly of ardent supporters of the present Government, several applications were under review; and there was enthusiasm over the prospect of providing deserving applicants with land. There was a practical man on the committee who began to ask a number of questions as to water supply, buildings, and accommodation for working the proposed small holding. Then the enthusiasm began to dampen a little, for the first-named was an exceedingly doubtful quantity, and all the rest would have to be provided.

COUNTING up the cost, it was found that the venture would be a risky and costly one, even under the most favourable terms for acquiring the land. When the further question of implements of cultivation came to be mentioned, it was seen that the small holding was not very likely to be flowing with milk and honey.

WITH regard to one of the applications to this county council, the local body to whom the case was mentioned were able to ascertain some interesting particulars. It came from a man who claimed that he could not get allotments—that, in fact, they had been refused him. The allotments were vacant, were advertised, and no one could be got to take them. They were offered to the man's master, and he went to the expense of cleaning and stocking. Then the man sent in his application. His large garden at the time of making it was only half planted.

ASSOCIATED with the question whether the small holding should be bought or rented is that of the larger holding. What is sauce for the goose is sauce for the gander is the argument. One old lady near me has just died in the house in which she was born seventy-seven years ago. Her father held the farm for sixty years, then her husband took it, and holds it still. Her son will probably have it in turn. Yet they are still only tenants. Plenty of other cases might be found of the same sort.

A WEST country record of work which has just been noted, owing to the death of a Cornish farmer, will be extremely difficult to beat Mr. Henry David Husson, of St. Neot's, has just passed away at Liskeard at the age of 101. Till he was over the century he was able to do some gardening, and for 93 years without intermission he helped in the harvesting operations.

GLOUCESTER is very determined about its reception, if possible, of the Royal Show in 1909. The Mayor called the City Council together yesterday, to hear the result of his visit and that of the Town Clerk to Linclon. "Just to see what they could see, to take stock of what might be wanted if they did give the Royal an invitation," was the naïve way he put the object of their visit. There were few second thoughts on the subject, and in a whole hearted way the Council set to work to organise the neighbourhood, and to co-operate with any deputation the Royal Society might send down to view the suggested sites.

THE season has commenced for Cheddar cheese to be put on the market, and I had an amusing experience trying to buy some for my own consumption. I was offered as prime Cheddar some very fair new double Gloucester. To-day I noted a number of cheese merchants bustling round. A motor car helped in one case. Prices are averaging 62s. or 63s. Some are as low as 61s. The top price appears to be 65s. for the best makes of April cheese.

MUCH as I like to respect the decision of the Somerset County Council, that they would not publish the price made for the cheese at their school at Chewton Mendip, I could not help overhearing a whisper that Mr. G. Gibbons and Mr. Keel had done very well, and had only got 6d. under the very highest price known to have been paid for April cheese. The school list continues well-filled under Miss Cannon.

ONE likes to hear of a balance on the right side, even if it is only a small one. Villages are being very fairly looked after in many places by the useful nursing associations, the number of which is growing very rapidly. Lady Paget presides over one formed for the group of villages into which Sir Richard Paget's estate extends, and others in the vicinity. Their account for the first year's working wound up with 1d. in the bank, and all bills paid.

July 5, 1907.

DAIRY.

British Dairy Farmers' Association.

At the meeting of the council of the British Dairy Farmers' Association held at 12, Hanover Square, London, W., on Wednesday. Sir Edward Strachey, Bart., M.P. (vice-president), who was in the chair, entered into a detailed explanation of the provisions of the Butter Bill, in its amended form, with a view to remove the prevalent misunderstanding and misrepresentations.

Several members of the council expressed the opinion that, after considering Sir Edward's statement, it would be unwise to continue the protest against the limit of 16 per cent. of moisture being exceeded in articles other than butter which may be legally sold under the Butter Bill; and on the motion of Mr. Christopher Middleton, seconded by Mr. W. J. Grant, it was unanimously resolved:—"That the council cordially thank Sir Edward Strachey for his statement relative to the Butter Bill, and that the Government be urged to pass it into law with all possible dispatch."

The Finance and General Purposes Committee reported that in the four weeks ended June 29 there were no imports of fresh milk into the United Kingdom, compared with 3 cwt. in the corresponding weeks of last year. Of cream the quantity received from abroad amounted to 425 as against 459 cwt.; of preserved milk to 339 compared with 139 cwt.; and of condensed milk to 70,454, against 77,191 cwt.

On the motion of Mr. Alexander, seconded by Mr. Tisdale, it was resolved to request the Board of Agriculture to represent to the Customs authorities the desirability of setting forth in their returns of imports the respective proportions of full-cream and of machine-skimmed condensed milk.

The Conference Committee reported with regard to the recent dairy conference and excursions in Kent and Sussex, that the proceedings were participated in by about eighty-five members, who evinced the keenest interest in the discussions, and in the various farms, estates, and institutions they were privileged to visit. In both counties the reception accorded was of the warmest possible character; and the committee desired to record their appreciation of the hospitality extended in all directions, as well as indebtedness to those local members by whose kind co-operation the programme was rendered possible. The committee regarded the conference and excursions of 1907 as being among the best yet held in the United Kingdom. They added that it was intended to make inquiries with regard to a visit to Canada next year.

The next meeting of the council was fixed to be held on Wednesday, September 4.

Medical Officers and the Milk Supply.

On Monday Dr. A. W. Mayo Robson, F.R.C.S., DSc., presided at a meeting in London of the Incorporated Institute of Hygiene to discuss the question of the "sources, surroundings, and distribution of milk."

Dr. Thresh, Medical Officer of the county of Essex, said they wanted better inspection of the sources from which milk was supplied. At the present time a milkman was not bound to notify when disease was in his cowshed. They must insist on a better system of veterinary inspection, and if they had that, then they must be free from local influence, so that no official should be dependent on his bread and butter because he was carrying out the regulations of his council. He moved that the periodical inspection of cows should be made compulsory throughout the United Kingdom.

Dr. George Carpenter, medical officer of Beckenham, seconded the resolution. He said that it would surprise them to hear that in the children's hospitals of London and of the country at least one-third of the young people died from tuberculous disorders. What they wanted was a universal law. If London had special laws in regard to pure milk, the milk which was shut out of London would go into other places and poison other people.

The resolution was supported by Admiral Brand and carried.

The conference, which included a number of milk dealers and sanitary inspectors, then proceeded to discuss various proposed resolutions. One was that it should be compulsory upon all local authorities to make and enforce regulations which would ensure a complete inspection of all sources of milk supply.

Milk-Blended Butter.

The Manchester Wholesale Provision Association has had under consideration the Butter and Margarine Bill, and the following resolution, which was adopted, has been sent to Earl Carrington and all the members of Parliament:—

This association is strongly of opinion that milk-blended butter, under whatever names it may be called, should not contain more moisture than either butter or margarine; that the introduction of this article, containing as it does 50 per cent. additional moisture, will be harmful to the producing and distributing interests, and is really, more or less, a fraud on the public; that as Acts of Parliament already prohibit the addition of more than a certain percentage of butter fat to margarine, the wilful addition of water to butter should also be prohibited; and that, as the tests for purity of butter are not absolutely perfect, the defendant should have the right to call as a witness the person or persons who made the analysis.

Cheese Fairs.

Chester.

The monthly cheese fair at Chester was held on Wednesday, and was attended by dealers representing wholesale houses in the North and Midlands, whose requirements were met by the 70 tons of new season's cheese brought in by farmers. A clearance being effected at the following prices:—Fine Cheshire 54s. to 58s., medium qualities 48s. to 52s. 6d., and common 44s. and upwards per cwt.

Market Drayton.

The first of the recently-organised cheese fairs was held at Market Drayton on Thursday, when fully forty tons of cheese was on offer. A big company of buyers attended from the principal centres, and a highly satisfactory trade resulted, practically the whole of the produce being disposed of in little over an hour from the commencement of the sale. Since the tawn is situated in the midst of one of the finest dairy districts in the Midlands, the success of the fair was guaranteed from its inception, and no doubt the markets to follow will be equally well supplied and patronised. For the best qualities of cheese prices ranged from 54s. to 59s. per cwt., and for medium qualities the prices were from 50s. to 54s. per cwt.

Stafford.

At the monthly cheese fair at Stafford on Tuesday, nearly eleven tons were staged, this being one of the heaviest pitches since the fair was started. There was a good attendance of buyers, and prices averaged about 50s. per cwt, the highest price being 60s. per cwt.

Cheese Fair for Blackpool.

The Market Committee of the Blackpool Corporation, after much consideration, finally decided on Wednesday last that a Lancashire Cheese Fair should be held on Wednesday once a month. The first fair will be held on the 17th inst. at the existing market.

French Butter: Decrease in Exports.

The export of butter from Cherbourg, and, indeed, from other ports of that Consular district, such as St. Malo and Granville, show a decided falling off during the past few years. In 1905 the quantity exported to the United Kingdom, Brazil, and other countries amounted to 15,816 tons; but during 1906 the total quantity exported from Cherbourg only reached 9,659 tons, showing a net decrease on 1905 of 6,157 tons.

The decrease is attributable firstly to the ever-increasing competition on the British markets of Danish, Argentine, Australian, and Russian butter, and secondly to the short supply of butter in France owing to the exceedingly dry summer of 1906. French dealers were forced to import foreign butter in order to meet the demands of the Paris Market.

The scarcity is also attributable to the fact that less butter is made by peasants, who are in many parts abandoning their villages, where they say they can no longer make a living, and flocking into the towns, to the great detriment of the latter. The Australian butter recently imported into Cherbourg is packed in wooden boxes containing 56 lb. of butter each, and comes to Cherbourg from Southampton.

Fertilisers and Feeding Stuffs.

Sulphate of Potash: Crude and Dark Coloured.

SIR,—I forwarded to you a sample of sulphate of potash a few days since to avail myself of your offer to analyse manures for your readers.

Allow me to congratulate you upon the wonderful improvement which has taken place in your paper during the last year or two.—Yours, &c.,

July 2, 1907. H. N.

The sample was very unusual in appearance, being dark and apparently gritty, so our correspondent thought the quality would not be up to the guaranteed analysis. We submitted the sample to our analyst, who reports:—

The sample contained percentage of potash 50·08
Equal to sulphate of potash... ... ... 92·70

"This is a crude very dark-coloured potash salt, very different in appearance to ordinary sulphate of potash, but it will be seen from the analysis that it contains the amount of potash guaranteed."

Chemical Manure Works.

The chief Government Inspector of Alkali Works, in his annual report, states that the number of works engaged in the manufacture of fertilisers, where the raw phosphatic material used is principally imported mineral phosphate, remains fairly steady from year to year. He observes that in some districts manufacturers found difficulty in covering their requirements of mineral phosphate, though it is expected that by 1908 these difficulties will be less marked. The newer sources of supply will, it is hoped, be then able to meet the demands made upon them.

The inspector is again indebted to Mr. Alexander Cross, M.P., for statistics of importation into the United Kingdom of some of the manure materials in largest use throughout the country in the manufacture of chemical manures. As explained in previous reports, a not inconsiderable proportion of the nitrate of soda imported was used in processes connected with the manufacture of sulphuric and nitric acids.

The amounts, in tons, imported in 1904, 1905, and 1906 were:—

	1906.	1905.	1904.
Guano	24,906	29,223	24,276
Mineral phosphates ...	442,970	421,026	419,221
Nitrate of soda	108,486	104,436	120,526

Science at Work.

"Science at Work" is the title of an interesting little pamphlet, written with the object of explaining the advantages of the work undertaken by the Aynsome Seed Testing Station and Laboratory.

On the Continent, the control of seed purity and germination is recognised as so important that it is undertaken by Government institutions. In this country it is left to private initiation, and the Aynsome Seed Testing Station and Laboratory was founded in 1901 to undertake this important work, as well as all other analytical work required by farmers, agricultural merchants, and manufacturers of cakes and fertilisers.

From the chapters on "Manure and Oilcake Makers" we extract the following passage:—

"Scientific tests of cattle foods are just as important to the farmer as to the manufacturer. When both farmer and maker are without means of telling what cakes are worth or what they contain, it frequently happens that extremely bad cakes find their way to the market, containing often really obnoxious seeds, like spurry or corncockle. Often in compound cakes by-products of the most inferior quality get mixed in with the rest of the materials. Cakes have even been known in which sand—surely not a very healthy or fattening diet—has made quite a large proportion of the composition. Farmers as well as makers should get their cakes tested, if only microscopically, so that they may have at least a little workable knowledge of their ingredients, and some sort of safeguard against the rascals who spoil the English market by foisting upon them useless and even harmful stuff.

Americans are the chief sinners in giving our farmers cakes, which are—sometimes—not of the slightest use to them, and taking good English money in exchange Like the English manufacturers, they want all possible oil from the seed; but while good makers retain enough oil in the cakes to make them digestible, the Americans leave practically none, and send to our country cakes that are extraordinarily hard, and consequently undesirable. A hard cake is very nearly indigestible, as experiments have amply shown.

In buying these brick-like cakes the farmers' money goes in at the animal's mouth and ends upon the dung heap, doing no manner of good on the way.

Farmers and English makers should combine to set a standard and insist on guarantees of the percentage of oil in cakes, asking, say, 11 per cent. oil in palm nut, 12 to 16 per cent. in rice meal, and 13 per cent. in good cotton cakes. They should regularly test the cakes they buy to see that they come up to this standard.

Soil Temperature and Ventilation.

This is an important soil factor. A wet soil is a cold soil, while a dry soil is a warm one. The seed bed of a well-drained, well-tilled soil will be 5 to 15 deg. warmer than of a poorly-drained, poorly-tilled one. The reason for this is found in two facts, as explained by Mr. W. Day, Lecturer of Physics at Ontario Agricultural College. It rests on the behaviour of different substances towards heat. It is more difficult to raise the temperature of 1 lb. of water by 1 deg. than 1 lb. of any other substance in the soil. Thus the same amount of heat would raise the temperature of dry sand 10 deg., dry clay 7 deg., dry loam 7 deg., dry muck or humus 5 deg., and the same weight of water only 1 deg. A half-saturated soil is in about the best condition for tillage, for germination, and for plant germination, and, from a temperature standpoint, it is essential that the soil should not be too wet. Of the more common cereals, wheat seems to have the lowest germinating temperature at about 70 deg., barley, oats, and peas, probably in the order named, at about 80 deg. Tests conducted over several years have shown that the order in which these grains should be sown is:—1st, wheat; 2nd, barley; 3rd, oats; and lastly, peas; and in testing six different dates of seeding at intervals of one week, it has been found that for wheat and barley the first sowing is the best, but for oats and peas the second.

Another factor in crop production is the proper supply of air. Whether the roots actually breathe this air as the leaves do has never been decided, but the fact remains that they can no more do without it than the leaves can. But absolute exclusion of fresh air occurs only when the soil is filled with water. Soils in a good state of cultivation permit sufficient change of air for all our crops but the legumes. This point has been tested both last year and this year, and that is the conclusion arrived at. Peas, beans, clover, cow peas, vetches, &c., would all be benefited by more air than reaches the roots under ordinary conditions. This may explain why peas do so well on sod; the soil is open in texture, and allows much interchange of air.

Soil Ventilation.

Perhaps it may be interesting to note some of the agencies that promote aëration. First, there is change of temperature of the soil. The air in the soil expands as it is heated, and thus some of it is driven into the atmosphere. If the rise in temperature amounts to 10 deg. when the temperature of the soil stands at 45 deg., then one-fiftieth of the air in the heated zone is expelled; and if it amounts to 20 deg., then one-twenty-fifth is expelled, and so on. The change of atmospheric pressure also aids. If the pressure falls half an inch, the air expands and about one-sixtieth of it escapes; if the pressure falls one inch, one-thirtieth escapes. Rain is a very potent factor. As the water sinks into the ground, an equal volume of air must be displaced. As it passes away, by drainage, by evaporation, or by absorption into the plant, the air is drawn into the soil again. Drainage aids very materially. When rain falls on undrained land, the imprisoned air must escape upward through the water as the water sinks down; the two actions thus opposing one another, the air escapes very slowly, often so slowly that large quantities of water, being unable to make their way into the soil, run off the surface and are lost. But if the soil is well drained some of this run-off may be prevented, the imprisoned air escaping downward through the drains as the weight of water above increases, fresh air following the rain into the soil. This gives us another reason for the great superiority of the drained soil over the undrained. Proper tillage increases the efficiency of all these agencies of aëration.

Composition, Nutritive, and Manurial Values of Farm Foods.

A useful table giving the above information relating to the farm foods has been distributed by the University of Leeds. The feature of the data is that it shows both the total and the digestible percentages of the constituents in the foods, although it may be well to bear in mind that the latter can only be a relative term because the percentage of a food digested by an animal depends more or less on the kind of animal, its age, condition of health, and other circumstances. The following extract gives the data for some of the principal foods:—

Food.	Total Percentage.					Digestible Percentage.			Albuminoid Ratio in Digestible Portion.	Probable Value of Manure from Consumption of One Ton of Food.
	Total Dry Matter.	Crude Albuminoid.	Oil.	Carbo-Hydrate.	Fibre.	True Albuminoid.	Oil.	Carbo-Hydrate and Fibre.

Nitrate of Soda: Statistics and Position.

We have received from the well known nitrate of soda broker, Mr. Thomson Aikman, junr., and from the importers and merchants, Messrs. W. Montgomery and Co., their usual half-yearly reports on nitrate of soda:—

It appears that in spite of adverse circumstances, such as unfavourable weather, a serious strike in Hamburg of the stevedores, and high prices, the total deliveries have exceeded those for the corresponding period of last year by about 40,000 tons, the figures being:—

1,152,000 tons for the 6 months 1907
1,115,000 ,, ,, 1906
1,062,000 ,, ,, 1905

In the United Kingdom the sales are given as—

75,200 tons for the 6 months 1907
60,500 ,, ,, 1906
68,200 ,, ,, 1905

The sales from depots in Liverpool and London show an increase of nearly 7,000 tons, while in Scotland there has been a falling off of 2,700 tons.

Prices have remained fairly steady throughout the period, from £11 to £11 5s. per ton, and it is expected that prices will rule at about the same level next season. It is said that important forward contracts are being made on that supposition, although the market for nitrate of soda is influenced by so many circumstances that its future course is most difficult to gauge.

A feature in the position is the increasing consumption in the United States, and the development of its use in Egypt. A sale to the latter country of 10,000 tons for autumn shipment is reported.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

FERTILISER EXHIBIT (POTASH SYNDICATE) AT THE SHOW OF THE GERMAN AGRICULTURAL SOCIETY.

This illustration represents the Temple of Agriculture erected by the Potash Syndicate at the agricultural show of the German National Agricultural Society. It was surrounded by a garden laid out to demonstrate the effect of the use of potash salts. Such an artistic structure naturally attracted much attention.

Nitrate of soda, sulphate of ammonia, and fertilisers generally were also represented at the show on an elaborate scale, and the respective stands were inspected by the thousands of farmers who visited the show.

Australia imported last year fertilisers to the value of £427,789, against £324,568 in the preceding twelve months.

Influence of Various Concentrated Foods on Quantity and Quality of Milk.

The results of trials with different kinds of concentrated foods on the quantity and quality of the yield of milk have recently been published in Germany, and are worth noting.

1. That equal quantities of nourishment supplied in different kinds of food exercise an unequal effect.

2. The foods supplied have, quite apart from their proportion of nourishing material, a special influence on the milk yield, and in a high degree on the percentage of fat in the milk.

3. Sesame cakes and cotton cakes are not so advantageous in use as earthnut cake, cocoanut cake, palmnut cake, and linseed cake. Rape cake proved to be a fairly satisfactory feed.

4. The percentage of fat in the milk was increased by palmnut cake, cocoanut cake, and also cottonseed meal. Then, in a lesser degree, by linseed cake, rape cake, and earthnut cake.

On the other hand, bean cakes, rice meal, and sesame cake depressed the percentage of fat in the milk.

Prices of Fertilisers.

The demand for fertilisers is now practically over, but prices remain firm all round. The demand has been bigger than usual, and the stocks of most manufacturers have been cleared.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	11	17	6
Peruvian guano	without change		
Superphosphate, 26 per cent.	2	10	0

BIBBY'S ANNUAL

EDITED BY

JOSEPH BIBBY

A New Number of the above

IS

NOW ON SALE

AT THE BOOKSTALLS

PRICE 1/- NET.

Some people say this is the best number we have brought out; others are not so sure. One newspaper remarked that, taking it altogether, it was the best magazine on the market; others expressed a contrary opinion.

On the first day of its publication we received the following telegram from Sir Alfred Jones:

"Heartiest congratulations upon completed 'Bibby's Annual.' Simply beautiful. Very proud of it as Liverpool production."

But the next morning a letter from an old friend, whom we had not seen for 30 years, admonished us for expressing opinions which did not square with the orthodox view of things.

It is, therefore, difficult to say whether the reader of this advertisement would do wisely to invest a shilling upon it or not.

He had better, we think, ask at the bookstalls to see a copy and judge for himself; or, if the Bookseller does not keep it, enclose stamps for the amount to the address below.

PUBLISHERS—

J. BIBBY & SONS,

EXCHANGE CHAMBERS,

LIVERPOOL.

Insist on having "HORSEMAN BRAND."

This Brand is Stocked by all leading Ironmongers & Implement Agents. Farmers should see that the get it, and have no other

SCYTHES SECTIONS, REAPER FILES, CHAFF-KNIVES, ETC.

If you cannot get our Brand write us, and we will send you address of nearest agent.

"HORSEMAN BRAND."

SISTER ARTS.

For some unexplained reason it has been customary in the past to draw a hard line of distinction between the occupations of the farmer and the gardener, but there are signs which prove that this barrier is being broken down.

In some districts farmers who were compelled by force of circumstances to put their land to more profitable use than growing corn, have entered the preserves of the gardener and grow vegetables for market. This is the month when the man in the street includes green peas in his menu, and perhaps in the majority of cases they are supplied by the farmer. We have recently passed through a district where green peas are a standard farm crop, and pea-picking is quite a harvest by itself. Yet in the past all this land grew corn.

As we write we hear an unmusical voice outside crying "ripe straw'bery," and knowing the man, we also know that the fruit was grown on a farm not far away, and the farmer who made the venture with the object of getting more out of the land than he did before has had no reason to regret it. As a matter of fact, the dividing line between agriculture and horticulture gradually grows less perceptible.

If further evidence is wanted of the closer affinity between the sister arts, let us turn to the shows. We referred a short time ago to the desirability of flowers being represented at agricultural shows, and at many meetings held this season the horticultural section was more of a feature than ever.

Take the Royal, for instance. Every visitor who had time to inspect the flower show was delighted with it, and the big nursery firms, rising to the Royal occasion, sent of their best. Perhaps the finest horticultural displays of the year are to be seen at the spring and summer shows held by the Royal Horticultural Society at the Temple and Holland House, but farmers do not attend these gatherings in great numbers, and they were afforded an opportunity at Lincoln of seeing some of the results of the horticulturist's art.

With the popularity of the Royal Show once more established, and the interest in the horticultural section keen, the public is furnished with the opportunity of seeing on the one occasion the very best products of the sister arts of agriculture and horticulture.

TRESPASSING COLTS—FARMERS' LIABILITY.

A case of great importance to farmers throughout the country was decided last month in the Scarborough County Court. A Yorkshire farmer had some horses, including a three-year-old Hackney filly, 14 hands 3 in. high, running in one of his fields. In the adjoining field, occupied by a neighbour, were some other horses, including two carting colts, two years old, which had not been cut. The latter fact, however, was not then known to the owner of the mare, who consequently made only a neighbourly protest when he found the colts trespassing in his field. Some months afterwards, however, the filly was found to be in foal—a condition which could only be accounted for by her having been served by one of the trespassing colts. In due time the mare foaled, but owing to the abnormal size of the foal (which died at birth) she died the following day. The owner claimed the value of the mare from his neighbour, as damages for the trespass committed by the colts.

It was proved to the satisfaction of the judge, that the colts had, in fact, trespassed in the field containing the mare about the crucial time, and although no one had actually seen the mare covered, it was shown that there were no other entire horses at large in the parish, and the judge found no difficulty in drawing the inference that one of the horses was responsible for the mare's condition. But, upon the facts as found, an important question of law arose, viz.:—Was the loss sustained the natural and probable result of the trespass committed?—in other words, Were the damages too remote?

Now, damage is said to be too remote, when, although arising out of the cause of action, it does not so immediately and necessarily flow from it, as that the offending party can be made responsible for it. But it is not too remote, if it can be shown to be such a consequence as in the ordinary course of things would flow from the act complained of. There are many decisions upon the point, but it is difficult to draw the line by laying down a hard and fast rule, and each case must to a great extent be decided on its merits.

In one case the mare was sent to a farmer to be agisted. She was put into a part of a field which was separated from a cricket ground by a wire fence. Through the farmer's negligence the gate between the two parts of the field was left open, and consequently the mare strayed on to the cricket ground. The cricketers attempted to drive her back, but instead of going through the gateway she ran against the wire fence and was injured. It was held that the damage was the natural consequence of leaving the gate open, and that the farmer was liable. This case shows that the damage must be very remote indeed before it becomes irrecoverable.

In the Scarborough case, the question really resolved itself into this—"If a nag pony mare have her first service from a young cart horse, is the natural result the death of the mare?" One of the witnesses solved the riddle to the satisfaction of the judge by saying that if he had had the mare insured, and wanted the insurance money, he could not conceive a more likely way of getting it. Consequently the plaintiff won his case and recovered damages.

Had the mare been served by a trespassing horse of suitable weight and size, a more difficult question would have arisen. In such a case the owner of the horse would be liable for natural damages, such as deterioration of value through being in foal, but if the mare had died it might be arguable that such a loss was not a natural or reasonable consequence of the trespass.

Probably a much more frequent ground of complaint is the loss of value in cattle caused by the unwelcome attentions of a neighbour's bull; and farmers will do well to remember that they must keep their stock on their own land, and will, as a rule, be liable for any mischief which may ensue from their failure to do so.

During the past few weeks nearly 300 boars and gelts have been disposed of, either to home or foreign buyers from Mr. N. J. Hine's old established Newnham Hall herd of Yorkshire pigs. Among the principal purchasers are:—Mr. J. R. Bruce, Buenos Ayres, forty boars and gelts, many of these being suitable for show purposes. Among the home buyers are:—The Right Hon. A. E. Fellowes, Horningham Hall, Norwich (late minister for Agriculture); Mr. B. Moss, Hawley, Dartford; Mr. J. Grey, Tiller's End, Buntingford; Mr. R. B. Berens, St. Mary Cray, Kent; Mr. V. E. Castellan, Han Hall, Romford; Mr. F. S. Smith, Sudbury Hall, Orford, Suffolk; Mr. W. Cailess, Eastgate, Stafford; Mr. A. George, Pontardulais; and Mr. Tonghey, Charlton Mead, Hoddesdon.

Notes of the Week.

Hail, storms, cold rains with occasional mild earthquakes in Wales, represent an epitome of the weather during the past week.

Farmers see with dismay their prospects getting blacker and blacker, while insect blight and fungus pests flourish and abound.

A comet is said to be travelling towards this earth at the express speed of about a million miles an hour. Let us hope that it is bringing finer weather in its tail.

It is curious to come across similar complaints of disastrous summers in old agricultural publications of 100 years ago.

The writer says "the failure of the last two crops—1806 and 1807—is due to great depression of temperature and superabundance of rain."

And he thinks that "our climate has been materially affected, and is still likely to be affected by the accumulation of ice in the Arctic seas."

The terrible disaster caused by the overturning of a tramcar at Swindon, during the show of the Bath and West of England Agricultural Society is remembered by all of us.

An echo of the accident has just appeared in the papers. Mr. Townsend, a seed merchant, of Stroud, has been awarded damages, amounting to £8,000, against the Swindon Corporation for injury received by him.

Memo. for the advocates of "Small Holdings and Allotments": When Mr. Black, M.P., was speaking on the subject, a man in the audience offered him a quarter of an acre of cabbages, stating that they had plenty of allotments at Great Barford but couldn't sell the produce.

Therein lies the rock on which many a small holding will be wrecked. It is easier to grow produce than to find a profitable market for it.

The cost of carriage in England is too high, and the means of distribution too imperfect.

The peerage confirmed on Sir James Blyth may be regarded as an honour extended to Agriculture.

His special hobby is dairy farming, and the model dairy at his Essex home is well worth a visit of inspection.

It it said that he has been associated with the firm of Gilbeys—the eminent wine merchants—since he was seventeen years old, and he is now a director of the company.

Horse thieves have a rough time of it in Russia. The peasants in a village caught a band of them, and when the police arrived they found the thieves crippled and mutilated, with legs broken and hands cut off.

This wet weather is directing attention to the advantages of the system of ensilage. The Board of Agriculture leaflet on the subject should be studied.

The Chairman of the Kitchen Committee of the House of Commons declines to substitute Welsh mutton for the New Zealand article in the House of Commons dining room.

This gave rise to an amusing discussion in the House, during which the rival claims of New Zealand, Welsh, Scotch, Irish, and English mutton were advocated.

It certainly seems strange to give preferential treatment to New Zealand mutton, and we should say that most diners would prefer home bred meat.

What is the opinion of the Minister for the War Office about Chicago beef?

What is whisky is to be determined by a small Royal Commission.

What is cider is an important question which has still to be decided.

The Small Holdings Bill is coming in for a good deal of unfavourable criticism at the hands of the chambers of agriculture.

The object aimed at by the Bill is all right, but the details seem to require alteration.

One hears a great deal now of the advantages of the "simple life" and "simple diet," the latter meaning vegetarianism. Most people will still prefer to eat grass concentrated in the form of beef and mutton.

On the occasion of the Gloucestershire Agricultural Show, recently held at Stroud, the town was gaily decorated, and in common with other buildings the local police station was gay with bunting.

Much amusement was caused by the words "County Police Station—Welcome"—which were boldly conspicuous on the front of the building.

Little Emily, while out walking with her nurse, saw a blacksmith shoeing a horse, and upon returning home said: "Mamma, I saw the man who makes horses to-day."

"Are you sure you did?" asked mamma.

"Of course I am," replied Emily. "He had one nearly finished when I saw him. He was just nailing on his hind feet."

THE FARMERS' DIARY.

TUESDAY, JULY 9.—Highland and Agricultural Show at Edinburgh, first day—Peterborough Show, first day—Millers' Convention opens at Exeter — Sale of Merton a Herd (selection, forty first-class Shorthorns) at Edinburgh—Sale of Pedigree Hackneys and Harness Horses at Peterborough—Sending-in Day for Salisbury Sheep Show—Sales of Store Cattle at Lynn and Ipswich—Agricultural Fairs at Denbigh, Worksworth, Stockport, and Haverfordwest.

WEDNESDAY, JULY 10.—Edinburgh Show, second day—Peterborough Show, second day—Bishop Auckland Show—Mid Kent Show at Maidstone—South Molton Show—Wirral and Birkenhead Show, first day—Show at Escrick, Yorkshire—Bath Cheese Fair—Agricultural Fairs at Carmarthen, Marsden, Ringwood, Stowmarket, and Sudbury—Millers visit Dartmouth and Exmouth.

THURSDAY, JULY 11.—Edinburgh Show, third day—Peterborough Show, third and last day—Wirral and Birkenhead Show, second day—Withernsea Horse and Foal Show—Great Chesterfield Colt and Foal Show—Fairs at Burnley, Knighton, Macclesfield, Mansfield, and Witney—Sale of Shorthorns and of Long Wool Sheep at Grimsby—Mr. Mallett receives Millers' Convention at Exwick, 3.30 p.m.

FRIDAY, JULY 12.—Edinburgh Show, last day—Sale of Shorthorns and of Lincoln Sheep at Heath House, Nocton, Lincoln—Fairs at Leicester and Alton—Sending-in Day for Harfogate and Denbigh Shows—Millers' Convention closes at Exeter.

SATURDAY, JULY 13.—Galloway District Show at Stranraer—Selkirk and Gallashiels District Show at Gallashiels—Grantham Fruit Fair—Congleton Horse and Cattle Fair—Sale of Store Cattle at Norwich—Late Sending-in Day (double fees) for the Show at Durdham Down—Sending-in Day for Haxby, Wellington, Goole, and Burgh Shows.

MONDAY, JULY 15.—St. Swithin—Salisbury Great Sheep Fair—Ludlow, Cattle, Sheep, and Pig Fair—Sending-in Day for Spilsby, Terrington, Maltby, and Cottenham Shows—Late Sending-in Day (double fees) for the Hastings Show.

TUESDAY, JULY 16.—Shire and Hackney Horse Show at March, Cambridgeshire—Sending-in Day for Border Union, Strathbogie, Morayshire, Perry Bar, and Chepstow Shows.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

A long discussion on the new Workmen's Compensation Act took place at the last meeting of the Lancaster branch of the Lancashire Farmers' Association. The secretary (Mr. T. H. Holborn) stated that a farmer, if not insured, might be called on to deposit £1,000 by a person permanently injured whilst working on his farm. One of the worst features of the Act was that it prohibited an employer from insuring any relatives that worked on his farm and at the same time lived in his house. Seeing that most farms were worked by the farmers' sons this seemed very hard. Mr. A. L Storey said that as far as he could gather the insurance companies were now asking most unreasonable rates. He suggested that the only way out of the difficulty was for a mutual society to be established in connection with the association. It was agreed to give support to anything in the nature of a farmers' mutual insurance society.

In their report, presented at the annual meeting of the Somerset, Wilts, and Dorset Farmers' Association, the committee stated that growing interest was being taken in the work of the association. Two new branches had been formed, and members had been assisted in contesting an unusually large number of cases in the police and county courts. Mr. Wall, the London agent, had made a record sale of milk, the returns showing that £30,000 worth had been received for sale during the year. The committee are confident that this branch of the work of the association will still grow, and that eventually it will become a very powerful aid in the disposal of produce at increased prices compared with the prices obtained by individual sellers.

After a discussion lasting close on two hours the members of the Norfolk Chamber of Agriculture passed, with but one or two dissentients, the following resolution regarding the Small Holdings Bill:—"That this Chamber, while generally approving of the main principles of the Small Holdings and Allotments Bill, sees grave objections to the handing over of all powers of arbitration to the officials of the Board of Agriculture, and to the transfer of powers of buying and hiring land for allotments for the rural district councils to parish councils. The Chamber further strongly objects to the provisions of Section 3, Sub-sections 2 and 3, by which the Commissioners are empowered to take action themselves, and to involve the county in expenditure of which it has not approved, and also to Section 5, by which all the powers of the County Council are given to such Commissioners, and the expenditure by them is chargeable to the rates. The Chamber is unanimously of opinion that expenses incurred by the Board of Agriculture or by the Commissioners, should be defrayed by Imperial taxation, not out of the local rates."

The Small Holdings Bill also came in for some severe criticism at the last meeting of the Worcestershire Chamber of Agriculture, one member remarking that the Act if passed was, he thought, never likely to take effect; it was merely a sop to the working men. As the result of the discussion, the following resolutions were passed:—"(1) That any expenditure incurred by the Board of Agriculture or the Commissioners should be defrayed entirely out of moneys devoted by Parliament and under the control of Parliament." "(2) that the interests of the sitting tenant should be more carefully safeguarded in view of the extraordinary powers given to the Commissioners for the compulsory hiring or purchase of land."

Royal Agricultural Benevolent Institution.

The report presented at the forty-seventh annual meeting of the Royal Agricultural Benevolent Institution, held recently, showed that for the twelve months ended on December 31 last the receipts had been £22,932, against £22,076 in the preceding year, but there was a slight falling off in subscriptions. The council regretted this, observing that "many persons subscribe merely to promote the success of candidates (for election to pensions), forgetful of the responsibility which subsequently devolves upon the funds of maintaining these as pensioners." There were on the books of the institution at the end of last year 204 married pensioners (102 couples), costing £4,080 per annum; 228 male pensioners, costing £5,928 per annum; and 603 female pensioners, costing £12,060 per annum. One pensioner, named Thomas Catchpole, had won his right to a pension by long annual subscription for it, and this was regarded as a very interesting comment on the subject of old age pensions generally.

At the annual meeting 166 pensioners were elected—fifteen married couples at £40 a year each, thirty male pensioners at £26 a year each, and forty-six female pensioners at £20 a year each, and, in addition, one woman of ninety who, under the rules, had to submit to the ordeal of the ballot.

The Earl of Jersey, in moving the adoption of the report, which was carried unanimously, particularly emphasised that part of it which spoke of the need for subscriptions without regard to the privilege of the vote for pensioners; there must be funds to secure the pensions to those who were elected to them.

Earl Spencer, Lord North, Mr. W. B. Parsons, Mr. R. T. Simpson, and Mr. John Gee were re-elected to the council, and the Earl of Jersey, who is a trustee, a member of the council, and chairman of the committee for Oxfordshire, was cordially thanked for presiding and for his unwearying efforts to promote the welfare and usefulness of the institution.

The Small Holdings Bill was the chief topic of discussion at the last meeting of the Warwickshire Chamber of Agriculture, and the following resolution was carried unanimously:—"That the chamber, while approving of the establishment of small holdings and allotments, protests against the county councils being overridden by the commissioners."

SHEEP.

Notes and Jottings.

THE most important exhibition of sheep, so far as regards stud sheep, for the current year is an event of the past. Flock-masters at home have every reason to be gratified at the notable exhibition they made of the combined breeds of British sheep at the Royal Show at Lincoln.

FLOCK-MASTERS and others interested in the sheep industry from the colonies and abroad, who were present at that show have, in no unmeasured terms, expressed their admiration for the many excellent specimens of the ovine breed that it was their pleasure and privilege to examine. The term used by Mr. McKerrow at the sheep conference on June 24, that "he raised his hat to the British sheep breeder," was indeed a very high compliment to the breeders of British sheep, coming as it did from one who is considered to be probably one of the leading breeders and exhibitors in the United States.

THERE is much in the discussion that gave satisfaction to the British flock-master. From the Tasmanian representative we heard that there was no likelihood of a diminishing demand from Australasia for the British mutton, in fact a careful study of the excellent speech made by Mr. Burbury shows that in his opinion there is a big future in the demand for British sheep from that side of the world.

IN Mr. Herbert Gibson's paper special mention is made of this point, and he most strongly urges that the Flock Book Societies of Great Britain should take steps to at once remedy this great defect in their registration.

IT may be looking ahead, but one cannot dispute actual facts, all of which tend to point that in the near future in many of the countries which are now importing British stud sheep it will become a condition of entry that such sheep shall not only have details of the breeding of the sire, but of the breeding of the dam also.

AN export buyer at the Royal was enquiring for a certain number of registered ewes, and he said they must be from flocks which are registered, and "I must have with every one at least particulars of their dam's sire." This condition at once limits the selection of these sheep to a very few flocks of that particular breed.

IT is not an onerous condition to make, for there is no real reason why every flockmaster in the country who is breeding pedigree sheep should not be able to at any rate give this information.

AS was said in our notes last week, it was evident from the phrases used, and also from the general trend of Mr. Gibson's paper, that he too is of the opinion that for years to come the Argentine estanciero will be a very large purchaser of British sheep of the first class. Then again, one can refer to the excellent speech made by Mr. Wing, another representative of the United States. He too was equally emphatic upon the need there was in the improvement of the quality of the mutton of that country. This means an increased demand upon the stud flocks of Great Britain, and it was a crumb of comfort, as Mr. Wing said, to know there was no real likelihood of any large supplies of mutton ever being available for shipment from the United States, because, said Mr. Wing, "we want all we can produce."

WITH reference to the question of pedigree record, it is unfortunate that so very many of the sheep societies were established without making proper provision for the record of the dam's pedigree. Apparently, from a brief review of the various rules and conditions of entry, each of the societies have made stringent provisions for the record of the sire's pedigree, and but very few have made any provision at all for the record of the dam's pedigree.

IT is as well that flockmasters who own registered flocks should realise that the increased stringency of the regulations in importing countries is certain to come, and therefore prepare themselves for those conditions with which they will have to comply in the near future.

THE sales of sheep at the Royal Show were dealt with fully in our last issue. That for the Shropshires was a remarkable one, but good as was the public sale, we understand that there was a very large number of private sales effected at prices which were considerably in excess of those recorded at the public auction. Amongst those one may mention that it was currently reported that Mr. M. Williams's first-prize yearling ram was sold for export to Chili at 250 guineas, one of the highest prices ever paid for a Shropshire yearling ram.

OTHER equally good prices were realised for Hampshire Downs and Southdowns. Mr. C. Adeane's sheep, which did not secure the favour of the judges to that extent many thought they might have done, were evidently in keen demand, for we understand that a considerable number of them were sold at high prices to leading flock-masters at home and abroad.

THE Kent or Romney Marsh breeders found a very excellent inquiry for their sheep, and from information gathered around the pens, it would appear that some very high prices were offered for the leading rams, none of which, we understand, were actually sold, but amongst the ewes several were sold at prices from 20 guineas per head.

THE Oxford Down breeders were apparently very gratified at the result of the demand experienced for their sheep. Quite a large proportion of the exhibits were sold for export.

THE importance of this country being cleared of sheep scab was clearly shown by the keenness with which the subject was brought before the conference by the Australasian representatives To these breeders the continued existence of sheep scab in England is a matter of great concern, because it is only on account of this disease being prevalent, in the country, although it is to a very much less extent each year, that the lengthened period of quarantine and its attendant expenses has to be incurred by all who import to the Australasian Colonies.

ON all hands it is generally admitted that the Board of Agriculture at the present time is making great efforts to do that which it ought to have done years ago—*i.e.*, eradicate this disease. It is satisfactory to note that there are few, if any cases on record in which the disease exists or has existed in a registered flock, in fact, it was said by several breeders at the conference that they had no knowledge of a single case of sheep scab in a registered flock.

UNFORTUNATELY the Colonial Governments insist that until the whole country is free they must, in defence of their own flocks, insist upon the present stringent conditions of quarantine, because, as was said at the conference, "of the enormous amount of money that these colonies expended to eradicate the disease from amongst their flocks."

UNFORTUNATELY there are many breeders at home who do not realise what sheep scab means to the Australasian flock-owner, and the

reason they do not recognise this is that at home the principal source of income from sheep is mutton, and wool is a secondary source of income; but in the Australasian colonies and New Zealand the reverse is the case, and consequently all who know what sheep scab really is will see at a glance how essentially important it is to the flockmasters of those colonies that no possible chance for the reintroduction of this disease should be allowed, for the disease meant ruin to all those who were to so large an extent dependent upon their income from the fleece of the sheep, and not from its flesh.

Mr. T. Fowell Buxton's Hampshire Downs.

The dispersal of such a famous flock of Hampshire Down sheep as Mr. T. Fowell Buxton's will be regretted by breeders of this highly-popular breed, but it will afford them an opportunity of obtaining some first-class stock which cannot fail to improve any flock. The sale will take place at Waters Place Farm, Ware, Herts, on Friday, the 19th inst., at twelve o'clock, and a large company of breeders from all parts may be expected. The flock consists of about 500 ewes in age, 150 ewe lamb, seventy ram lambs, and fifteen older rams, all of the highest quality.

The success at our various shows of animals from this flock is generally known, but the record of prizes won is worthy of mention. It is as follows:—239 first prizes, 197 second prizes, 72 third prizes, representing money value to the total of £2,683; also 47 champion and challenge cups, including the Prince of Wales' 100 guineas Challenge Cup for the best pen of sheep at Smithfield, bred and fed by the exhibitor, and the Cooper 25 guineas Challenge Cup at Birmingham.

Blandford Sheep Fair.

At this the first of a series of important Dorset sheep sales held on Thursday in stormy weather, over 10,000 were penned, principally of improved Hampshire Downs which are finding much favour with Dorset sheep breeders. Buyers were largely represented and, with sheep very scarce all over the country and more keep just now than can be profitably dealt with. There was a good demand, and a satisfactory clearance was effected at prices, generally speaking, quite up to what had been expected seeing the adverse conditions prevailing.

The best drafts of registered Hampshire ewes sold up to 58s. each, ranging down to 46s., whilst Dorset Down ewes made to 50s, ranging down to 44s.; non-registered ewes, 45s. to 49s.; Down wether lambs, 34s. to 41s.; mixed lambs, 36s., down to 32s.; Southdown ewes, 40s. to 44s.; Southdown rams, 2 guineas to 4 guineas; fat Down wether lambs, 46s. to 50s. 6d. The sheep were largely bought to go into distant districts.

Lamb Sales in East Anglia.

Quite a number of lamb sales have recently taken place in East Anglia; some were reported in our last issue, and we have now to record over half-a-dozen other fixtures. The numbers offered were not quite so large as in some previous years, but this is accounted for by the unfavourable weather. As Mr. Gaze, in opening the sale at Diss remarked, flockmasters have had a most trying time since the lambing season commenced, for there has been practically nothing but rain since lambing began in February, and no sun to brighten the sheep. In spite of that, the majority of the lambs were brought to the sales in first-class condition.

Barnham.

The number penned at the thirty-seventh annual lamb sale at Barnham was about the same as last year, 6,500, and they met a ready sale at prices ranging up to 46s. per head, which was the top price of the sale, and was given for thirty Suffolk ewe lambs belonging to the Hon. E. G. Strutt, of Timworth. Earl Cadogan sent 140 wethers, which went at an average of just on 28s. 9d. apiece, the first pen of twenty going for 33s. each, and the last pen, containing twenty-eight, going for 23s. each; whilst for 180 from the Duke of Grafton's home farm at Euston the highest price was 28s. per head for forty wethers. Half-bred lambs from the Earl of Cadogan's flock made up to 38s. 6d. each, whilst first-cross lambs from Viscount Iveagh's flock made up to 42s.

Braintree.

On Thursday there was a sale of about 2,000 lambs at Braintree, and as at other fixtures there was a good demand at higher prices than last year. The top price for lambs was 53s., at which figure two or three lots of ewe and wethers were knocked down. Other ewe and wether lambs made up to 41s. 6d., half-bred lambs made up to 37s. 6d.

Diss.

At the sale at Diss something like 17,000 lambs were offered consisting of 14,400 first-cross and half-breds, 1,500 black-faced lambs, 600 black-faced shearling, two-shear, and flock ewes, and 500 first-cross shearling, two-shear, and flock ewes, all drawn from well known flocks in the district. The attendance was far more numerous than that which has been experienced at any previous sale, and throughout the afternoon trade was exceptionally brisk, a very keen demand prevailing. For head lambs trade showed a slight improvement upon last year. For second-class sheep the competition was very spirited and sustained, with the result that prices must be quoted fully 2s. 6d. to 3s. a head dearer than this time last year. For Suffolk lambs the highest price realised was 49s. 6d. a head for a pen of ear-marked ewe lambs, sent by Mr. Alfred Johnson, of Burston. For first-cross lambs the top price of 46s. 6d was paid for some grand pens of Cotswold rams, consigned by Sir Edward Mann, of Thelveton Grange, and for another lot belonging to Mr. E. F. Wollard, Catton Hall Farm.

East Harling.

This annual lamb sale at East Harling was also held on Thursday, and it proved one of the most successful of the thirty-three sales held here. There were over 20,000 animals forward, and an excellent all-round trade was experienced, the chief features being the extraordinary demand there was for middle class lambs, which fetched rather surprising prices. Altogether better money was made of the various consignments than has already resulted at other sales in the district. 50s. 6d., the highest price of the day, as well as top figure so far of the season in the Eastern Counties, was made for a pen of twenty Suffolk ewe lambs, sent by Mr. W. M. Champion, of Riddlesworth. Another lot of twenty of his ewe lambs realised 49s. apiece, and together with 160 others averaged nearly 44s. each.

Hadleigh.

At Hadleigh on Monday the entry—nearly 3,500—was larger than last year, and the demand was keener, with the result that prices were up by about 3s. a head. A fine lot of 239 Suffolk ewe and wether lambs from the registered flock of Mr. Stephen Jackson were in great demand. Thirty ear-marked ewes fetched the top lamb price of the sale, viz, 50s.; two other similar lots went for 41s 6d. and 36s.; the best of the wethers made 43s. a head. Twelve Border Leicester wethers from Lady Alexander's; these made 25s. 6d. a head, and six ewes sent by the same lady fetched 45s. apiece. The range of the other prices for lambs was as follows:—Suffolks, 24s. to 46s. 6d.; Southdown, 26s. 6d. to 37s.; first cross, 25s. to 42s. 6d.; and half-breds, 23s. to 37s.

Ipswich.

On Tuesday Ipswich was the scene of a lamb sale, and the catalogue here comprised about 1,500 Southdown, Suffolk, and half-bred lambs and ewes. There was a large attendance of buyers, with brisk trade at the substantial advance in prices realised at the corresponding sale last year. Of the Southdowns, the consignment of 147 wethers and ewes from Sir Thomas Gooch averaged about 30s. Three hundred Southdowns from Mr. Kenneth M. Clark made, in pens of 50, from 30s. 3d. to 23s. Forty Suffolks contributed by Mr. John R. Keeble averaged 48s., and 180 of Mr. C. A. Creasey's averaged nearly 30s. Two lots of half hundred each of Suffolk ewes and wethers, from Miss Kay, Thorpe Abbots, made 39s. and 34s. 6d. respectively, and fifty wethers from Mr. A. Juby, Brandeston, 38s. 6d. Of the half-breds, the best pens of Sir T. Gooch's realised from 37s 6d. to 34s. 6d., and three pens from the Exors. of Mr. J. Lambert, Mendlesham, realised 38s., 36s. 6d., and 32s. 6d. Thirty half-bred shearling ewes and wethers, consigned by Mr. F. Smith, Mickfield, fetched 47s. 6d., and two pens (score each) of Mr. H. Frith's (Mickfield) went at 49s. 6d. and 48s.

Newmarket.

The twenty-fifth annual sale at Newmarket attracted a large entry and a big attendance of buyers, and prices proved 4s. to 5s. above last year, so that the sale was one worthy of the occasion. Suffolk ewe and wether lambs predominated, and they sold well at prices ranging from 29s. to 49s. 6d., the majority fetching between 36s. and 42s. 6d. Halfbreds made from 33s. 6d. to 40s. 6d., while eighty Suffolk woolled wether hoggets fetched 49s. and 44s. 6d.; two lots of twenty Southdown crones went at 33s. and 30s. 6d., and another lot of Suffolk crones at 30s.

Stowmarket.

On Friday a sale of lambs was held at Stowmarket, and here the upward tendency of prices was once more demonstrated, for whereas at East Harling on the previous day Blackfaced ewes went at 50s. 6d. apiece, the top figure till then for this season's sales, 62s. a head was twice given at Stowmarket. Mr. Percy A. Noble, of Stonham, and Messrs. Webb and Son, of Combs, were the consignors, whose ear-marked Suffolks realised these excellent prices, which, as already indicated, are more than 10s. ahead of anything made for lambs in East Anglia at this year's July sales. The demand for Suffolks was the feature of the sale, whilst first-cross ewes were also readily purchased, the leading price being 44s. for a pen of forty, the first of a very well bred lot of 265 belonging to Mr. E. E. Salmon, of Coddenham.

Sudbury.

There were not so many lambs as have been the case in previous years at the sale at Sudbury, the total of sheep and lambs being about 1,600. Buyers, however, were well represented, and a

The property of T. FOWELL BUXTON.
Registered in the *Hampshire Down Flock Book.*
Notice of Dispersal Sale of the
GRAND BREEDING FLOCK
of about
500 EWES in ages.
150 EWE LAMBS.
70 RAM LAMBS and 20 Older RAMS,
and which

MESSRS. WATERS & RAWLENCE (in conjunction with Messrs. Jackson and Son) are instructed to SELL by AUCTION at Waters Place Farm, two miles from Ware (Hertford Branch), and 3 miles from Roydon (Cambridge Line) Stations, G.E.R., on FRIDAY, JULY 19, 1907.

The dispersal of the Waters' Place Flock is undoubtedly one of the chief attractions of the Season in the Agricultural world, it comes at a time when the Hampshire Down Breed is very much to the front at home and in all mutton-producing countries, as it every day becomes more apparent that no breed of sheep is so valuable for producing the finest quality of mutton in the shortest possible time as the Hampshire Down, whilst they readily adapt themselves to all climates, and for crossing purposes are unrivalled.

Messrs. Waters and Rawlence have fixed the Sale at the earliest possible date to accommodate all Foreign Buyers, and as regards English Breeders it is well known that wonderful results have been attained by the introduction of Waters Place Blood, and the Auctioneers are satisfied that they will get the most genuine support from the leading Flockmasters, whilst to those desirous of establishing a Flock of this popular Breed, such a chance may rarely, if ever, occur again.

Conveyances will meet the trains at the above Stations.

Sale at 12 o'clock.

Luncheon will be served during the Sale.

Catalogues of Mr. J. H. Hurford, Waters' Place Farm, Ware; of Messrs. G. Jackson & Son, Auctioneers, Hitchin; or of Waters and Rawlence, Canal, Salisbury.

satisfactory sale resulted. The general range of prices was as follows:—Suffolk ewe and wether lambs, 24s. 6d. to 35s. 6d.; first cross Lincoln and Suffolk lambs, wethers, 27s. 6d. to 39s., ewes 30s. to 39s. 6d.; Suffolk and Hampshire ewes and wethers, 22s. to 32s. 6d.; half-bred ewe and wether lambs, 28s. to 38s. 6d.; Suffolk shearling ewes 58s., and half-bred shearling ewes and wethers 40s. 6d. to 47s. 6d.

Wool Fairs and Sales.

Alton.

At the annual wool sale at Alton about 14,000 fleeces from many of the best flocks of the county were offered. The top price was 12½d., obtained in seven instances, the average price being about 11¾d. per lb. Unwashed wool made 7d. to 8¼d., and lamb's wool to 10½d. per lb.

Andover.

The first of the Hampshire wool sales was held at Andover on Monday, when 50,000 fleeces from the leading flockmasters were pitched. The prices obtained were not so good as last year, the decrease being about 1½ per lb. Top price for washed wool was 13d., with the average 12½d.; unwashed samples made 8d to 9d per lh.

Basingstoke.

At Basingstoke on Tuesday about 21,000 fleeces were pitched, and they met a good demand, but at prices which were 2d. less than last year. Southdowns, washed, made from 1s. to 1s. 0¾d.; Hampshire Down, washed, 11½d. to 1s. 0½d.; Long Wool, washed, 10½d.; greasy Southdowns, 8¾d. to 9½d.; greasy Hampshire Down, 7¾d. to 8¾d.; greasy lambs, 9¾d. to 10d.

Bedford.

The pitch at Bedford on Tuesday was about 1,370 tods, a little less than last year, and all met a ready sale at prices ranging chiefly from 27s. to 29s.

Birmingham.

The annual wool sales at Birmingham took place on Wednesday, when buyers were in attendance from Bradford, Halifax, Swindon, York, Huddersfield, Leicester, Kidderminster, Worcester, Stafford, Shrewsbury, Stratford, &c. The top prices were:—Shropshire, 12¾d.; Oxford, 12½d.; Cheviot, 10d.; Southdown, 12½d.; Ryelands, 12d.; Welsh, 8¾d.; lamb wool, 11½d.; unwashed, 9½d.

Chichester.

The eighteenth annual wool sale at Chichester was held on Tuesday, when about 50,000 fleeces of English wool from some of the best Southdown, Sussex, and Hampshire flocks were disposed of at prices from 1½d. to 2d. less than last year. The highest price realised was 14½d. per lb., which was given for 104 fleeces of Southdown tegs from the Duke of Richmond and Gordon's farm at Goodwood. Other chief prices were 13¾d., 13½d., 13¼d., and 13d.

Loughborough.

Over 8,000 fleeces were disposed of at the Loughborough wool sale held on Monday. The lots consisted principally of Shropshires, crossbreds, and longwools. There was a good attendance of buyers, but prices were not so high as in the previous two years, the highest price being 12½d. per lb. for a lot of crossbred hogg wool, from the Rev. J. Martin, Chorley. A number of lots fetched 12¼d., comprising Shropshire hoggs, ewes, and crossbreds. Several lots were disposed of for 1s., but the bulk went off between 11d. and 1s.

Newport, Isle of Wight.

The Isle of Wight wool fair was held at Newport on Thursday, when 40,000 fleeces were offered in the presence of a good attendance of buyers, but bidding was not so keen as usual, and prices showed a falling off from last year. Washed fleeces and lamb's wool ranged from 10d. to 13½d. per lb.

Northampton.

At the annual wool fair promoted by the Northamptonshire Agricultural Society held at Northampton, the pitch was in excess of last year's, for some 19,000 fleeces were sent in as against 16,798 in 1906. The quality of the wool was not quite as high as in some previous years, a condition of affairs attributable to the bad season, whilst in common with other fairs this year trade was not quite as brisk as last year. The top price realised was 28s. 9d. per tod, a considerable reduction on last year's highest, which was 33s. 6d. According to the official statement the highest price obtained on 121 tods 14 lb. was 28s. 9d. per tod; lowest price on 70 tods 3 lb. was 21s. per tod; average price per tod was 26s. 9d.

The Department of Agriculture and Technical Instruction for Ireland.

In March last a Committee was appointed to inquire into and report upon the working of the Agriculture and Technical Instruction (Ireland) Act, 1899. It will be remembered that Sir Horace Plunkett was appointed the first Vice-President, and as he was then a member of Parliament he had charge of his Department while attending his duties at Westminster. Owing to the change of Government, a question arose as to his continued occupancy of the office, and before any alteration was made the Committee held its inquiry, with the result that Sir Horace resigned his appointment.

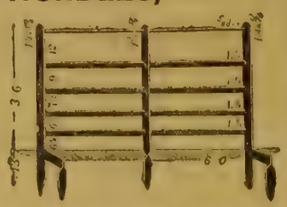
The report, which is dated the 15th of May, was issued as a Blue-book last week. It was unanimous, the dissentient member being Mr. W. L. Micks, of the Irish Local Government Board. The majority of four reported that they were not in favour of the suggestion that in place of the Department a Board should be constituted either wholly or partly elective.

"We think," said the Committee, that continuity of policy and efficiency of administration is best secured by the responsibility being vested solely in the head of the Department, the subordinate officials in their turn being responsible to the head of the Department.

In considering the point as to how far it is necessary or desirable that the vice president should have a seat in Parliament, the committee state that experience has shown that the proper place for him is in Ireland rather than Westminster. "He has to direct the policy of the department in Ireland, and this is, in our opinion, quite incompatible with due attendance in Parliament. It is essential that the office of vice-president should be as far as possible independent of party politics," and "we recommend that the office should be tenable for the period of five years, with power of reappointment."

The committee further states: "We are of opinion that as regards the constitution of the Council of Agriculture and Agricultural Board, there should be no change in the proportion of members appointed by the county and provincial councils and those appointed by the department; and we do not recommend any change in the Act of 1899 with regard to the powers and functions of Agricultural Board or the Council of Agriculture."

The main hay hirings at Kirkby Stephen were held on Monday, when the arrangement in most cases was for men to enter for a fortnight or three weeks, while in others no date was fixed. Wages for men ruled from £6 to £7 10s. per month, with victuals, and lads from £3 to £4 10s. Irishmen could be engaged at £4 to £5.



That cider is more popular to day than it has been for several years past is an undoubted fact, and it is due in a great measure to the untiring efforts of such enthusiasts as Mr. C. W. Radcliffe Cooke, whose endeavours to popularise the drink of his native county, Herefordshire, are well known and appreciated by agriculturists. Mr. Cooke's latest move to increase the number of cider and perry drinkers is the publication of an interesting and illustrated booklet entitled "Herefordshire Cider and Perry," in which he deals pretty fully with the subject, and especially with the estate of Hellens, in Herefordshire, on which he resides, and where cider and perry have been made for many generations. The booklet is one calculated to further the aim of Mr. Cooke, and given a wide circulation it should certainly result in an increase of the lovers of cider and perry.

CATTLE.

Some Retrospective Notes on the Royal Show.

THE great event of the period as regards cattle, and, indeed, all kinds of live stock, was the holding of the Royal Show at Lincoln. Right well did the cattle section fill, and in the case of most of the breeds, very successfully was the breeders' skill exemplified. The Shorthorns, which came first in the catalogue, were in great numerical force, and never, numbers taken into consideration, has the quality been so uniformly good. There were, it must be confessed, a good number that were sent for sale only, and these certainly detracted somewhat from the general excellence; but, apart from this, the breed was represented by a lot of cattle of this famous breed that are a credit to the breeders in any country, and more especially to our own, which has been shipping its best specimens in exchange for the foreigners' dollars for a long time, and right useful have the coins been to our breeders and our country.

IN the general classes the Scotch blood amalgamated with the various strains of English blood in a most satisfactory manner. No matter whether the blendings had been with the dairy Shorthorns of Gloucestershire or the perhaps equally good dual-purpose families of Westmoreland, Yorkshire, or other counties, all had gone as it should do, and those cattle which were classed as Shorthorns without regard to any special points were an exceptionally good lot of stock. Leaving these for a moment, and turning our attention to the Shorthorns which were classed as dairy Shorthorns, or where the conditions stated that dairy properties were especially to be taken into consideration, matters were even more satisfactory. What, we may ask, could be more satisfactory, more pleasing, more calculated to pay rent and expenses, than that magnificent cow of Mr. C. R. W. Adeane's which was accorded the champion prize of her section? Truly a beautiful cow, without waste in the shape of flesh reduced to the level of a milking machine, shapely—not with a narrow chest and the much-talked-of wedge shape, but with level outline, flesh in abundance, and the lacteal vessels in first-rate form.

LORD CALTHORPE'S Sweetheart, the champion of the other female section, was just as good as could be, and a wearing cow with a strong and splendid constitution, or she would not come out in such good condition time after time. The reserve to this cow for the champion honour of her section, Mr. Robert Taylor's Pitlivie Rosebud 2nd, was nothing less than a captivating heifer; but there was a sweetness and combination of the valuable properties in Mr. Adeane's Priceless Princess that could not lightly be set aside or even passed over at the expense of a strained conscience; and the reserve to her, Mr. G. W. Tyser's Lady Lee 21st, and several others, gave unmistakable evidence that it is quite possible to combine more than one property in the same animal, and that without deterioration of the special points.

WHAT about friend Mr. Miller's fine old bull, Linksfield Champion? He, too, is a marvellous example of what a Shorthorn can do; he is big, massive, wealthy of flesh, and shapely to an extent that is not often seen, and, what is far better, he fulfils the old adage that "handsome is as handsome does," for we have seen his progeny and can testify to their splendid Shorthorn character and general excellence. H.M. the King's reserve, Royal Windsor, is also quite a good one.

WE now come to another branch of the great Shorthorn tree, the Lincolnshire Reds. What a fine display they made, and what promise the young classes give! The older ones had not the benefit of the experience that breeders have brought to bear upon the production of young stock of a higher standard by the careful mating of the parents; but the junior classes have, and the conclusion we are bound to come to in respect of these is that in a few years' time, or earlier, the Lincolnshire Red Shorthorn will be much closer up to the rival branch of the family than it is to-day. Though there is always a little danger in running too sharply after quality, we should counsel a little more attention to this point, both in the cow's general appearance, and also, perhaps more especially, in respect of that very useful appendage to the dairy farmer and the man who needs money, the udder. A shapely, spacious udder without coarseness is one of the most valuable assets in most herds to-day.

HAVING glanced at the great exhibition of these famous (world famous we may add) cattle, what are we to say about the Royal Show and its means of providing for such increased numbers of cattle? There the space occupied was altogether bewildering, and tiring in the extreme to visitors who needed to spend more days than they could afford if they wished to see all; and every farmer, or at least by far the majority of farmers, needs to see all varieties of live stock (cattle, sheep, and pigs, as well as horses), and if this is to be done, the exhibition must be curtailed in some way or other. It will not be wise for one breed of cattle alone, where there are some sixteen other breeds, to be allowed to fill up little less than miles of shedding.

THE Aberdeen-Angus classes at Lincoln were very satisfactory to the Society that looks after their interests. The greatest fault that could be found as affecting the breed was the weakness of the young bull class; this class was decidedly below satisfaction, and it is a very important matter, and may be unfortunate. One likes to see promise of the young stock equalling at least, and, if possible, becoming superior to, their ancestors, but with these it scarcely seems possible that the yearling bulls can ever attain to such perfection as the aged class of the same sex displayed. Hope need not die, however, for it has often and again been seen that the plainest sires in appearance have proved the most satisfactory in their progeny, especially when they have been backed by a long pedigree!

THE Hereford breed has scarcely been up to its usual level this season at the leading shows, which is easily accounted for by the fact that the breeding grounds of the White Faces, though they have extended considerably during the last few years, are still very limited when compared with the red, white, and roan; and the enormous number that has been exported during the last twelve months must have had a marked influence upon the animals left at home for exhibition,

The Lincolnshire Red Shorthorn Heifer shown above is Ruby Queen, winner of First Prize and Reserve for the Female Championship of the breed at the Royal Show at Lincoln. She was born April 27, 1906, sire Saltfleet Bonus, dam Ruby 12th, and was bred by her owner, Mr. Edwin Bourne, 13, George Street, Louth.

especially when we take into consideration the area whence the "Royal" representatives were drawn. Nothwithstanding the above remarks, there were several animals of great merit, and it was no mean honour to Mr. A. E. Hughes's herd to furnish both the male and female champions at this great show.

SUSSEX were another breed that made a fine display, and the improvement that has taken place in this breed is perhaps more noticeable than in any other, particularly when we take our memories back to the days when oxen were so largely used for team work, and the Sussex, owing to its lightness and activity, was one of the most valuable. Oxen of this breed, when bred with a view to labour, become so active that it is said they could trot several miles an hour without apparently suffering any inconvenience or pain. To-day they are simply mountains of beef growing to great weights with a very moderate amount of feeding, and tending to early maturity. Indeed, at the Christmas shows members of this breed have upon one or two occasions recorded the greatest gain per day of any breed.

OF the many other breeds seen at Lincoln very few are more deserving of mention, so far as improvement is concerned, than the Kerries and Dexters. There was a large entry of these, and the Kerries especially displayed very much more quality and the cows considerably more milk than we have been accustomed to see. The Dexters appeared also to show distinct inclination to become more uniform, and to be more reliable in their breeding, as we noticed two or three instances at least where the best animals were English bred, and that for two or three generations. In these, too, there was a good deal of milk indication in their points and general appearance.

OF the remaining breeds, North Devons were very beautiful; South Devons improving; Galloways and Highlanders quite as good as we have latterly been accustomed to see at the Royal, and more numerous; but this is not saying very much for them, as these breeds, and also the Ayrshires, Longhorns, and Welsh, have not been very strong for some time. The Red Polls were very useful, quite inclined to make enough beef and not too much milk; and the Channel Island breeds were not better altogether than they were ten or fifteen years ago, especially as referring to the Jersey section. Guernseys have improved most, and these were great in quality and milk appearance.

Sale of Shorthorns in Hampshire.

An interesting sale of Shorthorns took place on Tuesday at Elvetham, Winchfield, Hants, the animals offered being from the first class herds of the Right Hon. Lord Calthorpe and the Right Hon. the Earl of Northbrook. Both herds are well known in all parts of the country, and all that need be said of the animals offered is that they were worthy representatives of the herds, and that they met with a ready sale at good prices, the average per head for sixty-one animals being no less than £87 15s 9d. No fewer than thirteen three-figure prices were recorded, the best being 325 guineas, which sum Mr. E. N. Casares, the well known Argentine exporter, gave for the Earl of Northbrook's cow Broadhooks Belle 7th, who comes from prize-winning stock, which has realised high prices. Details of the other chief sales are given in the following list, but mention may be made here of the fact that one of the three-figure prices was made by a calf. This was by Elvetham Monarch out of Claribel, and for the dam Lord Calthorpe also got 150 guineas, the purchaser in both cases being Mr. R. Millington Knowles. H.M. the King's representative secured two promising cows, but had to give 150 guineas each for them.

About twenty one-year-old Berkshire boars and gilts of the best blood and quality, the property of Lord Calthorpe and bred from the well known herds of Mr. R. Vincent, Mr. A. Hiscock, and the Middlesex County Asylum, were also offered for sale, but owing to the swine fever restrictions the demand was poor, and many failed to find purchasers. The average price for the twelve head sold was £12 7s. 9d., top figure being 28 guineas given by Mr. Drummond for the boar Elvetham Medallist, whilst Mr. S. Sanday gave 23 guineas for the sow Okeford Model. The other prices ranged from 4 to 13½ guineas.

The following were the principal sales of Shorthorn cattle:—

Sale of Sir O. Mosley's Shorthorns.

A large company assembled at the Hall Farm, Rolleston, Burton-on-Trent, on Thursday, for the sale of over sixty head of Sir Oswald Mosley's Shorthorn cattle. The animals composed the bulk of the three- and two-year-old heifers and bulls, together with a number of young cows, and were brought out in the best of condition, but the prices realised did not come up to those obtained at other sales this year, owing to the fact that the animals had not been subjected to the tuberculin test. Representatives were present from all parts of the kingdom, and the purchasers included his Majesty the King, who purchased a roan in calf to King Edward, and her two-year-old daughter Rolleston Palma 2nd, at 81 guineas and 64 guineas respectively. The top figure was 100 guineas given by Mr. Holford for Rolleston Thorndale 2nd, whilst the same buyer gave 90 guineas for Rolleston Thorndale.

A list of the chief sales is appended. The total amount realised was £2,500, the cows, heifers, and calves averaging £42 per head, and the bulls £33.

Sale of Kerries and Dexters at Bletchley.

The fifteenth annual sale of Kerry and Dexter cattle belonging to Messrs. Robertson and Sons, of La Mancha, Malahide, Dublin, took place at Bletchley, Bucks, on Wednesday, when twenty-eight cows and heifers and five bulls from first-class stock were offered for sale. Among them was the second-prize Dexter heifer at the Royal Show, Lincoln, La Mancha Marjorie, and she was bought for H.M. the King at 43 guineas. This was the top price of the sale, the nearest approach being 29 guineas, given by the Hon. Miss R. Hubbard for Acme. Big La Mancha Irish Nora was purchased for the King at 26 guineas, and at 25 guineas each the Duchess of Devonshire bought La Mancha Dot, Mr. Snelgrove La Mancha Mighty Atom, and Mr. de Bertodano La Mancha Shady Girl. Other prices ranged up to 22 guineas, the average price per head for the cows and heifers being £18 2s. 1d., whilst the three bulls averaged £10 3s.

A Late Harvest in Scotland.

Repofts of the harvest prospects in the various districts in Scotland, published in Friday's *Scotsman*, are for the most part of rather a gloomy character, and the sound of the reaper will be heard from three weeks to a month later than in the average of seasons.

Since Easter, adds our contemporary, there have been very few days dry, and in not a few instances rain has fallen during the greater part of the day. The temperature has often been low, particularly at night, and there has been a minimum of sunshine. Fortunately the weather at seedtime was most favourable, and the seed corn brairded quickly, and was promising for a time.

Even after the weather conditions changed for the worse it maintained a good colour, but of late the prospects of a satisfactory crop being harvested have become decidedly less favourable. In fact, since the weather became comparatively dry, the crop seems to have gone back instead of being improved, much of it having assumed a yellow tinge and been checked in its growth. The bulk of straw promises to be decidedly under an average.

Crops after turnips and potatoes are poor, and those after grass have lately fallen off in promise. The rye grass hay crop is good on many farms and indifferent on others, and meadows give promise of a bulky yield. Owing to the excessive and frequent rainfall the seeding of the turnip crop was slowly overtaken, and, indeed, on some land this was only accomplished last week. But the main crop, in good land, has come to the hoo in good time, and a large proportion of the plants have been thinned.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

Changing Colour.

A CURIOUS case of change of colour sometimes takes place in chesnut horses, and one came under my notice only recently. This was Sligo, who, when I first knew him some five years ago, was a red chesnut—a dark red chesnut certainly, but nothing approaching a liver-chesnut. He is now very much darker, and if his colour continues to change, he will be a very dark chesnut in two or three years. It will be interesting to watch him, for I once had a horse that changed from a red-chesnut to a very dark—almost liver-chesnut. The change was first perceptible when he was eight years old. When he was twelve he was very dark in colour. Sligo is now nine years old.

AND by the way Sligo is now known as Sir Lancelot, a change which calls up the question of naming and identifying show horses. Sligo has been a notable instance of change of name. When he was bought by Mr. Simpson Hinchcliffe his name was changed, but I forget his new name, and it is really immaterial for wiser counsels prevailed, and the old name was almost immediately adopted again. Now we have the old horse given a third name. This of course is very confusing to anyone who has not followed the horse's career very closely, but if it had been an isolated case it would not have been necessary to discuss the question of naming horses, which I shall now proceed to do.

Naming Horses.

IT is, I think, perfectly obvious that names are given in order that horses may be identified; but if one had to judge from the way in which some people name their horses, one would think they are given to prevent identification. The repetition of names is monotonous. No sooner does a horse make a name than straightway all over the country horses are named after him. For example, I wonder how many hunter fillies there are at the present day that are named after Major Leslie Renton's famous mare Success. It is of course within a man's right to name his horse what he likes, but I would point out that there are plenty of names to choose from, and that confusion can easily be avoided by taking a very little trouble. We should have no repetition of names if men would adopt the plan which Hackney and Shire breeders adopt, of putting a prefix or an affix to the name. This may be, and perhaps is a rather clumsy way of identifying horses. It leads to the multiplication of words, but, at any rate, it does away a confusion and mystification.

THERE are some men who seem to think that it is necessary to enshroud horses with mystery; that it is as well to do everything they can to prevent a horse being identified for fear that some episode in his early history should tell against him. There can be no greater mistake. It is not the general public that does the "crabbing" when any "crabbing" is to be done. It is the man who knows pretty nearly every horse of note in the country without the aid of a catalogue that can tell you "all about it." Here is an instance of straightforwardness about a horse's identity and history that came under my notice not very long ago. A horse, owned by a man I know, was rejected by the veterinary surgeons at a certain show. So far as I am aware not a single newspaper noticed the fact. The ailment, if it was there, was only a temporary one, and shortly afterwards the horse was put severely through the mill and passed all right. He was still shown in the same name, and again no notice was taken of the occurrence. His position in a prominent place in the prize list was taken just as a matter of course, and I do not remember hearing his rejection referred to more than once, when a man who knew him well said something about his exceptional soundness, and how strange it was that he did not pass a few weeks previously. But if a new name had been given to the horse, or he had been shown without a name, or any attempt had been made to disguise his identity, attention would have been drawn to an incident in his career which had evidently been forgotten by all but a very few, and what is more the incident would have been magnified.

HERE is another incident. A well-known exhibitor bought a horse at a very small figure. It looked perhaps plenty for him at the time, and certainly it may be said to have been his market value, as plenty of people knew about him. As a matter of fact he cost less than £25. He improved in a remarkable manner—horses do occasionally, and occasionally they move as rapidly in another direction—and was shown at one or two little shows, at which he was successful. He then flew at higher game, and still won, and no attempt was made to mislead anyone about him. "A cheap horse that to you" said a would-be buyer. "Will you take cost price multiplied by ten?" The offer was refused for some reason or other—it matters not what—but I would emphasise the fact that the original cost has nothing to do with present value, and that both vendor and would-be purchaser are well aware of the fact. I have heard dealers say that this plain identification of horses enables people to find out where others are to be got. I question it. The breeder naturally follows the horse he has bred, and he is not given to hiding his light under a bushel. And and unless the breeder adopts the dealer's policy and makes his horse ready in every way for the private customer, which is scarcely probable to any extent—if he does he becomes a dealer—he is not likely to take the dealer's customer away from him.

BY all means, then, let us have horses so named as to be readily identified, for there is no reason why they should not be and there is every reason why they should be. Of course, if horses are not properly described and named it makes it easier for a man to show one horse instead of another, but no man would think, say, of showing a veteran prize winner in a novice class. If he did he would be found out, and he would be lucky to escape a escape a public prosecution in these days.

False Pedigrees.

IT may interest my readers to refer briefly to a case of false pedigree which, though it took place respecting a bull, would serve as a precedent in any horse case in which false pedigree was involved. A large farmer showed a bull with a fine Shorthorn pedigree; he won several prizes, and was extensively used at a large fee. But the calves had black noses, the bull's history was traced, and then came trouble. The Agricultural Society prosecuted for obtaining money under false pretences; the farmer was convicted, and got twelve months' imprisonment. I forget whether with or without hard labour. Then those who had used the bull sued for damages, and recovered them to the amount of £1,500 or more. So it is evident that it is a dangerous thing to tamper with the pedigrees of show animals.

Judges and Judging.

I HAVE heard a good deal about judging lately, and have seen some judging which was, to put it mildly, very unsatisfactory. In fact, at many places during last month complaints have been loud and deep, not about individual decisions, for we seall always agree to differ about them, but about the general trend of the judging at certain shows. It would not do to particularise, but at some shows I have attended I think it has been pretty clear that some of the judges have not recognised—at any rate, practically—the first principles of judging. These I take to be selecting the best horses in the class for the prizes in the shortest possible time, and without regard to any circumstances but the horses themselves.

I HEARD a judge say once, that if it was a near thing he would favour his friend. I think most will agree with me that though it is easy to understand a man taking up such a position, it is one that is utterly indefensible. When men say such things there is no wonder that outsiders talk about favouritism. At the same time, I must say that I have seen a great deal of the judging of this gentleman, and I could never see any of the slight favouritism that he somewhat cynically said that he showed.

I ONCE heard an exhibitor who did not get quite so forward as he thought he ought, say to a judge, "Wait till you come before me, and I'll make you remember this." Such a man, it is obvious, should never be a judge. Neither should a man who for the mere purposes of a personal triumph endeavours to put his colleague into a false position. When two men go into the ring to judge they are expected to consult, and as far as possible pull together. And when one sees in class after class an umpire called in to decide not between two horses, but to place four or five it is pretty clear that one, at any rate, of the judges is letting his prejudice get the better of his commonsense. There is one thing one sometimes hears said against a judge which is not quite fair. "He does not remember the horses from one day to another," says Mr. Critic. A man may easily be forgiven for forgetting or for missing a horse in a very big class, but of course he ought to know the prominent show horses he has judged intimately, and if he reverses a previous decision should have some cogent reason ready for his action.

THE LOOKER-ON.

Mr. J. Howell's Hackneys.

A number of pedigree Hackneys from Mr. James Howell's celebrated Llanmanes Stud were brought under the hammer at Llanmaes Farm, St. Fagans, near Cardiff, in the presence of a large company of breeders from all parts, and met a good trade, though several animals had to be withdrawn. The highest price was obtained for a beautiful pair of four-year old bays, for which there was some keen competition, but eventually Captain Scott obtained the pair for 160 guineas. Two other pairs were knocked down to the same purchaser—one for 150 and the other for 110 guineas. Captain Scott, who was the principal buyer throughout the sale, paid 75 guineas each for a brown bay cob and a chesnut mare. Mr. Carr, of Carsluke (N.B.), also bought several lots, his highest price being 71 guineas for a chestnut mare foaled in 1902. The result of the sale was a total of close on £1,600, and appended is a list of the chief lots sold:—

Hywel's Lady Athilite and Prim Lucy	Captain Scott 160
Golden Trumps and Hywel's Bravo	Captain Scott 150
Miss Jones and a Brown Gelding	Captain Scott 110
Lady Athil	Captain Scott 75

Diseases of Farm Animals.

Wool-ball in Lambs.

Sheep of all ages are frequently found to have concretions in the rumen, the result of the felting together of wool, the fine hairs of clover, oats, and other food materials; while in the abomasum, or true digestive stomach, they often have calculous concretions called "bezoars," which are composed of a mixture of wool, earthy matter, and inspissated mucus, arranged in concentric layers around some foreign body as a nucleus.

These often exist without causing much inconvenience; but the wool-ball of the lamb is not nearly so harmless, for every year complaints are rife as to losses from this cause in lambs of various ages, particularly while still running with the ewe.

This season wool-ball seems to be particularly troublesome to the flockmaster, therefore a few notes as to its cause may be useful.

Causes.

It is a moot point, and a frequent subject of argument among farmers and shepherds, where the wool forming the balls found in the stomach of the lamb comes from.

Some say from the neighbourhood of the udder of the ewe; others from the hedge-rows, bushes, and pastures.

Little, if any, comes from the lamb's own body, from licking the skin or picking at the fleece, although a favourite way of accounting for it is that the lambs get "ticky" or lousy from association with their verminous dams, and in consequence suffer from skin irritation, for if a portion of one of the balls be teazed out it will be readily seen that the texture and staple of the material is different to the wool of the lamb.

Some of the wool is almost certainly taken in while sucking, and to reduce the risk of this careful shepherds remove the wool from the parts some time before lambing takes place. Some of them do this a little too freely, clipping the wool closely from the tail, inside the thighs, and around the udder, in a fashion that leaves the genitals and mammary gland very much exposed, which predisposes to garget. There are some flockmasters who have had considerable trouble with ewes suffering from bad udders who will not permit of this trimming, and unless the shepherd takes moderation for his guide it is certainly possible in endeavouring to avoid wool-ball in the lambs to risk garget in the ewes.

We believe that most of the material is dead wool obtained from a third source. At the season when young lambs are about, the hedges and pastures are full of "flecks" of wool torn from the fleeces by thorns and briars, or shed when the ewes are unhealthy in either skin or constitution or need shearing. Time was when this loose wool used to be gathered up, but either people are less careful than they used to be, despise the day of small things, or wool has so fallen in price as to render it not worth the time of even children to pick it up. Perhaps the march of education in the agricultural world and the school attendance officer are factors to be reckoned with.

It should, however, be gathered up as a measure of precaution, even if there is no profit in it, since lambs are very fond of picking about round hedgerows, and nothing is more likely than that a good deal of wool is taken into the stomach from this source. Lambs appear to pick at the flecks of wool in mischief, and even stray filaments picked up with grass are capable of being added to the nucleus and twine around it in movements of the stomach.

Symptoms and Prevention.

In some cases there is no doubt that mistakes are made in attributing deaths to wool-ball due to other causes, because it is so easy to argue from analogy, and for the inexpert conductor of the autopsy to assume that any obscure case resulting in death must of necessity arise from these balls of felted wool because they happen to be present when the unfortunate little animal is examined post-mortem.

This may, however, be mere coincidence, and perhaps fatalities from their presence are not so common as is popularly supposed; but authentic cases are frequent enough to render it imperative that all possible care should be taken to prevent the ingestion of wool, since there is a general agreement that not much that is useful can be done in the matter of curing any case of illness arising from the presence of such concretions.

To begin with, their existence cannot be accurately diagnosed, and almost before the animal is seen to be seriously ill, and the cause suspected, it is dead, and it is too late to do anything but lament.

There seems to be no very marked symptoms observable in the majority of cases, and the general complaint of the shepherd is that the lamb drops off suddenly and after only a few hours' illness. He may learn to suspect the cause of the ailment from experience of other cases and the finding of wool in their stomachs, but even then there is little to be done. Even if early diagnosis was possible, or after several losses in a flock the character of the case be suspected, the efficacy of treatment is more than doubtful.

A purgative would perhaps carry off the smaller balls, but it would be dangerous to give purgatives if they were large.

When wool-balls are already formed, they are generally too large to pass the pylorus, but may impact it.

SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

SOCIETIES.

CENTRAL CHAMBER.

A meeting of the council of the Central and Associated Chambers of Agriculture was held at the house of the Surveyors' Institution, Westminster, on Tuesday. Lord Desborough presiding.

Swine Fever.

A letter had been received from the Board of Agriculture and Fisheries on the subject of swine fever. This stated that consideration had been given to the reports submitted by the Cattle Disease Committee of the council. The communication stated that during the present year, up to and including the week ended June 8, 1,067 outbreaks had been confirmed in England, 47 in Wales, and 44 in Scotland, as compared with 480 in England, 37 in Wales, and 32 in Scotland during the corresponding period of the year 1906. "It will be seen therefore," continued the letter, "that the increase in outbreaks is practically confined to England; and it is by no means general throughout that country. There is evidence that the measures taken by the Board have had a distinctly beneficial effect in securing the control of the disease, both in the East Riding of Yorkshire and in the county of Salop, in both of which counties the position last year was particularly satisfactory, whilst more recently those measures have produced a similar result in Norfolk and Suffolk. Throughout the Northern, the North-Western, and the West Midland counties the position is still favourable, whilst, as regards the remainder of the Midland and North-Eastern counties, the only serious disease centres at present existing are in Leicestershire and West Nottingham, with a portion of Derbyshire, where the disease has, so far, been confined to a relatively small area. As regards the South Midlands, the remaining Eastern counties and the South of England the position remains unsatisfactory both in Essex and in Hants, whilst in Kent and in the contiguous counties of Worcester, Gloucester, Oxford, Berks, Bucks, Middlesex, Herts, and Bedford, the number of outbreaks of the disease has latterly been on the increase."

The board expressed their confidence that a steady persistence in the administrative measures taken to control the disease would before long result in regaining the ground which had unfortunately been lost. The enhanced expenditure entailed by reverting to the policy of slaughter could be defended only if there were good reason to believe that it would be followed by the rapid success of the operations against the disease, and a careful study of the existing position did not lead the board to believe that this would be the case at the present time. Recent investigations led to the conclusion that the extirpation of swine fever was to be looked for in the direction of the immunising of swine against the disease.

Glanders.

Colonel le Roy Lewis moved as a matter of urgency that a deputation be appointed to wait upon the Board of Agriculture to urge the views of the Chamber in regard to the payment of compensation for glanders. At present compensation to owners of slaughtered horses is limited to 25 per cent. of their value. The case was now made more serious by the inclusion of glanders in the scheduled list of diseases for which compensation is to be paid under the new Workmen's Compensation Act, so that the horse-owner is not only liable for 75 per cent. of the loss of his horse, but also saddled with liability in regard to compensation to his workmen.

The motion was agreed to.

The Small Holdings Bill.

A report of the Local Taxation Committee on the Small Holdings and Allotments Bill was received after certain verbal amendments had been effected. The report stated that the rating proposals are an invasion of the rights of representative bodies as to the determination of the rates to be levied. No exception is taken to the performance of certain duties by the commissioners defined in Sections 1 and 2. Under Section 3, Sub-sections 2 and 3, the commissioners are empowered to take action themselves, and to involve the county in expenditure which it has not approved of in pursuance of schemes which may be wholly visionary, and possibly very costly, and under Section 5 all the powers of the county council are given to such commissioners, and all expenditure by them shall be charged upon the rates. Such powers are wholly unprecedented, would be very inconvenient in practice, and not unlikely to be seriously resented by the counties affected. The committee are of opinion that it is absolutely necessary that any expenses incurred by the Board of Agriculture or by the commissioners should be defrayed entirely out of moneys voted by Parliament and under the control of Parliament, as is partly suggested for special cases in Section 14, and warmly press on the council that the Bill should not be passed without alterations to this effect being made in it.

Mr. Wood Homer, in presenting the report, explained that the committee had dealt with the Bill entirely from the financial aspect. The Bill would inflict an enormous injustice on the ratepayers of the country.

The report was seconded by Mr. T. Christian, who said the scheme would be very expensive in its working. Under it officialism would be exceedingly expensive, and the rates would be increased. He hoped the Chamber would set their foot down firmly against the bill.

Mr. Christopher Turner said they were in favour of small holdings, but they wanted them on sound and economic lines.

Sir Aubrey Fletcher declared that this was a most important question, and the committee's report should be carried unanimously.

The report was adopted.

The Small Holdings Bill was further discussed, when the following resolution was proposed by Mr. R. C. Pearce (Darlington): "This council is of opinion that the Small Holdings and Allotments Bill should not be passed unless the alterations recommended in the report of the Local Taxation Committee be incorporated in the Bill; and this council strongly protests against the hurried manner in which a measure of the importance of the Small Holdings and Allotments Bill is being forced through Parliament without an opportunity having been given to consult the agriculturists and ratepayers of the country whose interests are so vitally affected."

The motion was seconded by Mr. S. Kidner (Taunton), and a prolonged discussion followed, in the course of which several amendments were suggested.

Ultimately it was decided to adopt the first part of the resolution with the addition of the words, "and while it approves of the formation of small holdings on sound and economic lines, it protests against the hurried manner in which a measure of the importance of the Small Holdings and Allotments Bill is being forced through Parliament.

Parliamentary Committee.

In the absence of Mr. T. Courtenay T. Warner, the chairman, the adoption of the report of the Parliamentary Committee was moved by Mr. C. Middleton, and the resolution was passed without discussion. The report stated that the committee having considered the position of the Public Health Bill, referred to them by the last meeting of the council, were of opinion that the best course to pursue was to wait until it is reported by the Standing Committee, and then to move that it be re-committed to a Select Committee. This would give the council the best opportunity of putting forward their views by means of witnesses, either as to amending the Model Milk Clauses, or as to general legislation dealing with the production and distribution of milk.

The committee were of opinion that it would not be advisable to move to amend the London Council (General Powers) Bill on report by the deletion of the words inserted in the Model Milk Clauses, but the chairman promised, if possible, to make a verbal protest against this alteration being made a precedent to any further alteration in other private bills.

The committee had issued a whip with regard to the Destructive Insects and Pests Bill, asking members to urge that a clause should be inserted providing that any cost of administration should be defrayed out of the National Exchequer, but in other respects to press for the measure to be passed. This Bill has been since passed through committee stage as an opposed Bill, no alteration being possible without losing the Bill.

Scottish Chamber.

At the meeting of the directors of the Scottish Chamber of Agriculture held at Edinburgh on Wednesday, it was intimated that Lord Carrington, the President of the Board of Agriculture, would attend the autumn conference of the Chamber, which it was resolved should be held in Glasgow, and a number of subjects were set down for consideration by the conference.

Mr. Speir, Newton, speaking on the subject of Fiars Courts, said in some districts measures were taken by ministers to keep up the grain prices for the sake of their stipends.

Mr. Morrison, St. Andrews, thought ministers had a very just complaint. Many stipends had been reduced from 15 to 29 per cent. on account of the fiars.

Mr. Harry Hope, Barneyhill, said he wished to dissociate himself entirely from Mr Speir's views. It would be a great pity if the allegation against the Church should pass unnoticed.

Mr. Speir said he did not mean that the Church acted illegally, but that they got the best witnesses they could.

A committee was appointed to report on the subject of the striking of prices.

Agents, Situations Wanted.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

Seasonable Topics.

Hope.

IT is true that hope deferred maketh the heart sick, and at the moment of writing farmers are weary of waiting for the summer weather that is wanted so badly and which seems so loth to come. But hope is the rock to which the farmer must cling, and without the faculty for hoping, which fortunately is well developed in the members of the agricultural fraternity, he would often cut a sorry figure. It has been our lot week after week of late to write dismally of climatic conditions, but each time it has been with the hope that ere the next issue appeared matters would improve. We cling to that hope still, just as the farmer does when he taps the barometer in the morning and finds that it has gone up a shade. In bad seasons experienced in the past we have known instances in which hope has failed with sad—and in one or two cases fatal—results, and the pity of it was that things were not really so bad as they seemed.

[Since the above was written a spell of real summer weather has fortunately spread over the country, and it will be as beneficial as it was welcome.—ED.]

The Labour Staff in Bad Weather.

WITH a faint attempt at jocularity, a farmer informed us the other day that he thought he should buy some marbles and let his men amuse themselves with them until the weather improved, because each morning when he met his staff of employees he was at his wits' end to know what to set them to do. This, by the way, is a problem which faces many employers of agricultural labour in a catchy season. A wet day, or a succession of wet days, stops operations, and the men could be dispensed with; but the change might come at any time, bringing with it work in plenty and sufficient to render the staff inadequate. Catchy seasons are necessarily expensive, because the wages bill goes on though seasonable operations are stopped, and the only redeeming feature about the whole thing is that in the farmer's anxiety to find the men something to do, certain jobs are done which, though necessary, would be passed over if good harvest weather prevailed. Just to give an illustration, thousands of thistles have been cut off lately which would probably have lived to produce seed and multiply had the weather been more favourable for haymaking.

The National Poultry Conference.

AS we write the second National Poultry Conference is in progress at Reading, and matters connected with the poultry industry are being discussed. No effort has been spared to make the conference a success, and the importance of such a gathering can hardly be over estimated when we consider the possibilities that are held out for the development of the poultry industry. At this moment, perhaps more than at any previous time, it is desirable that the prospects of poultry keeping be made clear, because if small holdings become a reality in the near future, poultry keeping will doubtless figure in the curriculum of the small holder. There can be no doubt that poultry keeping has a great fascination for a large number of people, and whenever it is taken up it is always with a view to profit. Even the householder in the suburbs who keeps a dozen fowls in a home-built pen at the bottom of his garden religiously makes out a periodical balance-sheet, and if his figures could always be relied upon, it would appear as if poultry keeping is a quick road to fortune. But there, things are not always what they seem.

Knowledge of Plant Life.

WE do not say that it is essential for every farmer to be an accomplished botanist, but it is well for every man who cultivates land to have some acquaintanceship with the plants that grow on it, be they weeds or legitimate crops. Through sheer force of circumstances we will admit that there is a sort of rough-and-ready knowledge amongst farmers regarding the wild plants of the field, but from the source whence this knowledge is obtained it cannot always be reliable. We now and then meet men engaged in farming who do take an interest in plant life, but with here and there an exception it seems to be a case of familiarity breeding contempt, for in many cases nothing, not even the common name, is known of the plants that are seen every day. There are plants beneficial and plants harmful on every farm, plants that should be encouraged and plants that should be promptly exterminated, and we are convinced that if many farmers knew the actual capacity of certain weeds to propagate themselves from seed greater efforts would be made to exterminate such unwelcome vegetation.

Combination of Nitrogenous Fertilisers.

THE two nitrogenous fertilisers chiefly used in agriculture are nitrate of soda and sulphate of ammonia, and though their effects are the same, opinions differ as to which is the most beneficial, and the results of experiments made to prove the point sometimes give a verdict in favour of the one and sometimes in favour of the other. Why not effect a compromise and use both fertilisers in conjunction? We know that under certain conditions the effects of nitrate of soda are better than those of sulphate of ammonia, but the opinion is held by those who have tried them that in the majority of cases better results are got by employing the two in conjunction than by using either alone. The proportions should be dependent on the character of the soil, varying from equal parts of each to three-fourths of sulphate in mediums where lime is plentiful, and the same proportion of nitrate if lime is lacking. From an economical point of view there is something to be said in favour of the combination, because in a season when all the nitrogen is exhausted from nitrate of soda some would be reserved from sulphate for the benefit of the next crop.

New Tenants and Fresh Ideas.

BY right of custom certain methods of farming have settled themselves in certain localities, and the idea of trying anything different never seems to occur to the local mind. Son follows father in growing the crops that have proved themselves to be suitable to the conditions, and in this he shows the spirit of conservatism which is characteristic of the agricultural fraternity in general. It is, however, when a tenant farmer from another part of the country comes to reside in the locality that fresh ideas are introduced, and in some cases they answer while in others they do

not. A few years ago a Scotch farmer from one of the potato-growing districts north of the Tweed took a farm in a western county of England which he fancied would suit potatoes, and he straightaway commenced growing early varieties for market. The native farmers round about thought what a pity it was that a man should come there and lose his money in potato growing; but the Scotchman knew what he was doing, and of late years his neighbours have gone in for the same crop. Naturally success does not always follow experiments of this kind, and we know a farmer now who is being closely watched by his neighbours, who are anxious to see how an attempt to grow green peas for market will turn out on an isolated farm on the Cotswold Hills.

Building Haystacks. WITH the introduction of so many Dutch barns, not so much interest is taken in building haystacks as used to be the case; but, nevertheless, we meet with men whose particular *forte* in the hay harvest is ricking, and who take a great personal pride in the stacks they put together. It is curious how in the hayfields one man excels at this operation and another at that, and they take by right of custom the task at which they are most expert. Rick building, we suppose, would be classed as unskilled labour, but it is not everybody who can put together a haystack that stands up square and well balanced without the need of props to support it. And the expert rick builder, have you never watched how he arranges the corners of his stack as he proceeds, treads in the centre, and now and again descends the ladder and makes critical examinations of his handiwork from various points of view? And when the rick is finished, has been pulled neatly along the sides and ends, and is thatched, the man is as proud of his work as any skilled architect who surveys a graceful building erected according to his plans.

Plums. IN making a survey of the fruit crops in 1907, plums stand out as the most conspicuous feature of the season. In the majority of places trees are heavily laden, and in due course this useful fruit will be very plentiful. It is a peculiarity of plums that they seem to have located themselves in certain districts, and in every locality where they are largely represented there is generally to be found a variety of local origin predominating. For instance, the yellow Pershore or egg-plum is an institution in the Evesham Valley, and in the fruit-growing districts of Kent the purple Kentish bush-plum predominates. There are other local varieties to be found growing in different parts of the country, and though of late years such fine plums as Victoria, Early Prolific, Monarch, The Czar, and others have been largely planted, still local plums have considerable influence on the market, particularly in seasons of plenty. There is every prospect of plums being sold cheap this season, and there may even be a glut, but whether the consumer will get his fruit much cheaper than usual remains to be seen. Past experience shows that the man in the street does not always reap the advantage of the low prices at which the producer has to sell in seasons of plenty.

The Influence of Presence. THE business of the farmer is of such a character that it often takes him away from home, and it is said of some members of the fraternity that they will take advantage of trifling excuses in order to get a day's outing. Be that as it may, if a farmer is in the habit of attending every market, sale, fair, or public function that takes place in his locality, you may feel sure that something is going wrong at home. There can be no doubt about the influence of presence where a farmer is concerned, and as a rule the most work is done by the staff when the master is at hand. "If you want things looking after properly you must look after them yourself." This is the view taken by a successful old farmer of our acquaintance, and there is no getting very far away from this. We do not say that a man who is in a position to pay for labour should slave and work like a navvy, because he can very often do better for himself by devoting his energies to the organising and thinking part of the business. The very fact of him being there to control in person the progress of the work is sufficient to ensure its being done properly.

Agricultural Politics.

BY A LOBBYIST.

Cause of Mr. Harcourt's Difficulties.

Mr. Harcourt's difficulties with the Small Holdings Bill are practically all traceable to the disinclination of Parliamentarians to afflict the coerced county councils with the cost of what is after all a national responsibility. I used the word "coerced" without any intention or desire to embitter the initiation of the new scheme. I use it simply because the word aptly epitomises the position. Whether the principle of coercion is justified or not is another matter. The main protruding fact is that a county council may be—let it be conceased that this must be as a consequence of its own dilatoriness—mulcted with the expense of an experiment which had been initiated by a bureaucratic authority in London. Let what will be said in favour of this policy—let who may contend that county councils are afflicted with a temperamental infirmity antagonistic to small holdings—this method is out of harmony with the purposes and plan of local government. It would be well if Mr. Harcourt—to whose Parliamentary genius I yield an ungrudging admiration—were to comprehend that this sentiment has its springs in other than mere partisan antipathy. It has its fount in the deep anxiety to preserve the wise freedom of the county authorities. There may be one or two county councils which regard small holdings with an unhappy feeling of detestation—I must confess I do not know of one. Even their recalcitrance, however, would be less harmful to the new purpose than would this coercive method.

An Appeal to Mr. Harcourt.

It is already apparent that one of the first results of this possible coercion of the county council by a bureaucratic official has been to create a prejudice which must operate to the disadvantage of the Ministerial ambition. County councils would be seraphic in their nature if it were not so. The Government practically says to the county councils—and that, too, in a hectoring, stand-and-deliver fashion—"Look here, we make you the executive authority in carrying out our scheme, but it don't matter to us one rap whether you act or not; we shall still establish small holdings; and we shall compel you, whether you act or our official acts, to pay the piper." This method is official superciliousness carried to a height worse than scorn. Surely some other plan is possible. I believe in the necessity for the existence of the commissioners whom the Government intends to associate with this new legislation. In an advisory, inquiring capacity, they can be of infinite value. I do not, however, like them as a kind of embodied terror to county councils; and I believe that in this capacity they may tend to unconsciously create obstacles—I mean obstacles bred of an attitude of unfriendliness—to the success which everybody desires for the new agrarian economy. I put this matter seriously to Mr. Harcourt. He has one of the most receptive brains in the House of Commons; and I ask him whether he cannot perceive that in this matter it were well he adopted a more ductile attitude. His very inflexibility is an encouragement to the peers.

Was Mr. Chaplin Unwise?

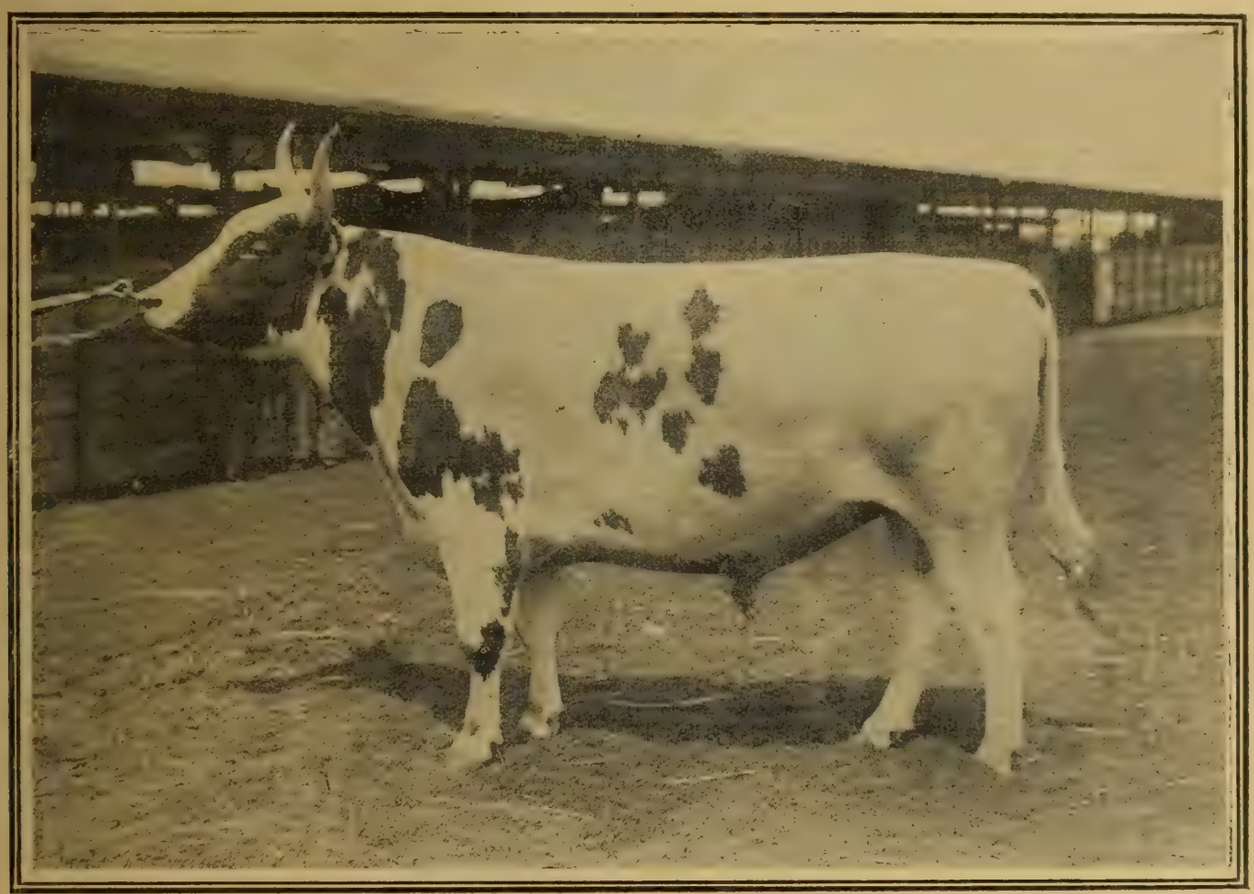
I am not, as my readers will have gathered from my preceding remarks, one of those who lack faith in the sincerity of the county councils. Was, however, Mr. Chaplin altogether ill-advised in seeking to limit the occupants of small holdings to that "labouring population resident in the county"? Without being possessed by visions of the county councils deliberately setting out to provide small holdings for the well-to-do—for, in particular, Mr. Chaplin's specially-selected friend, the butcher who has amassed an amazing pile of wealth—I can perceive that there ought to be some restraint. I happen to have a cottage in a country-side in which a beneficent rural authority has provided allotments. I recently saw one of these allotments being used as a kind of temporary builder's yard, the while the occupier was himself building three houses on the other side of the roadway. Those houses are that allotment-holder's own property. Perhaps, there is little fear of rural villadom being called into existence on these small-holdings areas; but such a precaution as Mr. Chaplin has suggested would, I repeat, have been a wise restraint. It would not have indicated suspicion of the county councils. It would have been accepted by those authorities as a judicious limitation of their powers. There are county councils and county councils. Of the county councils which are absolutely rural in character I have little fear. I have not the same confidence in county councils which are semi-urban in their character.

Mr. Jesse Collings' Persistence.

In our old friend Mr. Jesse Collings altogether well-advised in the persistence with which he seeks to make the Small Holdings Bill a means of calling into existence a peasant proprietorate? Of the sincerity of this desire there can be no question — there can be no suggestion that he is in this acting with mere partisan querulousness, for his anxiety is in complete harmony with his political past. However, he must comprehend that if the Government were to adopt his proposal—even though it only permitted the tenant-occupier of the small holding to gradually and slowly evolve into the peasant proprietor—it would build up for itself a heritage of woe, which would probably operate to its own grievous undoing. The principle of a peasant proprietorate, once so dear to the Radical heart, is out of harmony with the modern up-to-date Radical sentiment. It is antagonistic to the Radical dream of the State-domination of the soil. It would create a multiplicity of interests entirely opposed to the agrarian anxieties of the fighting left wing of the Radical party. Of course, it may be that Mr. Collings desires to accentuate, for the benefit of the rural mind, the ineradicable divergence in the purpose of the two schools of land reformers. The Conservative land reformer is all for a proprietorate; to the Radical this ambition is *anathema maranatha*. Hence it may be that behind Mr. Collings's obvious sincerity is, after all, the subtle anxiety of the politician. The land hunger—if land hunger exists—is certainly for proprietorship rather than for tenure; but the Government simply dare not concede it. I wonder, however, if Mr. Collings imagines he has stimulated the peers to insist on his anxiety being realised. It may be so.

Earl Carrington's Anticipations.

Earl Carrington evidently regards the Small Holdings Bill as in the nature of an agrarian revolution—as a kind of herald of a new agrarian heaven and a new agrarian earth. I am afraid he has permitted his native enthusiasm to run away with his imagination. Let the gingering process be what it may, let the commissioners who are to quicken the local authorities use the most drastic stimulants, the new legislation will not evolve a new social order. As a fact, there are many Liberal members of Parliament who prayerfully hope that it will be but a tepid experiment. Fears have been awakened in their sensitive bosoms that the Ministry is proceeding too far. The Scottish Land Valuation Bill has, indeed, induced them to question the absolute wisdom of the new agrarian departure. The exclusion from the rating standard of the building premises, and thus only to consider the land, is in their view an approach to the Georgian ideal beyond which it would be an economic danger to proceed. They cheered Mr. Balfour—true, *sotto voce*—when he denounced the policy of the Government "in basing rating on abstract theories regarding the unearned increment of land." The birth of this apprehensive spirit will inevitably extend to local authorities, and will not be without force even in Earl Carrington's own department. This spirit will grow, and will be an inevitable influence in modifying the operation of the English small holdings legislation. Lord Carrington will, I ween, find ten years hence that the face of agrarian England has not been greatly altered by the measure which has fevered him with such adjectival enthusiasm. It will have its value, of course; but the Bill is no Archimedian lever with which to move worlds.



South-Eastern Agricultural College.

The Right Hon. Ailwyn Fellowes will distribute the diplomas and prizes on July 24 at the South-Eastern Agricultural College, Wye, Kent.

The college was awarded the silver medal (highest award) at the Royal Agricultural Society's show at Lincoln, in a competition of exhibits of importance to British forestry, for a collection of insects, &c., injurious to forest trees, which was made and set up by the vice-principal and entomologist, Mr. F. V. Theobald.

HIGHLAND SHOW.

Although the entries did not come up to the good toll received when they visited Edinburgh in 1899, the Highland and Agricultural Society had no cause to complaim of the support accorded last week's exhibition, for the entries showed a marked increase all round when compared with last year's figures, and well up to the average, whilst the quality was in some instances better than any seen at a Highland Show. By way of comparison with the last Edinburgh Show, which seems the most appropriate to select for the purpose—there were 362 cattle entered, against 386 in 1899. The Shorthorns and Highlanders, a little down this year, were counterbalanced by the increase in black cattle. The horses were a shade lighter in the entry, and the Hunters, to particularise, suffered most in this respect. Swine and poultry showed an increase, and the total of 1,935 was creditable when contrasted with 2,051 at the last Edinburgh Show. All the principal breeders of the country were represented, and represented by their best achievements in the raising of stoock whilst the King and breeders in England sent several of their cattle which figured at the Royal Show at Lincoln. Additional interest centred in the show from the visit of the Prince and Princess of Wales, and their Royal Highnesses, as may be expected, received a most loyal and hearty welcome.

The Ayrshire Bull shown above is Nether Craig Spicy Sam, winner of the Prince of Wales' Gold Medal and the Ayrshire Cattle Society's Special for the Best Ayrshire at the Highland and Agricultural Society's Show at Edinburgh last week. He was born January 20, 1904, sire Not Likely of Hillhouse, dam Hareshaw, and was bred by Mr. R. Forrest, Knockinlaw, but is the property of Mr. J. Howie, Hillhouse, Kilmarnock, who also won with Spicy Sam a First Prize at the Royal Show at Lincoln and the Championship at the Ayrshire Show this year.

CATTLE.

As usual, premier place in the catalogue was given to the Shorthorns, and they fully deserved the honour, for they made an exceptionally good show, more especially as regards quality. Aged bulls were first led into the ring, the class having an entry of ten, and the judges had little difficulty in making their awards, the Royal Show champion, Linksfield Champion, the property of Mr. F. Miller, Birkenhead, being deservedly put in the first place. This bull is as fine an animal as has been seen at the show for many years, and later on he was awarded the Prince of Wales's gold medal for the best Shorthorn shown, and the Shorthorn Society's special for the best Shorthorn bull. Mr. John C. Toppin, Musgrave Hall, Penrith, was put second in the class with Moonstone, which was third at the Royal Show, and though he is a very good quality bull, hardly showed as much substance as the champion. An exceptionally large class of two-year-old bulls paraded before the judges, and considerable time was taken to place the awards. Eventually H.M. the King's Royal Windsor, reserve champion at Lincoln, took the lead, and was later reserve for the Shorthorn Society's special), the next two prizes in the class going to Mr. G. Harrison, Gainford Hall, Darlington, the second prize being for Czar, a thick, well-fleshed red and white bull, which ran the winner very hard, and the third for Elvetham Sweetmeat, a roan, which was not placed at the Royal Show. Yearling bulls made a strong class, and here his Majesty again led the way with a roan bull, Evander, from the Royal Farms, Windsor. He is a sweet quality bull of a nice type, and was an easy winner. Mr. Harrison was placed second with a good type of roan bull, Pride of Tees, whilst Mr. A. J. Marshall, Bridgebank, came third with Dunmore Sirdar, a very promising white bull, sired by the champion bull of the section.

There was a very good class of aged cows in milk, which was headed by Lord Calthorpe's roan, Sweetheart, the champion female at the Royal Show, and she was shown in the best of form, but had to be content with the reserve ticket for the female championship. The second ticket in the class went to Mr. W. Bell, Ratcheugh, for Ratcheugh Witch, a four-year-old that has won frequently, and Mr. Harrison came third with Towy Princess, which won the second prize in her class at the Royal Show. In a splendid class of two-year-old heifers, Mr. Robert Taylor's Pitlivie Rosebud 2nd, which was also the winner at the Royal Show, was rightly selected as the winner, and was later on reserve to Linksfield Champion for the championship of the breed, where she was also made female champion. Second to her in her class came Mr. Harrison's Montrave Wondrous, a good typical red heifer, bred by Sir John Gilmour. Yearling heifers made another very good class and added yet another win to the credit of H.M. the King, his first prize winner this time being Marjorie, a roan from Windsor sired by Royal Chieftain, a prominent prize winner this year, having been first at the Royal amongst other shows. Lord Calthorpe came second with Elvetham Sweetheart, a beautiful quality heifer, but she lacked the substance and style of the first prize winner. The judges had substance in view when selecting a yearling leader, and they gave pride of place to Mr. Andrew Brooks's Dalmeny-bred Eagle, a double Erica son of the record-priced Ebbero. Mr. Kennedy had second with the great level Perth fifth prize-taker Mythologist. Mr. Wylie Hill's Biota, first at Lincoln, had to be content with third now.

Cows were considered the finest class of the section, and there was a keen contest for first position between Mr. Bainbridge's Kinochty purchase, the Ruth cow Mrs. Nelly, and Mr. James Beddie's Gammer 2nd, a sweet, straight three-year-old by Loyalist of Morlich. The Eshott cow is neater at the finish of her quarters than Mr. Beddie's, but the judges preferred the latter, and also gave her the Ballindalloch challenge cup for the best cow of any age.

Aberdeen Angus made a splendid display, and so good was the quality all round that the judges occupied a considerable time. Mr. Bainbridge, who had forward his typical specimen Idelamere, won in aged bulls as at Lincoln, and Mr. Stewart Clark once again followed with the three-year-old April Fool, of Drumfad, Mr. A. T. Reid's Eliphaez was third, whilst the King took fourth with Prestor. Two-year-olds gave a deal of trouble, and a referee was finally called in with the result that the three leading awards went to the following in the order named:—Mr. G. A. Duff's Mulbin-bred Ploughboy, a son of Khartoum, and first last year at the Aberdeen spring show; Mr. D. M. MacRae's Everlasting, of Ballindalloch, the Peebles winner; and Mr. J. R. Findlay's Blizzard, which won at Perth last year and lately at Lincoln. In the two-year-old class Mr. Bainbridge's pretty little Estrella of Eshott had the pleasure of beating her Royal Show conquerors. She had next to her Sir George Macpherson Grant's neatly-built heifer Evie, third being Mr. Jas. Whyte's winner of a year ago, Bashful Bet, Mr. Findlay's Prize, which won at the Royal, being put in the fifth position. In the yearling class Mr. D. Y. Stewart led the way with the Perth spring winner, Eident, Mr. J. Kennedy's Ellen Terry running her pretty closely; in fact, many fancied her for first place. Mr. Bainbridge's big, level second prize winner at the Royal only got the fifth prize.

Exceptional interest attached to the placing of the special prizes, and here again the referee had to be called in. Sir George Macpherson Grant's Jeshurun, the champion bull of last year, which was on that account debarred from competing for the class prizes, was shown for the Prince of Wales's medal for the best animal in the section. He was brought out in beautiful condition, and successfully carried off the championship. The President's medal, awarded to the best animal of

the opposite sex from the champion, went to Mr. R. Wylie Hill's Bartonia of Glamis, the champion female of last year, which also was debarred from competing for the class prizes. The special prize for the best bull in the three male classes went to Mr. Bainbridge's Idelamere, Mr. Duff's winning two-year-old being reserve.

The Galloway breed was strongly represented, the quality being very creditable and the numbers in excess of previous years. There were twenty-five bulls and forty-two females, with an average of eleven in the six classes. Mr. John Cunningham, Tarbreoch, Dalbeattie, easily led in a strong class of seven aged bulls with his four-year-old Chancellor, which for three years in succession was first at the Royal Show. He was shown in the best of bloom, and was subsequently awarded the Prince of Wales's gold medal for the best Galloway. The president's medal for the best cow went to Mr. W. Montgomerie Neilson, of Queenshill, Joyce of Queenshill, winner in the cow class. Although not a very big cow, she is of fine quality, and carries a beautiful coat of hair.

The display of Highland cattle was not so strong as we have seen at the Highland Show, but it was, nevertheless, a highly creditable one. The Ensay cow Loachag Bhindhe 4th, champion at Glasgow two years ago, and at the head of the cows at Peebles, was entered as extra stock, and being set against the rest she secured the Prince of Wales's gold medal for the championship of the breed. The president's medal went to Lord Southesk's aged bull, and his lordship, being the breeder, also received the silver medal.

Special interest was attached to the Ayrshire cattle section in view of the milking qualifications necessary to the competing cows. These regulations, which require a certain yield of milk from each animal, were introduced this year for the first time, and it is recognised by the breeders that the regulations have been enforced in the best interests of the breed, but the general opinion seems to be that they handicap those cows which have calved a short time previous to the show. It is satisfactory to record that, considering the Ayrshire section as a whole, the merit was high and competition keen, particularly among the milk stock. This year's milk stock all yielded the quantity necessary to enable them to qualify for their classes.

The Prince of Wales gold medal for the best Ayrshire was awarded to Mr. James Howie's (Hill House, Kilmarnock) Nether Craig Spicy Sam, the first prize bull who was looking as well as when he carried off the honours at the Royal Show at Lincoln. Spicy Sam was also awarded the special prize of £10 given by the Ayrshire Cattle Herd-Book Society, and won for Mr. Robert Forrest, of Knockinlaw, Kilmarnock, his breeder, the silver medal for breeder of the best bull. Mr. R. Osborne's Morton Mains Phyllida, the winning yearling heifer, was placed reserve to Spicy Sam, and was given the President's medal.

HORSES.

The Clydesdales naturally came first in the horse section, and though as regards number they were in advance of last years' show, they were not quite so numerous as at the previous Edinburgh show. As to quality, however, they left little to be desired. As has been the case for some time past, the produce of Messrs A. and W. Montgomery's celebrated stallion, Baron's Pride, one of the most noted stock-breeding sires of his day, carried off a large proportion of the chief prizes. Another feature of the judging in this section was the success of Mr. J. Ernest Kerr of Harviestoun Castle, who was a prominent winner in the female classes, and for the second year in succession gained the Cawdor Cup for the best female of the breed. This award he gained with his Royal Show champion, Chester Princess, a seven-year-old mare by Baron's Pride, and a typical specimen of the breed. She was also awarded the Prince of Wales's gold medal for the best female Clydesdale. The Prince of Wales's gold medal for the best male of the breed was awarded to Mr. Renwick's two year-old colt, Royal Review ; Messrs. A. and W. Montgomery's five-year-old stallion, Ruby Pride, being reserve.

Light horses are always an important feature of the show at Edinburgh, and on this occasion they formed no exception to the rule. Although the classes were not as well filled as at the last exhibition in the capital, there was no falling off in other respects. Hunters headed the section, and they numbered 111, compared with 202 here in 1899, 43 at Peebles last year, and 90 at Glasgow in 1905. The Prince of Wales's gold medal for the best Hunter was won by Biscuit, a five-year-old bay gelding of fine shape and movement, owned by Mr. J. H. Stokes, Market Harborough, whilst the president's medal was awarded to Lady Mary Kidd, Lowood, Melrose, for Rosebud, a nice aged chesnut mare. A gold medal given by the Hunters' Improvement Society for the best Hunter filly registered or entered in the Hunter Stud Book was won by Mab, owned and bred by Mr. E. Hodgson, Bridlington. She is a typical Hunter, and was winner at the London Show this year, gained the championship at Otley, and took a first ticket at Lincoln. The gold medal given by the Imperial Hunter Stud Book Company for the best Hunter mare or filly registered in Volume V. of the Stud Book was secured by Peg the Rake, a two-year-old chesnut, owned and bred by Mr. William Lee Carlyle, Ecclefechan.

Hackneys were not so numerous as one would have liked them to have been, but they certainly made up in quality what they lacked in quantity. Copmanthorpe Performer, the well-known three-year-old stallion, owned by Mr. Arthur Hall, York, won the Prince of Wales's gold medal for the best Hackney, thus following up his great record, which includes champion at this year's Royal, junior champion at the London Hackney Show, and reserve for the supreme championship there. The president's medal and the championship prize of £10 for best mare or filly, given by the Hackney Horse Society, was won by Dashing Dunham, a four-year-old brood mare by Bonny Danegelt, and owned by Mr. William M'Allister, Inverness. She is a beautiful mover, and has previously met with success in English showyards.

Various classes were provided for ponies, and these formed an interesting section of the exhibition. In the class of stallions over 12 and not exceeding 14 hands, the well known Bantam King, which was bred at Gowanbank, Darvel, was placed first. This animal, which now belongs to Mr. William S. Miller, has been prominent during recent seasons, and was now given the gold medal presented by the Prince of Wales for the best pony. The President's medal fell to Mel Vlaloy's Catch of the Season, belonging to Mr. J. R. Forsyth, Paisley. This animal led in the smaller classes for mares, fillies, or geldings.

Some typical specimens were stalled in the classes for Highland ponies. Among the stallions Mr. Ross, Crieff, took precedence with Johnnie, a yellow dun, eleven years old, bred by the late Sir John Fowler, Braemore, Inverbroom, while the Duke of Atholl came second with Atholl Laddie, a black three-year-old of his own breeding. The Duke led in the pony mare class with Lady Anne, which also secured the medal given by the Prince of Wales. The president's medal was awarded Skerryvore, the property of Mr. J. H. Munro Mackenzie, Calgary.

There was a great turnout of Shetland ponies, and with so much quality forward, the judges spent a good deal of time over the awards. The Prince of Wales' medal went to the Ladies E. and D. Hope, Sevenoaks, for Thoreau, a black four-year-old stallion, whilst the president's prize went to Topaz, the noted winning mare owned by the Pony Stud (Limited), Cudham, Kent. She is a black fourteen-year-old pony, got by Oman. In addition to that prize, she was awarded a silver extra stock medal. A piece of silver plate for best group of Shetland ponies was won by Mr. William Mungall with his winning colt, Eirik, his winning filly, Lady Steynor, and his second prize filly Sheina.

SHEEP.

The show of sheep was one of the largest of recent years, and as regards quality was fully up to the average. Blackfaces formed an excellent display, eighty-two sheep being shown in the various classes. There were sixteen entries in the aged tup class, in which the first award went to Mr. Donald M'Dougall with the animal, then the property of Messrs. Cadzow Brothers, which carried off the championship at Peebles last year, a feat he succeeded in repeating, for he was now awarded the Prince of Wales' gold medal for the best pen of Blackfaced sheep. Mr. C. Howatson secured the president's medal with his first prize aged ewe, whilst the Messrs. Cadzow gained the Sinclair Scott Challenge trophy, value 100 guineas, for a group of sheep consisting of one aged ram, one shearling ram, one ewe, and lamb.

There was an extraordinarily good show of Cheviots, both in numbers and quality. Mr. John Elliot, Hindhope, who was a conspicuous winner, gained the first and second tickets in the old sheep class with fine specimens. His first prize winner, Peebles Dandie, a tup of the true Gentleman type, stood out by himself in the class, and, as was expected, was given the Prince of Wales's gold medal for the best pen of Cheviot sheep, and the Borthwick Challenge Cup, value £25, for the best sheep in the Cheviot classes, given by the Cheviot Sheep Society, whilst with his first prize shearling ewe Mr. Elliot gained the President's medal.

Border Leicesters were equal to any display seen at recent Highland shows. Mr. Robert Taylor, Pitlivie, received the prize for extra stock with Pitlivie Brilliant, the winner of the first prize at the Highland Show at Peebles last year, and champion at the Royal Show at Lincoln this year. He is a sheep of great substance and quality, with a beautiful white head, and easily won the Prince of Wales's gold medal for the best pen of Border Leicesters. The president's medal was annexed by Messrs. James Campbell and Sons for their first prize shearling gimmer, and the prize of £10 for the best pen of Border Leicesters, drawn from the ordinary classes, eligible for registration in the Border Leicester Flock Book, given by the society of Border Leicester Sheep Breeders, was secured by Mr. David Hume, Barrellwell, with his first prize shearling tup.

There was a capital exhibition of half-bred sheep, and in this section the Prince of Wales' gold medal went to Mr. Mein's home-bred three-shear sheep which was the winner of the first prize at the Peebles Show last year, and which was shown as extra stock ; the president's medal being bestowed on Mr. Spence's first-prize gimmer.

The display of Shropshires was extremely creditable for a show in this part of the country. In the shearling class premier honours went to an exhibit of Mr. Buttar, who was a prominent winner in this section. His animal was a typical Shropshire sheep—perhaps the best bred at Corston for the last ten years, and he was third and awarded the Prince of Wales' gold medal. Sir Richard Cooper's first-prize gimmer, which was one of the first prize ewes at the Royal Show, gained the president's medal.

In the classes for Oxford Downs, the leading honours, including the Prince of Wales' gold medal and the president's medal was secured by Mr. Jas. T. Hobbs, Maisey Hampton ; and for Suffolks, Mr. Wm. Kennedy, Luce Mains, Ecclefechan, was awarded the Prince of Wales' gold medal, and Mr. John S. Clark, Dundas Castle, gained the president's medal.

PIGS, &c.

There was an unusually fine show of pigs, and competition in many of the classes was particularly keen. The Large White breed was strongly represented, and in a good class of eight boars the first prize was awarded to Broomhouse Hercules, a four-year-old owned by Mr. William Wallace, Broomhouse, Corstorphine, and winner of several prizes. The second prize winner, Madrali, was shown by Mr. G. B. Shields, Dolphinstone, whilst Sir Gilbert Greenall secured the third ticket with Walton William 2nd. There was an uncommonly good class of sows, but the judge had little difficulty in placing the first card, for Colston Lass 13th, the property of Mr. R. M. Knowles, Colston Basset Hall, Bingham, stood out so prominently by herself that she could hardly be passed over for premier honours. She was first and champion at the Royal Show at Lincoln, and she was now given the president's gold medal. She was beaten for the Prince of Wales' gold medal by Mr. Wallace's first prize boar, Broomhouse Hercules.

For Berkshire boars, Lord Calthorpe was successful in gaining the leading ticket with Elvetham Champion, the Duchess of Devonshire being second with Polegate Dreadnought, and Mr. J. Jefferson, Peel Hall, Chester, third with Peel Czar. The Duchess of Devonshire was first and third for sows, Mr. Jefferson being second, and in the juveuile classes the Earl of Calthorpe and the Duchess of Devonshire were the leading winners.

Poultry made probably the largest and best show the society has ever held. Competition was very keen in almost every class, and the judges had a hard day's work in making the awards. Fanciers were present from all parts of the kingdom, and the interest in this section is increasing year by year. Many well-known winners at English shows came under the judge's wand, but Scotland was well able to maintain her own.

The entries in the implement yard—always a great source of attraction—numbered 2,140, the largest display that has been forward since the Edinburgh Show of eight years ago. They are shown on 232 stands, being forty more than last year, and were representative of all the leading firms in Scotland and England. The motion yard had more than ordinary interest, not only for the general visiter, but for those having a practical knowledge of agricultural machinery.

JUDGES.

CATTLE.—Shorthorn : John Cran, Kirkton, Bunchrew, Inverness ; Robert Bruce, Leinster House, Dublin. Aberdeen-Angus : J. J. Cridlau, Home Farm, Maismore Park, Glos. ; John Macpherson, Mulben Mains, Mulben, R.S.O. Galloway : Andrew Montgomery, Netherhall, Castle-Douglas ; Samuel Thomson, Buxley, Duns. Highland : Hugh Macdiarmid, Island House, Tiree, Oban. Ayrshire : Adam W. Montgomerie, Lessnessnock, Ochiltree ; William Murray, Barrow Moss, Wigtown. Jersey : T. H. Wectman, Rose Hill, Atherstone, Warwickshire.

HORSES.—Clydesdales : Alexander Burr, Tulloford, Old Meldrum ; Leslie Durno, Mains of Glack, Pitcaple ; David A. Hood, Balgreddan, Kirkcudbright ; John M'Caig, Challoch, Leswalt, Stranraer ; Robert Park, Brunstane, Portobello ; John P. Sleigh, St. John's Well, Fyvie. Hunters, Polo, and Riding Ponies : T. H. Hutchinson, Manor House, Catterick ; George Dove, Whitehouse, St. Boswells. Hackneys, Ponies, and Harness Horses : R. G. Heaton, Chatteris, Cambs. Highland Ponies : James Ferguson, Glenartney, Comrie. Shetland Ponies : Walter Aitchison, Coniccleugh, Huntly ; Captain Wentworth Hope Johnstone, Polebrook, Hever, Kent.

SHEEP.—Blackfaced : James Allan, Baluracoole, Shiskine, Arran ; Duncan M'Diarmid, Camuseright, Rannoch Station ; J. J. MacMillan, Gencrosh, Moniaive. Cheviot : Robert Dickinson, Longcroft, Oxton, Berwickshire ; Andrew T. Elliot, Nowhall, Clovenfords. Border Leicester : John Mark, Sunnyside, Prestonkirk ; Matthew Templeton, Sandyknowe, Kelso. Half-bred and fat sheep : John Caverhill, Jedneuk, Jedburgh ; John Riddell, Peaston, Ormiston. Shropshire : Alfred Mansell, College Hill, Shrewsbury. Oxford Down : J. Kenny, Westleigh, Albert Road, Caversham Heights, Oxon. Suffolk : S. R. Sherwood, Playford, Ipswich.

PIGS.—George Will, Crichton Royal Institution, Dumfries.

PETERBOROUGH SHOW.

The annual summer show, under the auspices of the Peterborough Agricultural Society, was held on Tuesday, Wednesday, and Thursday of last week. The weather proved favourably fine for judging to be got through comfortably on the opening day, but the second day was very unfortunate, rain falling incessantly the whole of the morning. The society has always been one of the most energetic as regards its efforts to stimulate agriculture and stock-breeding, but as regards the latter each succeeding year appears to mark the show as more of a horse exhibition than for other stock, though there is a creditable entry of Shorthorn cattle.

HORSES.

Horses take priority in the catalogue, the Hunter section coming first, and of these there was a very large entry.

In Leicestershire and Northamptonshire it is astonishing how some of these Thoroughbred or Hunter mares wear, breeding regularly year after year, and winning prizes themselves as well as bearing offspring that are capable of doing the like. One of such is Mr. H. R. Roe's aged mare Harmony by Marmiton, which won first in the heavy-weight brood mare class with foal at foot. Mr. J. A. Mullins' Everlasting (well known) and Mr. Harrison's Miss Melbourne were also winners in this class, while the best foals in the class were by Merry Matchmaker, Squadron Leader, and Glenrossal. In the light-weight brood mare class there were ten entries, the winning mares being Mr. Wilkinson's Rosalinda, Mr. Mullens' Glowworm, and Mr. Swallow's Tugela. The best foals in this class were by Roverstown, Glenrossal, and Grudon.

Tenant farmers' classes followed, and Messrs. Cheney, Carter, and Harris were most successful, dividing the prizes and exhibiting capital stock. The gold medal of the Hunters' Improvement Society was awarded to Mr. Mullins' Glowworm, and the reserve to Mr. Harrison's Miss Melbourne.

The young Hunter classes were exceptionally well filled, yearlings totalling twenty-one entries, and the growth and quality were very satisfactory, two-year-olds were also a very strong class. Well-known youngsters came to the front in these, Mr. Swallow's Recruit, Mr. Wilkinson's Lady Bird, Mr. Fenwick's Gay Boy, and Mr. Nickisson's Ensign being the best. Three-year old geldings were pretty strong, Mr. Wilkinson, Mr. Swallow, and Messrs Cheney owning the winners. Two or three capital three-year-old fillies were also shown, these were by Tweeddale Enterprise, and the Irish sire, Red Prince II, the silver medal going to Tweeddale's daughter, Husheen, shown by Mr. E. Harrison. Such shining lights as Mr. J. H. Stokes' Axiom, Mr. Drage's Mercedes, Whisky (Stokes), Chatterbox, and others, were the successful competitors in the riding classes or made Hunters. Messrs Cheney were also winners of several prizes.

Following along the successful track, the Hunters made Hackneys were quite one of the best shows of the present summer, Mrs. Fletcher's Angram St. Thomas, Mr. Fisher's Bradney Windle Swell, and Mr. R. P. Evans' Kingway were successful in the stallion class, the first of these obtaining the Hackney Horse Society's silver medal.

In the mare class Mr. Evans' beautiful and well-known mare, District Maid was first, beating Sir Walter Gilbey's Gallant Girl and Mr. W. Morton's Granford Sunshine. The latter mare, however, proved to be the dam of the first prize foal by Hedon Comedian. Amongst the young stock in this section were such celebrities as Sir Walter Gilbey's Lively Birthday, Mrs. Fletcher's Angram Queen, &c. In the harness classes several of the best owners were entered.

Shire horses have always been quite a stronghold of this society at its annual summer exhibition, and this year numbers and quality were quite fully up to the usual standard of excellence, several of the leading studs of the country being represented, as well as practically all the local studs from this great Shire district. Two-year-old stallions were the first class to come before the judges, and in this Mr. F. E. Muntz's famous colt King Forest by Lockinge Forest King came easily to the front; in shape, weight, character, and correctness of joints and feet he is certainly one of the best Shire colts of his age ever exhibited. Mr. W. Barrs and Sir P. A. Muntz had also very good colts in the prize list by Tatton Friar and Dunsmore Jameson. Geldings were next in the catalogue, and eight entries of for the most part fine and valuable horses were catalogued. The first prize was given to Mr. F. S. Freckleton for a red roan by Horbling Harold called Kirby Muxloe Duke II., a wonderfully big, showy, and correct horse with enormous lifting powers. Mr. F. W. Horrell and Mr. R. C. Cooper were each capitally represented in the class.

Yearling entire colts were a very promising lot, the open class bringing out some particularly good colts, and the local animals, though a little backward, were of a very fine class as regards their quality and points. In the open class Sir P. A. Muntz was awarded first for a very good Jameson colt, Dunsmore Professor, Earl Egerton making a very close second with Tatton Morning Star, a capital yearling by Tatton Friar, and Mr. Farnsworth sent a rare good third in his bay by Lockinge Forest King, Of the local ones the best were Messrs. Fletcher and Andrews, by Calwich Blend, and Mr. F. W. Griffin's by Boro Statesman, both showing quality and growth.

The Yearling fillies came next, and Mr. J. G. Williams made safe of the first prize with a well-grown and good limbed filly by Lockinge Forest King, Mr. W. T. Everard and Mr. John Rowell winning the other prizes as named, the second being a very close competitor and a charming filly; all the class were noticed by the judges. In the local class Mr. Rowell's filly was first, and Mr. A. E. Smith and Mr. F. W. Griffin were second and third. Two-year-old fillies (open) were also a very good lot. Mr. E. Orme's Combermere Abbess, winner at the Royal last year as a yearling, was placed first. This fine daughter of Tatton Friar has developed a good deal of massiveness and substance with quality, and was rightly placed in front of Lord Rothschild's Misty Morn by Birdsall Menestrel, a very choice filly in build and quality, but with scarcely sufficient scope about her. Mr. G. G. Atterbury's third, Fuchsia II., is also a grand stamp of Shire filly with scope about her, as well as correctness of build and quality with weight.

Local fillies of this age were also very good, indeed better need not be desired than Mr. Richardson's Wimbledon May Queen, Mr. Griffin's Bythorn Beauty, or Mr. J. S. Reynolds's Rose. The two winners in the three-year-old class were altogether an exceptional lot, Mr. W. T. Everard's champion (several times) Bardon Marion was at the head of the class, Earl Egerton's Tatton May Queen, second; and Mr. F. E. Muntz's quite wonderful filly, Aldeby Lady Jameson, third. Local three-year-olds were a smaller class, but the quality of the winners, Mr. R. Wood's Tichmarsh Baroness, Mr. W. Richardson's Alderton Ladybird, and Messrs Fletcher and Andrew's Maori Heliotrope, were good enough.

Pairs of Shires (mares or geldings) were a very interesting class and a capital lot of horses, many of the best animals of the breed taking part. Mr. Towgood came first with the London champion mare Stolen Duchess and the many times champion at other shows, Rolleston Fuchsia, two extraordinary Shire mares. Mr. Everard came next, and Mr. Leopold Salomons third, with well-known mares of the highest calibre. The local class of pairs was also very good, Mr. J. Bradly taking first with his splendid mares Halstead Lady Harold and Halstead Duchess III, Mr. John Rowell and Mr. J. W. Griffin had also remarkably fine pairs, winning the other prizes. Of single mares or geldings, Lord Rothschild's Royal winner, Belle Cole, was the best, a mare of sweet quality and build, Mr. W. T. Everard's Bardon Marion was accounted second best, and Mr. H. W. Kearns's Knottingley Rose third, the class throughout being one of the best. Mares with foal at foot were a very strong class, Belle Cole again came first for Lord Rothschild, Mr. Leopold Salomon's Childwick Juno second, and Mr. W. T. Everard's Barden Merry Lass third. The best foals were Sir P. A. Muntz's, by Dunsmore Jameson, a big and good colt; Mr. R. W. Hudson's, by Childwick Champion; Mr. Rowell's by Barfleur; and Mr. Crawford's, by Nailstone Cœur de Lion.

The champion prize and the Shire Horse Society's gold medal were awarded to Lord Rothschild's Belle Cole, and the Subscription Challenge Cup for the best local animal to Mr. F. W. Griffin's Boro Forest Queen, a very smart yearling filly by Lockinge Forest King.

CATTLE.

Shorthorns constituted the main features of this section; indeed, we may say the whole of it, as there were no other breeds exhibited except Lincoln Reds, another family of Shorthorns. Of the Coates Shorthorns aged bulls came first, and here Mr. T. Atkinson's Pride of Sunshine was placed first, a massive, heavily-fleshed bull by Pride of Collynie. Sir R. P. Cooper's famous white Meteor came second, and Lord Armstrong's Baron Merry Beau third. Mr. H. S. Leon's Ascott Wanderer and Sir R. P. Cooper's Shenstone Albino were best in the over one year class, and in the tenant farmers' class Messrs. Dean and Son and Mr. F. J. Steward were first and second; the general quality very good. For bull calves Mr. Raphael, Mr. T. Stokes, and Mr. Preece were most successful, and the champion bull was Mr. Atkinson's Pride of Sunshine. Cows were a smaller class. Mr. Atkinson was again first with Jenny 19th, Captain Harrison's Orange Girl and Mr. Stokes' Morvenna 9th being the other winners. In the heifer classes Messrs. Dean and Sons, Sir R. P. Cooper, Mr. Steward, and H.M. the King were the chief winners; whilst for heifer calves Mr. H. S. Leon, H.M. the King, and Messrs. Dean and Sons won the prizes. The championship of this section going to Mr. Atkinson's Jenny 19th.

Lincoln Reds were not over numerous, but nevertheless made a very good show. Messrs. Drewery and Son, Mr. J. Langham, Mr. John Evens, Mr. J. G. Williams, Messrs. Fletcher and Andrews, and Mr. G. Frier were the chief exhibitors, and each of them came in for a share of the honours.

SHEEP.

This section of the show was not of very important dimensions or quality; indeed, one of the smallest exhibitions we have seen at Peterborough. Mr. F. Ward, Messrs. Dean and Sons, with Longwool rams and ewes; Mr. A. S. Bowlby, with two pens of Hampshire Downs; and Messrs. J. A. Preece, W. Carter, and W. H. Lovell, with cross-breds, were the main exhibitors.

PIGS.

This section in a great measure atoned for the shortcomings in the sheep pens, and the display both of Whites and Berkshires was very good. In the White section the Earl of Ellesmere was the chief winner, and carried off both champion and reserve cards with Worsley pigs. Other winners were Mr, T. Henson, Mr. C. J. Tong, Mr. Daybell, Messrs. Duckering and Sons, Mr. Neaverson, Messrs. W. H. and E. Wherry, and Mr. W. E. Measures. In Berkshires, which were also very good, Mr. R. W. Hudson, the Duchess of Devonshire, and Mr. J. T. Inman were the chief exhibitors, and the honours were pretty well divided.

Wembley Horse Show.

The West Middlesex Horse Show Society decided to confine their show at Wembley Park to one day this year, and the step proved a wise one, for though a capital entry, especially as regards quality, was received, the attendance of visitors was disappointing.

The judges of Hunters had a comparatively easy task, for the exhibits of Mr. John Drage were such outstanding winners. Mr. J. Drage won all the first prizes in the open competitions, including the silver medal of the Hunters' Improvement Society, with two unnamed chesnut geldings. Both are of great quality, and stretched out well in their gallops. Mr. C. S. Mason's Rocket was the second best weight carrier. Mr. E. B. Brown's Signal won the second prize in the light-weight class, but later he headed a restricted competition for Mr. W. C. N. Chapman's special prize.

The Hacks were certainly one of the features of the show, the best of the novices being Mrs. Haines's chesnut gelding, another unnamed exhibit; while in the class for covert Hacks the Olympia and Richmond winners, Miss Trix and Arthur, were the leaders, the first-named being beautifully ridden by Mrs. Chapman. The same accomplished horsewoman rode the winning park Hack, Mrs. L. Albu's Charmer, beating Mr. Walter Winans' Bugle March and the good-topped Torpedo, the property of Mr. F. G. Haines.

An important class was that for horses in double harness over fifteen hands. In this figured the frequent winners Hopwood Horace and Hopwood Spark, belonging to Mrs. Hartley Batt, Mr. Winans' Londesborough and Lonsdale (the winning pair at Olympia), and Gougelt and Grandgelt, the winners at Richmond. The last named were recently sold for 1,000 sovs. to Mr. John Kerr, of Loudwater, and in that gentleman's name they appeared on Saturday. The judges could not get away from them, and were not very long in awarding them first over Hopwood Horace and Hopwood Spark. Mr. Kerr also won the single-harness contest with Loudwater Flourish, which beat some notable ones, such as Hopwood Spark, Mrs. Leopold Albu's Queen of the Fairies, Mrs. Goad's Prince Pick-'em-up, and Mr. Winans' Londesborough. The latter gentleman, though, won in the Tandem class with Londesborough and Lonsdale, and Mrs. Hartley Batt won in the single harness open class with Heathfield Squire, the old horse never going better than now, and beating several good ones in action, style, and pace. For the special prize given for pace and style Mr. Winans won easily with Colonel Wallace.

Ashton-under-Lyne Show.

Fine but somewhat cold weather was experienced for the Ashton-under-Lyne Agricultural Society's Show held on the 6th inst, the chief feature of which was the display of horses, some well-known animals being forward, notably in the light horse classes. The heavy going, however, did not allow of the animals being shown to the best advantage. The heavy horse section was not so well patronised, but there were some good quality animals forward. Cattle were not numerous, but included some useful dairy stock, whilst there were but a couple of classes of pigs.

WIRRAL AND BIRKENHEAD SHOW.

Last week, for once in a way, the Wirral and Birkenhead Agricultural Society had favourable weather for their show at Bebington, and the result was an excellent attendance of visitors on both days, the total being a record, which, together with the good entries, made the show a successful one, and it is to be hoped it will also prove a good one financially. The entries—4,448—were not quite so numerous as last year, about 100 less; and the decrease was pretty evenly apportioned over several departments, while in certain sections, notably poultry and dogs, substantial increases were recorded, but for the past three shows there has been a gradual decrease in the number of horses entered. There was, however, no decrease in quality, the exhibition in this respect being equal to any of its predecessors.

CATTLE.

There were good entries in the cattle classes, and some excellent quality beasts were brought forward. Perhaps a higher standard in dairy cows has been reached in previous years, but what were shown included some good specimens. The most notable feature of the section was the show of Shorthorns. Many noted winners, including Linksfield Champion, Mr. F. Miller's famous bull, were entered, but as will be seen elsewhere, Linksfield Champion was sent to Edinburgh instead, and in the class in which it was entered, the principal award went to Mr. R. R. Rothwell, of Preston, whose Strowan Marquis, a massive bull, which was shown in fine condition, beat Mr. Geo. Cooke's Chester Master Butterfly. In the class for bulls calved in 1906 the exhibits included Lord Brilliant, which was sold at the Royal for 1,000 guineas, and is destined to go to South America. Lord Brilliant, good bull though he is, was, however, beaten by Mr. Miller's bull Village Purple, who scored three victories in the classes in which he paraded. Quality was the distinguishing characteristic of the classes in which heifers were exhibited, Mr. Miller again being a considerable winner. There were some deep milking dairy cows shown in the classes in which cattle of any breed competed. Mr. S. S. Raingill, of Altrincham, practically carried off all before him in the three classes, winning two firsts with a good-looking roan of the Shorthorn breed, whose show-yard name is Pet, and in the in-calf class with Ruby, a light roan, whose good qualities have before brought her owner success. Kerry and Channel Island were strongly in evidence. In the open class for Channel Island bull, any age, Mr. Jersey de Knoops' Starlight, bred by Lady de Rothschild, was a strong winner, and in the cow class his Tena was awarded honours. In the classes for Kerry cattle, Lady Greenall was the chief winner, securing first and special with a Kerry cow, first for two-year-old heifer, and second in the yearling bull class.

HORSES.

As is usually the case at this show, there was a fine display of horses and notably Shires. Here chief interest centered in the success of Mr. James Gould, who had won two £50 champion cups twice, and only wanted to win them again to possess them. This he did, winning the prize for the best stallion with Lockinge Truffle, a black with white fetlocks, that was cup winner here last year. He has bone and feather, and is of correct Shire type. Mr. Gould won the other cup outright—Mr. J. W. Kenworthy's—with Lymm Blossom, a beautiful mare, but not quite the scale and power of Lymm Bloom, who won the cup last year. In stallions, Mr. Gould's Lymm Grey had an easy win, and Mr. Lewis Dodd's Rustic Friar was likewise well ahead. In the older classes Lockinge Truffle had a comfortable win against Sir P. A. Muntz's Dunsmore Premier. Mr. Sparkes, of Altrincham, showed his famous heavy geldings, and won with Duke, but the useful Lancashire and Yorkshire working geldings, one of the famous London pairs, took a good second, and split the heavy couple from Altrincham. Mr. Albert Muntz had hard lines to be beaten in the two-year-old filly class by the Duke of Westminster's Concert. In the yearlings Dunsmore Quicklime had an easy win. There were some very good foals, and Mr. Gould had a nice win in the class for pairs of horses with his beautiful mares Darling and Holme Lacy Starlight.

Hackneys were not so strong as they have been here in point of numbers, but quality was first rate. Sir Walter Gilbey's Lively Beeswing, who has met with such success this year, had quite an easy win in the two-year-old class, but one of the best classes was that for mares or geldings foaled in or before 1904, and here Miss Schintz won with her beautiful dark chestnut, Countess Clio by Rosador. Miss Schintz also won with Knowle Belinda in the brood mare class, but Messrs. Cockayne's Paddock Green ran her close. The entire horses were not as good as usual, and the well-known winner Administrator once again held his own with comparative ease.

SHEEP.

The display of Shropshire sheep was a good one, some splendid specimens being forward. Prominent amongst the exhibitors was the Duke of Sutherland, who not only secured a number of prizes, but had the satisfaction of carrying off the honours in the chief event—viz., the Edmund Taylor Challenge Bowl, value 5 guineas, for the best exhibit of Shropshire sheep in the show. Mr. A. Tanner, Shrewsbury, was first and reserve in the yearling ram class with a wonderfully springy and fleshy ram. Sir Richard Cooper, Bart, Lichfield, being second with a well-brought out ram, and the Duke of Sutherland third. Others successful were Sir Walter Corbet, Bart., Shrewsbury, and Mr. Frank Bibby, Shrewsbury. In the any Longwooled variety classes, Mr F. Miller secured first prize and special for a shearling ram, was first and second for three ram lambs dropped in 1907, took the first prize and special with three shearling ewes, and was also first and second for three ewe lambs dropped in 1907. He thus swept the board of practically all the prizes.

PIGS.

The show of pigs, with some of the most famous breeders in the kingdom competing, was an excellent one, the large and Middle Whites here, as at the Roal Show, being a considerable feature of the exhibition. In the large white sow class Messrs. T. Dodd and Sons, of Mollington, who were successful exhibitors at the Royal Show, won with Mollington Faith. The silver medal in the large or Middle White boar was won by Mr. A. Dewhurst, Bradford, Yorkshire, and for large or Middle White sow honours went to Sir Gilbert Greenall, Messrs. T. Dodd and Son, Mollington, being reserve.

Mid-Kent.

The Mid-Kent Agricultural Association were unfortunate enough to experience weather of the most wretched description on the day of their show at Maidstone (Wednesday), and the event was completely marred. The rain commenced with a thunderstorm just after the time the show opened, and it did not cease all day long. It was all the more to be regretted from the fact that, not only had the association obtained a splendid show of cattle, sheep and horses, a show stronger numerically than last year, and stronger in quality also, but Yeomanry Sports had been arranged, and Mr. Walter Winans had promised to send a contingent of the famous American trotters which carried all before them at Olympia.

The cattle section was very strong, and as is usually found in this part of the country, Sussex cattle appeared the favourites, and a fine lot of beasts they were. Mr. Hickman secured the first prize for bulls with Sammy, one of his own breeding; Mr. W. F. Winch was the first prize winner for cows with Tilsden Jesse, while the Hon. R. P. Neville carried off the premier award for heifers with Birling Countess, a daughter of Lord Comp. The Shorthorns were far away a better lot than at the last show. For Shorthorn bulls Messrs. Denny's Violet Pride was placed first, Mr. R. J. Balston, of Bilsington Priory, being placed second with Grand Duke of Ruddington 9th. Mr. Balston was also first with Shorthorn cows, as well as with heifers, whilst Mr. Walter Fremlin was placed first with May in the Channel Island section.

The sheep section was a good one, in which, of of course, the Kent or Romney Marsh breed was the most in evidence. Mr. C. File took the first prize for two-shear rams and for shearling rams also, as well as the championship of the ram classes for two-shear rams, which gained the first prize at the Royal Show; while Mr. J. E. Quested was the winner of the first prize for three ram lambs. The first for shearling ewes was won by Mr. J. B. Palmer, and for ewe lambs by Mr. Quested. There was no Southdown class.

The Hackneys were far better than last year, and some really good horses were on view. Mr. Le Marchant was the first prize winner for stallions, but Mr. E. J. Allen, however, carried off the Hackney Horse Society's silver medal, and the reserve as well.

The agricultural horse section filled well, and here Mr. Max Michaelis was placed first with King of the Forest III. for stallions in the older class, whilst for stallions foaled in 1905 or 1906, Mr. Cornwallis was awarded the first prize for Linton Bay Thumper, Lord Hothfield's General being second. For fillies foaled in 1904, Mr. Max Michaelis was most successful, gaining the chief award with Alexandra of Tandridge, which later was given the Shire Horse Society's silver medal.

Bishop Auckland.

The Bishop Auckland Agricultural Society's show was held in the picturesque park adjoining Auckland Castle on Wednesday, and, despite rain, there was a capital attendance. As in previous years, the exhibits in all sections were of excellent quality. The total entries numbered 1,165, as compared with 1,236 last year. Some very fine animals were shown in the horse section, and some of the best dogs in the county were exhibited.

Major Vaux, the president of the society, presided at the luncheon, and in responding to the toast of his health, said an idea had struck him, that one thing which would bring more subscribers to shows would be to get as many farmers as possible who had farms from 100 to 150 acres to enter for a good substantial prize for the best farms and not for the best horses. If his idea was taken up he would be willing to put his hand deep down into his pocket for prizes. It will be interesting to see if the suggestion is carried out.

Southmolton.

For their twentieth annual exhibition held at Hele Barton on Wednesday the Southmolton Agricultural Association received a record entry, thus justifying the committee in continuing to open the show to the unions of Southmolton, Torrington, Bideford, Barnstaple, and Dulverton, a departure inaugurated two years ago. The total entry was 382, made up of 216 horses against 206 last year, 55 cattle against 28, 60 sheep against 72, 34 entries for butter and cream against 26, 7 cider against 9, and 10 honey against 16. There was plenty of competition in the horse section, where there were stronger classes than last year, and a new feature was introduced in the Polo pony bending competition. A useful lot of brood mares and foals were shown, and agricultural horses were well up to the standard, as were the Hunters.

There was a gratifying increase in entries in the cattle classes, and the quality was also a great improvement on previous shows, old bulls being particularly good. Sheep, both Long Wools and Exmoors, made a very good show, and there was more competition than usual in these classes, although most of the old exhibitors retained their positions in the prize list.

Halesworth.

The thirteenth annual show at Halesworth did not by any means prove an unlucky event, but on the contrary was a complete success. The entries, thanks to the introduction for the first time of cattle, sheep, and pigs, were the largest on record, and the quality was, generally speaking, very high, so that the show promises to develop into a first-class exhibition of agricultural stock, and add still further to the reputation it has already gained as a horse show. There were 60 entries in the Suffolk horse classes, and 97 in the Shire and half-bred horse classes, and 127 in the Hackney section, whilst the cattle, sheep, and pig classes received good support.

SHOW GOSSIP.

The financial result of the Devon County Agricultural Association's Show at Bideford this year was made known at a meeting of the council of the association held on the 5th inst., and unfortunately a loss had to be recorded. The ordinary receipts were £2,229, and the expenditure £2,456, showing a loss of £224; but on the refreshment the receipts were £493, and the expenditure £425, or a profit of £68, thus making the actual loss on the show £156. It was pointed out that the deficiency was not so great as it appeared because the subscription list had been excluded, but in previous years the whole thing had been thrown together. There was a net gain on the whole year's working of between £80 and £100. It may be mentioned that the catering at the show was for the first time undertaken by the society itself, and the successful result naturally afforded keen satisfaction to the refreshment committee, who, whilst not claiming that the arrangements were perfect, think the results were encouraging, and with the knowledge gained by experience it was felt that the experiment should be continued.

The eleventh annual show of the East Berks Horse Show Society will be held at Hawthorn Hill Racecourse on Thursday, August 22, and the prize schedule, recently issued, gives promise of an interesting event, for a large number of both open and district classes have been provided with capital prizes for competition, so that, seeing the popularity of the fixture, there should be another big entry of animals and a large attendance of visitors. In connection with the last-mentioned matter it may be mentioned that the society has reduced the price of admission to 1s. all day, whilst the Great Western Railway Company will run motor 'buses between the show ground and Maidenhead Station, so that with increased facilities and lower charges there should be a record attendance of visitors—at least we hope so. Entries for the show close on July 30, or with double fees on August 6. Entry forms, prize schedules, &c., can be had of the hon. secretary, Mr. C. H. W. Dixon, 4, Henrietta Street, Covent Garden, W.C.

The committee of the South Brent (Devon) Pony, Hunter, &c, Society feel it imperative to make special effort this year towards clearing off the existing debt of about £21, and thus establish the show on a proper financial footing. There is no doubt the Brent Show has during the past twelve years done a great deal in the encouragement of local breeding, whilst the superiority of its exhibits has tended to educate breeders towards aiming at the production of the best animals. The committee hope that all persons in the locality are interested in such excellent objects, and that they will come forward specially this year with some measure of help in response to this necessary appeal.

The exhibition, to be held Saturday, August 3, promises to eclipse all former ones, inasmuch as particular prizes have been kindly offered by the president of the show, Miss Carew of Marley, H. F. W. Prince, Esq., G. B. Collier, Esq., and the Polo Pony Riding Society. The classes generally should be most attractive, providing new features in Polo pony bending, Polo pony ball racing, in addition to a vegetable and wild-flower show especially for cottagers and children. This, however, means increased prize money. Subscriptions and donations will be thankfully received on behalf of the committee by the secretary, and to facilitate the business an early response is hoped for.

The Poulton-le-Fylde and District Agricultural Society are to be congratulated on their prize schedule for their show to be held on Wednesday, Aug. 14, for it is one of the best as regards get up we have seen for some time, whilst as regards the prizes and classes these are on a liberal scale, and as competition is open to the United Kingdom a large entry should be received: it is certainly deserved. Entries close Monday, Aug. 5, with the secretary, Mr. R. Bibby, Market Place, Poulton-le-Fylde, from whom prize schedules, entry forms, &c., can be obtained.

A liberal prize schedule with many open classes and a large number of special prizes has been drawn up by the Merionethshire Agricultural Society for their fortieth annual show, to be held at Dolgelly on Friday, Sept. 13, and a good entry should be secured. Horses, cattle, sheep, pigs, are all provided with classes, and in addition there are sections for butter, poultry, and dogs. Entries for stock close on Aug. 29, jumping, &c., and trotting on Sept. 8, after which dates no entries will be received. Prize schedules, entry forms, &c., can be had of the secretary, Mr. R. Roberts, Rhydgarnedd, Towyn.

The Bishop's Castle District Agricultural and Horticultural Society's show will take place on Wednesday, August 7, under the presidency of the Earl of Powis. The radius has been extended to ten miles from the town hall, so that larger entries are expected. The prizes schedule shows there will be fifty-five classes, with prizes ranging up to £5 for horses, cattle, sheep, sheep dog trials, poultry, butter, &c. Entries close July 27 with the secretary, Mr. G. Fletcher, Bishop's Castle.

SHOW SECRETARIES.

Mr. W. MOORE,
Allendale Agricultural Society.

Prizes amounting to £650, with specials of the value of £250, will be offered for competition at the show of the Mid Somerset Agricultural Society, to be held at Shepton Mallet on Tuesday, September 3, and such a generous prize schedule should attract large entries. The show has earned a widespread reputation for its display of cheese, and this department receives full attention again this year, for the class prizes range in value up to £20, whilst there are several special awards. Butter is also another big section—in fact, the feature of the exhibition is its dairy show; but cattle, horses, pigs, &c., also receive their share of attention, and the whole should form another most attractive show, and be, if not the best, one of the best of the fifty-five held by the society. Entries close August 16, or with double fees August 24, with the secretary, Mr. W. Ozzard, Field, Shepton Mallet.

Clydesdale Horse Society.

At a meeting of the council of the Clydesdale Horse Society held in the Highland show ground at Edinburgh on Wednesday, a lengthy correspondence between the secretary and the secretaries of the Canadian Clydesdale Association and the Canadian Records Office, Ottawa, was submitted. The correspondence was with reference to the new regulations passed by the Canadian Association in respect to the admission of imported animals into the Canadian Clydesdale Stud Book. The rules in that stud book, it was stated, were much more restricted than those in force at home, and have already acted adversely on the export trade.

The council agreed that as the schedules and entries for Volume XXX. of the stud book had been issued it was impossible to take action in the way of altering the rules this year, but the secretary was instructed to communicate with the authorities in Canada requesting them to postpone until January 1, 1908, their proposed alterations. Meantime it was remitted to the Editing Committee to endeavour to bring the rules here more into line with what is desired by the Canadians.

SOCIETY ANNOUNCEMENTS.

WARWICKSHIRE AGRICULTURAL SOCIETY
(In conjunction with the Rugby and Dunchurch Agricultural Association).

SHOW AT RUGBY, AUGUST 28 and 29, 1907.

Prizes over £1,230.

For HORSES, CATTLE, SHEEP, PIGS, IMPLEMENTS, DAIRY PRODUCE, EGGS, DRESSED POULTRY, STOCK JUDGING COMPETITION, &c., &c.

Prizes in Horse Department over £685. Special Driving and Jumping Classes.

Last day of Entry July 27, after which at double fees up to Eight p.m. July 30. Prize Books and Entry Forms sent on application to

FREDERICK H. MOORE,
Warwick. Secretary.

MELTHAM & DISTRICT AGRICULTURAL SHOW.—The 16th Annual Show will be held on JULY 27. Horses, Cattle, Sheep, Pigs, and Produce; Leaping, Driving and Hunters; Dogs, Poultry, Pigeons, Rabbits, and Cats. Entries close July 20. Schedules and particulars from J. BRAMLEY, Secretary, Carlile Terrace, Meltham.

BAKEWELL FARMERS' CLUB. President for 1907, A. S. Marsden-Smedley, Esq., Darley Dale. The 59th, Annual Exhibition of Horses (Shires, Hunters, Jumpers, Hackneys, and Turnouts), Cattle, Sheep, Pigs, Wool, Roots, Cheese, and Butter, also open Trotting and Galloping Races, will be held at Bakewell, on Wednesday, August 14th, 1907. Upwards of £450 in Prizes, Challenge Cups, and Medals. Live Stock and Produce entries close Monday, August 5th. Racing, August, 9th. Schedules and entry forms, may be had on application to WILLIAM J. CLARK, Secretary, Farmers' Club, Bakewell.

HACKNEY STUD BOOK
VOL. 25.

Entries close at Single Fee on August 1, 1907.
(Late fees to September 2.)

For Entry Forms apply
FRANK F. EUREN,
Sec. Hackney Horse Society,
12, Hanover Square, London, W.

THORNEY SHIRE FOAL SOCIETY.—Eighteenth Annual Show will be held at Thorney, July 25, 1907. HARRY HORRELL, Secretary, Eye, Peterborough.

THE EAST BERKS HORSE SHOW SOCIETY will hold its 11th ANNUAL SHOW at Hawthorn Hill Race Course, near Maidenhead, on THURSDAY, AUGUST 22, 1907. Entries close July 30, or, with double fees, August 6. Schedules, &c., of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C. Telephone: No. 5148 Gerrard.

HARROGATE & DISTRICT AGRICULTURAL SOCIETY.

President: HY. WILLIAMS, Esq., J.P.

Will be held JULY 25, 1907.

Horses, Cattle, Sheep, Pigs, Poultry, Pigeons, Four-in-hands, Jumping, &c.

Entries close July 18.

Schedules from the Secretary,
G. SAVELL.
Park View, Harrogate.

THE SOUTH BRENT (12TH) ANNUAL SHOW,
SATURDAY, AUGUST 3, 1907.

For Dartmoor Ponies, Polo Pony Ball Race and Bending, Hunter Classes, Riding, Driving, Jumping, Butter, Cream, Honey, Cottagers' Vegetables and Childrens Flowers. Prizes to be given by the President (Miss Carew, of Marley), H. F. W. Prince, Esq., G. B. Collier, Esq., and the Polo and Riding Pony Society. Entry Forms and Schedules until July 20, from Secretary.—Mr. WYNDHAM HULL, South Brent.

COLESHILL HORTICULTURAL and HORSE SHOW,
TUESDAY, AUGUST 6, 1907.

Jumping, Driving, Hunters, Turnouts, &c. Nearly £170 in prizes.

Entries close July 23, 1907. For schedules, apply to—

W. H. M. BARTON, Secretary.
Coleshill, near Birmingham.

POULTON LE FYLDE AND DISTRICT AGRICULTURAL SOCIETY.—Open to the United Kingdom. August 14th, 1907. To be held on the Showground, Poulton le Fylde. Nearly £600 in Prizes, Cups & Specials. Splendid Classification for Shires, Hackneys, Turnouts, Tandems, Pairs, Jumpers, Cattle, Sheep and Pigs, &c. Entries close August 5th. Schedules from Secretary, Richard Bibby, Market Place, Poulton le Fylde. Tel. 6.

UP-HOLLAND & DISTRICT SHOW (Lancashire Federation), Wednesday, July 24th, 1907. Judges: Cattle, Pigs, and Heavy Horses.—G. H. Dean, Esq. Light Horses and Turnouts.—G. Pimlott, Esq. Dog entries close July 19, at 10 a.m.; other Exhibits July 20, at 10 a.m. Schedules, G. H. Scrivener, Up-Holland, near Wigan.

FELTON AND WARKWORTH AGRICULTURAL SOCIETY.

FELTON SHOW, MONDAY, August 5th, 1907.
£130 in Premiums for ordinary classes.
Special Prizes for Leaping. Open Competition.
Entries close July 18th, 1907.
Price Lists on application to the Secretary.
J. BARKER, High Stanners, Morpeth

KEELE AGRICULTURAL SOCIETY.

Keele Estates and North Staffs Hunt Show.

THURSDAY, AUGUST 8th, 1907.
£750 Prizes.
Entries close July 29: double fees later—dogs excepted.
Open Classes. Turn outs. Horse Leaping. Sheep Dog Trials.
Schedules ready.
Silverdale, Staffs, W. A. BENSON.

MALTON AGRICULTURAL SOCIETY'S SHOW.—WEDNESDAY, JULY 24, 1907. President: The Rt. Hon. Viscount Garnock. Special Prizes for Tenant Farmers' Hunters Brood Mare and Foal, Hackney Stallions, &c., &c. Schedules and entry forms on application to the Secretary — THOS. MITCHELL, The Mount, Malton.

DURHAM COUNTY AGRICULTURAL SOCIETY.—President, The Most Honourable the Marquis of Londonderry, K.G. The ANNUAL SHOW will be held on THURSDAY, AUGUST 15, 1907, in the picturesque grounds of Wynyard Park, Stockton-on-Tees (generously granted by the President). Upwards of £1,000 given in prizes for Horses, Cattle, Sheep, &c. Also two pieces of Silver Plate to cost not less than £25 each (the gift of the President) to be won outright in the classes for Shorthorn Cattle. Entries close Tuesday, July 30, 1907. Prize schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flass House, Durham. Prize schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,

WM. CHRYSTAL.
Houghton-le-Spring.

CORRESPONDENCE.

The Spread of the American Gooseberry Mildew in England.

SIR,—In view of an important stage having been reached in relation to the above matter, will you kindly allow me space for the following remarks?

Royal assent was given last Thursday to "The Destructive Insects and Pests Act, 1907," and the Board of Agriculture will now be able, under this new law, to issue an Order against the American gooseberry mildew.

I wish to point out how matters stand at this juncture, and especially to emphasise the necessity for growers to co-operate with the Board to stamp out this new pest.

During the past few weeks I have visited affected gooseberry plantations in Worcestershire, Gloucestershire and Norfolk, and in many cases I have seen the berries, leaves, and young shoots smothered with the white powdery masses of spores of the American gooseberry mildew. Experience in this country has already shown (as it has in other countries on the Continent) that severe pruning in the winter and frequent spraying during the spring and summer months do not eradicate the disease, and that the only certain way of dealing with this pest, if we wish to stamp it out before it spreads through the country, is to grub up and burn the affected bushes.

Already instances have occurred of considerable losses to growers caused by this new disease. In one case a grower discovered the disease in his nursery, and it was not until he had grubbed up and burnt the whole of his nursery stock, of the value of some £70, that the danger of the disease spreading to the adjacent gooseberry plantations (of a large acreage) was removed. In another case the loss was more serious still; here in a plantation of some 14 acres not only had all the gooseberry bushes to be destroyed, but, as I found the mildew had spread to red currant bushes growing intermixed with the gooseberries, it was necessary to grub up and burn these also in order to ensure the eradication of the disease and safeguard the surrounding unaffected plantations. The total loss in this case amounted to some hundreds of pounds. In a third case a nurseryman lost a considerable sum of money through the necessity of having to burn a large stock of recently imported standard gooseberries affected with the disease.

It is clear that growers are just beginning to experience the spread of a disease which, unless resolutely stamped out, will gradually invade and ruin their gooseberry plantations, just as the "Big Bud" mite has ruined black currant plantations.

The disease has been allowed seven years' start in Ireland and two or three years' start in England. Now that the Board has at length acquired the necessary legislative powers to deal with the disease, it behoves all growers and gardeners generally to co-operate heartily with the Board if they wish to see the American gooseberry mildew stamped out and their gooseberry plantations kept healthy.

Up to the present the outbreaks that have occurred in England are as follows:—Kent, on standard gooseberries only in one nursery (disease believed to be now stamped out); Worcestershire, thirty-one outbreaks in gooseberry plantations; Gloucestershire, one outbreak; Wisbech and district, two outbreaks; Warwickshire, one outbreak.—Yours, &c.,

E. S. SALMON, F.L.S.,
Mycologist to the South-Eastern Agricultural College, Wye, Kent.

July 8.

Harvest Beer.

SIR,—In your "Seasonable Topics" of last week's issue you invite correspondence on harvest beer.

Now in my mind the farmer who allows no beer comes in his own light in two ways.

First: What is beer, or what should beer be made from? Malt and hops—the farmer's crop. Can we as farmers expect others to use our crop, for such we must regard beer, if we farmers do not ourselves?

Then, secondly, take the present hay season, as fickle as can be, perhaps one day out of a week it's fit to lead. Give the man in the field two pints of beer (home-brewed, if you have it). The cost to the farmer will be perhaps 3d. That man will be working, while he never thinks to look if it is time to drop off. Then if the beer is what it should be, you have given him a stimulant, or a good pick-me-up, as he worked.

I think it is a very necessary thing for men in harvest and haytime to be supplied with a reasonable amount of beer, and will repay the farmer in more ways than one. He will be going to the market with the same barley after a while, and his brewery company perhaps are maltsters too; so it pulls once more.—Yours, &c.,

July 11. JUNIOR FARMER.

SIR,—In last week's issue of the MARK LANE EXPRESS you ask for discussion on the above question. It may interest some of your readers to know my experience.

Thirty years since we gave the men table beer at a cost of 6d. per gallon during haying time, with which they were quite content, besides paying 4d. an hour overtime, but I may mention that at times some of them, even at this low strength of beer, got too much. I used to be content if the hay was cut, carried, and stacked if it worked out at a gallon a wagon-load.

Some time after this I discontinued beer and allowed tea and sugar to come to the same cost in addition to overtime pay.

Again, I tried the plan of allowing each man 5s. for beer money, in addition to overtime pay. This on the part of some, caused great dissatisfaction; however, I did not give in.

At the present time I am allowing beer costing 8d. per gallon and overtime pay; the men were quite content with 6d. beer, but the brewers will not brew it now. The labourers work very willingly nine hours a day for 2s. 6d., but I generally find they get very tired of a long hay-making. After men have been at any kind of agricultural work of the same kind for some time they seem to want to have another job.—Yours, &c.,

THOMAS DAWS.
Soggs House, Ewhurst, Hawkhurst.
July 11.

Hop Prospects.

SIRS,—In 1905 and 1906 together England picked 941,626 cwt., and America 1,111,000 cwt.: total British and American crops, 2 years, 2,052,626 cwt.: England consumed in 2 years 1,400,000, and America, 775,000 cwt.: total, 2,175,000 cwt.

The Continent in 22 months sent about 160,000 cwt. to England, but it has no more to spare. July and August will absorb what England and America have left. The world closes the season with practically no stocks.

Europe no longer can grow an average crop, weather was and keeps too adverse. America is sure to get a short crop; it had two record ones in succession, and three full yields never follow each other. The world's acreage decreases, its consumption steadily increases.

Brewers and dealers should stock up, especially that cheapest, best keeping, and everyway best value of all hops, Belgians. If the whole world gets a full crop their price still is safe.

The world's stocks hardly suffice for the world's wants until next crop, which will be a late one.—Yours, &c.,

VAN WINT & Co.
Antwerp.

Treatment of Milk Fever.

SIR,—I should have liked to have known your Vet.'s opinion of the treatment of cows before calving that are suspected to be liable to milk fever. Since making this request in your issue of July 1 I have had the misfortune to lose one with this malady, although precautions were taken to prevent it which have hitherto been effective, but in this case proved futile.

She calved all right, without any difficulty, on the Saturday morning, after which she was given a drench; on the Sunday morning she was down at five o'clock. Our local vet. was promptly in attendance, and administered the new treatment, by injection into the udder, &c. From this she lingered until half-past three on the Monday morning, when she succumbed.

The vet. says he has had twenty-nine cases this season, out of which twenty-six recovered with this treatment; but to know how to prevent would be better than a cure, and would be of great benefit to some of the inexperienced of your readers.

This case was unusually quick after calving; we have generally looked for it about the third day after.—Yours, &c.,

July 9. GLOUCESTERSHIRE.

Specimen for Naming.

SIR,—I have noticed in the MARK LANE EXPRESS you state your willingness to give information respecting farm plants. I am enclosing a grass which grows on the marshes around here. You will observe it has a flower similar to the pea, and the seeds grow in a small pod. Can you inform me in your paper if it is a nutritious plant, and its name?—Yours, &c.,

July 2. SAM FARMER.

*** The Editor is always willing to assist readers by giving information respecting farm plants and other matter, but if you send any other specimens in the future, please pack them in a small box with a little damp moss round the stems to keep them moist. It is not easy to name plants when they are merely put into an envelope and arrive in a dry and withered condition. Fortunately, your specimen was not too far gone for identification, and I recognise it as the Grass Vetchling (*Lathyrus Nissolia*). The plant, of course, differs from the cultivated vetch, as the stems are more of a grass-like nature, but it nevertheless contains some nutritious properties, particularly when in a young and juicy state. When the stems are dry and wiry, like those of the specimen to hand, they are naturally not so nutritious as at an earlier stage.—RUSTICUS.

Wireworm Injuring Corn.

SIR,—Could you kindly inform me as soon as possible how to get rid of the wireworm which has come and begun to destroy my corn crop?

ANXIOUS ONE (IRELAND).

*** It is by no means an easy thing to get rid of wireworm that is injuring corn at the present stage of the growth of the crop, and I doubt whether you can at this time of the year adopt any method that will do much good. The time for preventive measures is in the spring, when corn crops on land infested with wireworm should be rolled so as to consolidate the soil round the plants and prevent the wireworms from moving amongst them. Another good thing at that time is to give a top dressing of nitrate of soda to stimulate the growth, and soot is also beneficial, as it seems to have a marked effect on the insects. With the corn fully grown, however, you will see how difficult it is to apply the above, or, in fact, any remedy. But are you quite sure that wireworm is the author of the damage? The reason I ask the question is that I have seen several fields of oats this season badly affected by the grub of the Frit fly, which any uninitiated person might mistake for wireworm. The grub referred to is a small red insect, and it may be found in the hearts of the plant near to the ground. The maggot feeding inside the main stems causes the plants to assume a sickly yellow appearance, the cause of which might readily be attributed to wireworm. Little can be done by way of a remedy at this stage of growth, but not infrequently the plants branch out again at the bottom after the central stem has been damaged. Of course, yours may be a case of wireworm, but I mention the possibility of the Frit fly because attacks of it are not uncommon this season. I may add that when rolling and stimulating with nitrate of soda cannot be done the only means of checking the ravages of wireworm on a growing crop is to trap the pests with pieces of potato, mangold, or carrot buried in the ground, and examined frequently. This is done in hop gardens, where wireworms are a great nuisance, but it is hardly practicable in a field of corn.—RUSTICUS.

"An Unrivalled Holiday Region."—Under the above heading the North-Eastern Railway Company has issued an interesting booklet giving details with illustrations of holiday resorts in Yorkshire, Durham, Northumberland, Cumberland, and Westmorland, and a perusal of the information given in the book should convince that the title chosen by the company is not an exaggerated one. The diversity and variety which distinguish the whole district of North-Eastern England is specially characteristic of that section of it known as the Yorkshire coast. Every class of holiday-maker is provided for; the weary, jaded workers, manual or mental, may find in the suggestive solitudes, where Nature may be studied in all her moods, that physical and mental rest and stimulus of which they are in need. On the other hand, man has combined with Nature to provide in the more fashionable and popular resorts—Scarborough, Filey, Whitby, Bridlington, Saltburn, and Redcar—that admixture of social life and gaiety, with great charm of natural surroundings, which are indispensable to a certain class of holiday seekers. Did space but permit much could be given concerning the other sections of "England's playground" as the North-East has been aptly termed. We would advise all who are fortunate enough to get holidays to write for a copy of the booklet mentioned before they decide where to go, and we feel sure they will choose a place in the "Unrivalled Holiday Region." We may add that the North-Eastern Railway Company make special arrangements for the convenience and enjoyment of visitors, including the issue of a series of cheap holiday contract tickets enabling holders to travel as many times as they choose over the portion of the line for which their tickets are issued, and circular tour tickets available for short periods. By this means it is possible for visitors to any one district to visit adjacent places of interest at a nominal expense, and thus add to the delights of the holiday without incurring the fatigue of unusually long walks or the heavy strain upon their resources which the payment of full fares would involve. There are also cycling and walking tour tickets and many other facilities, full details of which are given in the booklet under notice, a copy of which can be had, post free, for 1½d. from the Chief Passenger Agent, Department "A," North-Eastern Railway York.

NATIONAL POULTRY CONFERENCE.

The second National Poultry Conference was held at the University College, Reading, from the 8th to the 12th inst. inclusive, and was attended by about 240 members and delegates from different parts of the United Kingdom, the Continent, and the Colonies. The former consisted of poultry breeders and farmers representing the most advanced forms of the culture of fowls, and the latter were members of the committees of the different specialist clubs which are devoted to the developments of the interests of the breeds, in the distribution and breeding of which they were originally formed. The Poultry Club and nearly every specialist club was well represented.

The first National Poultry Conference was held in 1899, since when poultry keeping in every branch has made very marked progress, so that at the present time it has become a business seriously undertaken by those whose aim is to make a living by it; and it was therefore felt that the time had come for the meeting together of those representing the different phases of the industry to confer together as to the methods in vogue in their respective countries and districts.

The conference took the form of the contribution of papers on different subjects—which were read in several cases by their writers and in others by deputies—followed by a discussion, which necessarily had to be of limited form on account of the short time—five minutes in the majority of cases—allowed to the speakers.

Scratching Sheds and Colony Systems.

The first papers were devoted to the consideration of the two systems of housing in vogue in America, and called respectively the "Scratching Shed System" and the "Colony System," the former consisting of large ranges of houses built for the purpose of providing ample accommodation for fowls during the long American winters, when it is necessary that the stock should be housed indoors; and the colony system — as its name appropriately suggests—is made up of separate houses distributed over a considerable area of land, with the purpose of keeping the fowls separated as widely as possible. American methods have not been proved to be applicable profitably to utility poultry farming in England, speaking, of course, generally, and the expensive method of ranges of scratching shed houses was not upheld by the speakers who entered into the discussion, as their initial cost made the start altogether too heavy a matter for any poultry farmer who was desirous of making his fowls pay on utilitarian lines.

The scratching shed houses of America must not be thought of as being similar to the scratching sheds which we advocate as useful shelters to the poultry houses during the winter and for inclement weather, as they are built to provide a much larger area of space for each bird, with the object of keeping them there during the months when it is impossible to allow them free range on account of the severe climatic conditions, and to facilitate the easy feeding of a large number of birds which are, under this system, housed under one roof but divided off into compartments.

Fowls in England do better if they have access to their open run during the days throughout the winter; and it is only necessary to keep them shut in when snow is actually on the ground. Scratching shed houses, or houses with covered run or scratching shed attached, distributed on the colony system—*i.e.*, in separate runs, where the space is not unlimited—or about the farm, where there is plenty of land available—answer thoroughly well in England, and the cost is much less in proportion to the accommodation provided than the ranges of houses on the purely American plan, which necessitates the curtailment of the runs for the fowls to occupy when they can get out, as these can only be the width of the compartment of the house allotted to each pen, or, at most, the width of two where runs are built on both sides of the house, as is the case now and then.

Scratching-shed houses—as apart from the house and scratching-shed attached—consist of a good-sized house with wire netting front, and boards to the height of 2 ft. at bottom, the back of which is divided off into a roosting place, and in those on the American plan the roosting portion does not occupy the whole of the back of the house, but half of it, the roosting place being arranged in one corner divided off with wire netting principally. The birds when roosting are consequently not in a very warm place, as the whole of the front is open, with the exception of a weather-board at the top, and the three boards at the bottom, and for cold winter and spring seasons the house with lean-to roof and ventilation at the top only, provided with covered run at side with partly wire front is more conducive to winter egg production, for although the birds do not require artificial heat, they lay more eggs when the roosting quarters are comfortably warm.

Modern Methods of Incubation.

Modern methods of incubation—artificial and natural—were dealt with in two papers, and the discussions revealed that poultry breeders find hot water machines more generally suited to this climate than those on the hot-air system, and a judicious mixture of moist and dry foods better than one of all dry feeding for the growing stock. There is one point here which was not touched on but which merits the consideration of every poultry keeper who has to weigh the cost with its relative gain, and that is the moist system is less expensive, and in rearing chickens for the table considerably more weight is put on by the birds which are fed on moist foods, for it must be remembered that the flesh of fowls is largely composed of fluids when this is subjected to analysis.

Laying Competition: Some Suggestions.

The consideration of the laying competitions as conducted by the Utility Poultry Club in England and those in Australia brought clearly before those who are interested in the production of the commercial egg that, whereas the four months devoted to testing the productiveness of pens of four pullets for sixteen weeks in the winter months is useful, the twelve months' laying is the only test of the averages produced by fowls, and that a two years' competition would be altogether more useful as testing the length of time the different breeds take up for moulting and recommencing to lay during their second winter. Until this can be done by a club entirely with a view of supplying reliable data for others, the principal test is yet to be made; for while breeders of the different varieties conduct tests for their own information, these are not looked upon to supply averages as are the public competitions which are carefully carried out by rules most thoroughly enforced.

When a few subscriptions are forthcoming to help in this matter, very much will be accomplished in the interests of the small poultry keeper and farmer. Unfortunately the English poultry keeper is not assisted, as is the Colonial one, by a Government grant applied to the furtherance of tests of productiveness and usefulness, but we hope the time will come when this will be changed, for the poultry keeper is gradually making his way, and those interested in the problems of agricultural success in this country have come to consider the domestic hen as less significant than of yore.

Two or three Government experimental stations could be established for the outlay of a few hundred pounds, and poultry breeders would supply all the birds which would be required for experimental purposes, and the produce from these birds would pay the expense of feeding and the labour of a good man at each. Unless something is started ere long on these lines by the Board of Agriculture or under Government authority it will be necessary for some poultry breeders to combine to establish experimental stations for the production of eggs and market poultry only, keeping careful records of all outgoings as well as returns.

Over ten years ago we wrote to several daily papers on this subject, but at that time the interest taken was not sufficiently developed amongst those with means at their disposal to incline them to subscribe towards what would be a national benefit, as providing incontestible proof of the profits of poultry keeping, as well as acting as an educational medium. But we are hopeful now that the time is not far off when we may see this put into practice, because we are convinced of its thoroughly useful possibilities.

Some interesting papers on hybridisation and of breeding the different noted varieties, were followed by papers on "Poultry Keeping in Confinement," and women's work amongst poultry was well considered after the reading of papers by several ladies.

[Photo by] [Clarke and Hyde.

THE NATIONAL POULTRY CONFERENCE AT READING.

A Group of Eggs on show at the Conference. These comprise the eggs of South African ostrich, Irish duck, Swedish hen, turkey, and of a guinea fowl—the largest and the smallest.

An Instruction Class in Eggs. (About thirty-five thousand were exhibited.)

Milk Chickens.

The production of milk chickens (*Petit poussins* or *poulets au lait*), as in vogue in Belgium, was under consideration for some time, but having made careful inquiries for the last two years amongst those who do the best class of table poultry trade in London, we are only able to find three or four who have any demand for these, and then this demand is limited to those who have acquired the taste on the Continent, and the prices given by the handlers have not paid those English poultry breeders who have tried to cater for it.

We should be very glad to see this trade develop, as by careful feeding the chickens could be produced in England which would more than satisfy those who had acquired their taste on the Continent, and a really profitable branch of poultry raising could be turned to account. It is somewhat strange that, considering the large number of Transatlantic visitors we have each summer, that some of the large London hotels have not considered the advisability of catering for them by adding to the *menu* the broiler (as it is known in America), otherwise the milk chicken of France and Belgium (for these birds are practically of the same age, although fed differently in the two countries of production.)

Should there ever be an established demand for these young birds—as apart from the eighteen weeks' (and upwards) chickens now marketed—it will be a boon to poultry raisers who bring up

pullets for laying and find their cockerels very numerous, and on account of being of the egg-producing breeds, altogether unsuited for the English style of table fowl.

Other papers dealing with the results of experimental work in the United Kingdom, methods of instruction, and the application of State aid to poultry keeping abroad, and the possibilities of what might be done at home, were well received.

Miscellaneous.

Unfortunately, there are no authentic statistics to enable those interested to gain information as to the wonderful strides made in poultry production in England, but that this is carried on profitably in the majority of cases owing to the thorough grasp of the subject due to the dissemination of information by those who spend all their time working with fowls through such mediums as this and other papers, and by means of lectures and house-to-house visitation, can be seen by the careful observer, and is confirmed by many farmers, who are thankful to have had such a substantial addition to their income by the returns from their fowls. We have no hesitation in saying that this is only the beginning of the industry; for now that careful experiments have proved the cost of rearing birds to marketable age, and the prices for these are well maintained year by year, prospective poultry keepers are enabled to benefit by the experience which has, in many cases, cost the experimentalists money and time.

We do not believe in expensive organisations for the collection of produce, the upkeep of which lessen the producer's profits, and when there are reliable salesmen who pay really just prices for good produce, it is not necessary for poultry keepers to resort to them; but what we require to do is to show producers the necessity of economy and efficiency in feeding, and the importance of intelligent management all the year round.

We were somewhat disappointed that authentic figures of the cost of rearing as against prices obtainable were not forthcoming, but undoubtedly the result of this conference will be a great increase of interest in poultry keeping generally, and provided that those who add this to their work do it on practical rather than theoretical lines, it can only be for good, and for their own profit.

The conference brought together those representing various branches of poultry culture, and we were glad to find that the subjects treated in the papers read dealt with utility poultry keeping and breeding rather than with exhibition birds, which is in the poultry world the "professional" branch of work.

With our splendid markets—the finest in the world, agreed on by all producers—we should endeavour to get railway rates reduced for the conveyance of the produce to these centres, and this can be done by co operation. The arrangements made at the college were all for the comfort of the members, and reflected great credit on those who were responsible for the organisation of the conference, and members left Reading feeling that a new interest would be taken by many who were there, resulting in increased production throughout the country.

In our next number we shall deal with the display of English and foreign fowls and eggs which was one of the most interesting collections it has been our privilege to see.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended July 6, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (13,011), 10,628; sheep and lambs (600), 602; horses (207), 592.

Fresh meat:—Mutton (60,876 cwt.), 94,144; pork (4,642), 3,405.

Salted or preserved meat:—Bacon (108,065 cwt.), 102,542; beef (3,218), 4,499; hams (36,603), 31,509; pork (4,131), 8,149; meat (12,232), fresh, 9,002; salted, 916; meat, preserved (9,770), 4,394.

Dairy produce and substitutes:—Butter (96,459 cwt.), 84,275; margarine (22,696), 17,775; cheese (67,877), 67,912; milk, cream (182), 140; milk, condensed (16,018), 15,675; milk, preserved (22), 39.

Eggs (great hundreds):—(418,429), 453,747; poultry (value £5,343), £2,804; game (value £23), £24; rabbits, dead (not tinned), (240 cwt.), 1,025; lard (54,634 cwt.), 42,193.

Corn, grain, meal, and flour:—Wheat (3,062,200 cwt.), 2,138,600; wheat meal and flour (284,900), 206,600; barley (236,400), 198,000; oats (467,100), 134,800; peas (32,470), 29,540; beans (3,510), 710; maize or Indian corn (1,349,000), 1,299,500.

Fruit (raw):—Apples (3,353 cwt.), 6,552; cherries (17,090), 28,385; gooseberries (12,224), 14,888; strawberries (2,132), 3,762.

Hay (4,984 tons), 2,039; straw (1,840 tons), 1,179; mosslitter (1,399 tons), 1,563; hops (3,584 cwt.), 1,822; locust beans (21,340 cwt.), —.

West Country Notes.

THE Chief Constable of Cornwall has raised a very important point with regard to inspectorships under the Board of Agriculture. The sheep-dipping measure was the one which caused "the worm to turn." The view taken by the Chief is that piling up these alien duties must be detrimental to the more important public duties and interests. The police, he says, were never intended originally to carry out those duties which the Board of Agriculture and Fisheries now sought to impose upon them. Their duty was the prevention and detection of crime and the protection of life and property. He alleged, and I think he is right in his contention, that there was a concurrence of opinion that the Board of Agriculture should be asked to have a little regard for police duties proper. There are six or seven Acts under which the police have to act as inspectors.

AT a time when licenses have to be procured for the least movement of swine, or when anything of the nature of an outbreak of infectious disease is in existence, one who is brought into contact with the police sergeants and superintendents or inspectors cannot but sympathise with the worried aspect they so often present. They have perhaps an important matter respecting life or property to investigate, but they have to devote a large share of their energies and attention to agriculture affairs. The reception they get from those whom they have to "inspect" or license is generally the reverse of pleasant, though there is also usually some little ameliorating attention in the shape of refreshment.

VERY opportunely the Board of Agriculture call attention to their leaflet on the making of ensilage, which they have reissued. When a farmer can be found to regret that his crops of grass and clover are so heavy, there is evidently some necessity for trying any method that can be devised for securing that those crops shall not be utterly wasted. When I mentioned ensilage to my friend who made the complaint, he shook his head sadly. To the farmers who send milk to town it is of little use to say "try ensilage." They may make it, but they dare not use it for their milch beasts. The contracts into which they enter absolutely forbid its use in many cases. Even if they did not there is a good chance of the milk being rejected on account of flavour.

IF for a couple of days the hum of the mowing machine tells of the hay harvest, it has so far been promptly silenced by the ominous clouds overhead gathering, and in a short time the crop is laid still further, but not by the knife or scythe.

EVEN the farmers' children are affected by the depressing weather. "Why don't the clouds stop crying!" asked one; and another tiny mite wanted to know if they could not send a man up in a balloon to turn the sun round, so that there might be some fine weather.

RECORD crops of potatoes are being reported from Cornwall, and those of "May Queen" are particularly well spoken of. Prices are low, but the supply being so good the loss is less felt than was at one time feared. Cornish croppers are pushing forward with broccoli planting, for which the season is very favourable.

REDRUTH show is a mixed one, but there is a good agricultural element amongst its record entry for the present year, 1907; there being nearly 200 horses. Horticulture plays a good part. In all respects the gathering was very successful.

AT least half a dozen agricultural shows are taking place in various parts of Devonshire the next week or two, and most of them promise well.

ONE method by which the various education authorities are trying to work into the hands of parents and farmers is by a judicious consideration of the times of holiday. The granting of holidays at the busy seasons on the farms is a great boon to both. Fruit picking is a profitable source of occupation to many of the children, as well as grown ups. Many children voluntarily undertake the work. To earn a sovereign during the holiday, as many of them can, is a great price to them. Expert pickers can do still better, and at what appears a very trifling price, piece-work, women can earn from 15s. to 25s. per week during the season of potato setting, fruit, and pea picking, haymaking, and other occupations, common in the West as elsewhere.

IT is not only at these seasons that little increments to the wages are possible. There is the milking and sundry other employments which are always in season. Consideration of these points leads one up to another very important subject.

ONE of the big, but not usually recognised, causes of the rural depopulation is the enforcement of the Education Acts. Labourers with families are particularly useful on the land, whether it be the corn farm, the fruit and vegetable farm, or the dairy land. There is a great amount of work, in season and out, that can be performed by the younger members of the household without interfering with their attendance at school. The mischief, however, is that the school is in so many instances at such a distance that the children have to spend nearly as much time getting there and back as they have to give to the lessons.

THE rate at which they travel is, of course, of the Shakespearean value. In bad weather the difficulty is increased. The parent, as a consequence, cannot be induced to take work where he is wanted worst. The village itself became in a sense almost as much overstocked with labour as the towns, but the outlying homesteads could not obtain it. By and by a move was made to where there are greater opportunities of obtaining employ, and this is to the town. A big share of the drift to the populous centre is caused in this way.

NOW, if the children could be conveyed to school from the outlying hamlets and solitary homesteads there are many parents who would be only too willing to get out to these and take up the work. This is a view of the subject which is worth consideration.

PERHAPS not with the same ideas that are above suggested, but still with the object in view of making it easier for the country children to comply with the requirements of the School Attendance Committees, the Cornish novelist, Mr. Quiller-Couch, has in his own district been agitating the matter.

IT is cruel to children to have to go two and a half miles across fields in the abominable weather we have been experiencing. And what boy, or girl either, can be reasonably expected to withstand the temptation to loiter when the fine weather does come? If it be across moors, as is so often the case in Devon and Cornwall, as well as in other counties, the distances are often longer and the circumstances worse.

BY AND BY, pressure is brought to bear on the parent. It is a pressure he cannot withstand. Even if he is outside the area of compulsion he has the natural ambition that his children shall be somewhat of scholars. Off, then, to the town, where he can be close to schools for the youngsters. No one to take his place on the farm! What then?

MR. QUILLER-COUCH argues that it is better to pay for the children to be taken to school than that they should escape attending. The grants earned will generally far more than pay the cost.

FEW people there are in England who have not heard of Widdecombe Fair, and the interesting announcement is now made that the bells of Widdecombe-in-the-Moor, where the famous fair was held, have been heard again this week after having been rehung. The bells were cast in the year 1632, and were in the tower when it was struck by lightning during service in October, 1638. Many worshippers were killed. They did not, probably, include any of those who borrowed Tom Pearce's grey mare to go to the fair. I do not think anybody who has heard the famous West Country song has for many years heard the full tale of the load the poor mare had to drag on the occasion.

I TOOK it down some years ago, as sung by an old West Countryman, who had a rhyming list, which the general version of the song has not. They were—

"Bill Brewer, Jan Stewer, Peter Gumey,
Dan'l Whiddon, Ben Beckway, Peter Davey,
Jan Waller, Harry Hawk, and Tom Paul,
And my Uncle Tom Cobbleigh and all."

There was a refrain, as he sung it, at the end of each line of "Oh! I Oh! I Oh!" in which all the company joined, and it had consequently even more life than Baring Gould's well-known version.

July 12, 1907.

The Cheshire Farmers' Club have decided to support the resolution adopted by the Staffordshire Chamber of Agriculture, urging the Central Chamber to seriously take into consideration the formation of a really independent agricultural Parliamentary party, in order to return to the House of Commons a number of members pledged to represent the interests of agriculture. As regards the Small Holdings Bill, the club urge that a parish meeting should be called and at least two-thirds of the ratepayers should be in favour of the small holdings before application was made to the County Council.

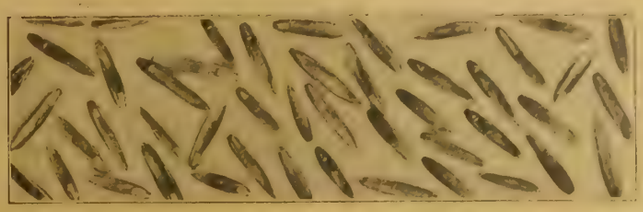
Lincolnshire Notes.

LINCOLNSHIRE is already well represented in the new Land Holders' Central Association which was formed in Lincoln last week. The inspiration of the association is Mr. Algernon Turnor, and the landowners supporting the association are—Lord Londesborough, Lord Scarborough, Lord Lindsey, Lord Kesteven, Mr. Chaplin, and Mr. C. Turnor. Messrs. A. Turnor and C. Turnor were placed upon the committee.

AS my readers are aware, Mr. Christopher Turnor is chairman of the Lincolnshire Chamber of Agriculture, and a gentleman who is doing much to direct and foster the new agricultural policy which is springing up in this county. In an interesting letter he has confided to me his views on the new association. "My hope," he says, "is that it may act as a means of stirring up increased interest in agriculture as an industry, and that it may incite existing agricultural organisations to greater activity."

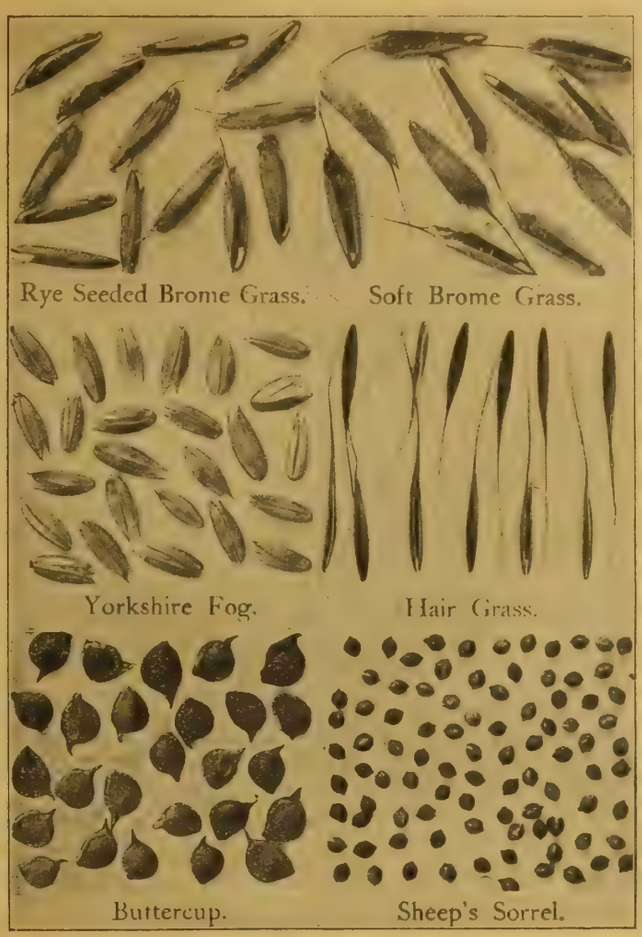
AS to its policy, Mr. Turnor says:—"First of all, to my mind, we want to see the majority of farmers, landowners, and I hope labourers belonging to distinctly agricultural organisations, instead of as at present only a percentage, and often I fear only a small percentage. Then we want to see a greatly increased agricultural influence at work, an influence which will work for the welfare of agriculture as not only an industry, but as the greatest industry in the country, believing that until agriculture is in a more flourishing condition, the whole social fabric of the country cannot be in a satisfactory state. This new association, he concludes, is not formed for defence, but rather with the idea of being pioneers of the best and soundest way to secure increased facilities for agriculture, including the development of a sound scheme for small holdings, education better suited to rural districts, &c."

THIS is all good sound doctrine, which every agriculturist would like to see applied to the problems of the land. Let us hope the new association will really go a step towards effecting what Mr. Chaplin claimed for it—a consolidation of all interests in agriculture. Amalgamation there can never be.



THE Small Holdings Bill is surviving criticism, thanks to the determined attitude of Mr. Harcourt. Mr. Chaplin is evidently anxious about it. He would like to see it made permissive, like many other Small Holding Acts which have proved a grotesque failure on that very account. But Mr. Harcourt will have none of it. The local authorities must do their duty. To those who are willing there will be no sort of attempt at coercion. Nor is there any proposed, even for the unwilling. There is only to be what Mr. Harcourt rightly calls alternative action. When the local authorities won't or can't carry out the Act the board above will kindly do it for them. But the main argument is that the Act has got to be carried out by somebody.

IF the proposed establishment of the sugar-beet industry in Lincolnshire depends upon an import duty its postponement for a year will have to be considerably prolonged. The debate in the House on Tuesday, the speech of the Chancellor of the Exchequer, and the evident temper of Parliament, bodes ill for sugar taxation in any form. The Government has already seriously strained the loyalty of its followers.



THE difficulties of the hay harvest are beginning to assume rather serious proportions. A really splendid crop is being threatened with disaster. The outlook is of the blackest, the weather has every prospect of keeping up its Novembrian character, and, altogether, those farmers who have finished leading—there are a few—are the happiest. Those who have not are beginning to think of having another look at the Board of Agriculture's circular, No. 9. Ensilage is dead and done for, a well-known farmer told me the other day, but I am not so certain that we shall not have to warm up its corpse. Even a buried crop is better than no grass. And perhaps, after all, the system has not been fairly tested.

AT any rate something will have to be decided. In a few weeks now we shall be landed amongst the corn. What will be the harvest be, I wonder? "It cannot be very much whatever the weather," an old salt of the soil said to me the other day. It is bound to be late, and I never knew a late harvest turn out a good one. But I am not at all sure. Some of the crops I have seen have a very promising look indeed. We have given up July as a bad job, but a glowing August might make our hearts rejoice in a way they have not rejoiced through many a harvest. Will not the clerk of the weather give us just a last little chance?

Perennial Rye Grass and its Impurities.

Pure Perennial Rye Grass.

The first of the above illustrations represents a sample of Pure Perennial Rye Grass, whilst underneath are shown some of the seeds of weeds to be found in imperfectly dressed samples. Unremitting attention and consummate skill, combined with perfect machinery, are requisite in ensuring the supply of the purest seeds. For our illustrations we are indebted to Messrs Dickson and Robinson, Manchester.

THE sixteenth Alford Horse and Foal Show was a distinct though not a record success. The entries exceeded last year's, their quality was quite the feature of the show, whilst the Shire foals have never been beaten in a local show-ring. Lincolnshire should one day be as famous for its Shires as for its sheep. The breed is wonderfully improving.

MR. DUDDING'S sale was held on Thursday. About sixty Shorthorns from his famous herd came under the hammer. They included several fine young cows with calves at foot from the most fashionable strains; and about thirty-three two and one-year old heifers, including the prize winners of this season. About fifty Lincolnshire long-wool yearling rams and some ewes, specially selected, and including this year's prize winners, were also in the collection.

ANOTHER classic sale took place on Friday, when Messrs. John Thornton and Co. sold by auction at Heath House, Nocton, about sixty Shorthorns from the fine herd of Messrs. S. E. Dean and Sons, and about 100 shearling rams and gimmers bred for pure strains. I doubt not that the results of these important events is duly reported in the MARK LANE EXPRESS.

IT may be some consolation to turn from corn to potatoes. The first liftings seem to promise well. The tubers are small, we are told, but very numerous to the root, some sorts producing from four to five tons to the acre. Prices, too, are fairly good, averaging between £7 and £9 per ton.

ON the other hand, the fruit season is anything but a good one, whilst strawberries are fairly plentiful, though sadly lacking in sunshine to perfect them in colour and flavour. Gooseberries are very light, particularly in unsheltered gardens. Small berries promise fairly well, but the apples have been almost decimated under a combined attack of frost and caterpillars. Pears promise moderately well. Plums would be a nice crop if they could be let alone, but, as Hamlet would say, that is the question.

THE Lincolnshire breeders were again in evidence at Peterborough. Mr. W. B. Swallow, Wooton Lawn, gained the first for Hunter yearlings, the third for mares up to between 12 stone and 14 stone, and the second for three-year-old geldings. Messrs. S. E. Dean and Sons, Dowsby, took the cup and first prize for bulls not exceeding three years old, property of tenant farmers; first for heifers above one year, second for heifers above two and under three years (the winner being owned by his Majesty the King), first in a tenant farmers' class for bulls of the same age, and first also in a tenants farmers' class for bulls above one and under two years. Mr. J. Evens, Burton, gained the first for cows or heifers three years old and upward, 2nd for bulls under eighteen months, and third for cows or heifers for dairy purposes. Amongst sheep, Mr. F. Ward, of Quarrington, gained first for a Longwooled shearling ram,

Messrs. S. E. Dean and Sons taking the second, and Mr. Ward was first again in the tenant farmers' class for five Longwooled ewes.

THE following paragraph carries its own comment :—"A well-cultivated farm of 65 acres in Timberland, Lincolnshire, which in 1870 made upwards of £5,000, was offered by auction at Sleaford last week by Messrs. Earl and Lawrence, when £1,710 was the highest price obtainable. Another well-managed small holding of 97 acres, which made a high figure some years ago, was withdrawn at £1,170." And yet there are still people who object to sell their land for small holdings.

MR. SAMUEL LEGGATT, of Dogdyke, has sold his yearling entire colt, which was the winner in Class 19 at Lincoln, to Mr. Everard, of Bardon Hall, the owner of the famous stallion Lockinge Forest King, for £100.

MR. J. E. CASSWELL, of Laughton, is to judge the Lincoln Longwool sheep at the Dublin Horse and Sheep Show, and Mr. C. W. Tindall, Wainfleet, is to share the work of judging the Thoroughbred stallions and brood mares.

July 12, 1907.

DAIRY.

The Dairy Show of 1907.

The proposals of the Show Committee with regard to the classification and prizes for dairy stock, produce, and appliances at the Association's Dairy Show of 1907, to be held as usual at the Royal Agricultural Hall, Islington, were recently considered by the Council of the British Dairy Farmers' Association, and the schedule was eventually passed, the following being the principal alterations from last year :—

In the milking trials the points for time since calving are reduced to a maximum of twelve instead of fourteen.

A new class is provided for Lincolnshire Red Shorthorn cows, at the instance of the Lincolnshire Red Shorthorn Association.

Last year's classes for cows and heifers "not eligible to compete in preceding classes" are omitted, and the following two classes are provided for cows to be used in the milkers' contests instead of the special class originated last year :—(*a*) Pair of cows of any breed or cross, in milk, with prizes £15, £10, £7, £5, £3 ; (*b*) Single cows, any breed or cross, in milk, with prizes £5, £4, £3, £2, £1.

In the bull classes it is notified that bulls from dams that have won the special milking prizes of the Shorthorn Society, or the prizes or certificates of the Dairy Shorthorn (Coates' Herd Book) Association, are eligible, as well as bulls whose dams have won prizes or certificates of merit in the milking trials or butter tests of the B.D.F.A. or any other society.

In the cheese section separate classes are provided for coloured and uncoloured Cheshire cheese, and a new class is made for Derby cheese, while the prizes for double Gloster are increased to the extent of £4.

Colonial butter will, for the first time, be judged according to a scale of points, a card to be placed at the top of each exhibit showing the points awarded.

In the appliance section the gold medal and the silver medal of the Association will be offered for milk strainers, or strainers and filters combined, capable of effectually dealing, other than by centrifugal force, with at least 100 gallons of milk in an hour.

In the milkers' contests the prizes are increased, those for men to the extent of £4, and those for boys and girls respectively to the extent of £6 10s. in each class. The prizes for women milkers will be £25.

The Selection Committee reported that they had held a meeting to nominate judges in the various sections of the show, and proposed to complete the list both of judges and stewards at the next sitting.

Whitchurch Cheese Fair.

There was a pitch of 74 tons of cheese at this fair on Wednesday, and trade was brisk with a decided improvement in prices. Buyers were numerous, which resulted in a quick clearance at 54s. to 60s., medium being 50s. to 53s. At the corresponding fair last year the pitch was 50 tons, and prices were 60s. to 64s. for best, with nothing lower than 50s.

Lancaster Cheese Fair.

There was a good attendance of buyers at Lancaster Cheese Fair on Tuesday, when the pitch comprised 86 dairies and 1,356 cheese, mainly good-made grass cheese with fair keeping qualities. Prices ranged from 60s. to 62s. for the best, and 56s. to 60s. per cwt. for moderate qualities.

The Yorkshire Agricultural Programme.

COLNE VALLEY CANDIDATES' OPINIONS.

The Parliamentary Committee of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture have written to the candidates in the Colne Valley election asking for their views on the various heads of the Union's Agricultural Parliamentary programme ; also inquiring whether they were prepared to pledge themselves to support "by all the means in your power, all or any (and which) of the items of the programme, and, in the event of your being returned to Parliament, to take an active part in promoting and maintaining the same in the House of Commons on every available opportunity."

Questions Put to the Candidates.

1. THE SALE OF BUTTER BILL.
   Q. Now before Parliament.
2. LOCAL TAXATION.
   Q. (*a*) That a permanent and comprehensive measure be passed, giving adequate relief from the excessive and unfair burdens at present imposed upon agriculture.
   Q. (*b*) That steps be taken to remedy the anomalies disclosed by the Reports of the Royal Commission on Local Taxation, and especially to provide one uniform assessment for all purposes both imperial and local.
3. RAILWAY RATES.
   Q. (*a*) That the granting by railway companies of preferential rates and facilities for foreign produce be absolutely prohibited, and that the Board of Trade be empowered and instructed to enforce the Law.
   Q. (*b*) That more ready means be provided for obtaining the reduction of unreasonable rates on English produce.
   Q. (*c*) The conditions of owners' risk, rates, and consignment notes be amended on the lines of the Railways (Contracts) Bill now before Parliament.
4. TUBERCULOSIS.
   Q (*a*) That pending the Report of the Royal Commission on Tuberculosis now sitting no further powers should be given to local authorities by public or local Acts to deal with tuberculous milk or meat.
   Q. (*b*) That when the report is issued the question of tuberculosis should be the subject of general legislation introduced by the Government and applicable to the whole country, and should not be dealt with by private Bills of municipal and other urban authorities.
   Q. (*c*) That in any legislation dealing with tuberculosis, due provision be made for compensation out of the Imperial exchequer in respect of tuberculous animals or carcases slaughtered or seized in the public interest.
5. BEER DUTIES AND BREWING MATERIALS.
   Q. (*a*) That the Beer Duty be readjusted by a reduction in the duty charged on beer brewed only from barley malt and hops, and that a like amount be added on beer containing any substitute for barley malt or hops.
   Q. (*b*) That brewers and publicans be compelled to declare all the ingredients used in the manufacture of their beer.
6. WEIGHTS AND MEASURES.
   Q. That there be one uniform system of agricultural weights and measures throughout the country.
7. FRAUDULENT SALE OF FOREIGN MEAT.
   Q That in the interests of both producers and consumers all retail vendors of imported dead meat be registered, and prominent notice of the fact displayed in every shop and on all vehicles held by each person registered, and that all such meat be clearly marked.
8. ADULTERATION.
   Q. (*a*) In order to prevent the adulteration of butter with margarine some innocuous substance which will reveal its presence should be introduced into margarine by manufacturers, as compelled by law in Germany, Belgium, and Austria.
   Q. (*b*) That the use of colouring matter in margarine be prohibited.
9. THE RIGID MAINTENANCE OF THE EXISTING MEASURES PROHIBITING THE IMPORTATION OF LIVE CATTLE FROM ABROAD.
10. LAW OF TRESPASS.
    Q. That the existing law of trespass, which is obsolete and ineffective, be amended, particularly in the direction of providing for the protection of products, which, though of natural growth, are of a marketable character.
11. Q. THE CONSOLIDATION OF THE AGRICULTURAL HOLDINGS ACTS.

N.B.—The order in which the above subjects are printed does not necessarily involve an expression of opinion as to their relative importance.

Mr. Wheler's Replies.

Mr. Granville C. H. Wheler has complied with the request, and, as will be seen from the appended list of his replies to the various questions, he is in general sympathy with the union's programme.

1. I am prepared to support this Bill.
2. (*a*) Yes ; (*b*) yes.
3. (*a*) Yes ; (*b*) (*c*) I have not had time to study this Bill closely, but support its principles.
4. (*a*) Yes ; (*b*) Yes ; (*c*) This is a question I have always held for insurance.
5. (*a*) Yes ; (*b*) I do not know whether this is possible at the present, but I support the principle.
6. Yes.
7. Yes.
8. (*a*) Yes ; (*b*) Yes.
9. Yes.
10. No answer.
11. Yes.

Mr. Victor Grayson's Replies.

It will be observed that Mr. Grayson has not dealt with the importation of live cattle, which is of vital importance.

1. No answer given.
2. (*a*) I am enthusiastically in favour of abolishing by public control the grossly excessive railway rates and other burdens placed upon agriculture. (*b*) In favour of uniform assessment for all purposes both Imperial and local.
3. (*a*) I am resolutely opposed to existing system of railway companies facilitating transit of foreign produce by preferential rates, and am in favour of a Board of Trade prohibition. (*b*) In favour. (*c*) In favour.
4. (*a*) Not in favour ; realise that injustices will arise owing to local and public Acts, but cannot agree to non-possumus attitude pending result of Royal Commission. (*b*) Half in favour. (*c*) In favour.
5. (*a*) In favour. (*b*) In favour.
6. In favour.
7. In favour.
8. (*a*) In favour. (*b*) In favour.
9. No answer given.
10. In favour.
11. In favour.

Northern Notes.

THE "thirst for land" grows apace. An urban council in a strictly agricultural district has been literally besieged with applications for allotments, and in a less degree for small holdings. The applicants put their request into the form of a petition, and then all signed their names. For allotments fifty applied, for small holdings over a dozen. These petitions are to be sent on to the county council. There are no Crown lands in the district referred to, and the farmers having land quite near the town are fearing their holdings may be decreased in area by the excision of a slice of the best and most convenient portions ; for land, to be set apart for allotments in a rural area, must be within easy reach of the workmen's homes.

JUST twelve years have elapsed since in this very district a fair attempt was made to obtain land for allotments. The council advertised for land, and the owners of acres were written to, with the result that only two definite offers were made, but at such rents as entirely precluded the council from embarking upon a scheme for satisfying local demands. The offers, strange to say, emanated from two ladies, neither of whom appeared to be prompted by any philanthropic motive, for one asked £36 a year for 10 acres, and the other £54 for 20 acres, 4½ of which were grass. As allotments are farmed out to subtenants in the district by a parish council at less than 30s. an acre, initial "wholesale" rents of over £3 an acre are out of the question. The "thirst" for land, one fears, under such conditions must go unsatisfied unless the law steps in, as is proposed, and compels the release of suitable land. But we do not think landowners will be unreasonable whenever they are confronted with a genuine demand. A member of the urban council mentioned in the first paragraph suggested that the list of petitioners would require riddling before the cases were dealt with individually, and it stands to reason that wherever allotment schemes are put into operation a good deal of caution and prevision will have to be exercised in regard to the tenants.

THE present is anything but a time for enthusiasm over anything pertaining to the cultivation of land. The situation is daily becoming worse. Bad weather is chronic. We are living from day to day in fear and trembling for the harvest. An old West Riding farmer and maltster, now retired, tells me that in a journey

from the Midlands to the borders of North Yorkshire he had not seen any crops looking equal to the Yorkshire cornfields. If that opinion is a correct one, then the cereals elsewhere than in Yorkshire are in a parlous state. There cannot possibly be anything like the amount of grain-yield of a normal year if the weather does not soon improve, and concerning the crops on some of the best of barley land farmers are despairing. The crops have insufficient stamina, and look less healthy than we have seen them for many years. Want of vitality has induced a sickly, yellow appearance.

ALL available hands are engaged in singling and hoeing turnips. Weeds on some of the flats are so rampant that it is hardly possible to discern the rows of roots; and weeds take an unconscionable lot of killing, being almost as tenacious of life as eels.

A TREMENDOUS crop of hay is regarded as a certainty. How it will be won is another story entirely. So far a very small portion of the yield appears to have been cut, and this is lying out in the swath day after day, with the risk of the goodness being washed out of it. All seasonable work is being retarded.

THE bad weather keeps people away from the seaside, in the crowds, at anyrate, which should now be invading the resorts, and consequently the lamb trade is sluggish, and beef has fallen in price. On the grazing farms the calves and yearlings are in an unthrifty-looking state, owing to the sodden grass lands. Store beasts are much in demand—the sort that will fetch £5 to £7 per head. Fat sheep have been a slower sale There is a capital demand for cows in milk, and for young store pigs, despite the continuance of restrictions on the movement of swine.

ON high land breeding farms the stock at this time of year have seldom looked worse; the ewes are thin and half-starving their lambs, the young cattle being in hardly more forward condition than in May. As for the lowland farmer in North Yorkshire, he is, according to one of them, in a poor way. As oats and barley approach the earing stage they get thinner every day. Wheat—the little there is—does not appear as if it would come within a quarter per acre of the yield last year. Mangolds are in some instances grubbing; swedes are backward, and wool is lowering in price.

THE Government's Small Holdings Bill ha been subjected to much criticism in the North. While recognising the fact that the passing of the measure will not affect districts where small holdings are already numerous, it will affect the farming interest generally; and it is felt that other far more practicable schemes might be inaugurated for the relief of the unemployed. Agriculturists are objecting to the Bill because, while affording no permanent relief to those whom it proposes to benefit, it would unquestionably militate against the best interests of the farmers, while it would tend to increase the burden of the rates.

ONE does not care to see the Board of Agriculture "bested" on a point of law; but, of course, the Board must act strictly within the four corners of an Act of Parliament, even if it be in a trivial matter. Everybody recognises the good work the Department is doing with but limited resources. The point of law I refer to is the decision in the High Court *re* the prosecution of a West Yorkshire farmer for having used a dip that was not "approved." He was convicted. He appealed to quarter sessions, and the conviction was upheld. Then he went to the High Court, and the judges unanimously quashed the conviction, on the ground, as stated by the Lord Chief Justice, that it was not laid down in the Act under which the orders were made that not using a dip approved by the Board of Agriculture was an offence. The question is of some importance, and it is possible the Board will endeavour to have the Act amended to bring it into line with their ideas.

July 11, 1907.

Trade Notice.—At last week's Highland Show at Edinburgh we were shown all the ingredients used in the manufacture of Nutrimol. This article is being quietly and persistently pushed, and its merits would seem to warrant the claim that it has "come to stay"; whilst the frankness of the makers (Nutrimol Feed Co., Glasgow) ensures the full confidence of their customers. In all the classes at the meeting above referred to Nutrimol-fed stock more than held their own. The company has published an attractively produced illustrated booklet, which can be had by *bonâ fide* stock owners and feeders on application to Nutrimol *Mill*, Glasgow, Scotland.

Nottinghamshire Notes.

WE are still suffering from showery weather, and many of the meadows have now been cut ten days, very few of the fields having yet been cleared. One day the sun bursts forth for a few hours accompanied by nice drying winds, and the farmer hastens every man among the hay to get it turned and "cocked" ready for leading. Alas! during the night further heavy showers fall, and instead of wagons being required for leading purposes in the morning the hay has once again to be turned, only for more rain to come and wash away the nutriment. Truly, it is one of the most disastrous seasons yet known. Still there are many agriculturists who yet have hope, and place their trust in the Biblical statement that "seed time and harvest shall never fail." One thing is certain, even if the weather takes up before these lines appear in print, that is so far as Notts is concerned, the gathering of the hay and seed crops of 1907 will be one of the most expensive ever known.

WITHOUT doubt agricultural land in this county is meeting with a much better demand just now than has been known for the past twenty years. During the present month several farms have been sold by auction within a radius of ten or fifteen miles of Nottingham, and what is more, sales have been effected. Messrs. Edward Bailey and Son, of Newark, were particularly successful with three lots of land they offered, which is situate in the parishes of Hawksworth and Thoroton, some nine or ten miles to the south of Newark. Lot one comprised farmhouse and cottage, stackyard, orchard, and several fields of pasture and arable land, having a total area of 38a. 0r. 6p. This was sold to Mr. R J. Fox, of Sibthorpe, for £1,900, or about £50 an acre. Five fields of pasture and arable land made up lot two, there being an approximate area of 28a. 1r. 3p, which was also purchased by Mr. R. J. Fox for £1,270, or, roughly speaking, £45 an acre. Mr. G. Breedon, jun., of Orston, gave £290 for a close of grassland containing 5a. 2r. 1p. in the parish of Thoroton. There was a time—and not many years ago—when some of the above land would not have made more than £30 an acre, so that without doubt the farming industry is improving, if only slowly

DURING the past week some important additions have been made to the long list of pedigree Shorthorns which we possess in our country. Some of the very best animals sold at Lord Calthorpe's sale last week we now claim as our own, for Mr. R. Millington Knowles, of Colston Bassett Hall, was a large purchaser at Elvetham. A beautiful young red cow named Claribel, possessing some of the best Scotch blood known, was knocked down by Mr. Thornton at 150 guineas to Mr. Knowles, who also gave 100 guineas for her calf, which is a charming roan. At 180 guineas the same gentleman bought Scotch Clemency; for 36 guineas he obtained Elvetham Queen, and another 20 guineas secured her roan calf. But yet another fine animal in Fanny Broadhook's 4th was purchased by Mr. Knowles for 75 guineas, so that from present indications it is safe to presume that a bold bid is to be made for the Colston Bassett herd of Shorthorns to secure for them the same honours as the famous pigs that have done so well during the 1907 show season.

OTHER animals from the Elvetham sale which have taken up their abode in Notts include Regal Mary, for which Mr. A. W. Hickling, of Adbolton gave 200 guineas, and with the services of the 900 guineas bull from the Ruddington herd, which Mr. Hickling obtained last year, it is expected that several youngsters well able to hold their own in the show ring will be the result. Mr. Tom Potter, of Daybrook, two miles to the north of Nottingham, was at the same sale, and apparently does not mean to lag behind, for he gave 200 guineas for Broadwood's Chief, a very fine Shorthorn bull, which many judges declare is improving, and already possesses many of the chief characteristics of a true sire. He also bought Fanny Broadhooks 3rd for 65 guineas and her roan calf cost him 32 guineas. What is Hampshire's loss, however, is a gain to the lace county.

MESSRS. FORSHAW, of Carlton-on-Trent, have again been casting their eyes around for the purchase of animals likely to take their place among the front rank of Shires. This time they have succeeded in inducing Mr. R. Covill, of Westfield, Ely, to part with the fine Shire horse known by the name of Westfield Thumper. He has already won several prizes in Norfolk and Cambridgeshire, and I understand that the price paid for him is £200.

LOOKING back 100 years, it is interesting to note the price of corn at the leading markets as compared to the present time. Wheat is worth anything from 31s. to 34s. per qr. in this district, but in July, 1807, it realised 70s. to 78s. per qr. in Nottingham, 70s. to 80s. at Derby, 65s. to 75s. at Lincoln, 76s. to 80s. at Warwick, 70s. to 80s. at Leicester, and 52s. to 75s. at York. The average price of wheat throughout England 100 years ago as now was 74s. per qr., while the price of the quartern loaf stood at 11½d. The following figures, taken from the *Nottingham Journal* of July, 1807, tell their own story:—

	Wheat.	Rye.	Oats.	Barley.	Beans.
Nottingham	70s to 78s	45s	28s	40s	47s
Derby	70s to 80s	47s	27s	44s	47s
Lincoln	65s to 75s	43s	26s 6d	38s	45s
Warwick	76s to 80s	--	31s	42s	49s
Leicester	70s to 80s	43s	27s	40s	46s
York	52s to 75s	38s	24s 6d	34s	42s

IN the annual report of the Markets Committee of the Nottingham City Council there are some interesting figures published which show what an enormous amount of business is done there in the course of twelve months. In all no less than 113,753 head of live stock were brought to the market, and of these 89,277 were offered by public auction, those brought for private sale totalling 24,476. Naturally sheep were the more numerous, there having passed under the auctioneer's hammer 52,407, and 11,235 were offered for private sale, making a total of 63,642. Beasts came next with 22,340 in auction sales and 10,773 private sales. The total animals offered either by auction or privately were as follows:—Beasts, 33,113; bulls, 642; yearling cattle, 1,645; sheep, 63,642; calves, 4,553; pigs, 8,032; and horses, 2,126. During the same period there had been 1,181 loads of hay or seeds sold in the cattle market.

AMONG the judges at the Peterborough Show on Tuesday were Mr. Albert Armitage, of Nottingham, for pigs; and Mr. A. W. Hickling, of Adbolton, for Hackneys. Mr. Hickling sails for Buenos Ayres, South America, in a few weeks, to act as judge at the great show out there, as previously announced in the MARK LANE EXPRESS.

SWINE fever still continues to spread in North Notts, and a very large number of pigs have been slaughtered. The outbreak has been traced, and it appears that had one farmer informed the authorities at the proper time, the loss of animals would have been narrowed down to less than twelve, whereas through his silence over 100 have already been destroyed. The Mansfield Market still remains closed.

LORD BELPER, who resides at Kingston Hall, a fine mansion on the borders of Notts, Derbyshire, and Leicestershire, has always taken a keen interest in the Midland Agricultural College at Kingston, which is situate on a portion of his estate. Professor Blackshaw, the principal at the college, informs me that his lordship has defrayed the cost out of his own pocket for the erection of a cold storage room, which will be of great benefit in hot weather for the storage of butter and cream and other small cheeses. By the way, it may interest some of my readers to known that no less than twenty-eight varieties of cheeses are made at the college.

AS a guide to farmers in various parts of England I may say that the price of farm produce in Nottingham market on Wednesday was as follows:—Fresh butter, 1s. 1d. to 1s. 2d. per lb.; eggs, 10 and 11 for 1s.; new potatoes, 2 lb. for 1½d.; peas, 1s. per peck; gooseberries, 1½d. to 2d. per lb.; red currants, 3d. per lb.; black currants, 5d. and 6d. per lb.; and strawberries, 3d. to 6d. per lb.

July 11, 1907. R. K.

The Sussex Hay Harvest.

In a special article on the haymaking season in Sussex, based on reports from leading farmers in that county, the *Southern Weekly News* says:—

There are very few south country farmers who can remember such a trying haymaking season as the present one is proving. The rainfall has been exasperating rather by reason of its frequency than of the actual quantity, and there is scarcely a load that has been carried without having been wetted at some stage of the curing process.

Mowing, turning, and carting have all alike been subject to continued interruption, and the absence of sun and heat has helped to convert what would have been a splendid crop into one of quite mediocre quality.

On the score of quantity there is no room for complaint, for the average yield is well above 30cwt. per acre—in some instances two tons. The heaviness of the crop, however, is entirely discounted by its damaged condition, and by the expense which has had to be incurred in securing it even in that state. It has already cost almost as much as it will be worth in the winter months, and large quantities of it will have to be used as litter, so useless is it for feeding purposes

Fertilisers and Feeding Stuffs.

Spraying Potatoes.

We refer to this matter again because the cold, damp weather is causing a development of potato disease which it is important to check, and as prevention is better than cure, it is best to begin operations before symptoms of the disease have become apparent.

The best results are obtained by the application of *Bordeaux mixture*, but the preparation of the mixture must be carefully attended to.

It is found that three times spraying, at intervals, gives better results than either one or two applications.

In some successful trials the spraying mixtures were applied first on July 29, second on Aug. 11, and third on Sept. 7. The yield from the (Per acre.)

	£	s.	d.
Thrice-sprayed plot was valued at	19	9	3
Twice-sprayed plot was valued at	18	13	0
Once sprayed plot was valued at ..	18	9	8
Unsprayed plot was valued at	18	1	0

Calculated at 50s. per ton for large tubers, and 20s. per ton for small and diseased.

The first dressing had apparently little effect in preserving the haulms, but the plots that received the second and third dressings kept green fully eighteen days longer than the rest of the field; this was very marked and could be seen from a considerable distance. Stress is laid on the necessity of preparing the mixture with care as follows:—

Preparation of Mixture.

3 lbs. of copper sulphate (blue vitriol) were dissolved in 12½ gallons of water in a wooden vessel—iron will not do—and 2½ lbs. of freshly burnt lime were slaked in another 12½ gallons of water. The solutions were poured both at the same time (and this is very essential) into a third receptacle made of wood. The resulting solution, after well stirring, had a steel knife blade immersed in it for one minute; if no copper was deposited on the blade during immersion, the solution was considered fit for use; if copper happened to be deposited, more lime was added until no deposit of copper formed. After straining well, and repeated stirring, the solution was applied, by means of a Knapsack Sprayer, at the rate of 40 to 80 gallons per acre, according to the size of the haulms, on a calm day.

Cutting the Hay Crop.

Apart from the question of weather—which, it may be hoped, has now taken a turn for the better—the best time to cut the hay crop is when the greatest number of the dominant plants are just in flower. If cut too soon the crop contains much water, dries slowly, and during the drying process loses part of its nourishing quality as well as considerable loss of weight.

On the other hand, the operation should not be delayed until the plants have begun to form seed, as the crop is then hard, fibrous, less aromatic, and less rich in nourishing constituents.

Eradicate Thistles.

This wet summer seems to have stimulated the growth of these troublesome weeds, so it may be opportune to remind farmers that now is the time to attack them. In another month, should sunny weather intervene, as we hope, they will be seeding and the mischief will be spread. The important point in their treatment is to prevent them seeding, and this can be effectively done at the present time by cutting them down with a scythe.

Plant Roots.

Lucerne is one of the deepest-rooting plants. It sends its roots far down into the soil, and has been known to penetrate twelve feet down. It thus utilises plant food in the lower layers of the soil which would not be available for other plants. As a soil-maker and improver no other crop is equal to lucerne. It obtains its own requirements of nitrogen from the air, and will grow in most soils if provided with phosphate of lime and potash to give it a fair start.

Grass is also a soil-maker, improver, and protector. No other crop equals it in producing a thick fibrous growth of root material in the upper soil, while the roots of some grasses penetrate sap, rendering the soil porous and bringing to the surface mineral plant foods.

Duration of Effect of Fertilisers.

A plot of land, about a fifth of an acre, was cultivated with potatoes in 1905, and was liberally dressed with basic slag, kainit, and nitrate of soda. In the following season, 1906, the plot was sown with oats and received only a small dressing of nitrate of soda. A duplicate plot, which was unmanured in 1905, was also sown with oats and dressed with nitrate of soda. The plot which had the benefit of the phosphate of lime and potash in the preceding season yielded 35 per cent. more produce.

The Most Important Part of a Plant's Life.

During the formation of the seed—the most important part of a plant's life—the mineral constituents are gradually transferred from the leaves and stems to that portion of the plant devoted to the development of the seed, in order that it may contain a supply of these vital elements to support the seedling when germination begins.

In this concentration it generally happens that phosphoric acid and potash are stored in largest amount, while lime, magnesia, chlorine, and the other ash constituents, though always present, are there in very small proportion. As a rule, the leaves and stems of a plant contain a higher proportion of these latter elements than the seeds.

This may be noted from the following analysis of the ash of the grain and straw of wheat:—

	Grain per cent.	Straw per cent.
Per cent. of ash in dry substance	2·07	4·96
,, potash in ash	31·1	11·5
,, soda ,, ...	3·5	2·9
,, lime ,, ...	3·1	6·2
,, magnesia ,, ...	12·2	2·6
,, phosphoric acid in ash	46·2	5·4
,, sulphuric acid in ash	2·4	2·9
,, silica ,,	1·7	66·3
,, chlorine ,,	—	—

A consideration of this fact shows the necessity of supplying cereals with an ample supply of phosphate of lime and potash, in addition to the nitrogen necessary to stimulate the active growth of the plant.

Potatoes and Manure.

In discussing this subject, which is attracting a good deal of attention in America at the present time, an American journal points out that experiments show the importance of balancing the various plant foods for both haulm and tuber. Potatoes are one of the best of all crops, yielding largely, and also being among the standard articles of food. So familiar are farmers with the growing of potatoes that they have been content to put them into the ground with a single manuring and good cultivation, trusting to chance of a favourable season and proficiency of the manure for a bountiful harvest. But the potato, like everything else, has its choice of foods. There is a time in its cultivation when even manure will not make a good crop of potatoes, but that is owing to the quality and condition of the manure. An application of fresh manure may injure the tubers. It must be well and thoroughly rotted, in fine condition, and carefully applied.

Manure that has been well decomposed can be used in connection with guano, potash salts, finely-ground bone, or superphosphate at time of application on the soil. Potatoes are very different in their mode of growth from corn, and are expected to keep well during the winter. It is not necessary to mention how and when potatoes should be planted, in a detailed manner, for every farmer's experience has taught him how such work should be performed; but there are certainly methods of manuring that have been in custom for years which would be changed if the farmer would consider the needs and requirements of his crop while it is expected to do what he wishes. The surest plan, then, is to experiment on small plots in several ways, and each grower will then better understand the condition of his soil. Formerly it was supposed that an application of lime would benefit the potato crop, but in recent years it has been discovered that lime favours the condition for scab, and that to avoid disease great care should be taken in procuring seed from a locality free from disease affecting the potato crop, while it is also an advantage to plant on a new locality for potatoes every year.

Nitrate of Soda Position.

According to a cablegram received during the week from Chili by the Permanent Nitrate Committee, the Syndicate] have now finally confirmed the arrangement made provisionally last May to the effect that the maximum shipments for the year from April 1 last to March 31, 1908, shall not exceed 45,000,000 quintals, equal to say 2,000,000 tons. There is, however, little expectation that the full authorised quantity will be shipped, as labour and transit difficulties will continue to interfere more or less with the manufacture and shipment of the article.

During the year ended March 31, 1907, the authorised quantity to be shipped was about 70,000 tons less, but the actual shipments were considerably less.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Feeding with Red Clover.

Red clover, when young and green, is an extremely nourishing food, very rich in protein substance.

Before the development of the flowering stage it contains in the dry substance up to 30 per cent. crude protein, of which, however, not more than two-thirds is in the more digestible albuminoid form. Of crude fibre it contains about 20 per cent.

Up to the period of flowering, it is best given green to animals, but afterwards it is not so suitable for this purpose and should preferably be converted into hay.

The second cut, under normal conditions, is somewhat richer than the first.

Clover is considered to have a heating effect on animals. For this reason it should not be supplied to horses and sheep in quantities, but it answers admirably for young cattle.

It is not suitable for cows in calf or for cattle under six months old. If supplied to them it should not form more than half of the ration.

To foals it should not be supplied at all.

When fed green to pigs it is said to impart to the flesh a yellow tint and an unpleasant flavour.

Fertiliser Material Market.

In his half-yearly report of the fertiliser market, Mr. Aikman remarks that indications of a slackening in the industrial activity throughout Europe and America have been apparent during the six months. A protracted winter and unusually cold spring, continued till the close, have rendered the crop outlook in both continents more uncertain, but should improved weather conditions prevail during summer and autumn, nearly average results might still be attained in most districts. The acreage devoted to sugar-beet on the Continent is understood to be about the same as last year, and the value of beet-sugar is about 1s. per cwt. higher than at date last year, at 9s. 8d. to 9s. 10d. for old, and 9s. 6d. to 9s. 9d. per cwt. for new crop. Cereal values are also at a higher level.

The fertiliser trade in Europe has been on a full scale as regards volume, but prices of raw phosphates are still proportionately higher than the manufactured products. Nitrate of soda, chiefly in French ports, has shown an increase of consumption, but for Europe this six months' increase aggregates under 4 per cent., while in the United States the consumption is the same as last year. The higher level of price, the character of the season and cheaper cost of nitrogen in other sources, have interfered with a more expansive increase. The difficulties checking a greater production are calculated to maintain the high values during another season. The increased production of sulphate of ammonia has been absorbed only by a maintenance of the lower comparative price ruling. Guano imports have been on a similar scale to those during the spring of last year, and raw phosphate imports have been on a full scale at their higher range of value. The recovery of nitrogen from the atmosphere on a sufficiently important commercial scale to influence seriously other sources of supply is so far not evident in the near future.

Prices of Fertilisers.

The demand for fertilisers is now practically over, but prices remain firm all round. The demand has been bigger than usual, and the stocks of most manufacturers have been cleared.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	11	17	6
Peruvian guano	without change		
Superphosphate, 26 per cent.....	2	10	0
,, 35 ,, ...	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.....	9	10	0
Fish guano, first quality, scarce & dear	6	12	6
Ditto, second quality	5	7	6
Kainit	2	7	6
Sulphate of potash	10	0	0
Muriate of potash	9	0	0
Basic slag, 30 per cent. (ex works, Midlands)	1	13	0
Ditto, 38 per cent.	2	3	0

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

Varieties of Oats.

There is a larger surface of the land under oat cultivation than under any other crop, excepting grass lands, in Great Britain, and it is important that farmers should select the most profitable varieties.

To obtain information on this point the West of Scotland Agricultural College have been conducting for five years a series of experiments, and Professor Wright has recently issued an interesting report of the results obtained.

The experiments were carried out on farms scattered widely over the eleven counties of the centre and south-west of Scotland and comprised soils of various geological origin and of very variable agricultural value, so that although the report may apply especially to Scotland it affords useful guidance to farmers in other parts of the kingdom.

The report is a lengthy one, giving full details of the results obtained. The most valuable crops, on the average, were obtained from the grain-producing variety, the Banner, for while the Potato oat gave 4 cwts more straw per acre, the Banner gave 9 bushels per acre more dressed grain, which would have a considerably higher value. The superiority of the Potato to the Sandy was, however, by no means so well marked, for, while it gave, on the average, 4 bushels more dressed grain, the Sandy had the advantage of 4 cwt. more straw and over 1 bushel more light grain. The Potato oat, on the average, suffered from the disadvantage of having been reduced in yield in unfavourable seasons relatively almost as much as the Banner, while in seasons favourable to abundant grain yield it was unable to reach the same high level of productiveness.

The conclusions which may be drawn from a consideration of the influence of seasons and soils on the varieties of the oat crop during the five years 1902-1906 are as follows:—

1. That the yield of all varieties of oats varies greatly according to the character of the season.

2. That the variation in the West of Scotland is less in the case of the acclimatised straw-producing varieties like the Sandy than in the case of new and imported grain-producing varieties like the Banner.

3. That seasons of low temperature, and especially late, cold, and wet spring and early summer weather, are very prejudicial to the yield of the oat crop, and that in such seasons the grain-producing varieties are liable to suffer special damage when grown on cold and unsuitable soils.

4. That, on suitable soils and in suitable districts, the grain-producing varieties of oats like the Banner, on the average of years, give larger and more profitable crops than the older Scotch varieties either of the Potato or of the Sandy type.

5 That, in favourable seasons and on suitable soils, the grain-producing varieties like the Banner will give much larger and more profitable crops than the Scotch varieties.

6. That the grain-producing varieties like the Banner are more liable to be seriously damaged or destroyed by grub than the common Scotch varieties, and that, if grown on land ploughed out of lea, special precautions should be taken to prevent a grub attack, or to assist the oat to resist it.

7. That the grain-producing varieties of oats are best adapted for cultivation either as a second corn crop or after a root crop, and that they should only be grown after lea on friable and open soils, or on land in high condition or liberally manured.

8. That the grain-producing varieties are not adapted for growth on cold or wet clays or mosses, or on poor, exposed, unproductive land, or on tough old lea land, and that on such soils, on the average of years, better crops will be got from the Sandy and similar varieties of the straw-producing type.

9. That the grain-producing varieties are best adapted for growth on good soils or on soils well drained and in high condition, and in situations not too much exposed to cold north and east winds.

Treatment of Aftermath.

After the first cutting of the hay crop, if cattle are not put on the land to utilise the new growth, it is good policy to apply a small dressing of superphosphate and potash, say 2 cwt. superphosphate and 2 cwt. kainit per acre. It gives the new growth a stimulus, and encourages the development of the finer herbage.

Loss of Weight in Hay.

It may be assumed that good hay loses from the time it is harvested to the following spring between 7 and 12 per cent. of its weight. The greater part of the loss occurs in the first weeks of storage, but naturally the drier the hay when carted the smaller will be the loss. In the first four weeks of storage good meadow hay harvested in favourable weather may be estimated to lose 10 per cent.; hay containing a large proportion of clover and clover hay will lose more, probably 12 to 15 per cent.

Other fodder plants, such as lucerne, lose considerably more, and, if stored up to spring, may be diminished in weight by more than 20 per cent.

It has, however, been observed that good grass hay, harvested and stacked in bright, sunny weather, after the first sweating has actually gained weight and maintained the increase over the winter. Hay which, through long storage, has become very dry and dusty, should be fed carefully, as the dust arising from it is apt to cause breathing difficulty in the animals. It should be moistened or mixed with fresher fodder to absorb the dust.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in the first issue of each month.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

THOUGHTS ON SHEEP SALES.

The current week will witness the commencement of a very important series of sheep sales, and in fact, except in the case of the earlier breeds such as the Dorset Horn, it may be said to be the commencement of the ram sale season.

It is not within our province here to refer in detail to the many notable sales that are to take place during the next three weeks, but full information in respect to these will be found in other parts of the paper and in our widely used advertisement columns.

One object in referring to this question is to impress upon flockmasters the importance of due care being exercised in the selection of the sire. So much depends upon this that it is impossible for any breeder to take too great care in selecting. It matters not whether the sire is to be used for the production of pure-bred animals or for those intended for ordinary commercial purposes; it is equally essential that all breeders should breed a level, uniform, and even lot of lambs.

The lamb sales, many of which have taken place recently, and those that will follow, all emphasise how necessary it is to secure uniformity in every respect. Much of this depends upon the sire, though, of course, the dam has a great deal to do with it also. The man who owns a flock will find it much to his advantage if, instead of treating that flock *en bloc*, he would individualise it, and instead of leaving so much to chance, draw the flock into convenient lots for mating, and then select the most suitable sire he can secure for those particular ewes.

This will doubtless entail somewhat more labour than the general practice of too large a proportion of our flockmasters, but it is quite certain that the extra labour involved will be more than recompensed by the greater uniformity of the lamb crop.

All who attend markets or fairs well know that no consignment or pen sells so easily or so readily as an even and uniform lot of cattle or sheep or pigs. The uniformity of them attracts attention, and although they may not be of the same average of merit as some uneven lots, yet the uniform lot in ninety-nine cases out of a hundred finds more bidders, and, generally speaking, makes a better price.

A fallacy held by many flockmasters is that this selection of sire and dam is only a matter for the ram breeder to consider, but the experience of years proves that it is equally important for every flockmaster.

POULTRY FOR THE FARMER.

The National Poultry Conference at Reading represents the first serious attempt in this country to treat poultry rearing and the egg supply as integral and veritable portions of our agricultural industry. The poultry interest for the whole Victorian period was given over to the

fancy, of which all we need say is that such monstrosities of shape and feather has it given birth to that we can only feel thankful that it has left us a domestic fowl with the ordinary allowance, neither more nor less, of wings and legs. The dawning of the Edwardian period, coincident with a new century, witnessed a general and remarkable assertion of the importance to agriculture of all the minor industries, poultry keeping being prominent among them. The idea of utility poultry gained ground with some rapidity, and the laws of breeding were increasingly studied, the very remarkable investigations of the Abbé Mendel with respect to plants proving to have a most vital bearing on the breeding of poultry and other birds. Mr. Hurst, of Leicester, brought these out very prominently on Tuesday last at Reading, and his views were endorsed by the Cambridge experts, Professor Bateson and Mr. F. Bateman. The gathering at Reading was extremely representative, and if the Minister of Agriculture failed at the last moment to keep his appointment, Sir Thomas Elliot, who spoke in his place, not improbably knew at least as much about the matter as the distinguished absentee.

Farmers are often spoken of as neglecting their poultry, and this reproach is not altogether unmerited. The unhappy agriculturist has, however, very little choice. The man sent to shepherd and retrieve a straying hen will require exactly the same daily wage as though he had been ploughing or reaping, and, speaking roughly, adult wages will be found to knock the bottom out of profitable fowl rearing.

With the question of State aid to poultry keeping we prefer not to deal. A specious case can usually be made out for the intervention of Hercules, but we do not yet admit that the cart wheel is in a hopeless rut. Far from it. The State ought to see that foreign produce is not foisted on our markets as English, but this duty applies to every sort of produce, and is in no way a specially poultry question.

The storage and saving both of eggs and of poultry occupied considerable attention at the Conference, but the organisers would do well to bear in mind that the key to success in the poultry industry is in the early maturing and quick delivery of birds. The egg is not so profitable as the chick, and the point at which the maximum of profit is obtainable is that where the bird is raised to reasonable table size in the shortest time. This early maturing question is as important in the poultry yard as it is at Smithfield. The quick delivery of the finished article at the place where buyers are to be found is the other great desideratum. It includes the whole question of distribution, and should be the subject on which the best efforts of the best organisers should be concentrated. We should not aim at storing birds, but at putting them promptly on the consumers' tables. England is, after all, a little country. A special train can take its charterer from any given spot to another within seven hours. Mr. Edge, doubtless, would undertake to do it in less. But this is the line upon which the poultry breeder should look for most improvement: on the quick and cheap distribution of "produce" from the farm of its rearing to the retail purchaser's larder.

THE FARMERS' DIARY.

TUESDAY, JULY 16.—Shire Horse Show March, Cambridgeshire—Live Stock Sale Lynn—Sale of Agricultural Properties at Ashford, Kent—Sending-in Day for Perry Bar, Border Union, and Chepstow Shows.

WEDNESDAY, JULY 17.—Oxted and Godstone (S.E. Surrey) Show at Oxted—Isle of Thanet Horse Show, first day—Staffordshire Show at Burton-on-Trent, first day—Oundle Show—Darlington Horse Show—Agricultural Show at Waterford—Haxby Show—Sending-in Day for Terrington, Cumberland, and Morayshire Agricultural Shows.

THURSDAY, JULY 18.—Isle of Thanet Horse Show, second day—Burton-on-Trent Show, second day—Bedfordshire Show at Bedford—Cambridge and Ely Show at Cambridge—Agricultural Show at Goole—Agricultural Show at Launceston—North Thoresby Show—Northumberland Show at Tynemouth, first day—West of England Horse Show at Taunton, first day—Isle of Wight Agricultural Show at Newport.

FRIDAY, JULY 19.—Northumberland Show at Tynemouth, second day—West of England Horse Show at Taunton, second day—Agricultural Show at Wem, Shropshire—Deane Agricultural Show—Sale of Hampshire Down Sheep at Watersplace Farm, near Ware—Live Stock Sale, East Dereham, Norfolk—Sending-in Day for Upholland Show.

SATURDAY, JULY 20.—Kirriemuir Agricultural Show—Maidstone Horse and Cattle Fair—Cattle and Sheep Sale, Norwich—Horse Sale, Canterbury—Lecture on Old English Rural Folk Lore by Mr. Cecil Shalp at Chichester.

MONDAY, JULY 22.—Spilsby Foal Show—Agricultural Fairs at Helston, Stamford, Ware, and St. Ives—Lord Rothschild's Hampshire Down Sheep at Tring—Fareham Fortnightly Market—Sending-in Day for Thirsk and Whalley Shows

TUESDAY, JULY 23.—Welsh National Show at Aberystwith, first day—Horse Sale at Maidstone—Sending-in Day for Castleford, Dumfries, Worthing, and Keele Shows.

Notes of the Week.

The unseasonable weather and the Small Holdings Bill have formed the chief topics of interest during the past week.

After a long absence the sun has returned. All hail to his majesty!

"Now is the winter of our discontent made glorious summer by the sun of Heaven."

The whirr of the mowing machine is heard throughout the land, and in many districts the hay harvest will still be satisfactory in quantity and quality.

The passage of the Small Holdings Bill through committee is straining the capacity of the Government.

The Government must be conciliatory, otherwise the Bill may come to grief.

The clergy seem concerned with some aspects of the measure, fearing that it will prejudice the value of glebe lands.

In Convocation the other day it gave rise to a long discussion.

The Archdeacon of Sarum gave an instance of a well-meaning person, who bought a farm of glebe land and let it out in small holdings.

The excellent people who took the holdings were not able to pay the rent, and as he was unwilling to take legal proceedings, he hardly ever got tythe from the farm.

The Archdeacon of Cirencester advocated the necessity of small holders keeping a pig; he spoke also of the greater value of farmyard manure than artificials "good enough in their way."

Where are small holders to get their farmyard manure from?

New use for potatoes! In Germany a composition made largely of compressed potatoes, is being substituted for cedar wood in the manufacture of pencils.

Billiard balls are being made from a similar preparation.

The Socialists in Italy induced the farm hands in a big agricultural district to strike for highe wages.

The labourers have now returned to their work, sadder and wiser men, but the loss caused by the strike at a critical harvest time is es imated to be about £80,000.

The housing question in villages is always with us, but it is being rendered more acute in villages round London, in consequence of many cottages being bought by Londoners for summer residence.

The number of sheep in New Z aland has increased and multiplied during the last four years by over 100 per cent.

They number now about 20,000,000. In the United Kingdom there are about 30,000,000.

Real progress in the discovery of a stronger type of wheat seems to have been made by the experts of the Cambridge University Department of Agricultural Science.

An additional variety of wheat, worth 2s. to 3s. per sack more for the flour, would be most welcome to English farmers.

The Board of Agriculture have now got power to deal promptly in cases of insect pests. What will they do with it?

The King takes such a practical interest in agriculture, that everyone is glad to hear of his successes at recent agricultural shows.

An Irishman, wishing to take a "homestead" in the Colonies, and not knowing just how to go about it, sought information from a friend.

"Mike," he said, "you've taken a homestead, an' I thought maybe ye could tell me th' law concernin' how to go about it."

"Well, Dennis, I don't remimber th' exact wordin' uv th' law, but I can give ye th' manin' uv it. Th' manin' uv it is this: Th' Governmint is willin' t' bet ye 160 acres uv land agin fourteen dollars thot ye can't live on it five years widout starvin' t' death."

It was reported at the half-yearly meeting of the Consett Co-operative Society that a profit of £55 had been made on the Bunker Hill Farm, of 200 acres, owned by the society during the year ending May 28 last. The average number of cows milked was twenty-seven, and they yielded 22,250 gallons of milk, of the total value of £1,114.

Royal Veterinary College.

The annual meeting of the governors of the Royal Veterinary College was held on Tuesday, the Duke of Connaught presiding.

The report presented stated that thirty-six students entered the college during the year, making the number at the beginning of the winter session 200, compared with 220 in the previous year. Many successes were obtained at all the examinations, and at the July examination of the Royal College of Veterinary Surgeons 68 per cent. of the candidates from the Royal Veterinary College proved successful, while in December 61 per cent. passed. The daily average of horses in the infirmary was thirty-seven, and of dogs fourteen, and 1,024 animals were brought to the college for advice and treatment in the course of the year. Thanks to a Government grant of £800 and donations of £927, there was a balance of £256 in hand.

Sir Nigel Kingscote said that the training afforded by the college was of great importance from a public point of view, men being especially instructed for the inspection of meat under the Contagious Diseases of Animals Act. Further developments were, however, impossible owing to lack of funds. Over 20,000 appeals had been sent to members of the Jockey Club, trainers, and, in fact, everyone who should be interested, but even the expenses had not been paid. All economy had been exercised, even to cutting down the salaries of the professors. The number of students had fallen off, but this was not surprising, new colleges having been founded in Ireland, Scotland, and Liverpool.

Mr. Brassey was elected vice-president, and four new governors were chosen—namely, the Duke of Richmond, Earl Bathurst, Colonel F. Smith, and Colonel Queripel.

The Duke of Connaught, responding to a vote of thanks, said he hoped that next year a more satisfactory result would be heard of. It was very unfortunate that Sir Nigel Kingscote had to continually harp on the lack of money, but it was an important subject. If they could get a larger number of subscribers they would be able to do more and follow on the lines they all desired.

For the annual show of the Staffordshire Agricultural Society, which takes place at Burton-on-Trent on Wednesday and Thursday next, the entries are as follow:—Horses, 288; cattle, 221; sheep, 121; pigs, 44; extra stock of dairy produce, 102; honey, 141; shoeing smiths, 52; poultry and pigeons, 520; and implement stands, 86; while 123 competitors have entered for the butter-making competitions. The dog show, which has been reinstated this year, will be opened on Wednesday only. The society's annual luncheon will take place on Wednesday, and will be presided over by the president (Lord Burton).

Two Important Lincolnshire Sales.

THE RIBY SALE.

On Thursday last, for the ninth time, Mr. Henry Dudding, in his princely manner, entertained somewhere about 600 of his fellow breeders of Shorthorn cattle and Lincoln sheep at his noted homestead, Riby Grove, Great Grimsby, to witness the annual dispersion of the surplus Shorthorn cattle and Lincoln sheep from that herd and flock, the reputation of which is known all over the world. The attendance was a general one, and included all the leading Argentine buyers or their representatives now in England, and most of the principal home breeders.

This year's sale was one of the best held at Riby, being the ninth of these notable gatherings, at which the prices realised have been remarkable for the general high average at which year after year they have been maintained. It seems but yesterday since we were present at the first of these notable sales, and few then ever anticipated that the successful sale which inaugurated these sales would in so short a space of time come to be looked upon as quite an ordinary one, for the averages then realised £30 3s. for seventy-six head of cattle, and £52 2s. 5d for thirty-one rams were considered exceptional, particularly the latter; but when compared with those realised last week can only be counted as moderate.

Messrs. Thornton and Co. sold the cattle, as they have done each year since these sales were started, and in commencing, Mr. Thornton mentioned that the merit of the stock to be offered needed no greater recommendation than the fact he found year after year the same excellent demand, and, as a rule, many of the same buyers, this showing the stock purchased gave satisfaction, and its merits were good enough to stand the test of actual use and service.

The cows and calves numbered eleven, and these, calculating in the usual manner, *i.e.*, cow and calf as one lot, gave the fine average of £71 19s. 5d. for that number. The sale opened with a slow demand, buyers appearing to be doubtful as to how the demand was, but after the sale got once in full swing all the best lots sold readily and well. Mr. Holford, one of the oldest Shorthorn breeders, gave top price, 165 guineas, for Melton Vittoria Belle, 125 guineas for the cow, and 40 guineas for the calf. Mr. Bell took Lot 3 at 50 guineas, her c c going to Mr. Candy at 30 guineas. Bright Morn went to Lord Ridley at 73 guineas, Royal Lily and her c c went to Lord Calthorpe at 79 guineas.

The two-year-old heifers were one of the best lots ever offered at Riby, and the demand for them was a very notable one indeed. The export buyer was all too successful, for quite a number of the best were taken to strengthen and increase in value those grand herds of Shorthorns that have in recent years been founded with the choicest of English strains of blood. Lot 20, Joyce, made the top price of this age, and also of the sale, 370 guineas, to Mr. O. Campo for the Argentine; his principal competitors were his fellow countrymen. Mr. C. Villatte gave 290 guineas for Jessica, the youngest one of the age, a fine specimen of her breed. Mr. Holford gave 200 guineas for Melton Duchess 9th, a very choice one; another realised this price to Lord Ridley, Beach Blossom. Mr. Candy, for the Argentine, gave 250 guineas for Waterloo Winnow, and 105 for Riby Kirklevington 3rd; a like price was paid by Mr. Sidey for Queen Esther 34th, and Mr. Candy was fortunate enough to secure that grand Heifer Crystal Empress, probably one of the best specimens of her breed seen for some long time at 290 guineas. The average for this age was £155 14s. for fourteen head.

The yearling heifers also numbered fourteen head, and here again the demand was a very keen one indeed, Mr. Villatte paying the top price for that grand Maid Nella, lot 33, namely, 155 guineas. Several wanted her, but the purchaser would not be beaten. 125 guineas for Newton Jealously 3rd to Mr. Burnyeat was next best price, a Waterloo going to Mr. Candy at 100 guineas, and Damory Lady went to Mr. Sidey at 90 guineas, the average for this age working out at £61 14s. 6d., making the general average for the 39 females, including calves, to be £98 7s.

The bulls were not in so keen request, it being very noticeable how much greater was the demand for females. Aberdeen, a stock bull, went to Mr. Sidey at 70 guineas, whilst Morning Light, that went to Dr. Anchorena, made the top price for two-year-olds, 290 guineas. Another of this age went to Mr. Sidey at 85 guineas, and the eight head sold averaged £101 11s. 9d. There were five yearling bulls sold, Mr. Brownley taking Stroan Kaiser at 50 guineas, the top price, the other four realised lower prices; average was £24 21s. 6d.

These figures give a general average for the bulls, fourteen in number, of £72 1s. 6d. and make the general average for the whole sale of cattle, fifty-three head, to work out at £91 8s. 2d., which, owing to the fact that there was no 1,000-guinea bull this year, compares most favourably with the average for 1906 - ., £99 4s. 8d. for fifty-one.

Details of the principal sales are given in the following list:—

Cows and Heifers.		Gns.
Catthorpe Sweetheart, c July, 1900	Mr W Bell	70
Her c c, c Sept. 8, 1905	Mr Candy	30

The Lincoln Sheep.

Messrs. Dickinson, Riggall, and Davy, had an easy task to dispose of the yearling rams and ewes, for although there have been many notable averages and prices realised at these sales 1,450 guineas, and a 1,000 guineas twice, we do not remember any previous sale, save perhaps that of 1906, when the biddings came more freely, nor have any of the previous sales given more general satisfaction, because there is no question but

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

that everyone came with the fixed idea there would be a dull trade and a much larger fall from the phenomenal average of 1906, few were disposed to put the average at any more than one-half of last year's, and yet so good and keen was the demand that it reached practically two-thirds.

The first ram was the unbeaten yearling ram first at the Royal Show, and put in at 100 guineas. By fifties and hundreds it was up to 700 guineas in a few moments; then fifty came from Mr. F. Miller, who has for years past always taken the first prize ram, but his opponents, Messrs. Dean, who it will be remembered were runners up for the first 1000 guineas ram, were not to be denied, and replied by another fifty, and so it ran until, at 900 guineas, Mr. F. Miller gave up the contest, and for the first time for many years the first prize Royal yearling Lincoln ram remains for service in a home flock, owned, it may be said, by two brothers who have the pluck to support their oft-expressed opinion—namely, that it is the breeder's duty, no matter the cost, to retain for service at home the pick of the sires of the year. Mr. R. Fisher secured the next Riby Leconfield at 200 guineas, probably one of the cheapest rams in the sale; for the next Mr. Duffleby gave 130 guineas, followed by 90 guineas by Mr. Fraser, 32 guineas by Dr. Anchorina, and then Mr. F. Miller got the fifth-prize yearling at the Royal at 110 guineas, this buyer taking no less than fifteen others mostly over the century, one at 200 guineas; the principal competitor here was Mr. R. Dixon.

Further details, however, are not necessary, for the full price list will show who the purchasers were. It is, however, of interest to note that out of the forty-eight rams sold only six remain at home—namely, the two first mentioned above, and one each to Messrs. C. E. Howard at 74 guineas, R. Dixon at 50 guineas, W. Bayles at 32 guineas, and Brown at 30 guineas.

The average of these forty-eight rams was £94 12s. 2d., and the amount realised £4,541 5s.

The ewes, twenty-one in number, sold well, £11 16s. 5d. being the average; 20 guineas per head was top price for the three third in the class at the Royal for ewe tegs in full fleece.

The grand total of the sale was £4,789 11s. 6d. for forty-eight rams and twenty-one ewes, and £4,844 14s. for fifty-three head of cattle, making an aggregate of £9,634 5s.

To H.M. The King.

Jeyes' Fluid

As used in the Royal Household, Stables and Kennels.

MAY BE OBTAINED IN THE FORM OF

FLUID, POWDER, DIP, & SOAP.

A SPICE THAT WILL SAVE YOUR DAMAGED HAY.

What in many parts of the country promised to be a record yield, has been endangered as to quality, if not also quantity, by the recent excessive rainfall.

That considerable damage has been done in many districts is already known by the orders which for several days past have been reaching the makers of "PHŒNIX" HAY SPICE, these being accompanied in most instances by an urgent appeal for quick despatch.

This Spice supplies the valuable aromatic flavouring principle of "prime" Hay, and when sown in the ricks imparts a much stronger fragrance, and a specially powerful, attractive, aromatic flavour. Besides this, it increases the value of all Hay, both for feeding and sale, quite 20s. per ton. It gives a pleasant aroma, and is unequalled as a condiment for damaged or inferior feeding stuff. It makes damaged Hay tempting and palatable, more digestible, and makes all animals eat it with a greater relish, and thrive faster on it. It also removes mustiness and all defects, and imparts a good tempting flavour and fragrant smell to "weathered" Hay (even when black and seemingly worthless), and makes cattle eat it as well as the best, and thrive on it admirably.

It is a really efficient Hay Spice, in which all waste is prevented, as it gives to the most inferior, coarse, or damaged Hay a fragrant, tempting smell, and an excellent and appetising taste. One cwt will dress 20 tons of Hay at a cost of about 1s. per ton.

The "PHŒNIX" HAY SPICE is packed in bags of 112 lbs. each; the price being 20s. per cwt., carriage paid to buyer's station.

MESSRS. DEAN'S SALE.

These well known live stock breeders held on Friday last at the Heath House Farm, near Nocton, Lincoln, the first of what one hopes may be draft sales from their grandly bred Shorthorn herd and equally good Lincoln Long Wool sheep. The day was all that could be desired, and the attendance was a large and representative one, both in respect to the home and export buyer. Amongst the attendance there were very many of the principal breeders both of Shorthorns and Lincolns. The result of the sale as given below must have been satisfactory to the vendors, who have been known for a long time as buyers of stud stock of the finest quality, and who have, no matter the price, always taken the particular sire most desirable to mate with the grandly bred females, of which some of the very choicest in the country were at Dowsby. The appreciation expressed as well as that shown by the prices paid, must have been most gratifying, for it shows that efforts like those Messrs. Dean have made, are well thought of by their fellow breeders whose attendance at this (the first of many similar sales we trust), was in so large numbers.

Messrs. J. Thornton and Co. sold the Shorthorns, and right through there could be no question but that the grand strains of blood in which this herd is so rich were wanted by both the home and the export buyer, for, as will be seen from the full price list which follows, notably high prices were readily paid for them. Right from start to finish the demand for these was of the keenest description. The leading prices for the cows and calves were 30 and 51 guineas to Mr. G. Harrison for lot 2. In lot 3 Mr. H. Webb took back to Melton Ross one of his late father's grand cows at 75 guineas, but its calf crosses the water to Mr. Eycurra at 105 guineas. Lot 9 went to the Earl of Northbrook at 81 guineas. At 10 guineas less Mr. J. E. Casswell got Red Rose 20th, a grand cow; and other equally good prices followed, so that the whole of this age — seventeen in number — their with calves realised £1,180 4s., and averaged £69 8s. 5d.

The two-year-olds were a choicely-bred lot. These numbered nine; thrice the century was exceeded for lot 18 to Mr. F. Webb, a beautiful heifer at 120 guineas; for Ladybird 17th to Mr. Sidey at 150 guineas, the top price of the age, and 120 to the same buyer for Dowsby Vittoria Queen. These were the best prices, but reference to the sale list below will disclose several others much above the general average for this age, the nine of this age making £79 4s. 4d. per head. For the yearling heifers, a notably fine lot combining merit and quality, as well as the choicest strains of blood, a great demand was experienced, and several prices much above the average for this age were realised. A July calf, Duchess, £150, went to Senor Eycurra for the Argentine, both Mr. Sidey and Senor Villatte were wanting her; this was the top price both for the age and sale. Mr. Villatte gave 300 guineas for Dowsby Waterloo and 100 guineas for the next lot, another of the same line of bood. Mr. Eycurra was in close competition for the one that made 300 guineas; another of the Waterloo strain went to Mr. Holford at 100 guineas, and this old breeder took that grand yearling Duchess 149th at 165 guineas, Mr. Villatte giving 150 guineas for Dowsby Sea Lady; here Mr. Sidey was a close competitor, the twenty-two of this age making the grand average of £84 5s. 10d., which, together with those given above, makes an average for forty-eight females, including calves, of £78 1s. 5d.

The bulls were not in so good request. The best prices for two-year-olds were 88 guineas for Dowsby Imperial Oxford to Mr. Sidey, and 70 guineas to Mr. Norris, Dowsby Imperator, the seven of this age averaging £52 7s., whilst the four yearlings made one of £34 2s. 6d., giving a general average for the bulls of £45 14s. 5d. The fifty-eight cattle sold realised £4,250 8s., or £72 0s. 9d. per head.

A list of the chief prices realised, purchasers, &c., is appended :—

Dowsby Ruby Imperial, c Sept. 30, 1906	Mr Money	40

The Lincoln Sheep.

Here Messrs. Saul Bros. were the auctioneers, and a right good demand did Mr. Saul find for the first-class rams and ewes he had to offer. It is worthy of note that Messrs. Dean have been for years buyers of the best sires, and only the previous day purchased Mr. H. Dudding's top price yearling at 900 guineas, the highest priced sire any British breeder has used in England to our knowledge. It was therefore no matter of surprise to find not only a very typical lot of sheep but a good one also, and it is a matter of satisfaction to find they were so well appreciated by the large assemblage of breeders present. Mr. F. G. Battle started the sale by taking lot 1 at 70 guineas; lot 2 a particularly handsome ram of very choice breeding, went to Mr. Dudding at 100 guineas; lot 6 to Mr. G. Pears at 82 guineas.

Lot 8, one of the best of its breed, was in great request, and Mr. J. E. Casswell did not retire from the contest until 300 guineas, the second best price of the season, was given by Senor Eycurra, one of the leading Argentine breeders. Dr. Anchorina, another Argentine, gave 90 guineas for lot 11; lot 13 went to Mr. Dudding at 105 guineas, a very fine and well-grown ram; lot 25 went to Dr. Anchorina at 95 guineas, a well-grown and first-class ram; Mr. J. E. Casswell gave 62 guineas for a very fine one, that came late in the sale; Mr. James Cartwright exceeded 50 guineas twice; and the 50 head offered and sold realised the handsome average of £37 5s. 6d., with a range of prices from 300 guineas to 7 guineas.

There were twenty-five yearling ewes offered, and a grand lot these were. Senor Villatte was the principal purchaser at the prices given in the summary, from which it will be found that these typical ewes made an average of £9 4s. 9d, realising £231, bringing up the aggregate total for seventy one sheep to £2,094 15s., which, added to that realised for the cattle, makes the grand total of the sale £6,345 3s., a result which, we believe, is satisfactory to the vendors, who are deserving the highest credit for the grand lot of stock placed before the public at this, their first Shorthorn sale. The chief sales of sheep were as follows :—

RAMS.

Four Shearling Ewes	Senor Villatte	36

The July horse and cattle fair at Stockport was held on Tuesday, when there was an abundant show of cows, but trade was very slow. Milch cows were offered from £16 to £23; lying-off cows from £12 to £16; stirks, £5 to £11. There was a liberal show of horses of varied descriptions. Colts made from £12 to £23; tradesmen's horses from £10 to £30; and heavy horses, of which the supply was limited, from 50 to 60 guineas each.

Notes and Jottings on the Highland Show.

UP to the time of writing the weather has remained most unsettled and rainy, and has proved anything but auspicious to the progress of cattle in the fields. Whether these cattle have been young stock for growing on or beef cattle maturing for the shambles, it has been one and the same thing; and milkers, too, have been having hard times of it, though in their case the succulent grass has been helpful to the supply of lacteal fluid, even though it may have been at the expense of condition. The nights have been very cold, and, indeed, the days, too, for the matter of that, and this cold, combined with the heavy rains, has caused a vast number of cattle throughout the country to show signs of weakness. Such should be herded in a sheltered pasture and assisted with a little cake or other dry food.

BAD as the weather has been for cattle in the fields at home, it has been even worse in many of the showyards where exhibitions have been taking place. In the shedding at the majority of these shows the protection afforded the cattle is but a conductor of cold draughts, which makes things much harder to bear than if the stock were at liberty in the open field, and besides being draughty, much of the canvas covering has been anything but effectual in keeping out the rain, and so the poor bovine exhibits have had to lie on very wet bedding, as well as in draughty cold air. Some of the leading exhibitors provide sheets to prevent the side draught, and these would be all right were they used only at night, but when used, as they have frequently been of late, during the daytime, they form quite an impediment to the sightseer.

AMONGST the shows that were held last week, so far as cattle are concerned, that of the very old established Highland and Agricultural Society of Scotland Show at Edinburgh will rank as the most important and interesting, being a very large and good show of the native North-country breeds, as well as of the red, white, and roan. A feature, too, of this show, at least in one section, was the warmer and more comfortable arrangement for the cattle. The shed being wide enough for two rows of cattle to stand with their heads towards the outside of the tent, and a wide space left for the public to walk along behind them, thus seeing them in the most comfortable manner possible; such an arrangement prevents the necessity of so many rugs and sheets being used by the exhibitor, and also keeps the visitor dry both overhead and under foot during his tour of inspection.

THE Highland Show was very interesting, inasmuch as some of the Scottish breeds that are seldom seen in any degree of perfection in the English showyards are here brought out not only in what we may call "their Sunday clothes," but are also brought out in greater numbers and of better quality. Some of the shaggy West Highlanders were very good to see; cows and calves, as well as matured bulls of this glorious breed were alike worth going many miles to see, and some of their attendants being attired in Highland costume added to the picturesqueness of the ring.

YES, this sight was calculated to and did carry one's memory back to the olden days of the great Falkirk Trysts, where these Highland cattle used to assemble in the autumn months of August, September, and October in their thousands. Their owners in some cases, and attendants in others, donning the kilt and sheltered with the "plaid." What journeys the Highlanders of those days had to undergo. Commencing their journey, perhaps, by swimming across the water from some of the Western Islands to other starting points; then the long walk by easy stages down to the Trysting ground, there to be handed over to southern purchasers for another long and tedious journey to the English park in the extreme south of the country, and other places, occupying a journey of some month to five or six weeks' duration. How all this is changed! To-day the whole of the peregrinations from their native homes to their new ones in the south is accomplished in many cases in a couple or three days.

IN another way, too, the business of buying and selling is very much altered. Whether for the better or the worse we will not venture an opinion here, but we allude to the present day system of selling by auction as compared with the last century way of doing all privately between buyer and seller. In some cases, too, there is the further innovation of selling by live weight. The latter we have no hesitation in disapproving of as regards stores, though it may be useful in some cases with fat cattle. With the raw unfinished article, the quality and breeding forms by far the most important part, and with the young and inexperienced feeder is often overlooked, such individuals being led away from quality by the heavier weight of the badly bred animal when placed on the weighing machine, and which said weight in such cases often remains very nearly stationary for weeks and months.

"TO the Highland Show again." The Ayrshire breed with their improved quality and grandly-shaped capacious udders were very attractive, and made a fine display. Few breeds of cattle have altered so completely in character during the past sorty or fifty years as this important dairy breed of Southern Scotia, and apparently whilst developing the improvement, they have not in any way apparently lost constitution, which has with some breeds been a great failing. Perhaps in the ordinary fair or market Ayrshires of the old type and colour may still be found in numbers, but in the showyard one seldom sees Ayrshires of the brindled and dark colours that so largely prevailed in many of the good lots of dairy cows that used to be seen in the markets and fairs. At Edinburgh last week there were more animals with black spots on the white ground than we have sometimes seen.

ANOTHER breed that pleased the writer immensely at this fine northern show was the Galloway. There were many eye-filling specimens of this ancient and highly valuable breed, hardy-looking to a degree, as shapely as the most fastidious could desire, and with a wealth and mellowness of flesh that not only pleases the touch but at once indicates an ability to fatten that must insure a profitable return to the feeder. It was delightful to see the old bulls of this fine old-time breed.

Sale of Shorthorns at Edinburgh.

A select portion of the Right Hon. Lord Polwarth's herd of Shorthorn cattle, removed from Mertoun, St. Boswells, was sold by auction on Tuesday last at Echo Park, adjoining the Highland Showyard at Edinburgh. The sale being held on the first day of the show attracted a good company, but no particularly high prices were realised, the best being 95 guineas paid by Mr. Wilkinson for the grand roan bull Border Butterfly, whilst 90 guineas was given by Mr. Davidson for a two-year-old red bull Great Britain. The average for the twenty-eight head sold was £35 0s. 1d. We give below a sale list of the principal lots with purchasers' names and prices:—

Sale of Mr. W. C. Cooper's Jersey Cattle and Berkshire Pigs.

The entire herd of pure-bred Jersey cattle belonging to Mr. W. C. Cooper, of Whittlebury, was disposed of by auction at the Church Farm on the 5th inst. In addition, Mr. Cooper's herd of pure-bred Berkshire pigs also came under the hammer. The herd of Jersey cattle has been in existence nearly seven years. It was originally started with good selections from those fine herds belonging to Lord Rothschild, Earl Cadogan, Mrs. Barron, Mr. Armitage, Mr. W. E. Budgett, Mr. J. H. Shore, and with occasional selections from good breeders in Jersey. For several years past both the Jerseys and Berkshires have been very successful at the principal shows. The pigs were bred from the well-known herds of Sir A. Henderson, Bart., Mr. Arthur Hiscock, Mr. Morant, and Mr. Woodward, and are full of the old Swanwick, Gibson, and Chick blood. There was only a fair attendance of buyers, and the Jerseys realised disappointing prices, but there was a good demand for the pigs, which sold extremely well. The highest price amongst the former was paid on behalf of his Grace the Duke of Grafton, K.G., for Golden Lady, which was knocked down at 60 guineas, whilst the Berkshire pigs made up to £12 10s.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

What is Quality?

"ITS indefinable characteristic 'quality,'" says someone writing about a horse; and when one comes to think of it, how many horsemen who use the word every day, and times in a day, could tell you offhand of what quality consists? Perhaps the dictionary definitions, "that which makes the thing what it is," "peculiar power," "superior character," are as nearly accurate as we can get, though to the horseman they all sound clumsy. One thing I think we may consider as thoroughly established, and that is that mere prettiness in a horses does not necessarily imply quality, and a horse can be, from the standpoint of the man in the street, plain looking, yet full of quality.

A Case in Point.

AN example of this will probably occur to the memory of most of my readers who have had much experience amongst horses, and a circumstance took place the other day which emphasised the fact very strongly to me. I was standing at the ringside with a friend when a well-known horse, about whom much has been written, came into the ring. "So that is the horse we have heard so much about," said he. "What a common brute." My friend, I should say, is given to expressing his opinion about horses somewhat emphatically, and is an adept in the noble art of "crabbing." I demurred, and we had a lengthy argument on the subject. My friend admitted at once that the horse in question was a fine mover. "He does use himself fairly," said he, "but it is the only good point he has." The conversation caused me to look over the horse more carefully than I had hitherto done, and to review the whole situation as it were. And it resolved itself into this: The horse certainly is plain about his head; you could not call it handsome; yet it was a good head when you picked it to pieces. He had a bold expressive eye, an open nostril; there was no undue heaviness about the jowl, and his ears were in the right place, and were indicative of courage and determination. Yet it was not a good-looking head; it was not the sort of head that if you had seen it looking out over a loose box door, you would have said instinctively "here is a horse to be seen." You would probably have passed him by under such circumstances, and you would have been wrong. For he is, notwithstanding his head, full of quality, and of quality of the highest order; the lay of his shoulders, his muscular back, the turn of his quarters and his bone are not only excellent, they are as nearly perfect as is possible, and he is one of the most valuable horses out at the present day. It would, of course, be unfair to name the horse, public a performer as he is, because his name could scarcely be given without indicating my friend.

A Definition.

WE come back, then, to the original question with which I commenced this article—"What is quality?" I take it that quality as applied to a horse means the possession in an exceptional manner of those characteristics which are necessary to his particular breed. In other words, it means the approach to perfection in general conformation. A clumsy definition, you say, and I admit it, but then I have set myself an almost impossible task. But what I would make clear is this, that what is quality in one breed is not necessarily quality in another. For instance, the conformation which gives the snap of the knee to the Hackney is quality in a horse of that breed, but it would not be quality in a Hunter, but quite the reverse. For a horse to have quality it is essential that he should be fitted for his peculiar work.

The Present Position of the Hackney.

IN certain quarters, and in some newspapers which only take a superficial view of the subject, it is said that Hackney breeding is on the decrease; that the breed has lost favour, and that "the good old days have gone never to return," whatever that convenient phrase may mean. I have been a great deal amongst Hackneys during the last few weeks; I have attended shows in the North, in the Midlands, and in the South, and I have had a good deal of talk with Hackney breeders. And what I have seen and heard tends to confirm me in the opinion I have previously expressed in these columns, viz, that the Hackney is holding his own. I would go even further, and say that he is more than holding his own. Recently I referred to the big prices paid for Hackneys as harness horses at Olympia. To day it is with the young Hackneys that I wish principally to deal. Now there is no mistake about one thing, and that is that there are not so many Hackneys bred and young Hackneys shown as was the case, say, fifteen years ago. But this is a sign of strength rather than weakness. One of the best-known breeders of Hackneys in Yorkshire said to me the other day that when the Yankee boom was on there were many young so-called Hackneys shown and sold for comparatively big prices that should never have been bred. This is by no means overstating the case, and to this is to be attributed the slump in prices which set in for all but the very best.

To-day's Young Hackneys.

IF the classes of Hackneys in what are called the breeding classes are smaller than was the case a few years ago the careful observer who can carry the young horses of that time in his mind has no difficulty in arriving at the conclusion that a horse which was good enough to win in those days would barely reach reserve place now. I am, of course, alluding to the rank and file, and not to horses of superlative excellence. In one respect the Hackney is a very much improved horse, and that is in action. When one stands by the ring side nowadays, one seldom sees everything sacrificed to the stamping knee action which was all the rage a few years since. Judges now want balanced action, they want a horse to put his foot well out as well as to bend his knee and they want pace, which means increased hock action. And what judges want breeders endeavour to give them, and in the case of Hackneys not without success.

In Harness.

TRAVELLING about in the districts where they breed harness horses as harness horses, without any particular prejudices about breed; where they will take a coaching cross or a Thoroughbred cross, or any other cross which they think will bring the result they require, that is a big upstanding harness horse with quality, action, and pace, I have been very much struck with the excellence of the young stock. And amongst these harness horses I have seen both Yorkshire Coach horses and Hackneys which are of the true harness type. Some Hackneys especially made a strong impression upon me. They are big upstanding horses, I should think fully 16 hands high; they have the lean bloodlike head that is seen in some of the best bred Hackneys, and it seems needless to add that they have fair action. But what I most admired in them—because I suppose it is so unusual in the Hackney—was the long level quarters and well set-on tail. And then their breeder had left their long tails on!

Make-up.

I HAVE often thought that Hackney breeders handicapped their horses considerably by the way they "make them up" for show. The short tails—some of them only a very few inches long—which have become fashionable, probably on account of the Hackney of old being "rucked," are not only ugly, but they are ridiculous, and they certainly spoil the appearance of any harness horse. I am no faddist on the subject of docking, either one way or the other. There are some horses one would not think of docking; there are others that are much improved if they are docked. If I had one of the latter I would dock him in spite of fashion, or a stupid law, or anything else. But the short tail of the Hackney, which seems to be getting shorter every year, and to be rapidly approaching vanishing point, certainly spoils the appearance of the horse. A Hackney, as a rule, looks better docked than undocked, but breeders and owners would do well to leave him a few inches more tail. With hogged manes the same general rule applies. Occasionally, very occasionally, a horse looks better with a hogged mane; but that is no justification for the indiscriminate hogging of manes we see nowadays. The Hackney men, however, are not so much to blame for hogging manes as their hunting friends. I would, however, point out that a horse in harness with a hogged mane and a tail same 4in. long is vulgar, and if Hackney breeders want to bring their breed more to the front as harness horses they must not dock them so short.

THE LOOKER-ON.

Notes and Jottings.

THE drop in the price of wool is a matter much to be regretted, because it has certainly in many instances reduced the receipts of the flockmaster to a considerable extent; but, what is worse, it has given those flockmasters who have not been careful, or who do not believe in being careful in the selection of the sire and dam, opportunity once again to urge that it does not much matter what kind of wool one grows.

HOW anyone who has a business training can make such an assertion is almost past understanding, but yet there are many who make this assertion, and, unfortunately, very many who act upon it.

IT matters much what kind of commodity one produces, for a reference to any market report shows that the best of that commodity always secures a better price than the inferior grade, and it is so in respect to wool. The better the quality of the wool produced, the more even the fleece and the more uniform the staple and character of it, all make that fleece of higher value than one of the contrary description.

GREATER discrimination should be exercised in the drafting of the flock in respect to the character and quality of the fleece of the sheep. This is applicable to every kind of sheep and to every breed, and it is quite certain to those who pay sufficient attention to note the varying qualities of the fleeces of their ewes that this means, in effect, that the flockmaster will more and more individualise his flock, and by so doing certainly produce a better, more uniform, and higher-class crop of lambs.

THE cold and ungenial weather we have experienced lately has been such that, whilst it has given a very good supply of food in most districts, has produced a food of lower nutritive value than would have been the case had we had a full supply of sunshine. The root crop, which in most districts has secured a full plant, does not thrive and grow to that extent it should do.

THESE are points worthy of consideration. They show that flockmasters must be fully ready to make use of any favourable opportunities which arise to take such steps as to them seem most desirable to make sure of securing a full and as varied as possible supply of food for both autumn and winter consumption.

FROM the statements made at the International Conference of Sheep Breeders, it appears that there have been some considerable difficulties arising out of the administration of the more rigorous sheep scab regulations. Those flock owners that have been affected thereby are somewhat sore at the stricter regulations now in force; but this only proves how very essential it is for the most drastic steps to be taken to secure the eradication of this disease, because, awkward as such regulations may certainly be, it would only be for a very short time that we should have them to trouble us.

THE Australian Government and the New Zealand Government, by determination, secured the eradication of this disease in their colonies; and, as all who come over from those colonies to this country repeat year after year, it is simply astounding that, in a country so closely settled as our own, all this great difficulty should not long ago have been done away with.

DISCUSSING this point with a New Zealand flockmaster at Folkestone Show the other day, the writer pointed out what was being done. "Ah!" said the New Zealander, "it is not what is being done, it is what should be done. We eradicate sheep scab once and for all by the Government dealing with the question in a thorough and drastic manner; but from what you say, and from what I have learned since I have been in the country, it is almost useless for the present half-kind of measures to be used, as it is practically certain that they cannot, except by almost a miracle, effect that which the drastic measures adopted by our Government did for us."

THE English flockmaster has for the past fifteen or twenty years, or even longer, put up with no end of inconvenience, loss, and bother simply because a few of their number have been careless and indifferent as to the proper cleansing of their sheep.

SHEEP scab can hardly be found in any flock of standing, and yet these flocks, which are in the majority and are well managed, have, owing to the neglect of the minority, to put up with a continual trouble and bother.

HOW long is the majority to suffer in this manner for the neglect and carelessness of the minority? This is a point that wants pressing well to the fore, and the harder it is pressed and the more vigorous the action taken by those who represent flocks free from sheep scab, the sooner will those who are responsible for its eradication be forced to take the drastic action which alone can secure its complete eradication—compulsory dipping and absolute prohibition of movement of sheep from any infected area until there is no possibility of the disease being taken with them.

Sheep Fairs and Sales.

Burgess Hill.

Close on 3,000 animals, including a few ewes, were penned at St. John's Lamb Fair, held at Burgess Hill on the 5th inst., the number being a little less than last year. The animals were from various well-known flocks and met a good demand throughout. The top price for lambs was 31s., Mrs. S. J. Hole, Twineham, selling eighty-two at that figure, whilst others sold at prices ranging from 20s. to 27s. Several re-sales at satisfactory prices up to 28s. were also reported.

The Black-faced Mountain Shearling Ram illustrated above is the animal with which Mr. John Robson, junr., Lyneger, Watten, Caithness, won a First Prize at the Royal Show at Lincoln.

Beccles.

On Tuesday close on 6,000 lambs and ewes were offered for sale by auction at Beccles, and met spirited bidding throughout. The top price of the day was 47s a head which was got for ten Suffolk ear-marked ewe lambs, from the registered flock of Sir F. E. S. Adair, Bart., Flixton Hall.

Dorchester.

At Dorchester wool fair prices were from 1½d. to 2d. below last year's figures, but a good trade was experienced. The top price was 13¾d.

Findon.

At Findon July lamb fair, held on Friday in beautiful weather, only 3,000 were penned, which is about 2,000 below the average for this fair. Nearly all the lots were sold at auction, the number of private sales getting less each year. Taken throughout, the prices were the highest realised here for some years past, quite small lambs fetching 23s. 6d. upwards. At the auction, Mr. C. Goring, of Winston, made 36s. a head for forty-seven wether lambs; Mr. Strong, of Clapham, made 34s. 6d.; mixed lambs made from

By WATERS & RAWLENCE.

FRIDAY, JULY 19, 1907.
THE WATERS PLACE HAMPSHIRE DOWN FLOCK.
The property of T. FOWELL BUXTON.
Registered in the *Hampshire Down Flock Book.*
Notice of Dispersal Sale of the
GRAND BREEDING FLOCK
of about
500 EWES in ages.
150 EWE LAMBS.
70 RAM LAMBS and 20 Older RAMS,
and which

MESSRS. WATERS & RAWLENCE (in conjunction with Messrs. Jackson and Son) are instructed to SELL by AUCTION at Waters Place Farm, two miles from Ware (Hertford Branch), and 3 miles from Roydon (Cambridge Line) Stations, G.E.R., on FRIDAY, JULY 19, 1907.

The dispersal of the Waters' Place Flock is undoubtedly one of the chief attractions of the Season in the Agricultural world, it comes at a time when the Hampshire Down Breed is very much to the front at home and in all mutton-producing countries, as it every day becomes more apparent that no breed of sheep is so valuable for producing the finest quality of mutton in the shortest possible time as the Hampshire Down, whilst they readily adapt themselves to all climates, and for crossing purposes are unrivalled.

Messrs. Waters and Rawlence have fixed the Sale at the earliest possible date to accommodate all Foreign Buyers, and as regards English Breeders it is well known that wonderful results have been attained by the introduction of Waters Place Blood, and the Auctioneers are satisfied that they will get the most genuine support from the leading Flockmasters, whilst to those desirous of establishing a Flock of this popular Breed, such a chance may rarely, if ever, occur again.

Conveyances will meet the trains at the above Stations.

Sale at 12 o'clock.

Luncheon will be served during the Sale.

Catalogues of Mr. J. H. Hurford, Waters' Place Farm, Ware; of Messrs. G. Jackson & Son, Auctioneers, Hitchin; or of Waters and Rawlence, Canal, Salisbury.

By HOBGEN BROS.

CHICHESTER EIGHTEENTH ANNUAL SALE of PURE-BRED SOUTHDOWN SHEEP.

HOBGEN BROS. beg to announce that they will hold their Eighteenth ANNUAL SALE of PURE-BRED SOUTHDOWNS in their Auction Repository in the Chichester Cattle Market on THURSDAY, AUGUST 8, 1907, when a large and choice selection of Rams, Ram Lambs and Ewes from the flocks of the Duke of Richmond, K.G., the Duke of Devonshire, K.G., Lord Northbourne, Earl Bathurst, C.M.G., Earl Cadogan, K.G., Mr. H. Cosmo-Bonsor, Mr. A. Heasman, Mr. A. G. Paul, Mr. E. Hobgen, Mr. Percy Herrington, and others will be offered. Sheep can be taken in under cover two or three days previous to the Auction, and green food will be provided free of cost.

HOBGEN BROS. will also give £10 in cash, or, if preferred, a piece of plate, to the Owner being the Breeder of the Shearling Ram which shall be sold at the highest price at such Auction

N.B.—This Sale is open to all Breeders of Southdown Sheep, and is unrestricted to numbers. Hobgen Bros. respectfully solicit early entries to the Sale, in order that the public may be notified of the same.

Sale to commence at 12 o'clock precisely.
Refreshments may be procured in the Hall.

By JOHN THORNTON & CO.

IMPORTANT SALES OF PURE-BRED STOCK.

JOHN THORNTON & CO. will SELL by AUCTION as follows:—

FRIDAY, JULY 19.—Mr. Herbert Padwick's JERSEYS, at West Thorney, Emsworth, Hants

WEDNESDAY, JULY 24.—The entire SOUTHDOWN flock and BERKSHIRE PIGS belonging to C. H. Berners, Esq., at Woolverstone Hall, Ipswich.

THURSDAY, JULY 25.—The Rt. Hon. Earl Manvers' SHORTHORNS, at Holmpierrepont, Nottingham.

WEDNESDAY, AUGUST 7.—Mr. G. J. B. Chetwynd's herd of DEXTERS, at Wyndthorpe, Doncaster.

FRIDAY, AUGUST 23.—Mr. W. P. Hampton's entire SOUTHDOWN flock, at Langdon Abbey, Dover.

Catalogues may be had of JOHN THORNTON & Co., 7, Princes Street, Hanover Square, London, W., who will execute commissions.

By A. MANSELL & CO.

On THURSDAY NEXT, JULY 18, 1907.
IMPORTANT SALE OF
PURE-BRED SHORTHORN CATTLE, the property of J. Tetley-Nickels, Esq., at
THE DAY HOUSE, SHREWSBURY.

Two miles from Shrewsbury Station, the train service from which is unrivalled, and where conveyances meet the morning trains.

ALFRED MANSELL & CO. will SELL by AUCTION, as above,
60 HEAD of PURE-BRED SHORTHORN CATTLE, of fashionable breeding, consisting of a grand lot of Cows, beautiful Heifers, and 21 Bulls.

With very few exceptions all the Cows catalogued are young and in their prime, whilst the Heifers, of various ages, and the Calves, are exceptionally good colours, with true outlines and correct Shorthorn character, and at the same time the Dairy properties of the herd are in evidence by the well-developed and capacious udders of the older Cows.

The 21 Bulls are of various ages, including some good reds and roans suitable for export, and several younger Bulls just fit for service.

On the few occasions Mr. Nickels has exhibited, the representatives of the herd have been very successful, and Bulls and Heifers have for many years been sold at high prices for export to the Argentine, Chile, Russia, and elsewhere.

Special attention is called to the fact that in 1899 the whole herd was tested for tuberculosis, and only those which successfully passed were retained. As a sequel to this, 18 Bulls were tested this spring (1907), and every animal successfully passed. All the animals catalogued (excepting 2 Cows and 3 stock Bulls) are bred by Mr. Tetley-Nickels.

The Bulls now in service comprise the finely-bred bull Holker Duke 3rd 79075, bred by His Majesty the King; Chewton Ideal 80680, by Bapton Victor's Champion 76084; and Ruddington King Edward 84669, bred by the late Mr. P. L. Mills, by Scottish Thorndale Duke.

Sale after 12 o'clock Luncheon.

Catalogues from ALFRED MANSELL & CO., Auctioneers, College Hill, Shrewsbury.

Commissions faithfully executed.

By R. BOND & SONS.

IPSWICH.

THE BEALINGS HALL HERD of PEDIGREE RED POLLS.
TUESDAY, JULY 23, at 2 p.m.

ROBERT BOND & SONS will SELL by AUCTION, at their Sale Yard, 50 excellent RED POLL COWS, HEIFERS and CALVES, comprising the entire herd the property of Mr. A. Gerald Smith, without reserve.

Catalogues forwarded on application to the AUCTIONEERS, Old Bank House, Ipswich, Suffolk.

Commissions executed.

By Messrs. CHALK.

PRELIMINARY.

THE 22nd ANNUAL SALE and LETTING of 80
PURE-BRED
HAMPSHIRE DOWN RAMS and RAM LAMBS
from Mr. H. Lambert's celebrated Flock
will take place at
CAMBRIDGE,
on
WEDNESDAY, AUGUST 7, 1907.

Messrs. CHALK, Auctioneers,
11, Alexandra Street, Cambridge, and Linton.

By J. HARRIS & SON.

By Order of Executors.
LONG SUTTON, HANTS,
Five miles from Hook and Winchfield Stations.
IMPORTANT SALE of the whole of the highly-bred FLOCK of 710 EWES and LAMBS,
Of the late Mr. William M. Harris, registered in Vol. 1 of the Hampshire Down Flock Book.

MESSRS. JAMES HARRIS and SON are instructed by the Exors. to SELL by AUCTION, on the premises at Long Sutton, on MONDAY, JULY 29, 1907, the whole of the above highly-bred Flock, comprising:—

150 Two-Tooth EWES,
140 Four-Tooth EWES,
130 Six-Tooth EWES,
100 Full-Mouth EWES,
140 EWE LAMBS,

Together with 50 RAM LAMBS and SHEARLINGS.

This Flock, established in the year 1864, is brought to the hammer in consequence of the recent death of the late Mr. W. M. Harris. That gentleman's well-known judgment (being a frequent judge at the Royal and other Shows) will be proved by the present Flock, which will be found of good size and colour, well-woolled, and full of quality. The Rams in service recently have been from the Flocks of Messrs. James Flower, Cary Coles, A. F. T. Drake, J. A. K. Falconer, and Sir George Judd. A good export trade to the Argentine and Germany has been done the last few years.

Luncheon will be provided at One o'clock, and the Sale will commence at Two.

Conveyances will meet the up train from Basingstoke, Eastleigh, and Salisbury, due at Hook 11.57, and the 9.30 train from Waterloo, reaching Hook 11.22, to convey passengers to the Sale at a charge of 2s. 6d. for the return journey.

Catalogues may be obtained of the Auctioneers, Winchester.

COCUM FARM,
Six miles from Micheldever Station, two from Sutton Scotney Station, and seven from Winchester.
ANNUAL SALE and LETTING of HAMPSHIRE DOWN RAM LAMBS.

MESSRS. JAMES HARRIS and SON have been favoured with instructions from Sir George Judd to LET and SELL by AUCTION, on the premises as above, on THURSDAY, AUGUST 8, 1907:—

100 RAM LAMBS and
6 SHEARLING RAMS,

from his highly-bred Cocum Flock, entered in Vol. 1 of Flock Book.

The well-known excellence of the Cocum Flock will be fully upheld by the very high-class selection of Ram Lambs to be brought forward this season, which show exceptionally good breeding, and possess that remarkable depth of flesh, good wool, and beauty of form always so marked in the Lambs from this healthy flock.

The most fashionable sires have been judiciously selected by Sir George Judd, and a characteristic and popular type of Hampshire Down has been obtained, which the Auctioneers can confidently recommend to Exhibitors and Breeders, who should not fail to attend this annual sale.

Conveyances will meet the principal Trains at Sutton Scotney Station, and a Brake will leave Winchester Station at 12 o'clock and Andover at same time on day of Sale.

Luncheon will be provided at One o'clock, and Sale commence immediately after.

Sir George Judd will be pleased to show his Flock of Breeding Ewes, Ram Lambs, &c., to his friends or intending purchasers at any time previous to Sale.

Catalogues may be obtained of the Auctioneers, Winchester.

(Continued on next page.)

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading, Six Shillings an inch

By W. BROWN & CO.

HAMPSHIRE DOWN SHEEP.

The ANNUAL SALE from the Tring Park Flock, the property of the Right Honble. Lord Rothschild, comprising 70 RAM LAMBS and 70 DRAFT EWES, will be SOLD by AUCTION by

MESSRS. W. BROWN & CO., at Home Farm, Tring (L. & N.W. Railway), on MONDAY, JULY 22, 1907, at One o'clock.

The good results from the Lambs bought at previous Sales is a sufficient guarantee that the combination from the leading Flocks has established a type which meets the requirements of the Breed. The Sires in use last year were purchased regardless of expense to secure the best blood, costing upwards of £500, of which purchasers will obtain the benefit, and the satisfactory average of last year's Sale is a criterion of the esteem in which this Flock is held.

☞ Pedigrees on the Day of Sale and further particulars may be obtained of Richardson Carr, Esq., Home Farm, Tring, and of the Auctioneers, Tring.

By SUGDON & PEARCE-BROWN.

THE LECONFIELD
LINCOLN LONG-WOOL RAMS,
No. 38 in Flock Book.

MESSRS. SUGDON & PEARCE-BROWN have received instructions from Mr. Robert Fisher TO SELL BY AUCTION, on Wednesday, August 14, 1907,

80 SHEARLING RAMS

From the above Registered Flock; when Mr. Fisher will be glad to see his friends.

Sale after 12 o'clock luncheon.

Conveyances will meet the trains at Beverley and Arram Stations. Auctioneers' Office:—Market Place, Beverley.

By KNIGHT, FRANK & RUTLEY.

A SOUND INVESTMENT.

ESSEX, near Hockley and Rochford Stations on the G E Rly. Only seven miles from Southend-on-Sea, and 36 from London.

A Valuable Freehold Agricultural and Sporting Estate known as "BECKNEY," extending to 605 acres. The property includes Three valuable Dairy Farms in excellent state of cultivation, possessing considerable prospective value, and known as "BECKNEY," "LOVEDOWNS," and part of "BRICKHOUSE" Farms, producing a rental of £417 per annum, to be offered by Auction (unless previously disposed of), first as a whole, if not sold, then in lots, by

MESSRS. KNIGHT, FRANK & RUTLEY, in conjunction with Mr. T. W. Offin, Junr., at the Mart, Tokenhouse Yard, London, E.C., on Monday, September 9, 1907, at 2 o'clock precisely.

Particulars can be obtained of Messrs. DUFFIELD, BRUTY & Co., Solicitors, Broad Street Avenue, London, E.C.; or Mr. T. W. OFFIN, Junr., Land Agent, 68, High Street, Southend-on-Sea; and of the Auctioneers at their offices, 9, Conduit Street, London, W.

23s. 6d. to 33s. 6d.; and ewe tegs touched 45s. 6d., and mixed tegs 35s. 6d.

Great Bentley.

At the 37th annual lamb sale held at Great Bentley on Thursday, the supply was not so large as last year, but the animals forward were of excellent quality, and met a good trade, and yet another best price of the season was recorded. The lambs catalogued totalled 4,000, and, with the exception of one lot of half-breds, were all Suffolks, some of which were bought for His Majesty the King. The middle-class lambs sold extremely well, prices being very dear, while for the best quality animals good prices were given. The highest figure this season was reached when 78s a head was bid for a pen of lambs belonging to Mr. J. Eagle, who thus made 15s. more than the best lambs yet sold at the present series of sales in East Anglia. A consignment of the Earl of Onslow's was brought to the notice of the company around the ring; the total entry of Black-faced lambs, which fell five short of 200, selling at an average of 40s. 9d. apiece. The prices ranged from 26s. 6d for a mixed lot of ewes and wethers, to 54s. for ear-marked ewes.

Haverhill.

The good prices given at the lamb sales in East Anglia reported in our last issue were maintained and beaten at the sale held at Haverhill on Monday, for the top price of the season was reached. Twenty ear-marked Suffolk ewe lambs, out of a consignment of 360 sent by Mr. Robert T. B. Payne, of Borley Hall, sold at 63s. a head, and thereby exceeded what was the highest price up to Friday, of 62s., made at Stowmarket. Sheep sold uncommonly well, the best being the 300, mostly ewes, from Mr. A. W. Ruggles-Brise. Having thick wool, and all being of a uniformly good size, they were in great demand, the biddings twice reaching £5 apiece and over.

Sutton.

Special interest centred in the lamb sale held at Sutton, near Woodbridge, on Friday, as it was the centenary of the sale, and it was fitting that it should have proved one of the best of the long series. All the lambs were in great demand, and the level character of the prices is best instanced by the circumstance that less than a dozen pens sold at under 30s. per head, whilst several sold at figures well over 50 guineas, so that the steady rise in price noticed in these East Anglian sales this season was well maintained.

Wool Fairs and Sales.

Aylesbury.

Aylesbury Wool Fair was held on Wednesday, when there was a larger attendance of buyers than usual. Twelve thousand fleeces were pitched, and prices showed an improvement on recent sales, averaging about 5 per cent. more. Washed wool made 1s. 1d. per lb., and unwashed 9½d.

Blandford.

About 100,000 fleeces were pitched at Blandford, Dorset, on Monday, and there was an average attendance of buyers, but prices ranged about 2½d. less than last year. Hampshire Down Wool, 13½d.; lambs' wool, 12d.; unwashed ewe, 8½d.; Southdown, 13½d.; ditto lambs' wool, 12½d.; Sussex tegs, 13½d.; crossbreds, 12½d; ditto lambs' wool, 11½d. per lb. One lot of horn lambs' wool made 13½d.

Devizes.

Devizes Wool Fair was held on Tuesday, when about 60,000 fleeces were offered in the presence of a good attendance of buyers. The best price made for washed wool was 13½d. per lb., about 2d. less than last year; and for unwashed 9d. was made, against 11d. last year. The general average of the sale was 12d. per lb. for washed, and 8½d. for unwashed. Lambs' wool made 10d.

Marlborough.

About 1,000 bales were offered at Marlborough on Wednesday in the presence of a good company of buyers. The highest price reached was 1s. 1½d., and the lowest, 7½d. for the tailings.

Salisbury.

At Salisbury Wool Fair there was a pitch of 112,000 fleeces of Down wool. The highest price for washed wool was 13¾d., as compared with 15½d. last year. The general quotations were as follows:—Washed wool, 12d. to 13½d.; unwashed wool, 8d to 10½d.; lamb's wool, 9d. to 11d.; and fallings and trimmings, to 9d. per lb.

The Leicester in New South Wales.

The secretary of the Leicester Sheep Society whose headquarters are at Driffield, and its members scattered over the country, but with many in the East and North Ridings, has received a piece of interesting intelligence from a far country—New South Wales—where the sheep industry is carried on upon a tremendous scale, and has an association of great influence to protect its interests.

Mr. Prince, the secretary, writing from Sydney, under date May 22 last, acknowledging the fifteenth volume of the Leicester Flock Book, says:—"A big demand has set in here for Long-wools for crossing and export sheep, and Leicesters are much in favour."

Last year's exports of Leicesters by members of the English society set up a record, and it is hoped the trade in this class of sheep will become eventually more extensive.

The Price of Wool at Northampton.

The secretary of the Northamptonshire Agricultural Society (Mr. A. E. Lovell) has kindly sent us the following table showing the average price per tod (28 lb.) of wool at the society's wool sale at Northampton in each year from 1865. It will be remembered that a report of this year's fair appeared in our last issue:—

Years.	Average price. s. d.	No. of fleeces pitched.	Years.	Average price. s. d.	No. of fleeces pitched.

PIGS.

Lincolnshire Curly-Coated Pig Breeders' Association.

A meeting of the council was held at Boston on Wednesday. Mr. Edwin Welsh presided, and also present were Messrs. C. E. Harris, T. R. Casswell, G. Godson, H. Caudwell, W. M. Epton, and C. E. Williams, hon. secretary. Mr. A. Saul, the association's auctioneer, attended by request.

The hon. secretary produced and read an extract from the MARK LANE EXPRESS speaking highly of the Curly-coated pigs exhibited at the Royal Show. He also read an extract from the *Cape Argus* of June 12 favourably noticing Volume I. of the association's herd book for 1907. Judging from their description and appearance in photographs, the writer said the Curly-coated breed would probably do well in the colony, and remarked, "anyone interested in pig farming should obtain the book, and probably might be tempted to give the Curly coated pig a trial."

It was resolved that the preliminary sale of pigs should be held at Boston on August 28, and the chairman, with Messrs. Caudwell and Godson, were appointed a committee to arrange for the sale. The second sale will be on October 9, and both will be conducted by Mr. A. Saul.

The hon. secretary was instructed to circularise members asking how many pigs they wished to enter; and it was resolved that no more than 100 pigs be entered for each sale, the entries to close for the first sale on August 7, and that no late entry be received.

Mr. Henry Thurlby was appointed assistant secretary, official inspector, and tattooer to the association.

The following new members were elected:—Messrs. F. G. Smith, Potter Hanworth; H. A. Reynolds, Skegness; C. T. Tunnard, Red House, Godmanchester, Hunts; Samuel Barnes, Ewerby; Thomas Mayfield, Dogdyke; W. W. Barnes, Helpringham; Fred Casswell, jun., Graby; Robert Chatterton, Stenigot, Lincoln; A. F. Allis, Toynton All Saints, Spilsby; and A. M. Wilson, East Keal.

It was resolved that application be made for inclusion of three classes of boars and three classes of sows in the Royal and Lincolnshire Shows, viz., classes for boars farrowed in 1906 or 1907, in 1907, and 1908; one class for sows farrowed 1904 to 1907, one class for sows farrowed in 1907, and pen of three sows farrowed in 1908. A committee, consisting of the chairman and Messrs. Harrison, Epton, Caudwell, and Godson, was appointed to arrange for these classes.

A letter was read from Lord Willoughby de Eresby, M.P. (president of the association), offering to give a champion prize value £5 for the best curly-coated boar exhibited at the county show at Sleaford in 1908; and Major-General Sir Mildmay Wilson (vice president of the association) wrote offering a £5 champion prize for the best sow sent to the show. The hon. secretary was instructed to reply accepting these offers with thanks.

At the hirings for haytime at Kirkby Stephen last week a number of Irishmen were present, but local men could scarcely be met with. The highest prices were £6 10s. to £7 for the month, while Scotchmen obtained about £6, and Irish £4 to £5.

Milk Fever Prevention—to Milk or Not to Milk?

On page 39 of the issue for July 1, "Gloucestershire" directs attention to the contradictory character of two communications that have appeared in our columns relative to the management of the cow with a view to the prevention of what is commonly miscalled "milk fever" (but which is not a *fever*, because the temperature is more frequently sub-normal than raised), and invites us to express an opinion on the subject. The contradictory statements are obviously those made by the writer of "Cattle Notes and Jottings" on page 679, and the criticism of these remarks by Mr. Thomas Daws in his letter under this heading on page 767 of the volume just completed, and, as "Gloucestershire" expresses it, "the treatment they advocate in each case is calculated to be bewildering, being just the reverse."

There is a temptation to embark in a general critique of the several paragraphs in which the author of "Cattle Notes and Jottings" gives so much bad advice, because the notions entertained are antiquated, erroneous, and mischievous; but perhaps we had better here stick to the point raised by "Gloucestershire"—"The one advises milking the cow two or three times before calving, and the other not until twenty-four hours afterwards"—and deal with the other heresies in the shape of an up-to-date article on "post-partum paralysis," which is a much better name for the condition under consideration than "milk fever," and that for several reasons other than stated above.

Premising that none of the correspondents seem to thoroughly appreciate the importance of the part played by predisposition to the disease by age, breed, and condition, or the fact that with some cows, or at some ages, it makes no difference how they are managed as regards their liability to "milk fever," simply because there is no predisposition to it, let us consider the question of to milk or not to milk—that is, before or about the period of parturition. The writer of "Cattle Notes and Jottings" says:—"Another admirable plan is to milk the cows a day or two before they are due, if the udder has become too full or even moderately so. Where this has been practised we do not recollect a single instance proving fatal, or even a slight attack following," which, we may add, argues a very limited experience of the disease, and which some of the other curious remarks tend to confirm.

Mr. Thomas Daws is totally opposed to the pre-parturient milking, and is so emphatic as to go in largely for italics. He says:—"We *never* milk a cow *before* calving, and I do not have the cow milked for twenty-four hours *after* calving, however much to appearance they require it. . . . We have not had a case of milk fever since we adopted this plan." "Gloucestershire" says:—"For myself I should say milk beforehand, as it appears reasonable to relieve the cow's system of the superabundance of milk as much as possible, which, in my opinion, would agitate and aid the fever."

Mr. Daws recognises that "we all have our fancies and opinions," and says "perhaps both sides are right"; but this can hardly be if all the parties to the dispute are talking about the same class of cow, and probably a better way to put it is perhaps both sides are wrong. This much is certain, *predisposed* cows go "down" under both systems of management; and while one gentleman has never seen even a slight attack occur where cows have been milked before calving, and the other has never had a case of milk fever since he adopted the plan of not milking by hand for twenty-four hours after calving, we have seen both systems fail. Indeed, we have no hesitation in affirming that there is no certain preventive of the disease in predisposed cows, and we have seen practically all systems tried, often with apparent success for a while, and seen them all break down sooner or later. But—there is always a "but"—we have seen the *best* results from the system of management so strongly advocated by Mr. Daws, and we agree with him in his conclusions, and for reasons exactly opposite to those expressed by "Gloucestershire."

The abstraction does not "relieve the cow's system of the superabundance of milk," for, as Mr. Daws says, "the more you milk away the more comes, just what you want to avoid for the first week," and every dairyman knows that hard milking and clean stripping encourages secretion. Without pretending that it is a certain preventive, our experience goes to show that the system of management which leaves the udder untouched until the "danger" period is passed, except in so far as affording the relief occasioned by the sucking of the calf, tends in the direction of prevention, especially if practised in conjunction with other measures before calving having for their object the discouragement of milk secretion about the time of parturition.

Further, and contrary, perhaps, to what might be expected, we have never known any injury to the udder from refraining from abstracting from it more than satisfies the necessities of the calf, and have not found that the practice has ultimately any serious effect on milk production. The temporary discouragement of secretion makes no difference to the yield, when feeding and milking commence in earnest after the "danger" period is passed. The treatment of "milk fever" is under modern methods attended with much greater success than formerly, when the animal was regarded as certain to die, whereas it is now confidently expected to recover; but prophylactic measures are still of great importance, if only because prevention saves the expense of treatment, nursing, &c., if the cow goes "down."

M.R.C.V.S.

At the Conference of the Federation of Grocers' Associations, at Bournemouth last week. A motion was carried deprecating legislation on milk-blended butter, and urging the adoption of the principle of invoice warrants. The Butter and Margarine Bill now before the country would punish the honest trader as much as the dishonest trader, and the only safeguard against adulterated articles was confiscation at the port of entry. It was decided to appoint a deputation to wait upon the President of the Board of Agriculture, and, failing, to hold a mass meeting in London upon the question.

A deputation representing Northern farmers interested in the sheep trade met Sir Thomas Elliot, secretary to the Board of Agriculture, in the showyard of the Highland and Agricultural Society yesterday forenoon on the question of the Agricultural Holdings Act, 1906, particularly as to the construction of sub-section 2 of section 1 of the Act, which comes into operation in 1909, the point at issue being the meaning of the words "arbitration" and "valuation." Mr. J. S. Ainsworth, M.P., presided. In the course of a lengthy reply, Sir Thomas said the Board of Agriculture realised the difficulties in the matter, but they did not believe that there was any danger of injustice or of a departure from the salient principle that a farmer should go out as he came in. He suggested that they appoint a committee to confer with the Board of Agriculture on the point under discussion, and this was unanimously agreed to.

The Home Outlook.

Warmer weather is now with us, and we are encouraged to hope that the long delayed summer has at last commenced. Judging from many reports to hand from the plantations, a higher temperature is sadly needed if we are to look for a decent crop of hops.

Many of my friends seemed to be on the verge of despair, and were inclined to predict an almost entire failure this season. The gusty winds have evidently knocked the bine about, and so far damaged the tender heads as to check the growth. Where the bine is weak, the aphides take advantage of the opportunity to feed and develop, consequently perseverance in washing is necessary. But this condition is by no means universal, and I have many reports that speak of favourable progress, and estimate the aspect of their gardens as fairly promising under the recent trying circumstances.

If the improved climate now visiting us be continued, we shall soon hear of a more hopeful tone being prevalent, fears that have been expressed of the spread of mould will probably be dispersed, and with the increasing strength of the bine, nature will be able to dispose of the blight.

The question arises whether improvement in the crop outlook is likely to be beneficial to the industry as a whole. I refer to market values, and in doing so am aware that I am venturing on debatable ground, for there are many who contend that a full crop will be our salvation, as it will close the market from the foreign competitor. I regret that I cannot share in this expectation, our experience in the past does not support such a theory, and I must confess that I am inclined to think that a moderate, or even small English crop this season is desirable, as it will the better encourage the trade and secure better recompense for our planters. Nevertheless, I am conscious that the average grower will do his best to grow hops, as each one will live in hopes that the shortage elsewhere will enable him to realise a good price for his heavier weight.

The only remedy for such uncertainty appears to be agreement between the planters as a body to regulate the whole supply to the possible demand. Could this be accomplished, the whole industry would be benefited. But I fear such a suggestion is not yet within the sphere of practical politics, and must therefore be dismissed for the moment. Nevertheless, I am always hoping for the dawn of day when the spirit of self-preservation may be sufficiently aroused to bring our people shoulder to shoulder with this excellent object in view.

Foreign Reports.

America. My correspondents say in a recent letter:—"The crop prospects in this country are improving daily. The weather in New York, California, Washington, and Oregon is ideal. We are looking for full crops, and may safely sum up our remarks by saying "all's well." From another source I learn that although some of the New York yards are rather backward, having suffered from the cold spring, recent warm weather has helped them on, and good progress is now evident. The favourable accounts of the state of affairs on the Pacific Coast is also confirmed.

The Continent.

Windsbach (Spalterland).—The gardens are generally healthy and free from insects, but are somewhat backward owing to the cool days and nights. Warm rain and sunshine are needed.

Spalt.—Up to the present the weather has been favourable to the progress of the plant. The earlies are at the top of the poles, and laterals are being rapidly developed. The later sorts show strong healthy growth, but are comparatively backward. We have had almost tropical heat, followed by thunder rains, and the present slight showers are doing much good in refreshing and invigorating the plants.

Altdorf (Hersbruckor Land).—Hops that have been attended to are doing well, but neglect of cultivation shows itself in the poor growth. The general condition of the gardens is, however, satisfactory; there is but little vermin, and the crop prospects are good.

Neustadt and Aischgrund.—Hops are growing well, the plants being strong and free from vermin. The heavy rains that have recently fallen are very advantageous, and a full crop is anticipated.

Bamberg.—The plants are developing rapidly, but we require more warm rains and sun. The present condition encourages the best hopes for a full crop.

Rottenburg (Wurtemberg).—The conditions are variable, some of the grounds are well advanced, but many of those on the left of the Neckar are rather backward, having suffered from the cold nights. Growers are applying manures to assist the plants. Moist, warm weather will be beneficial, but the general aspect of affairs is satisfactory.

Boblingen.—The plantations are making good progress, the growth having reached the height of about 20 ft. The hop area in this district is being enlarged.

Neutomischel (Prussia).—Hops are growing, the average being half way up the poles. They are vigorous and free from insects. The area is diminished to a slight extent.

Sachsenfeld (Austria).—The plantations are not improving, although the Goldings are well up the poles and developing laterals. In some cases burr is appearing. The later sorts are growing well, and are quite free from any disease.

Saaz.—The weather has not been altogether favourable, and the bine is only making slow progress; but this is not considered to be disadvantageous, as on the whole the conditions are fairly satisfactory. Better weather is required for the weaker gardens. It is now estimated that half the grounds may be reported as in good condition, the remainder being either middling or weak.

Kief (Poland).—The present position of the plantations is now satisfactory, although, in consequence of the long winter, cultivation was delayed. The spring was also cold and wet, and it was feared that the results would be bad, but all fears are now dissipated, and the prospect is favourable for a good harvest.

Volhynia (Poland).—There is no increase in the area, but cuttings have been sold in some quantity to other districts, where the demand is considerable. Crop prospects are good. A hop-growers' association has been formed under the patronage of the Government.

Belgium.—The continued cold weather has retarded the growth, but as the blight has disappeared growers are encouraged to hope for a plentiful harvest, supposing that the climate of the coming weeks is normal. Present appearances favour expectation that all will be well for development.

Market Jottings.

London.

The feeling of uncertainty as to the growing crop to which I referred last week as influencing the Borough trade has developed to a considerable extent. A marked renewal of activity is present with us, inquiries are frequent, and many sales have been made during the last few days. I am happy to be able to confirm previous indications of improving value, as prices have advanced from 5s. to 10s., and at the moment it does not appear that the arrival of the sun has interfered with the upward tendency now established.

Of course when one asks a trader for his views as to the future, he looks up to the sky and reminds his questioner of the climatic influences, upon which the market mainly depends. I conclude, therefore, that the brewers are somewhat disturbed, and are endeavouring to secure such hops as are obtainable at present low rates, and we may be sure that if the demand continues values will be further advanced, as there are no important stocks in hand, and supplies will be

Established 65 years. **BEDFORD.**

Works and Stock of Timber cover six acres.

Mr. Farmer,—One sees most trumpery efforts made by waggoners to patch up harness, such as piecing straps with boot-laces, and tieing loose buckles on with bits of string. Such attempts are only temporary at the best, and generally speaking risky. In fact, much damage to harness, horses, and carts can be traced to these gim-crack ways of effecting repairs. One can not expect a farmer to be sending a set of harness to the shop every time a strap gets loose or a buckle comes off, and if the waggoner is anything of a handy man, and has a few Bifurcated Rivets, he can effect these simple repairs himself. The remedy is use

rapidly exhausted if the present rate of business is supported.

America.

My latest information is to the effect that on account of the very favourable weather for the coming crop, the market for 1906's has a downward tendency, and the market for futures is very quiet.

Inward and Outward Movements.

In spite of the slow demand prevailing during the past month, the influx of foreign hops continues. The Board of Trade returns for June show that we have received from America 5,034 cwt., and from other countries 1,198 cwt., making a total for the month of 6 232 cwt. On the other hand, we have only shipped 306 cwt. of English and 281 cwt. of foreign hops, so that the balance against our market for June is the most important figure of 5,645 cwt., which is far too heavy a burden for us to bear with the trade in its present condition.

Nuremberg.—Absolute calm prevails in the market, sales are so small that they are hardly worth mentioning, while new supplies are coming in freely, proving that the holders are anxious to clear, in face of the favourable reports from the plantations.

Quotations are consequently reduced all round, and there is evident tendency to further ease.

Belgium.—Sellers are rather inclined to press for business by offering at lower prices, and buyers are slow to respond. Quotations, both for spot hops and for the growing crop, are therefore lower, the tendency being in a downward direction.

Looking back over the transactions of the season since September 1, 1906, we find that we have received from all foreign sources to the end of June no less than 204,299 cwt., exceeding the imports of the corresponding period of the previous season by over 30,000 cwts. Our exports for the same period were only 11,041 cwt., compared with 19,542 cwt. in the same months of 1905 06. Our market has therefore been oppressed more seriously than last year to the extent of nearly 40,000 cwt. I suppose it is useless to grumble at these important facts, but they certainly suggest the absolute necessity of attention on the part of English growers, and the desirability of united action and agitation, with the object of checking this disastrous invasion of their position.

The complete administration of the 1886 Act of Parliament would doubtless be of great service in checking excessive supplies from the Continent, but for the purpose of regulating shipments from America it is clear that we require an import duty. Whether we shall realise our earnest wishes remains to be seen, but it is quite certain that if planters do not bestir themselves and decide upon a reasonable policy they must be content to continue to suffer.

The Continental traffic of the Great Central Railway Company has this season received an additional impetus by the provision of two magnificent turbine steamers on the Grimsby-Rotterdam service. The new steamers, *Immingham* and *Marylebone*, are able to perform the journey in about eleven hours, and this fast service has and will tempt the short-term tourist to visit the numerous places of interest in Holland, such as the Hague, Scheveningen, Amsterdam, Delft, &c. Through the enterprise of the Great Central Company it is now possible to leave home on Saturday afternoon and be in any of the places mentioned early on Sunday morning, and, returning from Amsterdam on Tuesday evening, to be at home again early on Wednesday, so that practically only two days would be lost from business. True to their tradition of "rapid travel in luxury," the new turbine steamers they have provided are replete with all the little details for the comfort of passengers which modern steamship equipment affords, whilst every precaution has been taken for the safety of passengers, the vessels being divided into water-tight compartments fitted with Stones Lloyd's improved water-tight doors, which are under the control of the captain on the bridge, and can be closed by him in eight seconds. The sister ships *Immingham* and *Marylebone* have a length of 282 ft., a breadth of 41 ft., and a depth of 21 ft. They are fitted with the latest turbine engines on the Parsons principle, driving three sets of propellers, the power for which is generated in four boilers of the Scotch or marine type. A speed of 18½ knots per hour is maintained.

At the annual meeting of the Highland Cattle Society, Sir William Ogilvy Dalgleish, of Errol Park, who was appointed president for the ensuing year, intimated a prize of £10 for Highland cattle at the Royal Agricultural Show of England, and a silver cup, to be competed for at the Oban Bull Sale in February next.

LEGAL NOTICE.

FREDERICK GEMMELL, DECEASED.

PURSUANT to the Statute 22nd and 23rd Victoria, Chapter 35, intituled "An Act to further amend the Law of Property and to relieve Trustees," NOTICE IS HEREBY GIVEN that all Creditors and other persons having any debts, claims or demands against the Estate of Frederick Gemmell, late of 25, Earlsthorpe Road, Sydenham, in the County of Kent, and 110, Fenchurch Street, in the City of London, corn merchant (who died on the 25th day of April, 1907, and Letters of Administration to whose Estate were granted out of the Principal Registry of the Probate Division of His Majesty's High Court of Justice on the 15th day of May, 1907, to Florence Gemmell, Widow, the Administratrix therein named), are hereby required to send particulars in writing of their debts, claims or demands to us, the undersigned, as Solicitors to the said Administratrix, on or before the 12th day of August, 1907, after which date the said Administratrix will proceed to distribute the assets of the said deceased amongst the persons entitled thereto, having regard only to the debts, claims and demands of which she shall then have had notice, and that she will not be liable for the assets, or any part thereof, so distributed to any person or persons of whose debt, claim or demand she shall not then have had notice.

Dated this 10th day of July, 1907.

THE "HUNTER" BUGGY.

National Telephone—1533 South.
Telegrams—"Buggies, Glasgow."

Also GOVERNESS CARS.

Radnor View, Hay, Hereford.

Dear Mr. HUNTER,—I have very great pleasure in informing you that the Buggy I purchased from you in May last gives every satisfaction. It is very light, runs easily and is most comfortable to ride in. Since I had it I have driven it many hundreds of miles on all sorts of roads, but it shows no sign of wear. I consider it one of the best investments I have ever made, and think that no country practitioner (medical or veterinary) should be without one.—Yours faithfully, A. MARSTON, M.R.C.V.S

TO SECURE

YOUR HAY CROP IN GOOD CONDITION

ORDER ONE OF **J. RANDS & JECKELL'S**

NOTED RICK CLOTHS

Size	Quality	J.	K.	L.	N.
8yds. × 6yds.	at	40/-	48/-	60/-	72/-
8yds. × 8yds.	at	53/6	64/-	80/-	96/-
10yds. × 8yds.	at	66/9	80/-	100/-	120/-
12yds. × 10yds.	at	100/-	120/-	150/-	180/-

Any size to order at proportionate price.

These Cloths are made up to the Square Yard, and not sold by the width of 24 and 30 inches, which is so frequently the case, thus misleading purchasers.

Samples of Canvas submitted per post. Above Prices include Brass Eyelets and Long Cords. Carriage paid on Orders of 40/-. 5 per cent. Discount for Cash.

J. RANDS & JECKELL, IPSWICH,

RICK, CLOTH & TENT MANUFACTURERS.

By Special Royal Warrant to His Majesty The King.

MISCELLANEOUS.

LAITA.—The best Milk Substitute for Calves and best results. Popular prices, 12s. 6d. per cwt., carriage paid. Send 12s. 6d. for sample bag to—R. J. NELL & Co., LTD., Spiced Food Mills, Louth, Lincs.

RATS! RATS!!—A Truro Farmer writes:—"After using a 1/- Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, Broad Street, Reading.

COWS should be drenched with Horninhand Abortion Preventive when midway on in calf. 1/9 each, or 18/- per dozen tins, post free.—N. ELLIS, Larcombe, Blackawton, R.S.O., S. Devon.

POWDER for DESTROYING LICE in CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless, 1s. per lb., over 3 lbs. post free. E. RUMSEY & CO., Rhuddallt Fawr, Carnarvon.

SEEDS OF GILLIES' celebrated STOCKS, warranted first class.—Early Large Yorks, Lates or Drumheads, Savoys, Curled Greens, Imperial Early M'Ewan, also selected Brussels Sprouts, 12s. per stone, £4 per cwt.; Lates or Drumheads, £37 10s. per half ton; £70 per ton. Prepayment or banker's reference from new customers.—GILLIES, Northfield, Prestonpans. Largest Cabbage plant grower in the world; largest market gardener in Scotland

IVEL AGRICULTURAL MOTOR. 18 h.p., used by us for demonstration and trial purposes, most suitable machine for ploughing and harvesting. Can deliver same at once. Motor guaranteed in perfect order. £175. To likely purchaser we shall be pleased to show this motor at work near our factory at Biggleswade by appointment.—THE IVEL AGRICULTURAL MOTORS LIMITED, 45, Great Marlborough Street, London, W.

NETS, for Strawberry Protection, bird proof, extra quality, as supplied by us to the Royal Gardens. Any size at 4s. per 100 by 1 yard. Cheaper kinds kept.—SPASHETT & Co., Net Manufacturers, Lowestoft.

OGLE'S Patent Paragon Horse Hay Fork

Is by far the Simplest and most Improved Implement for the Building of Hay, Clover, or Loose Straw Stacks. By its use Stacks can be Built Cheaper and in Less time than by any other Implement in use. The Low First Cost and Simplicity of the Implement is a great recommendation in itself. It is Light, Portable, and can be quickly erected. With this Fork we guarantee to deliver 35 feet high a large 2-horse cart load of hay in less than four minutes. We also guarantee our Elevator to do more work in less time and with considerable less labour than any other appliance made for the purpose of elevating hay or straw. It will work equally well on a load of hay that is sweating as on one that has been newly built.

Can be sent anywhere on approval.

Further particulars had on application to

C. C. OGLE & SON, Perseverance Works, Ripley, Derbyshire.

HARVEST ELEVATORS

For HAY or CORN.

THE HANDIEST, LIGHTEST WORKED, AND MOST CAPACIOUS MACHINE ON THE MARKET.

Troughs 33 ft long, Jointed for Convenience of Stowage.

Self-contained Horsegears always ready, absolutely impossible to become disarranged.

This Season's Machines embody all improvements gained by my vast and lengthy experience, being the Oldest Manufacturer of this Class of Machinery in the Kingdom.

Seasonable Topics.

A Brighter Outlook. WE are writing this in the early hours of what we have looked and waited for so long—a summer's day. Half the world is as yet asleep, and the slumberers are missing the refreshing coolness of the morning air which comes through the open window and invigorates one to withstand the heat of the day. One half of the world still sleeps, but the other section—the agricultural fraternity—is awake and busy making up for time lost in past weeks of rain and gloom. Where are the pessimists who predicted that we should get no summer, and the faithless farmers who said that the hay would never be got in? We have heard little mention of ensilage during the past week, for old-fashioned hay is more to the mind of the average farmer, and a tremendous quantity has been stacked since the welcome change came and summer made its appearance. Sales are slack now, markets are making records in the way of sparse attendances, and public meetings are neglected, for farmers have but one thought—hay-making; and while the pessimists are more cheerful than they have been for some time, the optimists remind their less hopeful brethren of their contention all along—that summer would be sure to come.

IN FULL SWING. A SNAPSHOT TAKEN ON THE FARM OF ONE OF OUR NOTTINGHAMSHIRE READERS.

Weathered Hay. WHEN the hay harvest of 1907 is over, and the stacks stand side by side in the yard, it will not be difficult to note the difference between the colours of the material with which the ricks are built. In the same way there will also be a difference in the quality and feeding value of the fodder, because in most cases the hay that was cut first lay for several weeks exposed to the deteriorating influences of bad weather. Seeds and clover, which are generally the first to be cut, suffered severely in this respect, and in some cases the welcome change in the weather came too late to save the situation. It is true the harvest has been thrown back this season, but good hay is being got up now, and it will help to make up for the fodder which was cut first and got so severely weathered. When the rain was pelting down every day and summer seemed afar off, the Board of Agriculture sent out reminders about ensilage, but we trust they will not be needed now that climatic conditions have improved. Some farmers we know have this season adopted the good and old-fashioned method of sprinkling salt amongst their weathered hay in the process of stack building, with the object of making it more palatable to stock.

Long-service Prizes. NOT the least interesting item in the report of the Royal Show this season was the account of the prizes given to farm servants for long service. One glances through the report which tells of men who have served the same families between thirty and forty years, but these are records that should not be dismissed with just a mere casual reference. In these days of unrest, and, shall we say, discontentment, the matter is worth going into a little more deeply. The mere fact that a man has served one family for over thirty years is proof of two things—first, that he is a good servant, and secondly, that he has a good master. We know that men do not stay in the same situations as long as they used to do, but are more prone to move about, and this, after all, is prompted in a measure by the spirit of the age. Nevertheless, we like to read these records of long service which tell of good men leading contented lives and doing their duty in the true sense of the word. We should like to go a step further and learn what becomes of these old servants after their periods of long service. Some, we know, die in harness, and prefer to do so, but others fall on hard times in their last days, and it is for the benefit of men of the stamp referred to that we should vote for a system of old-age pensions.

The Turnip Fly. IT is in a hot, dry season that farmers expect to suffer the most through the ravages of the turnip fly, and suffer they did to a serious extent last year. But the turnip fly appears to have no respect for either persons or seasons, and this summer, which up to a short time ago was wet enough and dull enough in all conscience, turnip crops have suffered through the ravages of the hard-backed little pest which laughs at insecticides, and is so difficult to eradicate. We know men who hugged themselves that they would get a little compensation during the wet time by having no trouble with turnip fly, but they have found out since that they have still something to learn about the habits of this little pest. Various remedies have been suggested from time to time to check mate turnip fly, including the soaking of the seed in turpentine before sowing, dusting the seedlings with road dust and other material, and capturing by means of tarred boards or sheets; but there is an element of luck about turnip fly attacks, and the lucky growers are those who see their turnip pass through the seedling stage while the pest that is capable of working rapid destruction is engaged elsewhere.

Labour in the Hayfield. THE sudden change in the weather has made everybody busy, and with the hay harvest retarded and the corn harvest in view, farm operations are naturally being carried on at high pressure. While the weather continued bad the farmer was often at his wits' end to know how to find employment for his men, and now he is just as much pushed in finding hands enough to keep pace with the work. During the past few days we have heard several complaints about labour being scarce, and yet in journeying through the country one meets with men continually who, if their own story be true, cannot find employment.

When summer sun began to shine in real earnest these drones came out, from goodness knows where, and you see them now shambling along the dusty roads or more often curled up asleep under a shady tree by the roadside. Over the hedge the workers are busy amongst the hay, and the farmer would willingly set on more hands; but tired Mike never asks for a job where he thinks there is any risk of being set on, and in most cases he would get the cold shoulder if he did, for many farmers have tried the experiment and have found that the professional roadster is as useless in the hayfield as he is elsewhere. Not only is he useless, but often a nuisance and a public danger into the bargain, as may be gathered from a case which occurred the other day in which two men were brought before the magistrate for lighting a fire by the roadside, and they had selected a spot where a haystack just over the hedge provided the shelter they sought for. They appeared surprised when the police reminded them of the risk of firing the haystack.

The Royal Agricultural Benevolent Institution.

NO doubt many of our readers have read with interest the report of the above institution which was presented at a recent annual meeting, and we would make further reference to the regret of the council "that many persons subscribe merely to promote the success of candidates for election, forgetful of the responsibility which subsequently devolves upon the funds of maintaining these as pensioners." Lord Jersey also made reference to this matter, and urged the necessity of subscriptions without regard to the privilege of the vote for pensioners. We quite agree with his lordship, for it is no good electing persons to pensions unless there are the necessary funds to provide them. We know what a good work the institution has done, and is doing, to make comfortable the last days of men and women whom fortune has dealt hardly with, and it is quite obvious that this work can only be continued by the liberal support of agriculturists at large. And in helping others one may perhaps be helping himself, for one never knows what is in the future, and more than one man who never thought he would have to do so has been glad of help from the institution.

Agricultural Organisation.

JUDGING from the annual report of the society which lives to promote its interests, agricultural organisation is forging ahead, and this in face of the contention made in some quarters that farmers will not co-operate. One feature about the above society which is largely responsible for its success up to now is the fact that it is vigorous and energetic. Knowing something, no doubt, of the conservative tendencies which are natural to farmers, the society does not wait for them to come in, but it goes out, even to the highways and hedges, in search of them. A record showing an affiliation of 153 co-operative societies and a membership of 9,000 is good, and the figures must be gratifying to the promoters, while they show that the spirit of co-operation is a living thing amongst farmers. We would add, however, that organisation amongst farmers should not begin and end with the purchase of requisites required in the business, for there are other ways in which farmers should co-operate for the benefit and protection of the fraternity at large.

The Little Man's Hay Harvest.

SCATTERED about in different parts of the country there are little places (which are small holdings in the correct sense of the term, as there are houses and buildings on the land which comprise them), and the tenants of these tiny farms, who may keep one or two cows, have their hay to get in. It is only a bit, just a few acres, but it is of as much importance to the occupier of the small place as the greater extent is to the large farmer. The latter has all the appliances necessary for hay harvesting, but the small man is not so well equipped in this respect, and a bit of help is a godsend to him when he is getting in his hay. In many cases the proprietor of the little place is employed by a landed proprietor or a larger farmer, and he is content to let his own bit of haymaking stand until his master has nearly or quite finished. Then the latter can help the very small farmer by sending a machine to knock off his grass, or lending a cart and horse when it is ready for carrying. We are happy to say that there is a good deal of this kind of thing done, and the individual who helps his small or neighbour in times of emergency does not lose by it.

How the poor sometimes live in a rural village has just been illustrated by a report to the Driffield District Council. A family of seven were stated to occupy the one available bedroom in a cottage in Teapot Row at Wetwang. The room has a loping roof, no window, fireplace, or chimney, and is reached by a ladder. The seven persons had only 700 cubic feet of air-space. The occupier is an agricultural labourer.

Agricultural Politics.

BY A LOBBYIST.

The Distrust of the County Councils.

The distrust of the county councils gathers among the Radical Adullamites. It has become an integral part of what I may call their agrarian faith. "Local authorities are composed of local landowners, who are antipathetic towards small holdings"—this is the latest description of the county councils. Well, frankly, I think no friend of the existing authorities, and no man having experience of present-day local government, can be other than gratified at the resolute stand which Mr. Lewis Harcourt is making against this attempt to dethrone and mutilate our national system of local government. It is one of the paradoxes of the political situation this obsession of hate of the county councils on the part of the Mastermans of the House of Commons. They are the fevered Home Rulers, the professional local-governmentites, of the Parliamentary civilisation; and yet they are deliberately and pertinaciously seeking to establish a centralised bureaucracy which shall have the power of over-riding, checkmating, or thwarting the carefully-considered designs of democratically-elected local bodies. The Government has simply been asked to subordinate the designs of local and elective government to the preconceived purposes and anxieties of departmental officials, whose knowledge is born of red-tape and is instinct with sealing-wax. Mr. Masterman, the leader of these Adullamites, is a man of brains. Why does he allow foolish preconceptions against landlords and farmers—he yokes the two in the same harness—to run away with his native logic?

* * *

Mr. Harcourt's Resolute Stand.

The idea of certain of the protagonists of the small holdings principle—this has been made conspicuously evident during the committee-stage of the Small Holdings Bill—is that the agrarian county councils are ineradicably contumacious, and that they ought to be punished for this invincible sin by being mulcted with every possible loss suffered under and every cost inherent to the new legislation. If Mr. Chaplin and Mr. Jesse Collings—and to Mr. Chaplin's admirable knowledge and sagacious counsel Mr. Harcourt will, I am persuaded, be the first to bear willing tribute—are still unappeasable in their antagonism to the whip-hand to be possessed by the Central Commissioners, they should be gratified by the resolute refusal to make these personages the one, supreme and only executive authority. Mr. Harcourt could have secured a good deal of Radical applause—this has been illustrated again and again in the last few days—if he had hailed the past failure of small holdings legislation as an evidence of the invincible objection of county councils to small holdings generally and had thus decided to set them aside altogether. This he stoutly refused, and still refuses, to do. The Central Commissioners will still have upon them the duty of discovering where a demand exists for small holdings; but it is the county councils (I anticipate so sympathetic a readiness on their part that I doubt the Board of Agriculture will be called upon to act because of their default) who will draft and administer the scheme. Mr. Harcourt is, I repeat, wise in remaining firm to his original intention. He is acting with statesmanlike prevision. His policy is based upon the idea of winning the confidence and sympathy, should it not already exist, of the county councils.

* * *

A New Suggestion to Mr. Harcourt.

Will Mr. Harcourt be induced to depart from this attitude by the further suggestions which are to be made to him? He has been wise enough to listen to the suggestion that, if there should be a loss incurred when the Commissioners act instead of the county councils, that loss should not be borne altogether by the county councils; and he has promised to make provision for such cases. The central authority will chiefly—yes, this I verily believe, in spite of the fact that the successful amendment carried against the Government has still to be ratified by the House of Commons—bear these losses. Will, however, Mr. Harcourt detract from the generosity of his own promise by accepting the suggestion that the Commissioners shall have something to say to the price at which land is bought and the rent at which it was let to small holders? The authors of this proposal actually, in their illogical suspicion of the county councils, forget their own oft-protested forebodings, that one of the chief influences in restraining the county councils from proceeding under the Act would be their horror of burdening the rates. They have depicted county councils as being possessed by anxiety over the issue "should we risk higher rates and establish county councils," and thus determining not to make the experiment. If Mr. Harcourt accept this new suggestion he will violate his own apparent anxiety to embark upon the new policy embodied in the Act in a spirit of conciliation. He has invariably insisted that the Commissioners are a necessity; but he has hither refused to regard them as an irritant, as a kind of hair-shirt to be worn by every county council next its skin as a perpetual sting-nettle.

* * *

Why Bureaucracy should not Prevail.

The fight on the final stages of this part of the discussion of the Bill will be as to whether the Commissioners should be given greater powers than even originally proposed, or whether a certain confidence should be exhibited in the county councils. The anti-councilites are by no means rebuked. They have been severely chastised, but their wounds apparently quickly heal, and leave no discouraging memories behind. They exhibit in their misreading of the character of county councils all the enthusiasm of zealots. "Strengthen the hands of the Commissioners and the Board of Agriculture. Let the Commissioners have a voice in the fixing both of the purchase-money and the rents. Extend the clause which gives the Board power to establish small holdings experimentally, so that they may secure the necessary land for those experiments under compulsory conditions." This is the new *mot d'ordre*. I believe Mr. Harcourt is intent on what I deem the wiser plan—the admirable middle-path of establishing safeguards while revealing a conciliatory demeanour towards the local authority. Bureaucracy has been the curse of many admirable legislative impulses; bureaucracy often degenerates into mere supercilious disregard of local sentiment and local conditions. True, this is a great national policy, and in a national policy the nation should have adequate authority. If, however, this policy is to be dominated by bureaucratic officials, the State should bear the whole of the financial responsibility. This it will not do. Mr. Harcourt has shown himself to be impervious to that illogical enthusiasm which can degenerate into mere inflamed venom against a class; and I ween we can have confidence in him. He is doing more than his Radical critics to realise both his own aims and their own real anxieties.

* * *

The Wise Policy of the Colne Valley.

I heartily congratulate the Parliamentary Committee of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture. Its intervention in the Colne Valley election was pertinent, wise, and direct. The questions it submitted to the candidates—the insistence upon one uniform assessment for all purposes, both Imperial and local; the emphatic demand that preferential rates for foreign produce should be prohibited; the request that State compensation should be made to the owners of tuberculous cattle; the assertion that foreign meat ought to be marked. The demand that the present measures prohibiting the importation of live cattle from abroad should be maintained, and the assurance that the consolidation of the Agricultural Holdings Acts is necessary—were timely, sagacious, and judiciously expressed. I am certain that if similar action were invariably taken in county contests we should witness a marked development in the Parliamentary temper towards the agricultural interests. This heckling—the heckling of the written word—is the best of all heckling. It cannot be said of the written pledge that it was given in a heated atmosphere and under passionate conditions. This is the pledge of the study—the document that demands obedience.

NORTHUMBERLAND SHOW.

The annual show of the Northumberland Agricultural Society, held at Tynemouth on Thursday and Friday last in beautiful weather, was quite up to the average as regards the quality of the stock, but suffered in numbers owing to the restricted showyard available. It was found imperative to refuse a number of entries for want of exhibition space, and even then the showyard was more congested than was desirable. Under these circumstances it is obviously impossible to institute a fair comparison with last year's show at Newcastle, when there was ample room. However, the entries showed an increase of fifty-two when compared with 1896, the last occasion on which the Northumberland was held at Tynemouth. The notable increases were in the classes for sheep, driving and leaping, and poultry, while the cattle and horses were not so numerous.

CATTLE.

Numerically the cattle section was much smaller than at the Newcastle show, and less than half the size at the last Tynemouth show, but the quality was excellent. The most successful exhibitor was Mr. George Harrison, the well-known breeder of Gainsford Hall, Darlington. In the class for Shorthorn bulls calved in 1905 Mr. Harrison took premier honours with Czar, who beat a former conqueror in Mr. Harrison's Elvetham Sweetmeat, which was placed third, the second prize going to the Duke of Northumberland's Alnwick Favourite. In the section for bulls calved on or after January, 1906, Mr. Harrison was first with Pride of Tees, a roan which was second at Darlington, and second in the black polled cattle, Aberdeen Angus, section. The bull was first at the Royal and at the Highland, and has won at shows since it was a yearling, and now it was first in its class, and also secured the silver medal of the English Aberdeen-Angus Cattle Association, and the special prize which Mr. Bainbridge had himself offered, whilst it was one of the quartette which won for Mr. Bainbridge the special prize for a group of four. In Idelamere's class Mr. Robert Clayton Swan, Darlington, was second with Protestant. Mr. Bainbridge was the only exhibitor in the two-year old class, and Gabriel of Eshott was awarded the prize. Mythologist, the property of Mr. James Kennedy, Ayr, was judged to be the best bull over one year and under two, whilst Mr. Kennedy was first with his two-year old heifer Euroto, add also with Ellen Terry, a yearling which was second at the Highland. Euroto also carried off Mr. Bainbridge's special prize for the best cow or heifer. Mistress Nellie, shown by Mr. Bainbridge, was the first prize three-year-old cow.

SHEEP.

The sheep classes, which came next in the order of the catalogue, were very well filled, and it was particularly pleasing to see the Oxford Downs looking so well at such a great distance from home. Mr. Thomas Oswald, Byers Garth, Durham; Mr. J. Knox Lyal, Peepy, Stocksfield; and Messrs. Graham, Tughall, Chathill, were the first prize-takers.

The Leicesters were somewhat of mixed quality, though very good on the whole. The champion to the King's Evander at the Highland. Mr. William Bell, Alnwick, came second with Lord Waterloo, which also took the Shorthorn Society's prize. Mr. Harrison also carried away the special prize for the best group of four animals with Czar, Pride of Tees, Towy Princess and Ursula Raglan. The two last-named animals were first and second respectively in the three-year-old class, this being a reversal of the decision of the Nottingham judges, who placed Ursula Raglan first, and Towy Princess second. Mr. Harrison's two-year-old Montrave Wondrous, which was first at Newcastle and second at the Highland, was placed first, beating the Duke of Northumberland's Belle of Alnwick (second) and Famous Rosebud (third). In the class for bulls calved in or before 1904 Lord Armstrong's Baron Merry Beau continued a long line of recent successes. He was beat by his sire, Baron Hopeful, who was placed second, the Duke of Northumberland's Baron Westwood being third.

Mr. T. H. Bainbridge, Eshott Hall, Felton, showed a fine three-year-old animal—Idelamere—prize awarded by the Border-Leicester Society went to Messrs. J and J. R. C. Smith, Galalaw, Kelso, the animal being sired by last year's champion. The special for sheep exhibited by tenant farmers of Northumberland went to Mr. Charles Charlton, Shaw House, Stocksfield. In the class for rams of any age above one shear Messrs. Smith and Mr. Thomas Clark, Cockburnspath, ran very near, the former just securing the verdict with a bulky animal. These exhibitors were similarly placed for shearlings. The special offered for tenant farmers for ewes, gimmers, or ewe lambs was awarded to Mr. Charles Scott, East Lilburn.

The Cheviot sheep were an exceptionally good lot, though not of great variety. Principal honours fell to Mr Jacob Robson, Byrness, Otterburn, who was first with shearling rams, first and third with ewes, and second with gimmers. He also won Viscount Ridley's special prize. A three-shear ram bred by Miss Greeve, of Hawick, and exhibited by Mr. J. R. C. Smith, Yetholm, was awarded premier honours in the ram class, and Mr. John Robson, Newton, Bellingham, was first and second with tup lambs, second with ewes, and first with gimmers.

Bellingham breeders were prominent with black-faced mountain sheep. Mr. John Robson took three firsts, two seconds, and a third; and Messrs. Addison and Paisley two firsts, two seconds, and two thirds. In the half-bred sheep section all the firsts went to Mr. Charles Scott, East Lilburn.

HORSES.

Northumberland is proud of its agricultural horses, and the display was certainly one to be proud of. Mr. Fenwick Wilson, of Whitley Bay, took the group prize of £10 for the four best animals shown by a tenant farmer in Northumberland, three of the horses being first-prize winners in their classes. Lord Durham carried off the brood-mare prize with Lambton Maud, a grand seven-year-old that has not been out before this season, whilst the next two prizes went to mares from the Seaham Harbour Stud, and here it may be said that horses from this stud practically swept the boards. The chief honours in the two foal classes went that way, both being the offspring of Silver Cup, whilst Kitty Everard, a grand old mare from the same stud, and which was awarded the championship at Sunderland, took first place in the class for brood mares in foal. The four year olds "suitable for dray purposes" were about the most striking in the whole section, and Mr. Fenwick Wilson took both first and second; the winner, Major, repeating his success of the Highland Show. Mr. Wilson's Colonel, second at the Highland Show, was now placed first amongst the three-year-old geldings, a similar honour for fillies going to the Seaham Harbour exhibit, Silver Fern, which narrowly missed a first at the Royal. Messrs. W. and A. Mather, of Coldstream, took first in the two-year-old gelding class, and the Seaham Harbour stud was represented by a winner in the filly class, Silver Pansy carrying off the honour easily. She was the Royal champion at Lincoln. Her half-brother by Silver Cup won in the class for twelve-month-old geldings, the corresponding honour for fillies of the same age being accorded to Mr. W. C. Bowe's roan Mona from Innerwick.

Hunters were only a small show, but quality was alright, notably in the brood mare class. The first prize here went to Mr. Edward Harrison's beautiful mare, Miss Melbourne, Mr. Marmaduke Furness, of York, being second, and Mr. Rutherford's Lady Mowbray third. The last-named animal was also the winner of the Hunter Society's medal, which was confined to the county. Tenant farmers were specially catered for by the society, in each department of horses a special prize being given to the best animals sent in by farmers, and the competition attracted considerable attention. Hunters in saddle made a capital show. Out of a strong class of light-weight carriers, the first went to an attractive, well-bred bay, shown by Messrs.

The Cheviot Ram shown above is the animal with which Mr. Jacob Robson, Byrness, Otterburn, Northumberland, won a First Prize at the Royal Show at Lincoln. It was born in April of 1905.

Ward. Mr. Kidd, of Melrose, won in the heavy-weight class with Dervische, a great winner last year, and amongst the four-year-olds Mr. J. H. Stokes' Mustard, which took second at Darlington, now went up one. The group prize for the four best animals went to Mr. Kidd.

Hackneys were also a capital lot, and in some stands competition was particularly keen. Mr. Thomas Boddy, of West Auckland, wins in the brood mare class with his Dewdrop, whilst Mr. James Jebson's Gold Ware, which was second at Darlington, now took first amongst the three-year-olds, Mr. Wilstrop, of Bishop Wilton, heading the two-year-old with Silver Star, who thus beat the Darlington winner, Angram Queen. Mr. Cecil Fletcher, of Angram, again won in the yearling filly class, and Mr. Thomas Boddy, of West Auckland, was first in the "over fifteen hands" class with Whitegate Swell. There were ten strong entries in the class for mares and geldings between fourteen and fifteen hands, but Mr. Holmes won somewhat easily with a grand specimen of the Hackney breed, Dainty Kate.

Of the three pony classes, only two provided real competition, and in these the fight was keen indeed. The winners were Messrs. Ferguson's Queen Go-Bang and Mr. C. Waud's Ferniehurst Fortuna, from Baildon.

JUDGES.

CATTLE.—Shorthorns: Mr. M. G. Angus, Priory Farm, Hodsock, Worksop, and Mr. John Handley, Green Head, Milnthorpe. Dairy Cows and Fat Cows (confined to the County of Northumberland): Mr. W. L. Walker, North Moor Farm, Silkworth, Sunderland, and Mr. W. A. Weightman, Hall Farm, Silkworth, Sunderland. Aberdeen-Angus: Mr. James Whyte, Hayston, Glamis, N.B.

SHEEP.—Border Leicesters: Mr. Joseph Lee, Cogalton, Drem, N.B., and Mr. Matthew Temperley, Sandyknowe, Kelso. Cheviot: Mr. Michael Johnstone, Alton, Moffat, and Mr. G. G. Rea, Middleton, Wooler, R.S.O. Blackfaced Mountain: Mr. Hugh Carruthers, White Hill, Gilsland, Carlisle, and Mr. Matthew G. Hamilton, Woolfords, Cobbinshaw, N.B. Half-bred: Mr. Andrew T. Elliot, Newhall, Clovenshaw, Galashiels, and Mr. Matthew Ridley, Peelwell, Haydon Bridge. Oxford Down: Mr. G. T. Hobbs, Maisey Hampton, Fairford.

HORSES.—Agricultural and Draught Purposes: Mr. Jonathan R. Angus, Cheraton Hill, Castle Eden; Mr. Wm. Clark, Netherlea, Cathcart; Mr. William Taylor, Park Mains, Renfrew; and Mr. James Kilpatrick, Mains, Kilmarnock. Hunting Classes: Mr. George Dove, Whitehouse, St. Boswells, N.B., and Mr. C. H. Scott Plummer, Sunderland Hall, Selkirk; Mr. T. H. Hutchinson, Manor House, Catterick, and Mr. Owen C. Wallis, West Haddon Hall, Rugby. Hackneys and Ponies: Mr. Henry Moore, Burn Butts, Cranswick, Hull, and Mr. John Wreghitt, East Thorpe, Market Weighton. Referee.—Mr. George Dove, Whitehouse, St. Boswells.

South Durham and North Yorkshire.

The South Durham and North Yorkshire Agricultural Society were fortunate enough to have a brilliantly fine day for their show at Darlington on Wednesday, and it proved most successful from all points. For the first time there was a section for pedigree Shorthorns and another for sheep, and the success which attended these new departures should ensure them being included in future years. Horses were more numerous than last year, whilst the entries of dogs constituted a record for the society, so that the fixture was an all-round success. Shorthorn cattle made a splendid show for a first attempt, Mr. George Harrison, of Gainford Hall, Darlington, showing several of his notable animals and he took most of the prizes. A fine lot of grazing cattle was shown, the championship going to a choice Aberdeen Angus steer shown by Mr. C. Emmerson, of East Layton. The exhibition of horses as a whole was generally admitted to be one of the finest seen at the show for several years, notably the hunters. The sheep and goat sections were also creditable ones, and the society is to be congratulated on the success which has attended its forward policy, and we hope the financial result will also prove satisfactory.

Exeter Show.

The horse show held at Exeter on Wednesday proved the best yet held in that town. The horses numbered about 160, several more than last year, despite the fact that some classes had been dropped, and the quality was good. For the first time in its history, a dog show was held in conjunction with the horse show, under the auspices of the Yeovil and Western Counties Canine Society, and the Horse Show Society itself organised a show of hounds for the Western Counties, being the first of its kind in this part of the country, so that altogether the extensive and varied collection of horses and dogs exhibited was one of the finest seen in the West of England for some time. The weather was gloriously fine, and there was a large attendance from all parts of the county, so that the show should prove as successful financially as it was in other respects.

The Cheshire Milk Producers' Association have decided to extend the scope of their Manchester agency to Liverpool and district, so that those who send milk to Liverpool or towns on the Cheshire side of the Mersey may have their interests looked after in the same way as those who send to Manchester and district. An appeal will be made to members of the association in due course for financial support for this new development.

STAFFORDSHIRE SHOW.

The Staffordshire Agricultural Society were fortunate in having a splendid exhibition and brilliant weather, so that all that was needed to ensure a complete success of the show at Burton-on-Trent was a large attendance of the public, and this happily they also got on both days (Wednesday and Thursday), so that their visit to the famous brewery town after an absence of ten years proved a most satisfactory one. The entries totaled 681, compared with 653 last year and 685 the year before. The principal increase was in the department for sheep, but all the more important sections were splendidly supported. There were 221 entries of cattle, 288 of horses, 121 of sheep, and 44 of pigs. There were also classes for cheese, butter, honey, poultry, dogs, &c.

CATTLE.

Shorthorns, as usual, were the feature of the cattle section, and the display fully maintained the high reputation of the show. The Shorthorn bulls numbered eight, and the best, as in several other classes, were shown by Sir Richard Cooper. His Chiddingstone Malcolm, a distinguished second winner at quite a number of this year's shows, now got premier honours, whilst Shenstone Albino, with which Sir Richard won third prize at the Nottingham and Essex Shows, was second. The yearling bulls formed a very strong section numerically, though here again Sir Richard showed far and away to best advantage, Shenstone Gipsy Lad, his first winner, and Shenley Duke, which was second, having little to divide them in point of merit. Shenstone Gipsy Lad is a roan, one year and five months old, and a winner of third at Shrewsbury and first at Hereford and Worcester, and on the present occasion he was awarded the prize of £10 offered by the Shorthorn Society of Great Britain and Ireland for the best young bull in Staffordshire. The bull calves, which were a moderate lot, were headed by Mr. C. W. Kellock's Buxom Jack, a well-conditioned youngster, whilst Mr. Smedley's King of Diamonds, a nice red and white, a couple of weeks over nine months old, was second.

The female Shorthorns also made a good show; Captain W. B. Harrison had an easy win in the class for cows in milk, taking first and second honours with Orange Girl and Bearstone Sunshine respectively. The former, a red and white of four and a-half years, has got both flesh and milk qualities, and is an all-round useful beast, while the second best beast, a roan of three years, is a little bit short in hindquarters, but is likely to finish well. Mr. W. H. Rider's Cheddleton Peri beat Sir Oswald Mosley's Duchess Craggs, in the heifer class (calved in 1905), whilst in the next class, that for heifers over one year and not exceeding two years old, Sir Richard Cooper provided the champion among the Shorthorns in Lady Shenstone Barrington 2nd. A winner at Shrewsbury and Leicester, she shows nice points of the Shorthorn, and, in spite of a little weakness in the loins, is well grown and breedy. Captain Harrison's Aldershaw Primrose 3rd, who was highly commended as a calf at the Staffordshire Show a year ago, now made a very good second in the class, whilst Sir Richard came third with Shenstone Kitty. Among the heifers under one year old, Captain Harrison's Aldershaw Primrose 4th was an easy good-class winner, and was also reserve for the championship. She is a straight young roan beast, and might have been distinguished as champion if a little better in form.

Channel Island cattle in Staffordshire make little headway. With one of his two entries in cows calved in or previous to 1904, in calf or in milk, Mr. Oswald F. Mosley, Melton Mowbray, had the first prize and Mr. A. O. Worthington the second. For heifer calved in or subsequent to 1905, Mr. A. O. Worthington took first.

Among the Aberdeen-Angus, Mrs. Macpherson, Wryley Grove, and J. J. Cridlan, of Maisemore Park, Gloucester, divided the prizes, and the silver challenge cup of £10, when J. Cridlan, having gained the greater number of points, holds for the year the cup, and also the Aberdeen-Angus Association's for the best animal—the first-prize bull—in the Aberdeen-Angus class.

HORSES.

As regards numbers, horses were not quite so good as last year, but quality was as high as ever. Several of the Hunter classes were only moderately full, but the exhibits were more handsome and of better quality than has been the case in recent years. One of the most promising animals in the show was Mr. Blockley's two-year-old chesnut filly Princess of Wales, which won several first prizes, and was also awarded the Improvement Society's silver medal for the best filly. Mr. Young's Castlerea, another prominent winner, secured the society's medal for the best mare or gelding of any age, whilst a handsome chesnut gelding, shown by Lady Walker, which was first in the class, was reserve for the medal. So keen was the competition in the class for weight-carrying hacks that the prizes were divided between Colonel Swinfen Brown's Torpedo and Mr. Shuker's Lady Wychnor.

There was a remarkably good show of agricultural horses, which included nearly all the leading winners of the season. Mr. F. E. Muntz's shapely King Forest, an animal with good bone and pretty feather, scored another victory in the two-year-old stallion class, and was reserve for the Walsall Cup. This distinguished son of Lockinge Forest King was first in London in the spring, at the Royal, and at Peterborough and other shows. The best of the yearling entries was Dunsmore Professor, a promising son of Dunsmore Jameson, shown by Sir Albert Muntz, Bart, M.P. One of the notable features of the Shire show was the success of the progeny of the famous sire Lockinge Forest King, and in the yearling class, Ratcliffe Coming King, a good colt of this strain, won the second prize for Mr. F. Farnsworth. There was a very good class for mares of four years and over, and here Lord Beauchamp's weighty grey Sussex Blue Gown won fairly easily. She has only been shown this season at the Notts Show at Retford, where she was placed second, but she won several notable victories last year, including the female championship at the Staffordshire Show and the Walsall Cup. Bardon Marion, of the Lockinge strain, belonging to Mr. W. T. Everard, scored a series of brilliant successes. She was an easy first in the three-year-old mare class, and, in addition, won the champion prize for the best female in the yard and the Walsall Challenge Cup for the best Shire in the show. The mare was champion at the Royal this year, champion at Retford, and a winner at the Leicestershire Show. Mr. Muntz's Aldeby Lady Jameson was second in the class for three-year-olds and reserve to Bardon Marion for the female championship. Mr. Everard also secured the premier award in the class for two-year-old mares with Ashleigh Royal Duchess, a Lockinge filly which has figured in several other prize lists and has been reserve to Bardon Marion for several championships. Mr. Everard's yearling filly, Bardon Flower of the Forest, had had no difficulty in winning. She has previously won at the Royal, at the Notts, Leicester, Essex, Peterborough, and Oxfordshire shows, and she promises to make a grand mare. There was a very large entry in the open brood mare class, and the judging took a considerable time. Eventually the coveted ticket was awarded to the Duke of Sutherland, who showed his handsome bay mare Lilleshall Moss Rose. The colt and filly foals were a good-looking collection.

SHEEP.

Sheep were more numerous by about thirty than last year, and the section was a very good one, competition in some of the classes being very keen. Shropshires naturally predominated, and Sir R. P. Cooper, being strongly represented, took a large number of the prizes, including first for pen of five shearling rams; first and second for shearling ewes, first for a pen of five ewe lambs, and a similar award for a pen of five ram lambs, whilst, in addition, he got second prize for rams of any age and second for a pen of five ewes, each having reared a lamb in 1907. Mr. A. S. Berry was also a prominent winner, his awards including first for rams of any age (both in the open and tenant farmers classes), and first for shearling rams (tenant farmers only), whilst amongst other prize winners were Mrs. W. F. Inge and the Duke of Sutherland.

PIGS.

We should like to have seen a larger display of pigs, but found little fault with the quality. In the classes for Whites Mr. A. C. Twentyman was a conspicuous winner, he taking the two first prizes, one second, and the silver medal; for Tamworths, both first prizes went to Mr. F. W. Gilbert, Chellaston, Derby, whilst a similar feat was accomplished in the Berkshire or other Black breed classes by Mr. J. E. Breeze, of Edingale, Tamworth.

The Thame Agricultural Association have drawn up a liberal and attractive prize schedule for their show on Thursday, September 12, at Thame, a sum of £575 being offered in prizes for Hunters, cart horses, colts, cows, stock, sheep, poultry, butter, eggs, honey, jumping and driving competitions, &c. The progress of the show has of late years been very marked, and it is hoped that this year will create a record in regard to entries. As indicating the increasing popularity of the show it may be mentioned that although the Association was founded in 1855, in 1897 the classes for the show numbered only fourteen, and were for horses, there being none for cattle, sheep, roots, &c., whereas this year the schedule contains nearly fifty classes, and the variety can be seen by reference to the prizes as mentioned above. Entries close August 1 with the secretary, Mr J. Bush, Thame.

Bedfordshire Show.

The annual show in connection with the old-tablished Bedfordshire Agricultural Society was ld in the county town last week. It was the 6th show promoted by the Society, and the tries totalled 176 more than at Luton last year.

HORSES.

The horse classes were we'l filled, Carthorses ing a most creditable display. In the classes r colts and fillies, especially worthy of mention the bay Wilden Conqueror, sire Conquering uke. This colt was also first at St. Ives, and is ell set up on sound feet and possesses good oulders. Very promising fillies were shown by r. W. White, Messrs. J. King and Sons, Mr. mes Day, and Mr. Robert Long, notably his y filly Stondon Pansy. A very fine pair of own geldings took a first and second for Mr. pencer Draper, and in a capital class of two-ar-old fillies, Mr. T. Barnard's chesnut Brick arm Flower was first. Mr. J. Day came irly well to the front again in the class for ree-year-old geldings and mares, Mr. H. G. ickering took Mr. A. W. Bla k's prize for a four-ar-old gelding, with Prince. In the same class r. T. Allen, of Goldington, and Mr. W. H. llen, Bromham House, both took prizes with a own gelding by the name of Turpin. In the ass for a pair of geldings or mares some splendid imals were shown by Mr. J. Day, Roxton, and r. T. B. Kitchener, Potton. There was a umerous entry in the classes for mares with foal. The special prizes were awarded as follows :— he champion prize of £5 for the best cart horse, e property of a Bedfordshire tenant farmer, was arded to Clement Keevil ; r, Spencer Draper. A lver medal, offered by the Shire Horse Society for e best Shire mare, filly or filly foal, registered or igible for registration in the Stud Book, was arded to Clement Keevil ; r, T Barnard. The eeders' prize of £1, by the same society, was arded to Clement Keevil ; r, T. Barnard.

The classes for Hunters were very well filled, d Mr. B. Davies Cooke was first with his bay are Rebecca and filly foal. Mr. J. White being cond with a bay mare and foal. Mr. W. White-ad was first and second with a very attractive ir, a brown colt and a bay filly in a class for oroughbred colts, geldings, or fillies. Mr. B. owkins upheld his reputation by leading in the o-year-old class with the brown colt Neptune, d Mr. Whitehead was again first in the three-ar-old class with his chesnut mare Chutnee, ich was awarded the silver medal of the nters' Improvement Society for the best Hunter y. Mr. C. Hartop's brown colt was in excellent ndition and much admired. In the class for ar year-old mares, the first prize went to Mr. J. urges's brown gelding Mainstay, which has never en beaten where shown.

There were numerous handsome hacks and rness horses, notably those shown by Mr. G. F. nsley and Mr. Walby ; the shapely black nag mmy, of Mr. J. W. Barker, Bedford ; and the y gelding Togo, of Mr. W. A. Robinson.

CATTLE.

Coming to the cattle, in the class for bulls der a year old, the premier animal was Mr. F. Wythes's Ravensden Czar, only seven months l, but a perfect multum in parvo of good ints—good masculine head, firm limbs, and level ck with a voice like the bull of Bashan. Mr. ythes was also second in the same class. essrs. Hipwell and Sons won high honours th Birdsall Hector, a bull of the right hair, lour, and shape. A very big red bull, with assive head, took the prize for Mr. W. Hazell the open class up to three years, and Mr. H. S. on was second, but was first in the class for orthorn cows up to three years old. Mr. G. mphreys showed a pair of handsome heifers, ich took first and second in their class. Cows d heifers were numerous, and of high standard roughout.

The special awards included the district prize £10, given by the Shorthorn Society for the st Shorthorn bull in the counties of Bedford, rtford, and Middlesex, calved in 1906, won by r. C. F. Raphael ; r, F. A. W. Wythes. Cham-on prize of £5 for the best animal exhibited in e stock classes, the property of a tenant farmer iding in the county, was awarded to W. L. ck ; r, Mr. B. Howkins.

SHEEP AND PIGS.

Of sheep there was a good average entry. The ampion prize of £5 went to Dr. Harley, of alton Hall, for a magnificent Oxford Down ram, ich was first in two classes, and another endid animal was second. There was a good ry in the Oxford Down class, mainly by Mr. G. reet and Mr. B. Howkins. Mr. H. H. Green's mpshire Downs were creditably represented, l secured prizes. Some useful cross-bred eaves were shown by Mr. H. Campion, Mr. C. gle, and Mr. R. M. Bodger, whose ten wether l ten ewe lambs took first prizes. Ten Oxford wn ewes, shown by Mr. B. Howkins, held the erve number for the champion prize.

Pigs were well represented, and Mr. F. Brown s first with a Berkshire in the class for boars, beating a very fine black boar shown by Mr. P. Bass, who was first with a sow and pigs of the same breed. The champion prize of £5 went to the Three Counties Asylum for Large White sows.

JUDGES

CART HORSES : Mr. J. Paisley, Moresby House, Whitehaven, and Mr. James Young, Brimhope, near Leeds.
NAGS : Captain Stapleton, Bretherton, Wheler Lodge, Husband's Bosworth, Rugby, and Mr. H. Sedgley, Church Langton, Market Harborough.
CATTLE : Mr. J. Beattie, Byrkley Lodge, Burton-on-Trent, and Mr. George Terry, Weedon Hill, Aylesbury.
SHEEP AND PIGS : Mr. J. M. Eady, Thorpe Malsor, Kettering, and Mr. C. Stanford, Bramore, Salisbury.

Cambridge Show.

After the failure of the two-day show at Ely last year the Cambridgeshire and Isle of Ely Agricultural Society decided to confine the year's exhibition to one day, and the change proved a decided success, for at Cambridge on Thursday there were records of entries, splendid weather, and a large attendance of visitors, so that a complete success can be recorded. The total of entries was 453, as compared with the previous best of 418 (at Chatteris five years ago), whilst last year the total was but 289. On Thursday last horses numbered 343, cattle 40, sheep 43, butter and eggs 28, whilst there was a decided increase in the number of stands.

HORSES.

As will have been noticed, the horses were the feature of the show, and the best selection was undoubtedly that for Hackneys, many considering them better than at Peterborough. It the older stallion class Mr. R. A. de Mancha's Elevator by

SHOW SECRETARIES.

Mr. E. WALKER,
Leek and District Agricultural and Horticultural Society.

Royal Danegelt scored another success, Mr. F. T. Bailey coming second with Horningsea Squire John. In the three-year-old stallions Messrs. Hazelwood and Scrimshaw scored with the London premier winner, Refined Gold ; the executors of the late Mr. W. Flanders following closely with Witcham Lord Nelson. In the two-year-old colts Mr. R. G. Heaton secured a double win with Whitehall Wildfire and Kildare, the former, who is by Polonius, also securing the Hackney Horse Society's silver medal. Mr. Heaton was also first in the yearling class with a very pretty colt by Redskin. The mares were grand types, but Sir Walter Gilbey undoubtedly produced the best in Gallant Girl, who repeated her last year's win, showing in the best of form, and taking the Hackney Horse Society's gold medal. Mr. C. G. Cooke, Bygrave, won the red ribbon with Lilladora, for mares foaled before 1904, Mr. D. S. Carr's Londesborough May Queen being second. Mr. J. Tibbett, of Doddington, gained both first positions for two-year-old fillies in the open and tenants' classes, with Mr. Pentelow second in each instance, while among the yearlings the judges picked out the exhibit of the Exors. of the late Mr. Flanders as the best, Mr. Pentelow's filly being placed second, and Sir Walter Gilbey's Flash Clara by Danegelt, third. Mr. A. H. Maquire secured the premier position for the best mare or gelding, 15 hands and over, shown in saddle, with Morning Glory by Rosador, and Mr. Flanders' Exors. took second with Lady Tuck, and in a similar class for under 25 hands, the chief award went to Mr. R. A. De Mancha's Very Royal Empress, a daughter of Royal Danegelt.

In the harness class (over 15 h.h.), Mr. J. Kerr received both first and second prizes for Loudwater Gongelt and Loudwater Grangelt, both daughters of Royal Danegelt. Of those under 14 h.h., Mr. M. Ashworth's Sparth Fiancee was placed first, with Mr. Kerr's Loudwater Flourish second.

There was only a moderate lot of hunters, the weight carrying classes being too varied and common. The breeding mare class was also very poor, lacking in size and substance. Mr. F. R. Collinnham's (Great Baddow) Mikado was deemed the best weight-carrying animal in the lot. The best lightt weight was Mr. Douglas Crossman's Ninette, Mr. J. Duchesne's mare coming next, and for which he was also awarded the Hunters' Society Medal. The best brood mare was found in Mrs. Hooley's Gentle Ida, and the prize for the best colt fell to Mr. Reginald Hicks, of Wilbraham Temple.

In the Shire classes some well known animals were brought before the judges, and the section proved a good one all round. Colonel Duncombe's well known Duke Albert of Waresley, foaled in 1902, beat Mr. C. Morbey's Montford Knight among the stallions over five years old, and in the three-year-olds Mr. W. Richardson's Treasurer II. gained the premier honours, beating Mr. E. E. Pearson's Normoor Jameson. Mr. Richardson was also awarded the treasurer's cup for Treasurer II., having travelled in the county during the past season, and served thirty-five mares. Of the two-year-old colts, Mr. J. Rowell's Bury Shakespeare came out top, Mr. E. E. Pearson's Coleshill Forester being second. The mares made a capital show, typical of the Fens. Two famous mares, Mr. H. Towgood's Shelford Pax and Mr. T. Gee's Wrydelands Sunshine, took premier honours in their respective classes, and in both the open and tenant class, Mr. Gee's well-known Fen champion, Wrydelands Starlight —son of Bury Blood Royal—had an easy win. The fillies were an exceptionally good lot ; in the open class for foals of 1905, Mr. R. G. Heaton was called in as third judge to decide between Mr. J. Rowell's Bury Casket and Mr. Richardson's Wimbledon May Queen, when the positions at Huntingdon were now reversed, Mr. Richardson being placed first, and also awarded the prize for the Tenant Farmers' and Shire Societies' gold medal. Mr. Towgood's Shelford Fairy secured the first, and Mr. Rowell the second prize in the 1906 fillies, while Mr. Towgood also gained the societies' honour for the best Shire gelding of any age with Captain.

CATTLE.

The display of cattle was a disappointing one so far as numbers were concerned, but there were some nice quality animals forward. Mr. C. Spencer, of Holywell Manor, was awarded principal honours for Shorthorns, and Mr. Adeane, Babraham, had the best dairy cow ; Mr. W. J. Atkinson, of Weston St. Mary, Spalding, being successful in the heifer class, whilst Mr. F. Hargreaves, Gamlingay, had the best Channel Islands bull, and Mr. Towgood, St. Neots, the best cow.

SHEEP.

The sheep section comprised some nice displays of Southdowns and Suffolks, but Hampshire Downs were rather few, the principal prizes going to one exhibitor, namely, Mr. Briggs, of Babraham.

In Southdowns Colonel McCalmont's Exors.' pretty pens carried all before them, the second position going to Mr. A. C. Hall, of Carlton Grange, while Mr. W. J. Green, of Childerley Gate, the only exhibitor of long-woolled sheep, received the prizes. The best of the Suffolk classes was that for rams, the head of which was a good sheep shown by Mr. S. Trowbridge, Harleston, who also won the first prize for the best pen of ram lambs, the second prize in this class going to Mr. R. Barclay, Higham. In the ewe lambs, Mr. Barclay secured the premier honour with a pen of beautiful animals which won the champion prize for the best exhibit, Mr. Trowbridge being reserve.

There were no pigs, but a choice show of butter, cheese, and eggs, whilst the butter-making competiion proved as popular as ever.

JUDGES.

HORSES.—Shires : Messrs. John Nix, Stud Farm, Alfreton, and F. W. Griffin, Boro' Fen, Peterborough. Hackneys : Messrs. Alfred Rowell, West Rudham Hall, King's Lynn, and F. W. Buttle, Kirkburn Manor, Driffield. Hunters : Captain Beatty, Oakham House, Rugby. Turn-outs : Messrs. T. Mott, Littleport, and B. J. Chaplin, Fulbourn.
CATTLE AND SHEEP.—Mr. A. D. Druce, Elvetham Park, Winchfield. Suffolk Sheep : Mr. S. R. Sherwood, Playford.

Isle of Thanet Show.

The Isle of Thanet Horse Show, more fortunate than most similar exhibitions this season, was favoured with fine weather. Agricultural classes were notable for the exceedingly fine lot of Shires they included, and the many successes which were gained by the progeny of Betteshanger and Hothfield sires, Mr. F. de B. Collard being the owner of

most of the winners. The Hunter classes contained some splendid cattle, competition being exceedingly keen. Altogether there were four classes for Hunters, and of these two were won by Mr. E. W. Robinson, of Esher, a gentleman who, however, is well known at Kentish shows. Major Legard and Mr. L. W. Winans each took a first in these classes, and such well-known exhibitors as Mr. W. Winans, Mr. H. Ingram, and Mrs. Montefiore had to be content with seconds. Mrs. Montefiore's second prize gelding, a beautiful bay, also won the Hunters' Improvement Society's medal. Hacks and harness horses were as smart a lot of cattle as could be wished to be seen. Here Mrs. Montefiore's Prince came in for a first prize and she also won Mr. Marks's cup for the best hunter owned in Thanet. Mrs. H. Buckland's lovely brown mare, the well-known Musk, gained two first prizes in hack classes, while in the classes for harness horses the chief honours were carried off by Mrs. Hartley Batt, Mr. F. G. Joiner, Mr. Le Marchant, Mr. W. Sayer, and Mr. E. Lyne Dixson. The pace and action class was won by Mr. W. Winans' black gelding Lyric with Mr. Val Smith's bay gelding Prince, a good second; while the Hackney Society's medal fell to Mr. T. R. Higgins for his handsome bay mare Queenie. The champion cup for the best harness horse was carried off by Mrs. Hartley Batt's chesnut gelding Heathfield Squire.

The Royal Show of 1909 and Gloucester.

The Sites Committee of the Royal Agricultural Society paid a visit to Gloucester on Thursday to inspect sites and generally to talk matters over with the Mayor (Mr. S. Aitkin) concerning the proposed visit of the Royal Show in 1909. The representatives of the Royal included Sir John Thorold, Bart., Sir Gilbert Greenall, Bart., Sir Richard P. Cooper, Bart., Messrs. R. Graves, R. Carr, F. Reynard, C. Adeane, W. Harrison, H. Dent-Brocklehurst (the Gloucestershire representative on the council of the Society), and T. McRow (secretary).

The party proceeded first along the Cheltenham Road, in the neighbourhood of which there were two excellent sites—one known as the Elmbridge Field Farm Estate, at the junction of the Cheltenham and Elmbridge Roads, an inspection of which appeared to give satisfaction, and owned by Mr. Ralph Fream, and others, with land adjoining belonging to Mr. A. Estcourt; and the other consisting of land owned by Mr. Harvey and the Churchdown Land Company respectively. At both places there is ample acreage for the purposes of the show, with many attendant advantages, including contiguity to the railway (from which special sidings could be provided), accessibility to the city, and a good main water supply.

The Sites Committee will in due course report the result of their visits to the Council of the Royal Agricultural Society. Whilst no definite announcement can at present be made, there is every reason to hope that, subject to the conclusion of certain arrangements as to the raising of a local guarantee fund, and details as to the site (including satisfactory sidings), the Royal Show may be held on the Elmbridge Field Farm Estate in 1909. Much will, of course, depend upon the reception which the general public of both county and city accord to the proposal. Fully £5,000 will have to be raised locally, and there is good reason for hoping that the public will respond loyally when the appeal is made to them. When the Royal Society was invited to visit Gloucester in 1892—which invitation was unsuccessful—promises to the amount of over £4,450 were received; and this fact should augur well for the financial success of the present movement.

SHOW GOSSIP.

Letters were read at a recent meeting of the Southampton Town Council from the Earl of Northbrook and Mr. Franklin Simmons, stating that the Royal Counties Agricultural Society would like to hold their annual show at Southampton next year, and asking the consent of the council to their so doing. Although the matter was formally referred to committee, there is little or no question as to the requisite approval being given, the proposal seeming to meet with general approval.

The takings at the recent Edinburgh show of the Highland and Agricultural Society amounted to £7,574 4s. 5d., the gate receipts being £5,738 9s, catalogues £421 4s. 4d., and grand stands £1,414 11s. 1d. The total is the best on record, with the exception of 1899, when the show was last held at Edinburgh. On that occasion the takings amounted to £10,222 11s, and then the weather was of the most favourable description, whereas this year it was much against big attendances on the first day or two; so that the society is to be congratulated on the success of their fixture, due in no small measure to the visit of T.R.H. the Prince and Princess of Wales, although the show itself deserved such a reward.

The Cleveland Agricultural Society will offer about £400 in prizes for competition at their show on the Redcar Racecourse on Wednesday, the 31st inst. The amount is divided among classes for cattle, sheep, pigs, horses, poultry, pigeons, rabbits, ferrets, dairy produce, field produce, sheep-dog trials, &c., so that a varied and most interesting show should result. Entries close to-morrow (Tuesday) with the secretary, Mr. T. Turner, Lazenby, Eston, R.S.O., Yorks.

The entries for the annual show of the Tunbridge Wells and South-Eastern Counties Agricultural Society, which takes place on Thursday and Friday next, under the presidency of Sir Lindsay Hogg, Bart., may be pronounced satisfactory, being of about the usual extent. In all classes of stock they are numerous, the largest entry being of cattle, which total up to more than 300. Jerseys are, as usual, the most numerous, but there will be some strong classes of Sussex and Shorthorn, and in what may be called the "utility" classes there is likely to be a specially interesting competition, over 50 cows being entered for the milking trials and butter tests. Quality also will be a popular feature, a considerable number of the various breeds having taken foremost positions at the Royal and other leading shows this season.

Horses of all kinds will be well represented at the above show. Shires will provide some excellent classes, in some of which the entries are numerous, and there is a promise of good competition; the same may be said of Hunters and Hackneys, while the horses in harness give promise of making a highly interesting show. In nearly all the horse sections will be found animals that distinguished themselves at Olympia, which may be considered a guarantee of the high character of the exhibits.

Sheep also promise well, particularly the Romney Marsh breed, in which visitors may expect to find that the marked improvement in recent years is fully maintained. Southdowns, too, will be forward in good numbers, and will doubtless prove a good representation of this favourite breed. Goats will be present in about the same number as last year, and those interested in these useful animals may anticipate seeing the best specimens now living. Entries in the poultry and rabbit department have not yet closed, but considering the widespread favour in which the Tunbridge Wells Show is regarded by fanciers all over the country, there is no reason to anticipate anything but the customary successful exhibition.

SOCIETY ANNOUNCEMENTS.

TUNBRIDGE WELLS & SOUTH EASTERN COUNTIES AGRICULTURAL SOCIETY.

Patron—The Most Hon. The Marquess of Abergavenny, K.G.
President for 1907—Sir Lindsay Hogg, Bart.

GREAT SHOW AT TUNBRIDGE WELLS,
On THURSDAY and FRIDAY,
July 25 and 26, 1907.
OVER £1,800 IN PRIZES.

Open Judging of Live Stock commences at 9.30 a.m. on July 25.
Jumping and Driving Classes each day, for which entries may be made at the Secretary's Office upon the ground.
GRAND PARADE of all Horses and Cattle on July 26, commencing at 10.30 a.m.
GREAT SHOW of Sheep, Goats, Swine, Wool, Butter, Poultry, Implements, etc.
Admission:—Thursday, July 25, from 9.30 a.m. to 1.30 p.m., 2/6; from 1.30 p.m. to 7.30 p.m., 1/-; Friday, July 26, from 9.30 a.m. to 6 p.m., 1/-.

The CEYLON BAND will attend each day.

WM. ROPER, Secretary.
Kentish Buildings,
Tunbridge Wells.

THE EAST BERKS HORSE SHOW SOCIETY will hold its 11th ANNUAL SHOW at Hawthorn Hill Race Course, near Maidenhead, on THURSDAY, AUGUST 22, 1907. Entries close July 30, or, with double fees, August 6. Schedules, &c., of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C. Telephone: No. 5148 Gerrard.

WARWICKSHIRE AGRICULTURAL SOCIETY
(In conjunction with the Rugby and Dunchurch Agricultural Association).

SHOW AT RUGBY,
AUGUST 28 and 29, 1907.

Prizes over £1,230.
For HORSES, CATTLE, SHEEP, PIGS, IMPLEMENTS, DAIRY PRODUCE, EGGS, DRESSED POULTRY. STOCK JUDGING COMPETITION, &c., &c.
Prizes in Horse Department over £685. Special Driving and Jumping Classes.
Last day of Entry July 27, after which at double fees up to Eight p.m. July 30. Prize Books and Entry Forms sent on application to
FREDERICK H. MOORE,
Warwick. Secretary.

DURHAM COUNTY AGRICULTURAL SOCIETY.—President, The Most Honourable the Marquis of Londonderry, K.G. The ANNUAL SHOW will be held on THURSDAY, AUGUST 15, 1907, in the picturesque grounds of Wynyard Park, Stockton-on-Tees (generously granted by the President). Upwards of £1,000 given in prizes for Horses, Cattle, Sheep, &c. Also two pieces of Silver Plate to cost not less than £25 each (the gift of the President) to be won outright in the classes for Shorthorn Cattle. Entries close Tuesday, July 30, 1907. Prize schedules for Dogs, Poultry, Pigeons, &c., on application to the Hon. Secretary, G. H. Proctor, Esq., Flass House, Durham. Prize schedules for Horses, Cattle, Sheep, &c., on application to the Secretary,
WM. CHRYSTAL.
Houghton-le-Spring.

BIRMINGHAM SHORTHORN SHOW AND SALE.

THE SIXTY-SECOND EXHIBITION AND SALE will be held on SEPTEMBER 4 and 5.
£155 IN PRIZES, viz.:
£70 for Females in four classes, and £85 for Bulls in three classes.
ENTRIES CLOSE AUGUST 8.
W. H. LYTHALL, Secretary.
Bingley Hall, Birmingham.

WELBECK TENANTS' AGRICULTURAL SOCIETY.

EIGHTEENTH ANNUAL SHOW
will be held at
WELBECK,
TUESDAY, AUGUST 6, 1907.

1,210 ENTRIES.

ALEX. GALBRAITH,
Sec. and Treas.
Norton, Cuckney, Mansfield.

BAKEWELL FARMERS' CLUB. President for 1907, A. S Marsden-Smedley, Esq., Darley Dale. The 59th, Annual Exhibition of Horses (Shires, Hunters, Jumpers, Hackneys, and Turnouts), Cattle, Sheep, Pigs, Wool, Roots, Cheese, and Butter, also open Trotting and Galloping Races, will be held at Bakewell, on Wednesday, August 14th, 1907. Upwards of £450 in Prizes, Challenge Cups, and Medals. Live Stock and Produce entries close Monday, August 5th. Racing, August, 9th. Schedules and entry forms, may be had on application to WILLIAM J. CLARK, Secretary, Farmers' Club, Bakewell.

NEWBURY HORSE SHOW SOCIETY.
President: W. J. Yorke-Scarlett, Esq., M.F.H.
17th ANNUAL SHOW on NEWBURY RACE COURSE (station on ground),
WEDNESDAY, AUGUST 21, 1907.
Shelter provided for all Exhibits.
Cash prizes value £350. 14 Open and 11 Local Classes. Show opens 10.30 a.m. Entries close Single Fees, Aug. 1; Double Fees, Aug. 8.
Schedules and all particulars from
E. J. FORSTER,
Broadway, Newbury. Secretary.

POULTON LE FYLDE AND DISTRICT AGRICULTURAL SOCIETY.—Open to the United Kingdom. August 14th, 1907. To be held on the Showground, Poulton le Fylde. Nearly £600 in Prizes, Cups & Specials. Splendid Classification for Shires, Hackneys, Turnouts, Tandems, Pairs, Jumpers, Cattle, Sheep and Pigs, &c. Entries close August 5th. Schedules from Secretary, Richard Bibby, Market Place, Poulton le Fylde. Tel. 6.

GAINSBOROUGH AGRICULTURAL SOCIETY.

ANNUAL SHOW,
MONDAY, AUGUST 5 (Bank Holiday).

£225 in Prizes.

Open Classes in Hackney, Hunter and Shire Horses, Driving, Jumping, &c. Entries close July 30. Schedules from
T. J. DIXON, Hon. Sec.

HEMEL HEMPSTEAD HORSE SHOW.
AUGUST BANK HOLIDAY.
President: J. R. DRAKE, Esq.
Open Class for Cart Horses, Horse Jumping, Driving Contests, Hunters.
Entries close TUESDAY, July 23rd.
Double fees up to July 29.
J. & G. KIDMAN, Hon. Secs.

NATIONAL POULTRY CONFERENCE.

Display of English and Foreign Poultry and Eggs.

The inspiration which prompted the collection f the large number of birds of all nations and ome-produced and foreign eggs, which were hown at the University College, Reading, in con- ection with the second National Poultry Con- erence, was a particularly happy one, and formed most educative adjunct to the papers read, with he attendant discussions, and much praise is lue to the committee responsible for this collec- ion for the manner in which everything was rranged.

The fowls, ducks, turkeys, and geese were all ent in pairs, but were not exhibited together, the irds all being separately penned, which enabled isitors to see every bird at its best. The collec- ion of English breeds, with their many varieties f those which are popular, was the most omplete we have have ever seen. For it must be emembered that even at the largest poultry hows classes are only provided for those varieties hich the respective committees are convinced ill fill satisfactorily; and, as a rule, unless a ertain number of entries are received for the less opular breeds the classes for these are cancelled, r unless there are sufficient entries for the total o cover or provide the Show Committee with the mount to meet the prize money, they do not feel that it might be possible to have such an exhibition alternate years in London or within a short distance of it, to enable poultry keepers generally to see the birds, so that when mention is made of other fowls than those which they are acquainted with, they might know at least the outward appearance of each.

For many years such a fine and complete collection of samples of English fowls has not been under one roof as here, for there were Rose and Single Combed Anconas; Andalusians; Aseels; Light and Dark Brahmas; Buff Partridge, White and Black Cochins; Campines of the original type, and of present show type also; Silver Grey, Dark, Cuckoo and White Dorkings; Houdans; Crêve Cœurs and La Flèche as representing French breeds which are kept in England, together with Cocon de Malines, and Faverolles, and every variety of modern and old English Game, as well as the ever popular Indian Game.

All varieties of Hamburghs were staged, as well as modern (or exhibition) Black Langshans, Croad Langshans (Black also), and Whites and Blues in this section. All varieties of Leghorns were exhibited, and it was generally remarked that the White Leghorn cock exhibited was one of the largest ever seen

stified in keeping the classes on. For it must e remembered that promoters of poultry hows—no matter whether they are the committee f a local or flourishing society, whose object is to crease the interest in poultry keeping, or a few entlemen who run the show in the interests of nciers forming themselves into a committee for he purpose—cannot afford to give prizes for breeds rd varieties which are not sufficiently largely ept to provide classes of a few entires only, erely to show the visitors these breeds, at a loss themselves.

The exhibition at the Reading Conference as on different lines altogether, the exhibi- rs of the different varieties of the most opular breeds and of the minor breeds having een requested by the committee to supply repre- ntative birds of their own fowls to assist in the rmation of the most interesting and complete llection possible to be brought together.

These were exhibited in two fine tents, and ours could be spent in each by those who e really interested in comparing our own eeds and their developments with those opular in other countries, and particularly ose which are bred largely by our Continental eighbours, and which are only known by name the majority who are not able to make expedi- ons for the purpose of comparisons. We could t help wishing, when we were carefully com- ring the different breeds with each other, in such a collection, and we could not help feeling sorry that the type of this most useful breed is becoming so extreme, because these large birds do not lay nearly as many eggs as the smaller birds; and we trust that breeders of black Leghorns will not follow the example of the white Leghorn breeders, as if this is done their laying powers will in time deteriorate to the degree that these big birds spread for exhibitors' culls are largely bought up, and in this way the mischief spreads without the knowledge of the utility poultry keeper.

Lakenvellers, Malays, black and white Minorcas, and rose-comb Minorcas were there, and all varieties of Orpingtons, Polish, and Rocks, with Redcaps, that northern development the rose comb Blue, with Spanish, Scotch, Dumfries, and Scotch Greys.

Silkies and Sultans and all varieties of Sussex, with Wyandottes and Yokohamas were there, making a total of 182 pens, and undoubtedly the most representative display of fowls to be seen together.

Turkeys, ducks, and geese of all varieties were shown in addition to the fowls, and after these a few pairs of fowls, notably White Orpingtons and partridge Wyandottes, exhibited for the purpose of showing well-grown cockerels and pullets of all-round utility breeds, and a few couples of cross-bred cockerels and pullets for table purposes.

In the Belgian section, which came second, there were ten distinct breeds of fowls and eight distinct breeds of waterfowl. France was represented only by two exhibits, viz., of pairs of Crève Cœurs and La Flèche, and then came Section IV. with nine breeds and eighteen varieties.

It was noticeable that our English Hamburghs and Polands and the French La Flèche appeared in these sections under Dutch names, and that the type and colouring of these birds fell far below those shown by English exhibitors.

It could not be otherwise decided, we believe, than that the English poultry-keeper has reason to be well satisfied with the general appearance of the breeds which are available for him in his own country, for, regarded only from their appearance, the English fowls were very much in advance of the foreign ones, and records of productiveness prove also that the laying qualities of English Leghorns, Minorcas, Wyandottes, and Orpingtons are generally better than those of the Continental breeds, and the table fowls produced by our English method of fattening (which has been copied in other countries) are finer than those of any other; so that the lesson to be learnt by poultry keepers is to make the most of the opportunities afforded them for the disposal of eggs and fowls by the utilisation of all available land for a stock, which, carefully managed, will pay better than any other class of stock for a similar investment of capital.

Observant members of the conference could readily see that the progress made by all English breeds is most marked and would be thankful to see that this is so. America was represented by one exhibit of White Leghorns, and the difference of type was most marked, and in this matter English utility poultry keepers must be careful, for it is the smaller Leghorns which give the best return in egg yield, and if this is sacrificed to size, it will be a disastrous thing for the egg-producer.

The display of eggs consisted of cases from all countries, and the quality and size of the contents of the cases were very varied. The Danish and French eggs were an excellent sample of high grades, but some of the Russian cases were not to be compared with any saleable eggs. Ducks' and turkeys' eggs were there, and the Irish eggs were quite equal to the best English, proving that the instruction given there in so many directions is bearing fruit.

We hope that, in course of time, a yearly exhibition on similar lines to the one at Reading will be arranged, for the information of those whose interest is being awakened in poultry keeping as the means of a substantial addition to the incomes of farmers of all classes.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended July 13, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (9,714), 9,061; sheep and lambs (379), 1,089; horses (233), 283.

Fresh meat:—Beef (115,312 cwts.), 126,594; Mutton (135,293), 88,515; pork (4,299), 6,369.

Salted or preserved meat:—Bacon (104,770 cwt.), 98,620; beef (3,340), 1,336; hams (40,093), 21,616; pork (5,031), 6,443; meat (12,940), fresh, 8,226; salted, 789; meat, preserved (5,457), 11,164.

Dairy produce and substitutes:—Butter (93,637 cwt.), 82,932; margarine (19,546), 16,145; cheese (92,581), 79,355; milk, cream (130), 123; milk, condensed (15,778), 16,881; milk, preserved (12), 41.

Eggs (great hundreds):—(386,868), 275,485; poultry (value £2,715), £2,615; game (value £54), £24; rabbits, dead (not tinned), (3,482 cwt.), 1,290; lard (42,184 cwt.), 36,086.

Corn, grain, meal, and flour:—Wheat (2,243,000 cwt.), 2,536,600; wheat meal and flour (193,900), 227,300; barley (335,600), 216,100; oats (555,500), 290,700; peas (51,360), 17,320; beans (11,370), 440; maize or Indian corn (664,500), 1,066,900.

Fruit (raw):—Apples (12,134 cwt.), 3,536; cherries (14,494), 12,284; gooseberries (6,369), 5,679; strawberries (3,576), 2,135.

Hay (4,446 tons), 2,056; straw (1,009 tons), 1,108; moss litter (1,532 tons), 1,585; hops (894 cwt.), 4,590; locust beans (— cwt.), 6,421.

Vegetables, raw:—Onions (89,941 bush.), 104,661; potatoes (217,261 cwt.), 349,938; tomatoes (57,545); 33,124.

The following resolution, moved by Major Dent, was carried with but one dissentient at the last meeting of the Wetherby and District Chamber of Agriculture:—"That this meeting, while sympathising with the idea of trying to keep the population on the land by developing small holdings, does not believe that the Bill as drafted will bring about any great development, and may cause much friction and harm to present occupiers without giving them adequate compensation."

THE YORKSHIRE UNION.

Swine Fever Regulations.

Among those present at the meeting of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture held at York on Thursday—Dr. Wright in the chair—was Captain Spencer, General Inspector of the Board of Agriculture, and he opened the adjourned discussion on the measures being taken by the Board of Agriculture in reference to swine fever. He said that on the occasion of the last meeting members of the Union were invited to send questions to the department on any point on which they required enlightenment. Having received no communications he came to the conclusion that there were not so many grievances as he feared there were. There was a point raised at the last meeting about the difficulty of the pig trade as regarded Malton and Seamer markets. The position at present was that it had been suggested that a certain number of parishes in the East Riding should be transferred for the purpose of the disease of animals under the Swine Fever Order to the North Riding so that instead of the county boundary being the line of demarcation, it would come a little bit more to the south-east. The Buckrose Petty Sessional Division and a few other parishes were proposed to be included in the North Riding and taken away from the East Riding. That might meet the Malton and Seamer people, but how it would meet the people who lived just over the border it was hard to say, because somebody on the border was bound to feel the pinch. It was a matter the Board would leave to the two counties to settle between them.

As regards the question as to what percentage of reported cases turned out to be cases of swine fever, Captain Spencer said :—For the first quarter of the year the percentage of outbreaks to reports was :—In the North Riding, 15·8 ; in the East Riding, 2·1 ; and in the West Riding, 16·1. And as regarded the present condition of the West and East Ridings, which were bound together under the Swine Fever Regulation of Movement Order, from January 1 up to July 17, the East Riding had 15 outbreaks and the West Riding 107.

Colonel J. D. Legard, C.B., asked whether, if this division was made, any question of rating would arise? Supposing the part of the East Riding in question were excluded from its rateable area would the inhabitants consider that they would not be called upon to contribute to the rates which were levied on the rest of the area?

Captain Spencer said that no question of rates would come into this. It was simply an arrangement for the moving of pigs.

Mr. W. Humphrey thought the arrangement would be a very convenient one as far as Malton pig market was concerned.

Colonel Legard considered that the arrangement would be of undoubted advantage to the portion of the East Riding concerned, and, if there was no question of rates, he could not see that it would inflict any hardship on the rest of the area. All the pigs from that district went to either Seamer or to Malton market, and those in the other district would not suffer any disadvantage. Under the present arrangement the markets in Malton were closed to the East Riding. They could not go over the bridge.

Mr. W. Hutchinson said that the question of police supervision was the great difficulty. Were the North Riding police to have the oversight of the new district? If so, there would have to be some distribution of the charges necessarily attendant upon that supervision.

Captain Spencer explained that the idea that the North Riding police were to have the supervision of the transferred area had arisen owing to a mistake. The minute that was dictated by one of the officials of the Board was taken down wrongly by the shorthand writer.

Mr. R. T. G. Abbott said he thought the lines mapped out by Mr. Spencer were very fair. The present position at Malton was quite unheard of, and unless some such arrangement as that proposed were made the difficulties would be increased. He said there was no difficulty that could not be overcome, and, certainly, the alteration would be for the better.

Capt. Spencer said that so long as the local authorities would agree between them what they would like done, the Board of Agriculture would agree. So it really remained for the local authorities to work together.

Mr. F. H. Preston said he had placed everything before the East Riding County Council. But they hardened their hearts and would not listen. It was argued that Malton should have no alterations simply because Selby could not join with it. If the Local Government Board were willing that this proposal should be carried out, he could not understand why anyone on the county council or anyone else should have a word to say in prevention of it. It was time these grievances were at an end. They had been a long-suffering people, and the pig trade had been very much injured owing to the restrictions which had perhaps been a little more severe than was necessary. There were no cases of swine fever existing within a radius of twenty miles of the district where he came from, and it was hard that farmers should be annoyed for no practical reason. As the suggestions now made were acceptable to everybody, he hoped the county council would no longer oppose them.

Mr. W. Humphrey then moved the following resolution, which was agreed to :—

That this meeting approves the proposed transfer of certain parishes of the East Riding from the East Riding to the North Riding for the purposes of the Swine Fever Regulation and Movement Order, and strongly urge the Board of Agriculture to carry the same into effect.

Mr. T. N. Driffield called the attention of Captain Spencer to the difficulty often arising on account of the very wide area declared to be an infected place. It was thought that when any farmer had a case of swine fever, his farm alone should be dealt with as an infected area. Could anything of that kind be done?

Captain Spencer said the whole policy of the Board where swine fever was found was to tie up that pigsty firmly—as tight as they possibly could. If the infected pigs are all in that one place, nothing more could be done ; but if the pigs were scattered miles apart, all must be got into the net, so the infected area must be made wide enough to get hold of all of them. Restrictions were laid on the smallest possible areas.

Report of the Parliamentary Committee.

The following report of the Parliamentary Committee was then considered :—

The Destructive Insects and Pests Bill.

It is proposed by this Bill to give the Board of Agriculture power to make orders for preventing the introduction into Great Britain of any insect, fungus, or other pest destructive to agricultural or horticultural crops or to trees or bushes, and for preventing the spreading in Great Britain of any such insect, fungus, or other pest. Although the Bill is very comprehensive in its terms, the primary mischief aimed at is understood to be the gooseberry mildew ; and it is proposed to adapt to agricultural and horticultural pests generally the machinery designed for the reception of the Colorado beetle by the Destructive Insects Act, 1879. That Act only applies to the insect designated as *Doryphora Decemlineata* and commonly called the Colorado beetle. The present Bill extends to all insects, fungi, and pests destructive to crops, trees, or bushes.

The Orders to be made by the Board may prohibit or regulate the landing in Great Britain of potatoes or of the stalks or leaves of potatoes or other vegetable substance or other article, brought from any place out of Great Britain, the landing whereof may appear likely to introduce any such pest into Great Britain, and may direct or authorise the destruction of any such article, if landed. The Board may also make orders for preventing the spread of such pests ; and for that purpose may direct or authorise the removal or destruction of any crop or substance where the pest is found or which appears likely to spread it.

Where the Board order the removal or destruction of any crop they may direct or authorise the payment by the local authority of compensation for the crop out of the local rate, on a basis not exceeding half value if the pest is found in existence in the crop in any stage, and in every other case not exceeding three-fourths value of the crop. But the Board shall not make an order directing the payment of compensation by any local authority for the removal or destruction of any crop or any trees or bushes unless the local authority consent to make the payment.

The committee approve generally of the Bill.

The Merchandise Marks Bill.

The object of this Bill is to amend the sixteenth section of the Merchandise Marks Act, 1887, which provides that imported goods bearing English trade marks or English words tending to show that they were made in England must bear a definite indication of the country of origin—*e.g.*, "Made in Germany." The Select Committee of 1897 reported that this requirement gave a gratuitous advertisement to trade competitors and had done much harm. The Bill provides that the words "Made Abroad" shall be used instead of naming the country in which the goods were made or produced.

The committee recommend that the Bill be approved.

The Small Holdings and Allotments Bill.

The committee having carefully considered this Bill, resolved unanimously, on the proposition of Mr. W. H. Wilson (Thirsk), seconded by Mr. Jonah Bulmer (Ryedale) :—"That this committee are of opinion that the Small Holdings and Allotments Bill now before Parliament should be strenuously opposed, and they hereby request Members of Parliament connected with the Yorkshire Union to take steps to defeat it."

The committee's approval of the first two Bills mentioned were agreed to without comment, but there was a lengthy discussion on the Small Holdings Bill.

A letter was read from Major Dent, in which the writer said he did not like the resolution the committee. He should like to express sympathy with the ostensible object of the Bi but at the same time to say the Bill would not le to any real development, and would cause gre expense to the ratepayers, and friction, expens and loss to present occupiers, and the taking responsibility out of the hands of the loc authorities.

A resolution was received from the Wetherl Chamber of Agriculture stating that, whilst t Chamber sympathised with the object of the Bi they did not think that it would achieve i objects.

The Chairman moved the adoption of the com mittee's report.

Mr. Wilson, in seconding the resolution, sai that recently seventeen small holdings in t Snaith district had been given up. If larg farmers with plenty of capital could not mak farming pay, he did not see how small holding could be made to pay.

Mr. Lloyd Greame said he thought it would b desirable in some places to increase the number c small holdings.

Colonel Legard said he thought the multiplica tion of small holdings would be a very good thin if it could be done on sound commercial lines an by proper legislation, because the more peopl were interested in the cultivation of the land th stronger would be the position of agriculture i the country and in Parliament, and no doubt i would have some effect in finding employment fo people who otherwise could not get it. He thought the present Bill was a thoroughly bad Bill, and nothing could make it a good one, but i they passed the resolution as it stood, it might give an impression that they were hostile to the formation of small holdings. He moved as an amendment to add to the resolution, after the word "committee," the words "while not opposed in principle to the increase of small holdings."

Mr. Abbott seconded the amendment. He said his experience of small holdings was certainly not a successful one. "You must," he said, "have a farm of 70 or 80 acres to make it pay in this district, though there are, of course, neighbourhoods near large towns where there is a different condition of things."

Mr. Lloyd Greame said their great fear was that people would get these small holdings who did not want to be farmers, but simply wanted to amuse themselves. He would be very glad to see some of these small holdings used to enable a hind, say, whose family was growing up, to take a little farm and make his way. That was what was wanted. But the present Bill was utterly unworkable and utterly unfair.

Mr. J. Bulmer said farmers objected to the very foundations of the Bill. They were opposed to anything more being put on the backs of the ratepayers.

Mr. Byass contended that small holdings were a success in some cases, but a man with a small holding wanted some other business with it. He knew districts where they were paying, and where there was a demand for them.

The chairman pointed out the object of the Bill was not to put tradesmen on the land, but to get people on the lann to live on it.

The amendment was incorporated with the resolution, which was unanimously adopted.

Rural Education.

A discussion on the subject of secondary education in rural districts followed. Mr. W. Hutchinson, who introduced the subject, remarked that secondary education, as he understood it, meant that when the elementary scholar by mental ability or age had passed through the curriculum of the elementary school the child should have an opportunity of being instructed in the higher branches of learning. In furtherance of this very desirable object the present educational authorities were empowered to make provision by the establishment of secondary schools by arrangement with present existing grammar schools, higher educational schools, or by erecting buildings adapted for the purpose in view. The maintenance of these schools was to be provided for by fees from the students, grants from the National Exchequer, and from a special county rate to the extent of 2d. in the pound. It was to the latter source of income that the attention of the Union of Agricultural Clubs was invited.

The question they had to consider was how the rural districts were to derive any benefit from the large sums of money granted for a purpose which the Board of Education confess their inability to carry out in these areas. If they could not have beautifully-equipped schools presided over by highly-trained and competent professors, was that a reason why their only part in the affair was to pay their share of the rate which the county councils had power to levy! In the East Riding, for instance, the advantages were mainly confined to the town and neighbourhoods of Bridlington, Driffield, Beverley, and Hull, thus leaving a very

large and scattered population deriving little or no benefit from either Government grants or county council levies.

Village night schools had to the present time afforded the only opportunity for many to carry on their education after leaving the elementary school. Without any disrespect for the teachers in elementary schools, and fully recognising the valuable services they are rendering there, it was questionable whether their training and methods of imparting instruction had been adapted with best results to youths of from fourteen to seventeen or eighteen years of age.

Would it not be possible, whilst awaiting for the full solution of this difficult problem in rural districts, to provide for the employment of qualified professors, whose frequent periodical visits and university methods at centres where suitable accommodation already exists, thus to help the willing student and prevent that apathy to the pursuit of knowledge so frequently seen when the scholar is free from compulsory attendance?

Colonel Legard, who moved "That our present system of secondary education in rural districts is not entirely satisfactory," said that in a number of cases children in rural districts were not sufficiently advanced in the groundwork of education to take advantage of the higher instruction in agriculture. If they could establish higher elementary schools they would enable farmers' children to carry their education further than the elementary school, and then they would be in a better position to take advantage of the opportunities offered to them by the Leeds University. They wanted to improve elementary education, giving it a rural character, and then give further opportunities for country children to extend their education beyond the school age.

Mr. T. N. Driffield, in seconding, said education had hitherto given children a distaste for rural pursuits. In his district prizes were offered for the best kept garden plots, and he was delighted with the way these plots were cultivated. If the education of children were confined to books, they would develop an utter distaste for farming.

Mr. W. Humphrey thought the higher education went the harder it was for farmers to obtain servants.

The Chairman said book education would not make people love the country, but if they were educated in Nature studies they would get really fond of the country. Most people thought the country was dull; for his part he could find one of the dullest places the centre of London. If people were taught to study Nature and study agriculture, they would be got to stay on the land and enjoy it.

Mr. Abbott thought prizes should be given to scholars for gardening and for knowledge of seeds and agriculture generally.

Mr. G. Scoby said that this secondary education was running away from the real and pure and simple agricultural education. Where had they got a man that could stack and plough properly; where had they got men that could thatch, ditch, and fence? That was the great thing that farmers wanted. In the villages they had hardly any men that could stack properly, "and the young ones," said Mr. Scoby, "all go after these professorships."

Mr. T. N. Driffield remarked that this had little to do with the education question they were discussing. The dearth of men to do the work Mr. Scoby referred to was owing to the neglect of the agricultural societies. They had not encouraged these men to become competent workmen. If prizes had been given for hedge-cutting, thatching, and any skilled work upon the farm for a series of years, they would now have had a sufficient supply of that skilled labour.

Mr. J. Byass suggested that the county council should teach this class of work instead of having boys dabbling in carpentry.

The resolution was then put to the meeting and carried unanimously.

CORRESPONDENCE.

Landlords and Small Holdings.

SIR,—On a small estate of some 1,800 acres I have established, during the last few years, five agricultural labourers and their families in small grass holdings, varying in size from 4 to 14 acres.

These men are not only making an economic success of their holdings, but they are still working for the tenant farmer, to whose farms the cottages are attached. The wife and family do most of the work in connection with the holding.

I think you will agree with me that one of the safest channels through which to establish the economically successful small holdings is through the agency of the landlords, who are in sympathy with the movement.

I flatter myself that I know with practical certainty the families living on my estate, who, under normal conditions, are likely to make an economic success of small holdings. I am more anxious than I can say, that the present movement to establish a large number of small holdings, should prove a success. I do hope, therefore, that when the Bill now before Parliament is passed into law it will give to landlords in sympathy with the movement every encouragement to settle the most competent of their agricultural labourers in "small holdings."

As you are doubtless aware, we landlords can, for the purpose of erecting new and necessary buildings on our farms, with the approval of the Board of Agriculture, obtain loans for this purpose from the Lands Improvement Company, by paying £4 16s. per cent. per annum on the loan.

This sum pays the yearly interest on the loan, and liquidates the whole loan at the expiration of forty years. The company, in order to meet all expenses, charges 5 per cent. on the loan granted, and the official appointed by the Board of Agriculture makes two, and sometimes three visits, in order to sanction the plans and to pass the buildings when completed.

All these extra expenses are added to the loan, the whole of which constitutes a first charge on the property.

Now the special point of my letter is this, that the Government, under the supervision of the Board of Agriculture, should advance money to landlords who make an application, at the lowest rate of interest, and extend the periods of repayments of the loan over fifty or sixty years.

The Government, in order to encourage landlords to establish small holdings on their property, should not charge any expenses for granting the loan, as the Lands Improvement Company now do.

The result probably would be that instead of the landlords being called upon to pay £4 16s. per cent. per annum for interest and liquidation of the loan on cottages and outbuildings suitable for small holdings they would probably only pay £3 16s. per cent. per annum.

The loans would be perfectly safe, as they would constitute, as the Lands Improvement Company loans now do, a first charge on the property.

If the Government could see their way to grant loans to sympathetic and willing landlords on these lines, and the Board of Agriculture was to send out a judicious circular to the landlords, stating the terms on which they could obtain a loan for the creation of small holdings on their estates, and that an official of the Board of Agriculture was at their disposal, to submit plans and arbitrate differences between landlord and tenant farmer for the necessary land, then I venture to prophesy that the next few years would see a considerable number more of our competent agricultural labourers established in small holdings, without resorting to the local authorities or the taxpayer.—Yours, &c., H. B. M. BUCHANAN.

Hales, Market Drayton, July 12, 1907.

The Sheep Dipping Orders.

SIR,—The sheep dipping order is making a good deal of trouble to our graziers, who complain very much about it amongst their fat lambs, and that their sheep cannot be moved back home from market or to another market without being dipped again and kept for some time. They say the Orders are unworkable, which I always predicted they would be in a grazing country.—Yours, &c.,

CENTRAL BUCKS.

The Decline of the Hop Industry.

SIR,—Allow me, as a large hop grower, to call your attention to an article on the decline of the hop industry which appeared in the *Kentish Observer* of the 4th inst.

I am a "fair trader," and I believe in Protection, and I would not for one moment substitute marking of foreign hops for a duty. I believe in putting a duty on all foreign hops as quickly as we can manage to do it, but there is no reason why we should not also "protect" ourselves against the very unfair competition we have to meet through foreign hops being both mixed and unmarked. As a "fair trader" I ask for fair trading conditions. Nothing short of the equal application of the terms of the Act of 1866 to all foreign hops (which are landed here) the same as to English hops will constitute "fair trading" conditions. I am told that the foreigner cannot comply with the terms of the Act. Then let him cease to send hops to our market. We do not want them. They are quite unnecessary here. We have nothing to do with whether they mark them or not for use in their own country.

If they keep them at home—whether they mark them or not, is nothing to us; but when the foreign hop arrives on English soil it should be just as subject to the English law as the foreigner himself is subject to it immediately he sets foot on English land.

In order that a practical result shall be obtained, I should like to see copies of the article mentioned printed and put into the hands of every English hop grower; and, with it, a form of letter to the president of the Board of Agriculture asking or demanding that no foreign hops should be allowed to land in England without first being honestly marked in accordance with all the provisions of the Act of 1866. I would ask every grower to sign and forward the letter.

We have no organisation to take this matter in hand, but surely something can be done, or are we to still remain under the reproach that we will do nothing to help ourselves? Personally, I would do my best to assist, if others are willing to take the matter in hand.—Yours, &c.,

FRANK REEVE.

Lea Farm, Peasmarsh, Sussex.
July 18, 1907.

Northern Notes.

ONE can well understand the elation of the tenant-farmer after the past weeks of really horrible weather to realise the pleasure of seeing everything bathed in what a clerical friend described this morning as "blazing heat." The past injury cannot be ignored, the hay crop having suffered material damage, and to all appearance, taking note of the few fields cleared, the aftermath and also the clovers will be less productive than in a season of normal temperatures. Sheep have been badly scoured, and losses have accrued in the best-managed of flocks. These were not surprising to the experienced flockmaster.

THE loss of a few sheep is a flea-bite compared to the sad story of damage by a thunderstorm on the Yorkshire Wolds, whereby one farmer alone estimates his losses at £500. Other of his neighbours' farms were also "visited," but not so severely. He had two fields, one of 78 acres and another of 57 acres, laid bare to the rock in a few minutes by torrential rain.

IT has since been ascertained as a curious feature of this storm that its area covered only one and a-half miles, and that the *débris* from the fields blocked a highway for a distance of 540 yards. The surveyor for the district tells me that gangs of his men have been hard at work for some time effecting a passage. The soil, which is largely mixed with flint and gravel, is being tipped on the roadside wastes, where it will remain, a puzzle to future generations as to the cause of the deposit.

POSSIBLY the fertile brain of some archæologist will attribute its presence on the roadsides to the Roman excavators, as near the spot runs one of the Roman roads. As it becomes grass-grown an air of romance will most certainly be attached to it!

I HEAR that Mr. Luke White, one of the most aggressive members in the Commons, representing an agricultural constituency, has had an interview with the secretary of the Board of Agriculture on the question of the swine fever regulations existent in Yorkshire. The hon. member for Buckrose presented a petition for a withdrawal of the orders which are so disastrous to the trade in the North; but so far the Board has not been moved to action.

MR. WHITE intends to press the claims of his constituents upon Lord Carrington in the hope that the department, when it has heard the whole case for the dealers and feeders, will be disposed to so modify their orders as to allow free movement, except from affected areas. The area represented by Mr. White has had no case of swine fever in it since August of last year. Many experts—veterinaries and others, as well as experienced farmers and agricultural journalists—have pronounced against the present attitude of the Board of Agriculture with regard to this question.

AN idea that is becoming more general is that the Board begins at the wrong end. It should endeavour to prevent outbreaks of fever by making registration of styes compulsory, and insist upon sanitary surroundings for pigs, instead of making heroic but futile attempts to "stamp out" the disease—an aim, one fears, that is utterly impossible of attainment. The opinion is also general in the north that the closing of markets against the produce of a whole district because infection may have asserted its presence in a certain prescribed area, is not a reasonable position to be assumed. At present, though the scrupulously-kept markets are closed, every inn-yard in their neighbourhood becomes a place of sale, as thither pigs both great and small are brought for sale to dealers without let or hindrance.

I HAVE read some interesting commente in a north-country newspaper about Lord Masham's reasons for parting with the Jervaulx estate, which is noted for the large number of small holdings on it, from the cottage with a garden to the cottage with sufficient land to keep a cow all the year round. Forty to fifty years ago these cottages were occupied, and the men worked at all kinds of trades—as carpenters, blacksmiths, lead miners,

farm labourers, and a good many as jobbing men, who drained the land in the season, and acted as mowers, turnip hoers, and harvest hands.

NOW these men are a good many of them gone; lead mining is reduced, draining has been given up as the produce would not pay the cost, mowing and reaping are played out by the introduction of machinery. The result is that numbers of the families have left.

WHEN a man had work outside his cottage he added the land to his holding, which was of no use to the man who could not get work; and so these cottages have become the centre of small holdings; and it was Lord Masham's fear that the prospective legislation of the present Government is hostile to the landed proprietors that caused him to part with the estate. It is some consolation that these thousands of acres have passed into the hands of so excellent a landlord as Mr. Christie, to whom we wish all good luck.

IN all the northern counties potatoes are late, and "earlies" are in many places a disappointing crop. Holders of old potatoes are realising good prices, but stocks are nearly run out. The new tubers have turned up small, and on cold wet land fears are entertained that they will hardly pay for lifting. It is apprehended that potatoes will be dear in the winter on account of a poor yield; whereas last year the abundance of the crop and low price caused farmers to feed many sound ones to stock.

July 19, 1907.

Nottinghamshire Notes.

GLORIOUS sunshine accompanied by light breezes sums up the atmospheric conditions which now reign supreme in this district. The clattering of reapers in the meadows and clover fields may be heard on every side, while the waggons have been drawn out from their sheds, the wheels greased, and once again brought into activity in assisting to bring home the heavy fodder crops. Stacks are being raised with remarkable rapidity, and though some of the hay has been considerably "washed," it is now being harvested in good condition. The "afternoon" farmer who delays everything until the last possible moment will this year score with his fodder crops. So powerful is the sun that several very heavy crops of seeds which were only reaped on Monday were actually being led to day, and have entailed very little expense in the way of labour.

WE are now within a month of harvest day—in fact winter oats will be ready for cutting in about a fortnight. As compared with last year this means that harvest day will be fully two weeks later. The wheats have flowered well, and in the majority of cases have a very good ear—both long and broad. Barley, taken all round, will be rather light so far as straw is concerned, for the heavy rains coupled with the long spell of cold weather, have had a demoralising effect on their growth especially on heavy land. Winter sown oats have not done so well as might have been expected. Where they were mauled in last back-end they are without exception poor crops, and as yet I have not heard a single farmer estimate a yield of more than six quarters to the acre. On the light land—especially to the north of Nottingham at Bestwood—the spring corn has done well, and the year promises to be above the average providing the grain does not ripen too quickly as was the case last year.

THAT the present year will be a good one for beans is now certain, for the frequent rains have proved too much for the fly, and the stalks which have grown to a great length are crowded with pods of goodly dimensions. Providing the price of beans remain at anything like their present level, those who had the good fortune to have a few acres sown with winter beans will have the satisfaction of being well repaid for their trouble.

BLUE peas are grown rather extensively in this county, and though I have traversed practically every district during the past six weeks, I have not seen a single failing crop. Bearing in mind the fact that the citizens of Nottingham are lovers of green peas, a large number of farmers make a point in getting a few acres in early, so that they may be "pulled." They have this season ample reason to be pleased with themselves, for the prices obtained are very satisfactory, and the number of pods on a plant is well up to the average. A walk through the Sneinton Wholesale Market about five or six o'clock in the morning just now provides a sight not easily to be forgotten. Carts, wagons, drays—in fact, vehicles of every description—may be seen laden with hampers of freshly-pulled peas.

ABOUT ten years back very few agriculturists ventured to embark on growing peas for pulling purposes round about here, but how things have changed since then. The Fen districts were the chief source of supply, but I venture to assert that from 3 a.m. to 5 a.m. on Saturday morning over 100 vehicles laden with fresh-pulled peas may be seen coming over Trent Bridge into the city from the Bingham, Flintham, Edwalton, and Bunny districts. Here and there a farmer prefers to sell his growing crop as it stands to a merchant, who sends out his own pullers daily. This practice to a large extent has died out, for many farmers now pull their own crops, and, what is more, sell them to the shopkeepers and householders themselves, and save the middleman's profits. At the present time they are making from 9d. to 1s. per peck, and by this means many a small tenant farmer obtains sufficient ready money to see him through the harvest, thus avoiding his threshing a sack of corn immediately he gets it into the yard.

FAT stock continues to realise high prices, especially nicely finished beasts, and moderate sized sheep. Town people as a rule cannot consume fat meat, and they prefer paying ½d. or 1d. per lb. more where there is preponderance of lean flesh. At the Newark Cattle Market on Tuesday beef made up to 7s. 9d. per stone, and mutton as much as 9½d. per lb. At Nottingham on Wednesday best beef fetched 8s. to 8s. 3d. per stone, and nice sheep were eagerly bought by butchers at prices ranging from 9½d. to 10½d. per lb.

JUDGING from present appearances, we shall have plenty of roots for the coming winter months. Mangolds are a good plant, and with a continance of the present sunshine, are sure to reach a good size. Swedes have now been "gapped," and having received a good start, are growing rapidly. Common turnips have hit well, and have passed the stage when the "fly" can devour them in twenty-four hours. Seed merchants will to some extent be the sufferers by the recent wet weather, for in very many cases have the root crops been dragged up, thus obviating the trouble and expense of extra labour and seed.

THE Marquis of Granby, the eldest son of the present Duke of Rutland, will attain his twenty-first birthday on September 21 next, and the tenants on the Duke's numerous estates throughout the Midlands are rising to the occasion, and intend making him a presentation. At a meeting held at the Peacock Hotel, Belvoir, the project was explained, and Mr. Charles Hickson, of Bottesford, on the borders of this county, has been elected as hon. secretary and treasurer. The individual subscriptions have been limited in amount to a small sum, so that every tenant may subscribe. In all there are thirty parishes on the estate, and proper collectors have been appointed for each district. There will be some celebrations at Belvoir on the date named, at which the presentation will be made. Such an occasion as a coming of age celebration of a Marquis of Granby has not taken place since 1836.

EXTRA remuneration is being applied for by the whole of the justices' clerks in the county consequent on the extra work entailed through the passing of the Dogs Act. This was expected, and the applications came before a meeting of the Nottinghamshire Standing Joint Committee on Saturday last, who ordered the clerk to make inquiries as to the action taken in other counties respecting the matter.

THE chief event in agricultural circles in this district next week will be the sale of pure-bred Shorthorns at Holme Pierrepont, and from what I can gather from those in the know, there will be a goodly sprinkling of foreign buyers present at the sale on Thursday. As most of my readers are aware, Earl Manvers takes a keen interest in the breeding of Shorthorns, and his agent (Mr. W. H. P. Norris) is an admitted authority on the breed. During the past few years some very high prices have been paid for youngsters at most of the leading sales, and it will be doubtless remembered that the Earl bought several youngsters at the Ruddington sale last year.

July 18, 1907.

A Dorset reader writes that rabbits and wood pigeons are quite a pest in his part of the country; they do no end of harm and no good whatever.

Gooseberry Mildew in Gloucestershire and Worcestershire.

Order of the Board of Agriculture.

The Board of Agriculture has not been slow to take advantage of the new Destructive Insects and Pests Act to deal with the gooseberry mildew, for in Tuesday's *London Gazette* there is an order of the Board dealing with the outbreak in Gloucestershire and Worcestershire. The Order, which comes into force to-day (Monday), applies to the administrative counties of Gloucester and Worcester, and the county boroughs of Bristol, Gloucester, and Worcester. It enforces that—

1. The occupier of any premises on which there is a bush (this includes cutting, seedling, or other plant) which is diseased or suspected of being diseased shall forthwith notify the fact to the clerk to the local authority, or to some person authorised by the local authority to receive such notices, and where practicable a specimen showing the disease or suspected disease shall accompany the notice.

2. If any person knowingly fail to give a notice required by this Order to be given by him, he shall be liable on conviction to a penalty not exceeding £10.

The measures to be adopted for the prevention of the spread of disease are set forth as follows:—

The local authority on receiving in any manner notice of the existence or supposed existence of disease shall take such steps as may be necessary to determine whether the disease exists, and the area covered by diseased bushes, or by bushes to which the disease is likely to spread, and shall cause a notice to be served on the occupier of any land within that area requiring him to adopt such measures for prevention of the spread of the disease as are authorised in this Article.

A notice under this Article shall require—

(i.) The immediate destruction by burning or other effective method of all diseased bushes, including the fruit on such bushes.

(ii.) The thorough spraying as soon as possible with a solution of copper sulphate (containing at least one pound of copper sulphate to a gallon of water) or with some other fungicide approved by or on behalf of the local authority for that purpose of the site of any bush that has been destroyed.

(iii.) The thorough spraying of all gooseberry and currant bushes on the area defined in the notice with a fungicide approved by or on behalf of the local authority for that purpose and so that the spraying shall be carried out at such time or times as an inspector of the local authority shall direct and to his satisfaction.

(iv.) That no gooseberry or currant bush or any part of any such bush shall be removed or permitted to be removed out of the area defined in the notice except with, and subject to the conditions (if any) of, a licence authorising such removal, but this restriction shall not apply to fruit of a bush that is not diseased.

Any notice may be altered or withdrawn by the local authority if and when they are satisfied that this may be done without risk of the spread of disease.

If any person fail to adopt any measure for prevention of the spread of the disease required by a notice served on him under this Article he shall be liable on conviction to a penalty not exceeding £10.

The local authority shall in a form to be provided by the Board notify the Board of any outbreak of disease, and shall as soon as may be after the expiration of each year report to the Board the proceedings taken by the local authority under this Order in the preceding year.

Any inspector or other officer appointed in that behalf by the local authority, and any inspector of the Board, may upon production, if so required, of his appointment or authority, enter any land on which he has reason to suspect that disease exists or has recently existed and examine any gooseberry or currant bush on such land, and any person who wilfully obstructs or impedes any inspector or other officer in the course of his duties under this Order shall be liable on conviction to a penalty not exceeding £10.

The local authority of each district mentioned in the schedule shall carry into effect this Order within that district, and shall appoint such inspectors or other officers for that purpose as may be necessary.

For the purposes of this Order a notice shall be deemed to be served on a person if it is delivered to him personally or left for him at his last-known place of abode or business or sent through the post in a letter addressed to him there, and a notice or other document purporting to be signed by the clerk of a local authority shall be *primâ* evidence that it was signed by him and duly authorised by the local authority.

At the last meeting of the council of the Hereford Herd Book Society, Captain E. L. A. Heygate, of Buckland, Leominster, was unanimously elected president of the society for the ensuing year, and Mr. W. Judge vice-president.

Reports of the Growing Crops.

England.

"Summer, with his fervid, beaming eye," is now providing a genial atmosphere to which our plantations are responding gratefully and readily. With very few exceptions, the reports I have received this week refer to manifest improvement in the growth and condition. Vigour is imparted to the bine, and the crop prospects are substantially brighter. From a few gardens I hear that lost ground cannot be made up under the most favourable circumstances, but as these are exceptional, we may conclude that generally the outlook is now fairly good. With the higher temperature there is, however, a renewed attack of vermin, which in some districts is assuming rather serious proportions, and mould appears to be also running rather faster than planters like.

But I do not trace any note of alarm in the reports, although I am aware that washing is in operation in most places, and I am inclined to anticipate that if the present weather continues the attention of our people to this moderate hindrance will soon conquer it. The strength of the laterals, which are now being pushed out freely, significantly demonstrates the healthy life of the plant, and we seem to have arrived at a point when we can with comparative confidence forecast the possibilities of the yield. I neither desire nor expect a large crop, nor am I inclined to be too pessimistic.

Yet one can hardly avoid the formation of an estimate, always keeping in view the many contingencies that may arise to interfere with the most careful calculations. But, assuming that climatic conditions remain favourable, I venture to predict a harvest of somewhere about £250,000 old duty, or 500,000 cwt. There is the reduction of acreage to be taken into account, and until the official figures are published, this must remain as an unknown quantity. I hardly think, however, that the final result will be materially influenced by this item, and therefore am content for the present to leave my estimate as I have placed it.

America.

My latest information does not show any change in the crop prospects. Some fine, warm rains have fallen generally throughout Oregon and Washington, under the beneficial influence of which the plant is making very satisfactory progress, the vines in Washington being especially well-forward and healthy. The outlook in California is hardly so promising as it was a month ago, but New York State is improving on the whole.

Austria.

I have a communication from a friend, who is an extensive hop grower in Bohemia, and is also a member of the Austrian Board of Agriculture. He reports as follows:—"The outlook of the hop crop in Austria is generally a good one, and especially so in the Saaz district, where the plant is free from insects, and has been much benefited by recent rains. In Upper Austria the growth is backward, and insects are appearing. In Styria rain is wanted for development, but in Galicia, despite the very severe winter, the bine is strong and healthy, and free from blight. The Auscha and Dauba districts are in similar condition to Saaz, viz., satisfactory. It should be noted that Bohemia produces fully 75 per cent. of the Austrian crop."

Germany.

With a much higher temperature, the advantage to the growth and development of the plant in all districts is abundantly evident. Occasional storms have not hindered progress, nearly all the bines have reached the tops of the poles, and are putting out a plentiful supply of laterals, so that the foliage is now luxuriant, and rich as regards the crop prospect. Should no unforeseen hindrance intervene, it is very probable that the harvest will be early and plentiful

Belgium.

In the Poperinghe district there is very little vermin, although certain persons are disposed to magnify the danger to the crop from blight. There is but little room for doubt concerning the general condition of the plantations; they are promising for a good yield. In the Assche district of Alost, the plant is healthy, although there is a little vermin, which seems disposed to increase. But the vigour of the bine, which has attained the height of from 10 ft. to 16 ft., and is pushing out laterals freely, dismisses any alarm, and creates expectation of a satisfactory issue.

Market Indications.

England.

In these days when rhyming is the craze, I may be excused if I follow the fashion and construct a rhyme thus:—"Hops markets and the weather, they always go together." Crude as this may be, it nevertheless declares a recognised fact, and our experience this week confirms it. The encouragement we received from the prevalence of the cold and the wet has been dissipated by the outburst of sunshine in which we have basked lately. Demand has subsided, and although the recent advance in values is nominally maintained, the actual tone of the market is weaker, holders who were firm a few days ago being now much more inclined to sell, while buyers are proportionately slow to operate. The tendency of the trade barometer is therefore downward, and this is not surprising when the plantation reports are so much more favourable. The only counterweight to this tendency is the paucity of stocks, which are indeed very limited. I question whether the market was ever so empty of available hops as it is at present. But if the demand is also absent it avails but little if we have only little to sell, therefore I am reluctantly compelled to recognise that weakness is our present characteristic, and with to-day's surroundings recovery appears to be somewhat remote.

America.

The market for 1906's and 1907's remains in a depressed condition, with no prospect of early improvement.

Bohemia.

The market is dull, merchants are waiting for the further development of the crop. The bad weather has had an unfavourable influence on the consumption of beer, therefore the unsold stocks of hops are rather larger than are justified by the small demand.

Germany.

Holders of hops are desirous to realise, and are offering considerable concessions in prices, but the requirements of the brewers being limited by the reduced demand for beer, there is no disposition to buy, and consequently the tone of the market has lost all appearance of health, and the tendency is towards continued calm and further reduction.

Belgium.

Both town and country hop markets are very quiet, the quotations being rather lower, as holders are pressing to do business. Contracts for 1907 crop are also being offered at reduced rates.

The Herefordshire County Council have passed a resolution to the effect that those clauses of the Small Holdings Bill now before Parliament which enabled the Board of Agriculture or any person or persons appointed by them to overrule the opinions of county councils as to the expediency of putting in force the provisions of the Bill within their respective districts were contrary to the true principles of representative local government and ought to be opposed. Inquiries made in Herefordshire show that in 135 parishes there were 2,979 holdings of from one to fifty acres already in existence within their boundaries. In thirty-six parishes there is a demand for further land for small holdings, and in twenty-three of those there was no land available for the purpose. On the other hand, in twenty-six out of the ninety-nine parishes that did not want small holdings land was available

Fertilisers and Feeding Stuffs.

The Unceasing Drain of Phosphates.

The phrase "No phosphate no life" is rather a hackneyed one, but it expresses the vital necessity of supplies of phosphate of lime in the development of all life, both animal and vegetable. As Professor Wright has remarked, when the unceasing drain of phosphates from all descriptions of cultivated soils, year after year and century after century is taken into consideration, it is no matter for surprise that our fields and pastures should have become denuded of this constituent. We are liable to think that arable fields are more subject to loss from cropping than pasture grounds, and this erroneous idea has controlled practice even down to the present time. It should, however, be remembered that pastures are perpetually being robbed by grazing animals. In their case it has been constant depletion, for while manures of various kinds are freely applied to arable land, pastures are too often neglected, and supposed to preserve their fertility through the simple act of grazing. This view is evidently incorrect, and especially so when milk selling is practised. We are accustomed to think that two, or more than two, white straw crops in succession exhaust a field, and to forget that a cow yielding 600 gallons of milk, say from April 1 to November 1, removes 12 lb. of phosphoric acid from an acre of land, besides what she stores up in the body of her unborn calf. Such a cow removes at least 15 lb. of phosphoric acid from the land on which she grazes every year, whereas two corn crops only remove 42 lb. in four years. It is, therefore, certain that in four years a good cow will remove 50 per cent. more phosphoric acid from an acre of land, supposing she grazes an acre. Even if she requires 1½ acres of good pasture to support her, she will remove as much phosphoric acid per acre as is removed by corn-growing on the four-course system. What would be thought of a farmer who never manured his land? And yet it is quite as absurd to deplete grass land by selling milk, if the phosphoric acid is not restored by applications of superphosphate.

The consequences of this short-sighted policy are easily seen in the presence of sour, coarse grasses, which not even hunger will induce stock to eat; in the absence of clovers, and in the prevalence of buttercups, cowslips, daisies, yellow rattle, red bartsia, moons, and sorrel, instead of rich and palatable grasses. My own first experience of the effects of superphosphate on coarse grass was gained by leaving one ridge unmanured in a field that was top-dressed with superphosphate. This ridge was conspicuous during the whole of the next season from its being absolutely neglected by cattle. The stock grazed all the remainder of the field closely, but this ridge was left rank with coarse herbage, which nothing would touch.

On all pastures where cows and young stock have been grazed for many years without special means being taken to restore the loss of phosphates; on all pastures abounding in coarse grass and weeds; on damp, rushy grounds, and on clay land pastures, an application of 5 cwt. per acre will be found to produce a satisfactory result during the first and subsequent seasons. The remarkable appearance of clover which follows closely upon such an application is only to be accounted for by the stimulus which phosphatic and calcic manures give to this class of plants. White clover throws out suckers and is of a creeping nature, from which it derives its botanical name of repens. That the plants existed in a weak and sparse condition previously cannot be doubted, but a dressing of superphosphate causes an unwonted development and vigorous growth of both white clover and other leguminous plants.

International Agricultural Congress.

The International Agricultural Congress has recently held its eighth sitting at Vienna for the second time. It has been held in successive years at Paris, Vienna, Haag, Budapest, Lausann, Rome, and now again in Vienna. The importance which is attached to these conferences can be judged by the number of representatives from the different countries; for instance, representatives were present from:—

1. Germany, France, Great Britain, Italy, Russia, Belgium, Holland, Denmark, Spain, Greece, Norway, Sweden, Hungary, Roumania.
2. Persia, Japan, China.
3. Egypt.
4. America, Argentine, Chili, Mexico.

Lectures were delivered, and discussions followed on almost all important subjects connected with the cultivation of the land, and economical questions connected therewith.

Bulb Cultivation.

The great extension in the cultivation of tulips, hyacinths, narcissus in Lincolnshire and other parts of England creates growing interest in this subject. Bulb cultivation is an old Dutch industry, and as early as the 16th century had become an important one. The tulip mania is a matter of history, and the elder Dumas founded on it one of his best known romances, "The Black Tulip." The value of new and rare tulip bulbs become enormous, thus, according to an old chronicle, 20,000 marks were offered for ten tulip bulbs. The speculation reached gigantic proportons, and finally ended in a sensational crash in about 1620.

A century later the hyacinth craze set in, and in a price list of 1734 a bulb, "Bleu Passé non plus extra," was quoted at fl. 1,600 (about £133).

The development of the present Dutch industry may be said to date from about 1860, and is extending yearly in spite of competition with the cultivation of bulbs in other countries. The bulbs are exported from Holland all over the world, although the principal buyers are England, Germany, and America. The total quantity of bulbs exported annually is over 10,000 tons.

The cultivation is principally carried on over the stretch of sand hills running along the north-coast of Holland, the centres of the industry being Haarlem, Leiden, and Haag.

As the industry extends new districts are being continually planted, and as soil suitable is not plentiful, the price of land has advanced enormously, in some cases as much as £400 per acre having been paid for good land, and old country houses have been converted into bulb warehouses.

As sandy soil offers the environment in which bulbs grow best, it will easily be understood that it is necessary to apply large quantities of plant food. This is provided chiefly in the form of farmyard manure. Hyacinths are manured with cow manure, while tulips and other bulbs are not so particular, and are supplied with horse manure, pig manure, and any other that may be available.

Until recently animal manure was the only form of plant nourishment applied, but the use of artificials is now gradually becoming general, and in consequence of the increasing cost of farmyard dung, the growers will be driven more and more to rely on artificials. Potash seems to be the dominant requirement of the bulbs, and mixtures of sulphate of potash, superphosphate, and nitrate of soda, used to supplement the farmyard manure, are being employed with good results The problem of the best use of fertilisers is a difficult and important one, and requires a careful study.

Analysis of Bulbs.

	Hyacinth bulb.	Tulip bulb.

Manuring Strawberries.

This month's Journal of the Board of Agriculture contains an article dealing very fully with the various problems connected with the successful cultivation of strawberries on a large scale. Limiting ourselves in this place to the remarks on the subject of the best methods of applying manure to the crop, it may be noted that the suggestions confirm in a great measure the views expressed by Dr. Dyer and Mr. Shrivell as the result of their Hadley experiments.

The most important point is that the very heavy dressings of farmyard or stable manure put into the soil by many planters are not essential—indeed, do not produce such good results as a more moderate quantity. Some growers are in the habit of applying as much as 50 tons of manure per acre. The experiments have clearly demonstrated that such enormous dressings are an unnecessary expenditure. A quantity of 20 tons or 15 tons will suffice equally well, especially if supplemented by the judicious use of artificials.

The large growers are beginning to find out that the very heavy dressings of farmyard manure occasion softness of flesh and coarseness of flavour in the berry.

Phosphate and potash should form the chief part of the supplementary artificial manures, although a little nitrogen may also be used with advantage.

Fruit growers in Kent, we know, have tried all kinds of fertilisers, as a really profitable fertiliser, convenient to apply, would be a great advantage. We believe that Peruvian guano of medium strength has been found to produce generally as good results as anything else. It is, perhaps, weak in potash for strawberry cultivation, and might be improved by admixture with a little sulphate of potash, so as to make the guano contain 5 per cent puro potash.

Superphosphate is also useful. In the article in the Journal it is stated that the value of mineral superphosphate costing about £3 per ton is altogether underrated by strawberry growers. A reasonable rate of application for strong land is to allow two-thirds (28 lb.) to every ton of manure if 25 tons or over are applied. Thus, if 30 tons of manure were applied per acre, the quantity of superphosphate would be 7½ cwt exactly. At £3 per ton this would cost 22s. 6d. per acre, which can easily be saved out of the manure, for 30 tons per acre is often exceeded.

In the Hadley experiments it has been found that 12½ tons of London dung together with a good dressing of phosphates and a little nitrate of soda gave results which were most satisfactory.

A special advantage of the artificials is that it promotes early maturity. In the Hadley experiments a plot dressed only with light dung produced a large crop calculated at 4 tons 4 cwt. per acre. When the dung was supplemented by artificials the total crop was increased only to the extent of 3 cwt. per acre, but in the first few days of picking the produce from the chemically-manured plot was nearly *700 lb. more fruit* per acre, and during these first few days the market value of the strawberries per pound was at least twice that of the fruit picked during the succeeding days. To the large grower this point of earlier maturity is of vital importance.

Imports of Fertiliser and Cakes Material for Six Months ending June 30, 1907.

	Quantities. 1906. tons.	Quantities. 1907. tons.	Value. 1906. £	Value. 1907. £
Bones	20,071	23,360	92,471	105,964
Guano	13,094	15,738	66,854	78,305

Oil seeds	819,654	1,070,641	1,716,278	2,201,881

For the Suppression of Fraud.

The Chamber of Deputies in France has just voted, on the application of the Minister for Agriculture, the sum of 385,000 francs (£13,500) to be employed during the year 1907 on the discovery and suppression of fraud or adulteration in such agricultural produce as butter, milk, wines, as well as in cakes, feeding stuffs, fertilisers, and other commodities required by farmers.

Twelve chief district inspectors have been appointed, whose special duty will be to thoroughly investigate cases of fraud, and to trace them back to their origin, so that the real culprits may not escape exposure. Hitherto, it has often happened that while the small retailer of adulterated goods has been punished, the real delinquent, who was the wholesale dealer or manufacturer, has been able to escape detection and punishment.

A fully-equipped central laboratory is to be erected in Paris, and it is estimated that the number of samples tested will be about 50,000 a year.

Next year the amount to be devoted to the purpose is to be increased to 566,000 francs, and it is hoped that the stringent measures adopted will suffice to purify the trades in question.

Prices of Fertilisers.

The demand for fertilisers is now practically over, but prices remain firm all round. The demand has been bigger than usual, and the stocks of most manufacturers have been cleared.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	11	17	6
Peruvian guano	without change		
Superphosphate, 26 per cent.	2	10	0

Ditto, 38 per cent.	2	3	0

The Defect in Farmyard Manure.

There is no fertiliser that can be more profitably used on the farm than farmyard manure—the resulting by-product in feeding live stock of all classes, writes the *American Cultivator*. The solid and liquid excrements of animals, together with the litter used as bedding, constitute a source of fertiliser which is not generally appreciated as it should be. The fertilising value of the manure may be increased very considerably by feeding such concentrates as gluten meal, linseed meal, and cotton-seed meal.

It is for this reason that dairy farmers and those engaged exclusively in live stock industries have been able to maintain the fertility of their lands for indefinite periods, and often conclude that commercial fertilisers cannot be used to advantage under their conditions. This is frequently a mistake, and their land often becomes over-abundantly supplied with humus, as compared with the mineral elements of plant food, which are regarded as essential for the successful growth and development of all farm crops. As a carrier of available plant food, farmyard manure is not especially valuable, as a ton of it only contains from 9 lb. to 15 lb. of nitrogen, 4 lb. to 9 lb. of phosphorus, and 9 lb. to 15 lb. of potash.

Its Greatest Benefit

to the land is as an indirect fertiliser. It adds organic matter which provides humus, thus increasing the water-holding capacity of the soil. It benefits the texture and makes heavy soils, especially clays, more porous. It tends to make sandy soils more retentive of moisture by adding vegetable matter. Through its decomposition, it adds heat and increases the heat-absorbing powers of the land; carbonic acid is also formed, and this increases the solvent power of the water contained in the soil.

Lacks Phosphate and Potash.

That there is a lack in farmyard manure is shown by the facts presented in the foregoing paragraphs giving the numerous useful influences it has on the soil, as compared with the amount of available plant food it contains. It is evident, therefore, to all thoughtful men that phosphorus and potassium in particular should be and can be applied along with farmyard manure with the most advantageous results. For instance, six tons of farmyard manure should supply the nitrogen needed for a 40-bushel crop of corn; practically 12 tons would be required to supply the phosphorus and 5 to 6 tons of the potash. It is thus an ill-balanced food, richer in proportion in certain elements than in others, which must be supplied in a commercial form in order to balance it up properly.

What to Add.

Acid phosphate may be used with advantage on land to which manure has been applied in previous years; 25 lb. muriate of potash will not be too much to apply with each ton of farmyard manure. In other words, 50 to 150 lb. muriate of potash per acre on land heavily covered with farmyard manure will as a rule prove profitable; on crops to which chloride is objectionable, use sulphate of potash. Many farmers who have used farmyard manure exclusively as a fertiliser now complain of their inability to raise large crops of Irish potatoes and market garden crops as satisfactorily as they formerly did. This is due to the insufficient supply of phosphorous and potassium returned to the land by the manure. This is a matter of far-reaching importance, and the lack in farmyard manure, if more widely appreciated, would enable farmers to raise larger crops through supplying the necessary elements of mineral food, which are likely to be deficient in the soil.

The question of the standardisation of fertilisers sold in India is one of importance, writes the *Chemical Trade Journal*, and is to be considered by the authorities. In Southern India a large collection of samples of mixed, or "patent" fertilisers, and of ordinary fertilisers such as oil-cakes, bone meals, sulphate of potash, &c., have been obtained and are to be analysed.

Cottonseed meal is used as a fertiliser, and it is proposed to exploit this refuse in a practical manner.

The most satisfactory fungicide according to American experiments is the Bordeaux mixture, composed of sulphate of copper (blue stone, blue vitriol) and lime. Various proportions have been used, but the formula five pounds sulphate of copper and five pounds of quicklime to fifty gallons of water has been most used in late years.

Meadow Manuring Experiments.

For the fifth year in succession the following fertilisers have been applied to plots (one-eighth of an acre) of grass land, and the results are instructive, as they exemplify that the continued application of lime year after year is quite needless, and that the most profitable results are to be expected from the application of fertilisers of a complete character.

Plot. one-eighth acre.	Fertiliser applied per plot.	Yield of grass, two cuttings per plot.	Cost of manure	Profit + or loss − per plot.
		lb.		
1	No manure	1,960	—	—
2	Fine lime 2½ cwt.	2,000	2s.	−1s. 4d.
3	Lime 2½ cwt., slag ¾ cwt.	2,500	3s. 9d.	+2s. 3d.
4	Lime as above, kainit ¾ cwt. ...	2,300	3s. 9d.	+1s. 6d.
5	Lime as above, slag ¾ cwt., and kainit ¾ cwt....	3,500	5s.	9s. 3d.
6	Lime as above, slag ¾ cwt., kainit ¾ cwt., and nitrate soda 10lb.	4,000	6s.	+12s. 9d

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, in the paper.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

BIBBY'S ANNUAL

EDITED BY

JOSEPH BIBBY

A New Number of the above

IS

NOW ON SALE

AT THE BOOKSTALLS

PRICE 1/- NET.

Some people say this is the best number we have brought out; others are not so sure. One newspaper remarked that, taking it altogether, it was the best magazine on the market; others expressed a contrary opinion.

On the first day of its publication we received the following telegram from Sir Alfred Jones:

"Heartiest congratulations upon completed 'Bibby's Annual.' Simply beautiful. Very proud of it as Liverpool production."

But the next morning a letter from an old friend, whom we had not seen for 30 years, admonished us for expressing opinions which did not square with the orthodox view of things.

It is, therefore, difficult to say whether the reader of this advertisement would do wisely to invest a shilling upon it or not.

He had better, we think, ask at the bookstalls to see a copy and judge for himself; or, if the Bookseller does not keep it, enclose stamps for the amount to the address below.

WHY DO RAM BUYERS RETURN AGAIN AND AGAIN?

Amongst many questions discussed during the Lincolnshire sales was this—"What is it that brings customers year after year to the same flocks for the purchase of rams?" The reply was that these purchasers have found out by experience that the rams purchased from the particular flock mentioned always give satisfaction.

This question and answer deserve, and are worthy of, consideration. If, as they are true in respect to one flock, why should they not be true in respect to all flocks? The reason for this is that so very many flockmasters sell rams and forget that it is not the rams they sell that decide whether or not the buyers will come again, but it is the produce of those rams that decide this all-important question.

Rams and ram lambs bred with great care, with pedigrees reaching back for many generations, are those which in the majority of cases give the desired satisfaction, but rams and ram lambs bred with short pedigrees, or which are, in other words, the resultant cross of two acknowledged strains of blood, are those which more often than not, owing to the fact that they are not endowed with the power of prepotency found in the former, will fail to transmit to the same degree as the former their good qualities to their progeny.

Probably some will remark that this dictum is strongly in favour of the older flocks, and certainly it is so, but the younger flocks can be brought to this required standard by care and close attention being exercised, and proper judgment in mating and buying, but a flockmaster who is desirous of breeding stud sheep such as will secure him year after year the continual support of ram users will never be able to do so unless he makes up his mind to his ideal type of sheep, and sticks to it.

A ram breeder who "goes all over the shop," as the term is, to purchase sires, will certainly never become a ram breeder to secure the regular patronage of the best buyers, because of this one reason—the stock he breeds will be of such an admixture of different strains of blood that there will be no reliability to be placed upon the resultant progeny.

PRICE OF STORE CATTLE.

Present prices of store cattle should act as a stimulant to a greater amount of home breeding. Good stores are making fairly long prices, and best beef quite 4s. 8d. per Smithfield stone. This price in the experience of most feeders who are also breeders in so far as to bring up their own stores for fattening will afford a fair profit for food consumed, always supposing that good well-bred stock are in hand to commence with. Below 4s. 8d. per stone the profit, even of well-bred and carefully managed lots, would be very scanty if, indeed, it could be made out as a profit at all, and there is little doubt that on many occasions the fact that very best of beef has been sold at prices below 4s. 8d. has had a good deal to do with the small number of cattle that have been weaned.

It is not only necessary that the young stock that are weaned to be brought up either as stores for selling or as stores to retain, should be well bred, but if the best is to be made of them, they must also be well fed and carefully managed. One care in respect of their management should always be provided for if at all practicable, and that is the care that there is always a sufficiency of food provided for them to keep them steadily improving.

To allow young stock to lose flesh, to any great extent at least, is often followed by attacks of disease that they have not strength enough to withstand, such as the husk in young calves, and in the spring of the year looseness or scour in the yearlings.

As a rule, they withstand any unavoidable shrinkage with much less loss or risk of life after they have passed over eighteen months of age than younger.

It is not always convenient or practicable to keep the young stock thriving when fodder or pasture is short and root crops a failure, as well as cakes at a rather high price, but wherever and whenever it can be done, it is always advisable to keep them on the move, and if the food available is sufficiently good, and the object is to get them out ripe fat, the more rapidly they are kept going the better and more profitable, always providing, nevertheless, that too much of the forcing is not done by artificial means.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

Spitalfield Market Rights.

In the Chancery Division on Tuesday, Mr. Justice Warrington heard a summons in the matter of "The Attorney-General *v.* Horner" which raised a question as to tenancy rights in Spitalfield Market.

Mr. Gore Browne, K.C., for the defendant, Mr. Robert Horner, who is the lessee of Spitalfield Market, explained that the summons asked that the Corporation of London, who were the relators in the action, might be joined as co-plaintiffs with the Attorney-General, and also that they might be ordered to give fuller particulars of the allegation against the defendant that some of the tolls in the market were excessive. The defendant desired to put in a counter claim against the Corporation.

The lease of the market was originally granted by King Charles II. in 1682 to one John Balch and his heirs. Mr. Horner in 1883 was granted a lease of the market for 84 years at a rental of £5,000 per annum. Subsequently the City Corporation by statutory power became purchasers of the interest of the lessee, and it was now said that under the lease the defendant was only entitled to a two-day market, the original grant having been for two days. The Corporation further said that Mr. Horner was only entitled to the use of the market on Thursday and Saturday.

Counsel contended that the object of the action was to compel Mr. Horner to take a smaller sum for his interests than he said he was entitled to.

Mr. Danckwerts, who appeared for the Attorney-General, said that as a law officer he knew all the facts. They were willing to give the defendant the particulars he asked for after the defence was put in.

Mr. Justice Warrington said that the relief claimed against the defendants really was that he had been exceeding his franchise and had infringed public rights. He was of opinion that he could not compel the Attorney-General to add the Corporation as co-plaintiffs, and the application must be dismissed with costs.

Leave to appeal was granted.

A Case under the Agricultural Holdings Act.

Mr. Christopher Middleton, an arbitrator under the Agricultural Holdings Act, asked his honour Judge Templer, at the Darlington county court on Wednesday, to decide whether, under the Act, verbal notice by a tenant of a claim for compensation for unexhausted improvements was sufficient.

The case arose in connection with the tenancy of a small farm at Cockerton, the tenant of which, before the expiration of his tenancy, gave verbal notice to the landlord of a claim for compensation.

On behalf of the landlord it was contended that the notice should have been in writing, but his honour held that a verbal notice was sufficient, and gave judgment for the tenant with costs under Scale C.

Notes of the Week.

The festival of St. Swithin passed in glorious sunshine, so, according to the belief formerly more popular than to-day, we may look forward to six weeks of fine weather.

St. Swithin's Day, if thou dost rain,
For forty days it will remain;
St Swithin's Day, if thou be fine,
For forty days t'will rain na mair.

Earl Carrington is in a very optimistic mood as regards the operations of the Small Holdings Bill.

With a prophetic eye, he sees rural England peopled by a happy population of Little Holders.

As sparks fly upward, so is man in this world doomed to disappointment.

The "return to the land," said an eminent French statesman, referring to depopulation in rural France, is not so much a question of money as of education and the disposition in the minds of men.

Said a shopman at S——, who had failed,
Which the loss of his business entailed,
A small holding for me
Will most excellent be,
So he (fill up please).

That youth will be served, is as true of nations as of individuals.

Youthful Australia is going to spend three quarters of a million pounds, spread over ten years in bounties for the cultivation of crops.

While in Old England agriculture is neglected and the Government give a severe snub to the suggestion that new industries, such as sugar beet, should be encouraged.

The recent horse show at Olympia was such a tremendous success that the show for next year is already engaging attention.

The idea is to make the show peripatetic if the difficult of finding a suitable place can be overcome.

Our ally, the Mikado of Japan, is reported to have bought some American cows and to have paid £3,000 for one animal.

The Japs are certainly making great efforts to improve the breeds of their stock, and English breeders might pay special attention to their requirements.

We should certainly get the preference of their orders if our best animals were brought to their notice.

No sooner is fraud squashed in one direction than it appears in another place.

The coffee-house keepers of London and other large towns must be looked after.

It appears that many of them supply their customers with margarine, instead of butter, with bread.

The medical officer of health still complains of the sale of so-called milk-blended butter, composed of milk, butter, and boracic acid mixed by machinery and sold in large quantities.

It is a novelty to read of heat waves and deaths from sunstroke. With such a sudden change from cold to excessive heat it is necessary to be careful.

The horticultural exhibition at the Botanic Gardens, given under the auspices of the Women's Agricultural and Horticultural Union, proved a great success.

The cultivation and arrangement of flowers is a department in which women excel, and their exhibition afforded ample proof of their success.

THE FARMERS' DIARY.

TUESDAY, JULY 23.—Welsh National Show at Aberystwith, first day—Sale of Pedigree Red Polled Cattle at Ipswich—Live Stock Sale at Maidstone—Horse Sale at Crewe—Sending-in Day for Castleford, Dumfries, Worthing, and Keele Shows.

WEDNESDAY, JULY 24.—Thornton's Sale of Pedigree Sheep and Pigs at Woolverstone Hall, Ipswich—Wadebridge Show—Upholland Show—Paignton Show—Bodmin Horse Show—Welsh National Show at Aberystwith, second day—Royal Ulster Show at Belfast, first day—Honiton Cattle Fair—Meeting of the Finance Committee of the Bath and West of England Society—Sending-in Day for Crook Show—Wye Agricultural College Summer Term ends, Prize Distribution by the Right Hon. Ailwyn Fellowes.

THURSDAY, JULY 25.—Royal Ulster Show, second day—Framlingham Show—Grantham Horse Show—Harrogate Show—Hertfordshire County Show at Hatfield—Maltby Horse Show—Newport (Shropshire) Show—Normanby Estates Show near Doncaster—Thorney Shire Foal Show—Aberdeen Show—Tunbridge Wells Show, first day—Wisbech Horse Fair—Tregony Cattle Fair—Lutterworth, Alresford, Reading, and Ashton Agricultural Fairs.

FRIDAY, JULY 26.—Royal Ulster Show, third day—Tunbridge Wells Show, second day—Copmanthorpe (Yorkshire) Show—Wrexham Show—Hutton Cranswick and Beverley District Shows—Agricultural Fairs at Malpas, Sherborne, Barnstaple, Rutherglen, Weyhill, and Tamworth—Sale of Horses at Lynn.

SATURDAY, JULY 27.—Cumberland County Show at Carlisle—Show at Norden, near Rochdale—Lauderdale Show—Show at Whalley, near Blackburn—Show at Meltham, near Huddersfield—Horse Show at Sand Pits, near Shirley, Birmingham.

MONDAY, JULY 29.—Newtown (Monmouthshire) Sheep and Pig Fair—Alnwick Horse and Cattle Fair—Erdington (Warwickshire) Horse Show—Special Sale of Suffolk Horses at Ipswich—The Pendley Manor Farm Sale of Hampshire Down Sheep.

At Nantwich Cheese Fair on Thursday there was a pitch of 52 tons of cheese, and with a large attendance of factors a clearance was quickly effected. Finest lots made from 56s. to 61s. 6d. per cwt.; medium from 52s. to 55s.

Old Scotch Farmer (having spent sixpence on a raffle ticket for a pony and trap value £50, and having won it, is shown the prize. After gazing critically at it for some minutes). "But whaur's the whup?"

The pen of Hampshire Down Ram Lambs with which Mr. J. Flower, Chilmark, won the Championship at Salisbury Fair last week.

SHEEP SALES AND FAIRS.

Bury St. Edmunds.

At the lamb sale held at Bury St. Edmunds on Wednesday, about 3,500 lambs and ewes were catalogued, including 2,000 Suffolk ewe and wether lambs, 1,000 half-bred lambs, and 400 black-faced and half-bred ewes, consigned by well-known breeders. For all Suffolk lambs there was a sharp trade at fully late rates. Heavy half-bred lambs were perhaps hardly as dear as of late; but for all well-bred lambs there was sharp competition. Suffolks made up to 54s. per head, whilst half-breds ranged up to 37s. 6d.

Chichester.

A sale of upwards of 4,000 Southdown and other lambs was held at Chichester on Wednesday, and attracted a large number of buyers. Trade, however, was not particularly brisk, but a steady demand prevailed at prices generally about the same as last year, the top price being 45s. per head for a nice lot of lambs sent by Mr. T. Morris, Timberley.

Halesworth.

There was a record entry at the lamb sales at Halesworth on Thursday, and with a large attendance of buyers a lively trade was experienced, prices being about equal to recent quotations. For the Suffolk lambs there were considerable advances on last year's figures, rises to the extent of 14s. being noted.

Horsham.

The annual sheep fair at Horsham was held on Thursday, when it was hardly as well supported by either stock or buyers as in former years. The total head of sheep was 1,405, of which Lord Leconfield sent 500, and they again fetched the highest price, his lordship selling 100 lambs at 40s., 100 at 38s., 200 at 35s , and 100 tegs at 50s.

Inverness.

The annual sheep and wool fair at Inverness attracted a large gathering of flockmasters from the northern counties and the South of Scotland, and also many English buyers. The stock most in demand was Cheviot breeding ewes, which sold at last year's prices. Wedder lambs in some cases maintained last year's prices, but other lots were sold from 1s. to 2s. down, according to quality. Ewe lambs of all classes maintained last year's prices, and in some instances there was a slight rise. Mid-ewe blackfaced lambs, which were very scarce, realised in some cases a rise of 1s. Cheviot dinmonts were reported about 1s. down. Cheviot wool was selling at 2d. to 2½d. per lb. down, blackfaced wool about ½d. per lb. down. The chief depression in the sheep trade was in the disposal of the wedder stock, which are more dependent on the state of the turnip crop than any other class. The drop in prices for wedders was estimated at from 2s. to 3s., although in some top cases the fall was only 1s. A few choice clips of Cheviot white wool sold at 27s., being 3s. down from last year, or 1½d. per lb., but in other cases the drop was heavier.

Salisbury.

Beautiful weather favoured the annual sheep fair at Salisbury on Monday, when over 22,000 sheep were penned. There was a very large attendance of agriculturists and dealers, and sheep met a good trade, especially ewes. The prices for ewes were several shillings in advance of last year's figures. Lambs also realised very satisfactory prices at about last year's figures. The range of prices was as follows:—Two-teeth ewes, 48s. to 58s.; draft ewes, 36s. to 46s.; regular draft ewes, 46s. to 54s.; wether lambs, 36s. to 46s.; chilver lambs, 32s. to 42s.

The competitive classes were the feature of the fair, the show of Hampshire Down sheep being, generally, the best of the season. The entries were hardly so large as on some previous occasions, but there was no question that the exhibits fully maintained the high reputation of Salisbury Fair. The outstanding feature of the fair was the remarkable success of Mr. J. Flower, of Chilmark, who, following his victories in the chief showyards of England this season, completely swept the board, taking all four prizes and two second prizes, in addition to the 25-guinea cup, which was gained last year by Mr. Cary Coles, and has to be won two years in succession in order to become the property of the winner.

The shearling class brought out three sheep of exceptional merit, the first prize going to a deep-fleshed, compact ram, which handled well and showed the true Hampshire character. This was the shearling with which Mr. Flower won the third prize at the Royal Show, the first-prize winner having been disposed of for export to Chili. The same exhibitor also won the second prize with a ram which has not been shown before, and Mr. H. C. Stephens, of Cholderton, secured the reserve number.

The single ram lambs were a very strong class, there being sixteen pens, of which six at least contained animals of quite exceptional merit. Here Mr. Flower was again to the fore with a lamb which was in the winning pen at the Royal, the second prize winner being a flockmate. Mr. Cary Coles, of Winterbourne Stoke, secured the reserve number with a lamb showing nice character.

The competition in the class for not less than four nor more than eight ram lambs attracted a great deal of attention, as it carried with it the championship of the breed, and here again Mr. J. Flower achieved another victory. His pen of ram lambs were as good a level lot of animals as one could wish to see, and they did their breeder infinite credit. The second prize went to Mr. H. C. Stephens, whose pen was of great merit, and showed good breeding. Mr. Cary Coles secured the third prize with a pen of lambs characteristic of the Winterbourne Stoke flock.

In the ewe lamb class Mr. Flower completed his triumph by again taking the first award with a pen of great quality. They were a quite exceptional lot of animals, and the judges had no hesitation in placing them at the head of the class. The second award went to Mr. Stephens, with a bigger lot of ewes, Mr. Cary Coles being reserve.

The Judges were Mr. C. Stanford (Breamore), Mr. J. Joyce (Milverton, Somerset), and Mr. W. T. Tardell (Reading).

In the other competitive classes Mr. W. A. Hunt, of Chilhampton, was awarded the prize for the best pen of wether lambs. Mr. G. C. Waters, of Burcombe, was the winner in the class for ewes of regular draftage, Mr. H. Andrews, of Little Langford, being given the reserve number. Mr. Waters sold his sheep for 55s. a head, whilst Mr. Andrews disposed of his at 53s. apiece.

Mr. B. J. Waters, of Stratford Toney, took the chief award in the class for 100 shearling ewes, and premier honours in the class for eighty ewe lambs went to Mr. A. T. W. Gay, of East Grinstead. The special prizes of £5 each to the largest penner and the largest purchaser were won by Mr. F. Rawlins, of Alton Magna, and Messrs. Jarman and Son, Herts.

Swaffham.

The twenty-fourth annual lamb sale at Swaffham took place on Monday, and was well attended, whilst there is a large supply, over 10,000 lambs being penned, a number far in excess of last year. The average prices of recent sales in East Anglia were well maintained, the middling-class lambs being in great demand, they consequently sold extremely well. Half-bred lambs, which were in the majority, sold at prices ranging up to 45s., which was also the top price for black-faced lambs.

Suffolk Sheep Society.

One of the chief items of interest at the meeting of the council of the Suffolk Sheep Society, held on Monday, was the appointment of a secretary in succession to the late Mr. Ernest Prentice.

The report of the committee, appointed to receive the applications which had been sent in response to advertisements inserted in various papers, stated that there were twenty-seven applications, and the committee had selected six for the consideration of the council.

The meeting was occupied a long time in considering the six applications, reading the testimonials, and interviewing three of the candidates who attended before them. The majority of the council were, however, evidently strongly in favour of the appointment of Miss Prentice, daughter of the late secretary, it being urged that Miss Prentice had practically done the work for a long period in consequence of the serious illness of her father, and that it was never more efficiently done, evidence being afforded by the promptitude in which the last volume of the Herd Book was issued and brought up to date.

Eventually Miss Prentice was elected secretary by 13 votes to 5.

At the same meeting the council gave considerable time to the consideration of the rules in respect to ear-marking and registration, the matter being marked by the reading of a report of the committee who had had the matter under consideration. This statement dealt fully with the question, but it seemed that complications had arisen in consequence, in many cases, of ear-marking not being carried out at the proper time, or in other instances incorrectly by the transposition of the figures and in other ways. It was suggested in the course of the discussion that many lambs were not marked until the following year, and that the mark never stood so well as when made whilst the sheep were young, the skin of the ear being thinner.

One of the recommendations of the committee was that a return should be made by flock-owners of how many lambs had been ear-marked, how many sold, and how many retained, and that attention should be called to the special notices that had been sent out in reference to ear-marking.

After various suggestions and remarks, the chairman mentioned that a letter had been received from Mr. A. H. Cobbald, enclosing a new mark which he had in hand, but which might yet entail more journeys to London. The committee had evidently not had time to adequately deal with the whole question, and he (Mr. Pretyman) would suggest that perhaps it would be better to refer the report back to the committee, which was consented to.

Sheep Notes and Jottings.

Present Prices for Lincoln Sheep.

LINCOLN breeders have every reason to be satisfied with the eminently satisfactory result of the sales held by Messrs. Dudding and Dean, reported fully in our last issue.

PESSIMISTS had stated that the demand for Lincoln sheep was certainly not likely to be so keen and good as last year, and they said, "When we get the sales you will see what will happen." Some of them quoted the result of the sale of Lincoln sheep at the Royal Show as proof of the falling off in the prices likely to be paid for Lincoln sheep during the current year.

THOSE who knew the condition of the demand for Lincolns in connection with the Royal Show sale, stated that these prices were not in any way indicative of those that would be paid for the tip-top rams of the breed. The sales referred to above fully confirm this, for it was only after bidding up to 900 guineas that Messrs. S. E. Dean and Sons were able to prevent the champion yearling ram of the current year going to the Argentine; and it is further shown by the sale record at Riby that it was only after very high prices were paid that the English breeders permitted the choicest rams of Messrs. Dudding's sale to be purchased for the Argentine.

THE same lesson is shown by the result of Messrs. Dean's sale. The top-priced ram there was 300 guineas, and the runner up for that ram was an English breeder, Mr. J. E. Casswell, who, after a stiff fight, certainly yielded to the Argentine buyer, and allowed one of the choicest selections of Messrs. Dean's offering to be taken for the Argentine.

THE lesson that these two sales convey is one that has been often referred to—*i.e.*, that for the choicest specimens of this or any other breed there is always a very ready market at fully remunerative prices. It is not the best specimens of any breed that will suffer in the reduced demand, if any exists, but those of lower grade, and these results further prove that what ram breeders must do, if they desire to keep up their reputation, as well as the reputation of their breed, is to select most carefully the rams and ram lambs offered for sale, and to remember that the smaller number of high-class rams give a far better and more profitable result to their breeder and vendor than a larger number which includes a considerable proportion of inferior or lower-grade rams.

THE feature of these two great sales, for great sales they are, has been to set in no doubtful terms the value of the best Lincoln rams this year; and the breeders of these sheep are under a debt of obligation to the vendors of the rams sold at Riby and Nocton Heath last week, in holding their annual sales at this early period of the year, so as to enable all who follow them to know in what condition the trade for the Argentine for their breed may be expected to be during the current year.

THESE sales commence a series of sales which will take place week after week, and, whatever may be the result of them, there can be no question, but that these two sales have given an excellent send off to the sale season for the current year.

Feeding Prospects.

ALLUSION has been made to the need of greater attention being given to the feeding of lambs as well as the ordinary commercial sheep, and from inspection of several flocks during the past week there is ample evidence that, owing to the cold weather experienced, where care has not been taken, the development and bloom of both the yearling rams and the ram lambs has suffered considerably.

IF we should be fortunate enough to have an alteration in the weather, it will still be necessary for all flockmasters to take care and watch closely how their flocks are doing. The information and knowledge secured during visits to flocks in many parts of the country shows that the rate of development has not been, during the current season, equal to the general average, and further there is, in many cases, evidence that the rate of progress has been very much retarded by the unfavourable climatic conditions, and consequently there is need for a continued supply of nutritious food being given, in addition to that provided by the ordinary green crops which are now being consumed upon the land.

AT the present time there is a good prospect for abundant crops in the shape of vetches, turnips, cabbage, and kale. Many excellent pieces of these have been seen during journeys throughout a greater part of England; but good as are the prospects at the present time, the flockmaster is reminded that it is equally important that he should continue to make preparation for the future. As one crop is consumed another one must be got ready for consumption, and so on right away until late in the autumn.

IT is far better to have more food than one requires than to have too little, and to have to stint the sheep at a period of the year when it is highly essential for their well being that they should have as much as they require.

Exports.

THE export buyer has been very busy amongst our flocks. Forty at least of the rams offered at Mr. Henry Dudding's sale were taken for export. A very considerable portion of those sold at Messrs. S. E. Dean and Son's sale were likewise taken for export. These two lots were selected entirely by the Argentine breeders.

WE have not received any direct information in respect to the demand experienced for the Hampshire Downs and other breeds, save that of the Kent or Romney Marsh, and during the past week information in respect to this breed has come to hand, which shows that twenty-five yearling rams, ram lambs, yearling ewes, and ewe lambs have been selected for export, about half of which are going to South America, and the remainder to New Zealand.

Hampshire Down News.

THOSE who are interested in the Hampshire Down sheep will have noticed what a very large number of sales there are advertised to take place during the next few weeks. Several of these are annual sales and lettings at home; such sales and lettings are those that can be strongly recommended as places at which breeders may select stud ram lambs with great confidence, because these sheep will be offered on the farm where they were bred and reared, and there is but little fear of any kind of infection being taken to the flock to which they go.

THE latter remark is applicable to many of the leading fairs, such as Britford, Weyhill, &c., at which many of the leading Hampshire Down flockmasters annually offer for sale selected drafts of their ram lambs, but there are strong reasons for breeders, if they have no special reason for not doing so, to select and purchase stud rams at the sale held at home.

Lewes Wool Fair.

Many of the leading buyers in the kingdom were represented at the fourth annual wool sale at Lewes, held on Monday, when the catalogue embraced over 200 lots, comprising nearly 40,000 fleeces of English wool from some of the best Southdown flocks, with a few Kent and cross-bred fleeces. Not a single lot failed to change hands. Prices, however, ranged from 1d. to 2d. below those of last year. The top price for Southdown fleeces was 14½d. per lb., which was made by the Rev. F. S. Sclater, Newick Park, for tegs; Mr. W. B. Marchant, Wannock, for ewes; Mr. J. Burder Powell, J.P., Old Place, Mayfield, for tegs; and Mr. Harry Willett, J.P., Laughton, for tegs.

Kent fleeces sold up to 13½d., Hampshire Downs to 12½d., and cross-breds to 11¼d. per lb.

Under the title of "Aids to the Choice of a Holiday Resort," the Midland Railway Company has issued an attractive booklet giving the principal services from St. Pancras to the various holiday resorts in England, Scotland, and Ireland, together with notes and illustrations of some of the chief. This aid should be appreciated by those who have not yet decided where to go for their holidays. A copy can be obtained from any of the Midland Railway Company's offices or stations.

Lord Barnard, presiding at the luncheon at the Wem Agricultural Show on Friday, said he was a member of the Royal Commission sitting to inquire into the matter of increased facilities for scientific research as applied to agriculture. He had been struck by the evidence of all classes of agriculturists who had been before them as to the intense desire there was amongst farmers to avail themselves of this scientific knowledge as applied to agriculture. He recognised that no amount of theoretical knowledge would ever make a farmer. It was the practical experience on a farm that was required.

Notes and Jottings.

SEVERAL times we have advocated in these notes the growing of a fair quantity of green cropping, or, we may say, as large a quantity as can conveniently be arranged, and it is very pleasing to see at the present time in different parts of the country many excellent crops of tares and other food. As grass is in many places superabundant, some of these green crops might with advantage be converted into ensilage. In this form they would be very useful during the coming winter or next spring; or, if ensilage is not approved of, conversion into dry fodder would be worth doing. In the latter case, however, they should be cut before the seeds are quite ripe, when very valuable fodder is obtained, especially if the weather proves fine, so that the fodder can be secured in good condition.

THERE appears to be a great increase in the area sown to lucerne as compared with a few years ago, and this is proving a most useful addition to our green crops. On good land and well managed, the quantity of feed obtained is truly astounding, and the results of using it, or, in other words, its quality and feeding properties are as surprising as is the amount of feed obtained from it. The cultivation, too, is very inexpensive, as the plant remains permanent for a considerable number of years, and with occasional top dressing remains productive during the whole time. The kind of soil it is being grown upon must naturally have a considerable effect upon the quantity of feed produced as well as upon the permanency of the plant.

WHEN better known, maize will become a most useful addition to our green crops. It is a valuable feed when grown, and when its cultivation has become more extensive, the best systems of producing it will naturally be discovered. In a dry season the seed apparently possesses one very valuable property, namely, that it will vegetate in soil that is practically dust dry. This is a great matter, as it frequently happens in a droughty period in May or June that seeds of some plants cannot obtain sufficient moisture to start them into growth. Then, maize after it has commenced to grow, continues its growth for a long time without rain or assistance in any way. It is a beautiful, profitable, and interesting forage crop, and the sooner its cultivation is extended on suitable lands the better.

Milk Fever.

I NOTICE one or two of your correspondents appear to be desirous of entering into a discussion upon the question of milk fever in cows—indeed, have already done so. One of them writing over the letters "M.R.C.V.S.," being very emphatic in his denunciation of my theory of milking before eating as being an excellent preventive measure, calling the practice or the publishing of it "mischievous." I am, however, obliged to tell you, for the benefit of that correspondent, that I have had very considerable experience with cattle of that kind and at ages most predisposed to take on milk fever, and after the what I term beforehand milking I have never known one of them to fall, and so far has this means of prevention been carried out with a few great milking cows that they have never been allowed to go dry, but been milked regularly twice every day from a little over six years old up to between eight and nine years, and I am quite sure such treatment is much more economical than are the services of a veterinary.

ANOTHER correspondent argues that the more you milk a cow the more milk she will secrete; what matter if it is drawn from her at intervals as its secretes? I have seen this practised by very experienced and successful managers of the worst possible subjects for milk fever, the herdsman milking the cow, one may say, almost continually. There are many or several preventive measures of recent introduction I am aware; but prudence would seem to dictate that the bridge that has carried one safely over the stream is the one to trust, and as in my case this bridge has been a very inexpensive structure, and upon one or two occasions when neglected has resulted in a fall, that under veterinary treatment could not be recovered, I prefer to adhere to my own practice. A great

many so-called antiquated ideas are much more valuable in the management of cattle where milk fever is likely to be concerned, than are many of the newer theories that have been brought to our notice.

NOT long ago, whilst visiting a gentleman who owned a very valuable herd of dairy cattle, it was my painful experience to see one of them that had fallen of fever and was being, and had been for some two or more weeks treated by a very skilled veterinary surgeon, and all the most modern and up-to date remedies tried to raise the poor animal, but all to no avail, the poor thing eventually succumbing to the fever. I have no doubt myself that had the herdsman of that establishment practised the fore-milking doctrine, that cow would not have fallen. Her constitution was good, and there was nothing but the excessive milk flow to deal with. There are many experienced herdsmen in this country who are quite as capable of dealing with milk fever as are the veterinary profession, and it is quite probable that the herdsman in the instance mentioned would have done better with the poor cow than was done; indeed, had the worst come to the worst, he would have killed the poor thing at hundreds per cent. less cost, even had he done it by the antiquated and mischievous practice of milking before calving.

ONE correspondent, too, I notice, adopts the plan of leaving all the milk in the cow's udder (for, I believe, twelve hours) as a means of prevention from the fall. Surely this gentleman must be speaking of the beef breeds when he talks of such treatment. It is monstrous to suppose that a deep-milking cow that has filled her udder to repletion before calving could retain another twelve hours' milk without damage, and without very excessive pain; indeed, in such instances the R.S.P.C.A. society would have every reason to interfere.

Sale of Mr. Nickels's Shorthorns.

Mr. J. T. Nickels's herd of pure-bred Shorthorns having outgrown the capabilities of the farm, the major portion—some of the older animals and a few recent purchases being retained—was sold by auction on Thursday at the Day House, near Shrewsbury. With very few exceptions all the cows catalogued were young and in their prime, whilst the heifers of various ages and the calves were exceptionally good colours, with true outlines and correct Shorthorn character. At the same time, the dairy properties of the herd were in evidence by the well-developed and capacious udders of the older cows. Some twenty-one bulls of various ages were offered, including some good reds and roans suitable for export, and some younger bulls just fit for service.

There was a large attendance of buyers, and a good sale resulted, the cows and calves averaging £29 18s. 6d. per head. Two-year-old heifers, £28 19s.; yearling heifers, £44 5s.; and bulls, £30 13s. The top figure was realised by Meole Fashion, a smart young bull by Chewton Ideal, dam Day Dream 2nd, which found a purchaser in Mr. R. Wright at 70 guineas. Meole Aristocrat, another promising young bull, was sold to Mr. Holland for 53 guineas; Mr. Morris-Eyton bought Bristol Sweetmeat for 50 guineas and the Belle of Nobold at 40 guineas; Mr. W. H. Foster paid 40 guineas for Meole Thistle, and Lady Day Dream 4th made 43 guineas, the purchaser being Mr. C. W. Kellock. Other prices ranged down to 17½ guineas.

Sale of Jersey Cattle at Buckhold, Berkshire.

The sale of about thirty head of Jerseys from Dr. Watney's well-known English-bred herd, held on Wednesday at Buckhold, near Pangbourne, resulted in an average of £23 18s. 5d. Most of the cattle for sale were descended from butter test winners, and realised fair prices. The yearling bull, Violette's Aurelius 2nd, whose dam had won eleven prizes, was sold to Mr. E. Carter at 90 guineas to go to the Isle of Wight, the same purchaser also taking Lady Maple at 30 guineas. Mr. J. Carson secured Maple's Marryatt at 28 guineas to join his herd at Theydon Bois. A number of the Buckhold ponies were also sold at prices up to 20 guineas, and some cart colts up to 38 guineas.

We give below a few of the highest priced lots of cattle, with purchasers' names and prices:—

COWS AND HEIFERS.		Gs.
Opale 3rd	Miss Vale	20
Lady of the Isle 4th	Mr J C Sabor	26

English Jersey Cattle Society.

The twenty-fourth annual general meeting took place on the 8th inst., Viscount Enfield being in the chair.

The annual report for the year 1906 was taken as read and adopted.

Lord Enfield having announced that Colonel Willan had been elected by the council as president for the ensuing year, the chair was taken by Colonel Willan, who thanked the members for the honour they had conferred upon him.

The scrutineers reported that they had examined the voting papers, and found that the following gentlemen were duly elected members of council:

Mr. William Adams, Woodside, Loughton, Essex.

Mr. W. E. Budgett, Henbury, Bristol.

Mr. Richardson Carr, Tring Park, Herts.

Mr. R. H. Cobb, The Grove, Esher, Surrey.

Mr. Herbert Padwick, Manor House, West Thorney, Emsworth.

Mr. John Henry Shore, Whatley House, Frome, Somersetshire.

Mr. Thomas Harrison Westman, Mancetter, Atherstone, Warwickshire.

Messrs. James Harris, Sons, and Co. were re-elected auditors for the ensuing year.

A telegram conveying the congratulations of the council was sent to Lord Blyth.

Colonel Willan, in moving a vote of thanks to Viscount Enfield, said that his lordship had done all in his power to further the interests of the society.

Mr. Murray Smith said he had much pleasure in seconding the vote, which was carried with acclamation.

Lord Enfield having thanked the meeting, the proceedings terminated.

At a meeting of the Council prior to the annual meeting, the secretary reported that Vol. XVIII., Herd Book, was now made up, and nearly ready for printing. A complete proof of the volume was laid on the table.

The following gentlemen were appointed to represent the society on the Council of the National Cattle Breeders' Association:—The President, Colonel Willan, Mr. Ernest Mathews, Mr. Richardson Carr, and Captain Gisborne.

The next council meeting was fixed to take place on Monday, October 7, the day before the London Dairy Show.

At the last meeting of the council of the Clydesdale Horse Society it was unanimously agreed that the Cawdor Cup in 1908 should be competed for as in the past, that for the stallions at the Glasgow Stallion Show in February, and that for the mares and fillies at the Highland and Agricultural Society's Show in July.

The Shorthorn Heifer Pitlivie Rosebud II. was the Champion female Shorthorn and winner of a First Prize at the Royal Counties Agricultural Society's Show at Maidenhead this year, and also First at the Royal Show at Lincoln. She was calved April 7, 1905, sire Golden Dawn, dam Rubina, and was bred by her exhibitor, Mr. R. Taylor, Pitlivie, Carnoustie.

Important Shipments of British Live Stock.

Messrs. Alfred Mansell and Co., of Shrewsbury, have been very busy of late, and report the following important shipments within the last three weeks:—

On account of Messrs. Chandler Bros., United States of America, per ss. *Marina*, from Glasgow, 317 high-class sheep, mainly Shropshires, all of which had been personally selected by Mr. Howard Chandler, and including several show specimens from the well-known Shropshire flocks of Mr. T. S. Minton (who supplied a grand lot), the Right Hon. Victor Cavendish, M.P. (show rams and ewes), Sir Walter Corbet, Bart. (prize-winning ewes), Sir R. P. Cooper, Bart. (20 field rams), Mr. E. Nock, Mrs. Inge, Mr. C. L. Coxon, Mr. R. Bach, Mr. C. Blatherwick, Mr. J. H. Walford (prize-winning ram and ewe lambs and shearling ewes), Mr. T. G. Juckes, Mr. A. S. Berry (34 rams), Mr. E. J. Frank, and Mr. R. C. Pryce. The Oxfords comprised a grand selection of shearling ewes and ram and ewe lambs from Mr. Geo. Adams' prize-winning flock, and show ewes and 1 ram from Mr. J. T. Hobbs, a Hampshire ram lamb from Mr. Jas. Flower. Accompanying these were 4 Lincolns from Mr. H. Dudding for Mr. J. T. Gibson; 7 Southdowns from H.M. the King, 2 Ryelands from Mr. Gough for Professor Kennedy, and Border Leicesters from Mr. Matthew Templeton, for Mr. Geo. Whitelaw, of Ontario. Altogether, Messrs. Chandler's lot of sheep was quite one of the best ever shipped to America.

On account of Mr. Robert Miller, Canada, per ss. *Monmouth*, from Barry Dock, 153 sheep and 7 ponies, consisting of a splendid selection of prize-winning Shropshires from the Right Hon. Victor Cavendish, M.P. (3 Royal-winning ewe lambs), Mr. F. Bibby (3 show rams), Sir W. Corbet, Bart. (4 show ewes), Mr. E. Nock (3 Royal-winning ewe lambs), Sir R. P. Cooper, Bart. (1 ram in 1st prize pen R.A.S.E.), Mr. A. S. Berry (one 2-shear ram 2nd Lincoln Royal), Mr. T. A. Buttar (12 rams and 3 show lambs), Mr. Percy Instone (8 rams), Mr. J. Corden (2 show ram lambs), Mr. Peter Everall (4 show ewes); a show contingent of Cotswolds from Mr. W. T. Garne, consisting of 28 rams, ewes, and lambs; Hampshires, including several show specimens from Lord Carnarvon, Mr. F. Buxton, Mr. E. Smith Hanbury, Sir Alexander Henderson, M.P.; Oxfords from Mr. Geo. Adams; Dorsets from Mr. Hambro, and Lincolns from Mr. Charles Featherstone.

On account of Messrs. Geo. McKerrow and Sons, United States, per ss. *Turcoman*, from Avonmouth, 137 sheep and Large Black pigs, consisting in Shropshires of 1 Royal-winning ram from Mr. T. S. Minton, the Right Hon. Victor Cavendish, M.P. (2 show rams), Sir W. Corbet, Bart. (3 show rams and 1 show ewe), Mr. A. Tanner (7 rams), Mr. R. F. H. White (11 head, consisting of shearling ewes and ram and ewe lambs), Lord Barrymore (6 ewes and 1 ram), Sir R. P. Cooper, Bart. (show ram and ewe), Mr. J. T. Cole (3 rams), Mr. J. H. Walford, Mr. J. E. Farmer (10 rams), Mr. C. Blatherwick, Mr. T. A. Buttar (15 rams and 5 ewes), Mr. Minton and Mr. C. T. Pulley; Oxfords from Mr. Horlick, Mr. H. W. Stilgoe, Mr. A. Brassey, Mr. W. A. Treweeke, Mr. J. T. Hobbs, and Mr. S. W. Jefferies; Cheviots from Mr Robson; Hampshires from Mr. T. F. Buxton; Southdowns from the Duke of Richmond and Mr. McCalmont; Ryelands from Mr. Davies; Large Black pigs from Mr. John Bastard and Mr. T. Warne, both of Cornwall.

On account of Oak Park Farm Company, Canada, per ss. *Parthenia*, from Glasgow, 100 Shropshire sheep, comprising 40 selected ewes from Mr. T. S. Minton, Mr. T. G. Juckes (4 rams and 20 ewes), Mr. R. H. Gwynne (5 rams and 6 ewes), Mr. E. J. Frank (25 ewes). A further 60 head, including all the show animals, were to be despatched on Saturday last, and amongst them are several Royal and other winners.

On account of Mr. G. Allen, per ss. *Monmouth*, from Barry Dock, 89 sheep of various breeds, including in Shropshires 7 head from T. G. Juckes; Oxfords from Mr. Horlick and Mr. J. T. Hobbs; Hampshires from Mills Bros., Hon. D P. Bouverie, Marquis of Winchester, and Mr. Carey Coles; Cotswolds from Mr. W. T. Garne, Mr. Russell (Swanwick), Mr. Houlton, Mr. C. Parton, and Mr. Thomas; Southdowns from Earl Bathurst; Dorsets from Mr. Merson, Mr. Kidner, and Mr. W. R. Flower; Cheviots from Mr. Robson.

On account of Renk Bros., United States of America, per ss. *Manxman* of the Dominion Line,

A SPICE THAT WILL SAVE YOUR DAMAGED HAY.

What in many parts of the country promised to be a record yield, has been endangered as to quality, if not also quantity, by the recent excessive rainfall.

That considerable damage has been done in many districts is already known by the orders which for several days past have been reaching the makers of "PHŒNIX" HAY SPICE, these being accompanied in most instances by an urgent appeal for quick despatch.

This Spice supplies the valuable aromatic flavouring principle of "prime" Hay, and when sown in the ricks imparts a much stronger fragrance, and a specially powerful, attractive, aromatic flavour. Besides this, it increases the value of all Hay, both for feeding and sale, quite 20s. per ton. It gives a pleasant aroma, and is unequalled as a condiment for damaged or inferior feeding stuff. It makes damaged Hay tempting and palatable, more digestible, and makes all animals eat it with a greater relish, and thrive faster on it. It also removes mustiness and all defects, and imparts a good tempting flavour and fragrant smell to "weathered" Hay (even when black and seemingly worthless), and makes cattle eat it as well as the best, and thrive on it admirably.

It is a really efficient Hay Spice, in which all waste is prevented, as it gives to the most inferior, coarse, or damaged Hay a fragrant, tempting smell, and an excellent and appetising taste. One cwt. will dress 20 tons of Hay at a cost of about 1s. per ton.

The "PHŒNIX" HAY SPICE is packed in bags of 112 lbs. each; the price being 20s. per cwt., carriage paid to buyer's station.

Sole Manufacturers:

Chichester, Sussex.

By Messrs. CHALK.

PRELIMINARY.

THE 22nd ANNUAL SALE and LETTING of
80
PURE-BRED
HAMPSHIRE DOWN RAMS and RAM LAMBS
from Mr. H. Lambert's celebrated Flock
will take place at
CAMBRIDGE,
on
WEDNESDAY, AUGUST 7, 1907.

Messrs. CHALK, Auctioneers,
11, Alexandra Street, Cambridge, and Linton.

By J. HARRIS & SON.

By Order of Executors.
LONG SUTTON, HANTS,

Five miles from Hook and Winchfield Stations.

IMPORTANT SALE of the whole of the highly-bred FLOCK of 710 EWES and LAMBS,
Of the late Mr. William M. Harris, registered in Vol. 1 of the Hampshire Down Flock Book.

MESSRS. JAMES HARRIS and SON are instructed by the Exors. to SELL by AUCTION, on the premises at Long Sutton, on MONDAY, JULY 29, 1907, the whole of the above highly-bred Flock, comprising:—

150 Two-Tooth EWES,
140 Four-Tooth EWES,
130 Six-Tooth EWES,
100 Full-Mouth EWES,
140 EWE LAMBS,

Together with 50 RAM LAMBS and SHEARLINGS.

This Flock, established in the year 1864, is brought to the hammer in consequence of the recent death of the late Mr. W. M. Harris. That gentleman's well-known judgment (being a frequent judge at the Royal and other Shows) will be proved by the present Flock, which will be found of good size and colour, well-woolled, and full of quality. The Rams in service recently have been from the Flocks of Messrs. James Flower, Cary Coles, A. F. T. Drake, J. A. K. Falconer, and Sir George Judd. A good export trade to the Argentine and Germany has been done the last few years.

Luncheon will be provided at One o'clock, and the Sale will commence at Two.

Conveyances will meet the up train from Basingstoke, Eastleigh, and Salisbury, due at Hook 11.57, and the 9.30 train from Waterloo, reaching Hook 11.22, to convey passengers to the Sale at a charge of 2s. 6d. for the return journey.

Catalogues may be obtained of the Auctioneers, Winchester.

By GAVIN LOW.

1,000 IRISH STORE CATTLE.

NEXT SALE
at Auction Mart, 50, Prussia Street, Dublin, will be held on THURSDAY, JULY 25, and will comprise the usual classes of the different breeds.

Every facility given cross-Channel buyers shipping stock.

Buttar, and Mr. Noah Morgan; Hampshires from Mr. Carey Coles, Mr. H. C. Stephens, Mr. J. C. Holman, and Mr. James Flower; and Cotswolds from Mr. W. T. Garne.

On account of Mrs. Lambert, Chile, per ss. *Sarmiento*, 2 blood-red Shorthorn bulls, to Valparaiso, viz.: Border Chief 94389, a well-grown, stylish bull bred by Mr. W. Elliott, Hollybush, Galashiels, N.B., by Connington Star 83158, from Blushing Heather; and Briggsflat Merryman 90992, bred by Mr. John Handley, Havera Bank, Sedburgh, sired by Merryman 75073, from Cinderella 15th by Prince of Crosby 6152.

On account of Mr. J. G. Hanmer, Canada, per ss. *Athenia*, from Glasgow, 98 Shropshire sheep selected from the well-known flock of Mr. T. A. Buttar and others.

In addition to the foregoing, Messrs. Mansell and Co. have recently purchased for shipment to South America 31 Berkshire and Middle White sows and boars of various ages, and several sporting dogs.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

The Importance of the Pony.

THE pony is a much more important factor in the horse breeding economy of the country than the superficial observer would believe. He is as a rule, and except by the few who studied him carefully and know his value, regarded with feelings of good-natured contempt. He has to rough it, and he does rough it, with that indifference to the "stings and arrows of outrageous fortune" which is the sign of a hardy and healthy constitution. No horse on the place does half the work the pony does; he is at every one's beck and call. He is galloped down to the post with late letters, after having been on half a score of errands during the day; then perhaps he is run down to the station to meet some one or set some one off, and if the master is going off to some informal bachelor party, he is as likely as not to say "Put the saddle and bridle on the pony."

Aristocratic Ponies.

IN all deference to authorities, I would submit that the aristocrats of the pony race are not ponies at all. By the aristocrats of the pony race I, of course, mean Polo ponies, and those handsome little Harness horses the development of which is so closely associated with the name of Mr. C. W. Wilson, of Rigmaden. Now the former is a miniature Hunter; he is bred on the lines of a miniature Hunter, and is judged mainly from the Hunter standpoint; whilst the latter is a Hackney pure and simple, and is judged by Hackney judges from a Hackney standpoint. And I need scarcely point out that these ponies, as they are called, do not do much in the way of roughing it.

The Hackney Pony.

THE Hackney pony is a wonderful animal, and as we know him now he has only existed for some thirty or forty years. Indeed, I think if we were to say that he really owes his existence to Mr. C. W. Wilson we should not be very wide of the mark. The foundation was a small pony crossed with a Hackney, with exceptionally fine action, and continual in-breeding has resulted in the production of such perfect harness ponies as Sir Horace, and many a show pony whose name will occur at once to those who follow the form of the showyard from day to day. It is a curious thing, but it is no less strange than true, that there are very few harness horses indeed, which can compare with the high-class harness pony.

The Polo Pony.

A SIMILAR remark applies in equal force to the Polo and riding pony. How many weight-carrying Hunters do we see that are so well proportioned, so well balanced, and so active as the weight-carrying Polo pony. Like the Hackney pony, his foundation has been pony blood and a similar system of in-breeding has had something to do with his development. There are, however, many thoroughbreds which have not reached the 14 hands 2 inches limit, or which have done what amounts to the same thing, passed the standard, and these of course are extensively bred from, so that in some Polo ponies pony blood does not come in at all.

What Polo Has Done.

NOW I think I am within the mark when I say that if it had not been for polo, the British pony would have been suffered to fall into neglect and decay, save perhaps where a few foresters or common right owners, or a man like Sir Thomas Dyke Acland, awake to his many good qualities struggled to keep him to the fore. But polo accentuated the fact that size is not absolutely essential in a horse, and the brilliant performances of Polo ponies in the game itself and in the many gymkhanas which came to be associated with the game called attention to the possibilities which our British breeds of ponies possessed. Then the ponies which were too big for polo were used as riding ponies, and their good qualities brought them many admirers, and I think we have to give polo the credit of the inauguration of those useful classes for hacks of the Hunter type, not exceeding 15 hands 2 in.

The Native Ponies.

THE Polo and Riding Pony Society soon began to direct their attention to the native breeds of ponies and they did a good work when they began to give prizes for Exmoors, Dartmoors, Welsh ponies, and other Forest and Hill ponies. This caused attention to be paid to them, and a great improvement soon became evident. There has been, however, and there still is, a leaning to improving these native breeds by crossing. And this has been encouraged by the lines on which classes of native ponies were judged. The nearer the approach to the Hackney type, particularly in action, the better the chance a pony had, or still has, in some places of winning a prize. This is wrong. There is proper pony action as well as proper Hackney action, and it is by no means desirable that we should have our pony breeds displaced by miniature Hackneys. I could mention one or two Welsh ponies. No doubt some will occur to my readers that are of pronounced Hackney type in shape and action, though they retain the pony head, and it is curious that they should have got such Hackney characteristics without a touch of Hackney blood.

The Fell Ponies.

I AM afraid the old-fashioned Fell pony is rapidly becoming extinct. Some years ago, when I was driving through Cumberland, I saw one of these ponies. He was a cart horse in miniature, yet he showed no resemblance to either Shire or Clydesdale. He was rather under than over 14 hands, if my memory serves me, and was as wide as a wagon horse and he could trot. He was shaggy in his coat, and a real hardy-looking little fellow. I spent some time driving about the Cumberland Fells and Dales, but I never saw anything approaching him. At the Durham County Show, when it is held in the northern division of the county, there is often a class for Dales ponies, which are somewhat similar in type to the pony I have described. The classes never fill very well, but there are some useful ponies found amongst them. I am glad to say they are generally judged by a Dalesman, and those who own them are full of enthusiasm about them, saying, what I can well believe, that there is no breed of horses which answers their purpose so well.

The Pony as a Foundation of Hunter Breeding.

SOME years ago the Earl of Harrington wrote some letters in which he drew attention to the value of the pony cross as Hunters. He pointed out that the pony is an "enduring" breed that can stay for ever, and that has the pluck of the Thoroughbred joined to his own courage. I think also Lord Harrington might have added, without fear of contradiction, that the pony is the most sagacious of the equine race, and this is no small matter in Hunter breeding. Lord Harrington instanced several horses he had known that strained back to ponies, and at least two good Hunters that I have possessed or had to do with had ponies for their dams. The former of these was a curiously bred one. Her dam was nearly if not quite thoroughbred. She was by Lucy Cropper dam by Dr. Syntax, the famous gold cup winner, and there were other thoroughbred crosses, and it is quite likely that she was descended from those Dales ponies of which I've been speaking, for she came from the Etherley district. Her sire was a light active cart horse called Short Legs. A funnier bred one for a hunter I never came across, but she knew her business, and managed to get through. Of course she was a bit of a bone setter. Equally of course she was not very fast, and did not show to advantage in a quick ten minutes. But she was the soundest mare in the world, with legs like iron. She could go the nearest way, and at her pace she could stay first, and when she died of heart failure at the age of 19—she dropped down dead as she was being ridden along the road. She was as clean on her legs as a four-year-old. THE LOOKER ON.

An interesting suggestion was made and voted upon at the meeting of the Border Leicester Sheep Breeders' Society held during the Highland Show. It was made by Mr. J. R. C. Smith, Galalaw, who said he thought that seeing the society was in such a flourishing condition they should take advantage of their surplus finances to do all in their power to forward the interests of the breed. He suggested that they should allocate a £50 silver cup to be competed for annually at the Royal Show. Foreigners coming to that show had been in the habit of seeing very small classes of Border Leicesters, and it was their duty to do all in their power to encourage breeders to bring their favourite breed into prominence. A big, thumping prize such as he had proposed would also, perhaps, attract monied men at home to give more attention to the Border Leicester class. This sheep was becoming more popular, as evidenced by the large acquisition of members to the society, and in some respects the Blackfaces could not compete with them.

SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

Weather, Crops and Stock.

The prospects are on the whole very encouraging, now that such a favourable change in the weather has set in. Crops generally are considered quite a fortnight late owing to the want of sunshine, but should the present warm, dry, and long-hoped-for weather continue—so welcome to both man and beast—we shall find the corn crops rapidly ripen and harvest be upon us before we are aware of it, especially as so much field work as haymaking, turnip hoeing, &c., must be pushed on with all speed to fetch up for lost time during the long wet spell, otherwise much of this work will be incomplete before the harvest demands our attention.

The above is the report of a Cambridgeshire correspondent, and it sums up the situation pretty generally. Other reports have come to hand from various places, and these we have summarised below, thus giving briefly the prospects of hay, grain, roots, &c., of several counties as far apart as Lancashire and Dorset.

The Weather.

Dorset.

Up to the present this has been the coldest and most shady season I have ever known, though very little rain, and the land is comparatively dry.

Norfolk (South).

Favourable winter, and work forward up to April, weather since then very unsettled. Heavy rains in certain districts, in other parts not more than required.

Lancashire (North).

The wet weather has made havoc, especially on low-laying land. The weather has now taken a turn, and is hot.

Nottinghamshire (South).

The season is about a fortnight later than the average owing to the dull weather and low temperature of June. The popular idea is that this is the worst summer on record, but those who remember that of 1879, say differently. The rainfall here this June is under average and less than in June, 1906. A brilliant St. Swithin's and a rising glass bring strong hopes of a good time to follow.

Hay.

Bucks (Central).

Most of the clovers and a good deal of hay has been very much damaged by the showery weather. Not that we have had any great quantity of rainfall, but continually showery. Grass crops are big on the uplands, and the pastures are full of keep. We are now having a few fine days, and a good deal of good hay has been got up.

Cambridgeshire.

The clover, seed, and hay crops cut early have suffered from the incessant wet and want of sun. Those who have left grass cutting as late as possible appear to be more fortunate so far; and the grass being left to grow has thickened, and fairly good crops are the result; and if this genial weather lasts a fortnight longer some capital hay may be well and safely stacked.

Dorset.

The bulk of the hay is now taken—quite an average crop, not well made.

Hampshire.

The hay is generally carried in this district, the greater part in rather poor condition, but since the change of weather, there are some ricks carried in good condition or order.

Norfolk (South).

Hay an abundant crop, and largely secured in this district, but the cost for labour very high.

Lancashire (North).

The hay crops are taking off well on dry land, and if this heat continues until it is housed, will make the season a much better one.

Notts (South).

The frequent showers and dull weather have greatly retarded the making of the fine hay crop. Early made stacks are all "smoking," but those who have bided their time, and judiciously got their hay into cocks, will not have much cause of complaint excepting delay.

Corn.

Bucks (Central).

The corn crops on these hills are very good, but want sunshine; more rain would doubtless knock them down.

Cambridgeshire.

Crops are looking remarkably well; the barley appears to be well-headed and very heavy in straw, some of which is already laid in places, and it is feared won't all recover. Oats are also a fair average crop, although very backward.

Dorset.

Wheat is looking so far well, a lot of straw, but the yield of corn is very uncertain owing to so much frost and unseasonable weather; other corn crops are fairly promising.

Hampshire.

The corn crops are an average, barley the best, oats and wheats not so good, but improving. Harvest will be late, and some are unusually weedy, quantities of charlock and poppies in a large proportion of the corn in this neighbourhood.

Norfolk (South).

Corns on the whole looking well. Roots a good plant and forward, but not too clean, caused by showery weather.

Lancashire (North).

The grain is shooting and may be a good crop, though late.

Notts (South).

Harvest is bound to be late this year. Wheat is now in bloom, but all my crops are over average, and with average good weather to follow the prospects are excellent.

Roots.

Bucks (Central).

Roots are not good as a rule. Mangolds want more sunshine.

Cambridgeshire.

Root crops are exceptionally good in most places, and only need plenty of hoeing by horse and by hand to bring them to perfection.

Dorset.

Roots a good plant, not showing the growth they should. Harvest must be late.

Hampshire.

The roots are improving. The early sown did not come away well, owing partly to the weather, wire worm, and fly, but now I think it will be an average season.

Lancashire (North).

Turnips and roots of all kinds could not be cleaned properly, but are now looking much healthier.

Nottinghamshire (South).

Roots are doing well; turnips have come a good plant without much injury from the fly, which hindered the earler sown kohl rabi.

Live Stock.

Hampshire.

Sheep have done well, but cattle not quite so well as they do most years, owing to the unseasonable weather, the grass being so continuously wet.

Notts (South).

Stock generally is doing well, and lambs look better than a year ago, specially those on tares.

The Markets.

Bucks (Central).

The wool fairs have been very much below last year's prices, some 3s. or 4s. per tod, and not a very brisk trade.

Norfolk.

Mutton selling well, lambs making high prices, pork selling well, and stores dear.

West Country Notes.

A COMPLETE week of fine weather has enabled the prematurely cut fodder to be dried and harvested, and the cheerful tone of the farmers engaged in the operations, where there was no intention of selling, told that there was no great harm done.

"STARTED haymaking yet?" I asked one farmer. He replied, "No; I suppose I shall start to-morrow." "You will be rather late, won't you?" "No, I always wait for summer; I was looking at my last year's diary yesterday, and I find I shall be only four days later than then to start. Some of our farmers go mad to start haymaking directly they are in June. If they only had a little more patience it would be money in their pocket." Perhaps it is true. My friend had a wider experience than most men of his class.

EXCEPT where the clover was specially forward—very few cases of this kind though—or the crops laid by the roughor weather, there was, it seems, no particular reason for haste this season, and nothing is yet really over ripe that was intended for hay.

I HAVE seen, however, some of the heaviest crops being made that I have for a long while.

THE Board of Agriculture have not been long in putting in force their new powers with regard to destructive insects and pests. They have scheduled a wide tract in the Western Counties for gooseberry mildew, including the counties of Gloucestershire and Worcestershire with the county boroughs therein. From what I can gather, the Act is likely to prove very useful in clearing out some of the pests which infect fruit trees. Some famous nurseries of fruit have in the past suffered considerable loss in the fact that there was no proper control over neighbouring places where difficulties had been occurring, and careless treatment had allowed pests to get somewhat of an upper hand. These will rejoice at the protection which will be possible to their valuable stocks.

THE annual exhibition of the Devon and Exeter Horse Show Society participated in the happy results of the burst of fine weather. Coming so soon after the change, they had the full advantage of the desire of the general public to indulge in outdoor gatherings. Their experience has not always been so favourable, and they are to be heartily congratulated upon this fact, and also upon the increased entry, though the classes were fewer.

THERE was a novelty in the shape of a hound show, with most of the leading packs of the kingdom represented. The Canine Society for the district also had an exhibition, and here there was a record success. The entries exceeded a thousand.

DEVON bee-keepers, in common with others, are beginning to find out how costly the past season has been to them through the losses in their apiaries. Where artificial feeding has been resorted to, though the cost has been considerable, the evils have not altogether been avoided, though the results of the damp and cold have been minimised.

FARMERS will do well to note that the casually employed worker in the harvesting of fruit, hay, vegetables, or corn come under the new Act. There has been an idea prevalent that they are not entitled to compensation in case of accident, but as they come under the special case of employment in the farmer's business they stand on exactly the same footing as the regular man. Now every farmer knows that these men who come and go are the most troublesome. They are also the most likely to be reckless about meeting with an accident. Forewarned, if the warning be taken, is forearmed. Either these men must be fully insured, or their services must be dispensed with, unless the farmer can afford to take the risk.

THE proceedings of the Millers' Convention at Exeter, though not all applicable to the producer, gave a few hints here and there of some value to farmers. The points as to the rating of machinery are worth noting. One hopes with Mr. Marriage that the time has about come when the efforts of the Home Grown Wheat Association may be of some service to the farmer.

THE sale of the estate of Mr. Anthony Gibbs in Devonshire has seen four out of six tenant farmers on the principal farms become yeomen. Yet the prices are significant. Purchased at £50,000, and with £12,000 spent on new buildings, the sale realised £24,000, a depreciation of some 60 per cent. in a third of a century. The current rental is estimated at £1,100.

SECOND early potatoes from Cornwall are realising far more satisfactory prices than did the earlies during the time the bulk of the trade in them was being done. Preparations for the autumn crops are getting well forward. Cereals are not up to the usual standard at this date.

DEVON County Show finances seem disappointing on the year. Whilst the ordinary receipts came to £2,229, the expenditure amounted to £2,456, showing an apparent loss of £224. The profit on the refreshments, managed by the committee themselves, reduced this to £156. But this, it must be noted, appears to exclude subscriptions. Not many of the shows can expect to make a profit as such.

July 19.

Midland Notes.

THE Small Holdings Bill does not appear to be arousing much enthusiasm among country people. Nothing is heard of the old foreboding, *e.g.*, that to give the labourer a plot of his own is to deprive the larger farmer of his services. Experience with allotments has already shown the groundlessness of that fear. But our practical farmers, looking round the villages, find only a very small number of men who are ever likely to take advantage of the Bill's provisions—and a smaller number who seem to have the capacity necessary for success.

NOR can it be said that the proposal to create tenancies only, and not ownerships, wins much approval. But in this respect opinions are curiously divergent. Our Belbroughton small holders in Worcestershire, for instance, are well enough content with tenancies under a practical and sympathetic district council. Here is a district where compulsory leasing powers do seem to be regarded as exactly the necessary thing. Here, however, the small holdings have constantly tended to increase in number, and the need for additional land has often been felt.

MEANWHILE this season furnishes a painful illustratien of the vicissitudes, the small holders of the future may expect to have to put up with. A day or so ago the case of a strawberry grower was mentioned to me. Last year's profits reached £500; this year they are nothing—or perhaps a minus quantity. It is to be feared that many of the smaller people engaged in the same branch—a favourite one in Worcestershire—have suffered proportionately almost as severely.

TWO remarkable features have distinguished this distressing season—the extraordinary frequency with which smart rain has followed or accompanied a rise in the barometer, and the extremely local nature of many of the storms and showers. For my own part, in the course of somewhat extensive travels over the Midlands, I have seen more or less rain on certainly twenty-five days—possibly more—out of the last thirty.

HERE in Warwickshire we have been sadly languishing for want of sun, though now there is a sudden change for the better, and the season is worthy at last of mid-July. Some of the barley in particular is deplorably faint and weak, but only to a small extent is this a corn-growing county. Worcestershire may still provide some first-rate wheat yields, but oats are probably the corn crop of the season. The pastures have been so continuously wet that a common tendency towards scouring in live stock is not unexpected. On the whole the palm of promise may perhaps be given to mid-Stafford, a region of light and sandy soil, and one which has been pretty nearly exempt from the heavy thunderstorms that have done so much damage elsewhere.

A SEASON like this reminds us that many of our farming friends have still something to learn about ensilage. It is sad to see grass standing over-ripe and obviously deteriorating from the point of view of nutritive quality just because the owner cannot see the chance of making hay, and does not even think of any other method of saving the crop. Nor is it less pitiable to see acres cut and lying day after day in the wet. "If we cannot do anything else, we can always silage it," one is told, and it is added: "But we'll give it another day or so before trying that." During the last few days an enormous amount of hay has been dried and carried, but some of it has been lying a long time in the field.

IT seems to be supposed in many cases that expensive silos and presses are needful. The Board of Agriculture leaflet on the subject ought to dispose of that illusion. The plan adopted in 1888—a very similar year—by a Maxtoke farmer has points in its favour:—

"Having several fields of grass mown," says this gentleman, "which was practically useless for making into hay, I commenced building it into two stacks, building on each every alternate day. My reason for two stacks was to allow one to sink while building on the other. After all the grass was carried, and a few days allowed for the stacks to sink, the tops were well rounded up and about two feet of soil placed all over. In the winter the stacks were cut, and from six to nine inches of the outside was rotten and useless; all the rest was good stuff, and greatly relished by the stock, especially when cut into chaff and mixed with the mouldy hay. So well satisfied was I with my primitive method that if this season continues a bad one I shall not have the slightest hesitation in making ensilage."

THERE is still much talk of gooseberry mildew, and much uncertainty. On the one hand, there is the indubitable fact that the American form of the disease is spreading. Mr. Collinge, of Birmingham University, has found an instance in a garden at Solihull, Warwickshire, where no new bushes had been planted for four years. In this case the most badly affected bushes were put in fourteen years ago, and as the garden is isolated, the source of the infection is mysterious. Up to date over thirty outbreaks have been confirmed in Worcestershire, and one in Gloucestershire—a county which was almost certainly uninfected a year ago. On the other hand, it is the firm conviction on the part of many growers that the fungus is much less to be dreaded than report commonly affirms. Beyond doubt there is a certain amount of evidence in support of that view. One hears of infected bushes being bought, transplanted to another garden, and still bearing freely after careful cutting back. At Lenchwick, where the disease was developing very fast a little time ago, the county council expert is said to have succeeded in eradicating it entirely by means of a sodium sulphide wash.

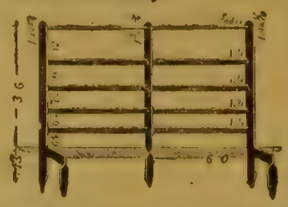
THE proceedings at a recent meeting of the Uttoxeter branch show that the Midland Farmers' Association is amply justifying its existence. According to Lord Harrowby's statement, £65,000 of milk had been sold through the society's London agent, and the prices to the farmer had been raised from 11d. and 1s. 5d. to 1s. 3d. and 1s. 9d. The association has done so well hitherto that there is every reason to anticipate success for its ambitious new scheme—the institution of three factories, north, south, and east of Birmingham respectively, for the purpose of dealing with surplus milk. According to the plan proposed, every farmer who sends milk will contribute at the rate of 10s. per cow towards the expenses—5s. to form a share certificate bearing 4 per cent. or 5 per cent. interest, the other 5s. for working capital. And even if this project is not carried out, there is a private firm ready to take 20,000 to 30,000 gallons of skimmed milk per month, if a suitable site can be found in the association's area for a factory.

I HEAR of two new herds in the Midlands, to both of which more than merely local or personal interest attaches. One of our dairy farmers, it seems, is bringing South Devon heifers into the district, which seems to indicate that this heavy breed is gaining adherents outside its usual haunts; another owner (in Northamptonshire) is making a start with fifteen pedigree Galloway heifers and a bull.

July 11.

Balloon Ascents and the Study of the Weather.

The International Aeronautical Commission, which met at Milan last autumn, decided to obtain from as many stations as possible in the Northern Hemisphere simultaneous records of the conditions of wind, temperature, and humidity prevailing in the upper air during the last week of this month. Most of the Continental Governments are taking part in this work, and some are sending out special vessels for the purpose of obtaining records from over the sea. England is to be represented by four land stations, one near Portsmouth, one near Manchester, one in Herefordshire, and one in Scotland.



The plan is to send up balloons with very light self-recording instruments hanging from them. Often the balloons attain a hight of ten or more miles before falling to the ground. A label is attached to the instruments offering a reward and giving instructions to the finder. It is hoped that any person finding one of these instruments will communicate with the address given, and so help to carry out the object of the inquiry. Many meteorologists hope that information may be obtained which will in time lead to more certainty in the forecasting of the weather.

Farm Implements and Machinery.

Judges' Report on the Field Trials at the Essex Show.

The judges' report on the field trials of implements and machinery at the Jubilee Show of the Essex Agricultural Society, held at Chelmsford on June 12 and 13, has now been issued, and affords interesting reading. Each entry in the four classes is described, and the award given mentioned. Space does not permit of our giving the full report, but we append the judges' remarks on the prize winners.

At the outset the judges (Mr. W. Dannatt and Mr. J. F. Benson) remarked that owing to the rather vague wording of the qualification in the Classes A (best new implement), and B (best improvement in any existing implement), which was not quite understood by the entrants, they were allowed to enter in both classes, with the understanding that the judges were to decide in which class they were eligible, and they suggest that this matter be made more definite another time.

In Class A a gold medal and three silver medals were awarded, and in class B one silver medal. The implements which secured these awards and the judges' remarks were as follows:—

Best New Implement.

Gold medal.—Messrs. Barford and Perkins' patent water ballast motor roller for rolling grass lands and country roads. "This exhibit is a 12 to 14 h.p. double cylinder petrol motor. The roller can be filled with water up to a ton weight. It worked very smoothly and quietly. It is also fitted with a shaft, with pulley, fixed in front, and when stationary can be used for working any machinery, such as chaff-cutting, corn-grinding, pumping, &c. It is provided with a hand-power appliance, whereby it can be adjusted to the length of the driving band to a nicety. We had it tested by driving a grinding mill, which it worked well. Bearing in mind the connection estate work (for which this entry is eminently adapted) has with agriculture, its novelty, and general usefulness, we award it the gold medal."

Silver Medal.—The Hesworth Company, for the new distributor, The Silver King (Simpson's patent), for distributing artificial manures, &c., on land, and for sand, &c., on roads in frosty weather or tarred roads. "This machine has several good points to recommend it—viz., its capacity. The machine being placed low on the wheels, makes it easy to fill and clean out; and also its low distribution is not affected so much by the wind. It will carry a large quantity of stuff, which is kept alive by vibratory hanging chains. This is fed on to a horizontal shelf, which, by its oscillating action, causes it to be spread evenly. It being made of wood, there is no iron to be corroded by acid."

Silver Medal.—Messrs. Joslins, Ltd., for The Handy Sickle Bench (Rawlinson's patent). "This is a very handy, compact bench, &c., provided with the necessary tools for quickly removing and fitting sections to reaper and mower knives. It also acts as a stand for sharpening the knife. This entry, although very simple, supplies efficiently and cheaply a useful adjunct to reaping and mowing machines."

Silver Medal.—Messrs. J. B. Pash, Ltd., for Blackstone's new patent swath turner and hay collector, with swivel wheel. "This swath turner is fitted with an expanding axle, and will follow a right or left-handed mower. It will make two rows or three rows into one, and by working both ways makes the rows handy for loading. It turned the swath perfectly, leaving it light, is also provided with a wind guard, is well balanced, and light in draught."

Best Improvement in Existing Implements.

The gold medal in Class B for the best improvement in any existing implement was given to Mr. H. Kleinfeller, for the 8 ft. cut Emerson standard mower. It is claimed for this mower that it is worked by two horses as easily as the lightest 4 ft 6 in. machine, doing twice as much work. "This machine was tested on a piece of fairly strong grass, and did very good work, two horses drawing it with great ease. The fingers are fitted with reversible finger rail or heel plate at a cost of 2d. each. A very important feature in this machine is the compensating lever, which takes the weight of the cutter bar, thereby considerably lessening the draught. If this machine could be constructed to take the different length cutter bars (easily detachable) we think its utility would be enhanced."

Best Motor.

In Class C, which was for the best motor for ploughing, hauling, and other agricultural purposes, the judges had to choose between H. P. Saunderson and Co.'s 50 h.p. universal motor (weight, 2 ton 10 cwt), and the Ivel agricultural motor (weight, 1 ton 12 cwt.), and their report is as follows:—

"The test was a non-stop run of three bouts on land about 50 rods long, each drawing a three-furrow Ransome plough, the depth to be not less than 7 in. They started simultaneously, the Saunderson outpacing its rival, but this was somewhat discounted at turning at the ends, the Saunderson, owing to its length, or other cause, having to back, and on one occasion to unhitch the plough, which was placed in work by men, while the Ivel turned and got into its work with rapidity and ease. Both motors accomplished the work, the Saunderson taking 23 minutes and the Ivel 25 minutes, the headlands being left much wider by the Saunderson. In deciding the merits of the two motors for general agricultural purposes, where so many operations are required, such as ploughing and cultivating, the working of implements and machines as reapers and mowers, where turning at corners and at sharp angles is a *sine qua non*—the capabilities of the Ivel in this respect being well known by your judges—weight of motor, farm haulage, road haulage, &c., have to be taken into consideration. The result was in favour of the Ivel, which we awarded the gold medal, awarding a silver medal to the Saunderson. The latter is a powerful petrol motor, travelling at a quick pace. It was tried at work with a three furrow Ransome plough and a disc plough, each of which it worked with ease. It was also hitched to a thrashing machine, which it hauled about with remarkable ease. It was not tested for heavy road haulage, nothing being provided for that purpose."

Chaff Cutters.

In Class D, which was for the best steam, petrol, or other power chaff-cutter on wheels, to cut at the rate of not less than 1½ tons per hour, either hay or straw, suitable for agricultural or trade purposes, there were only two entries—viz., one by Messrs. Whitlock Bros. (price, £80) and the other by Messrs Jackson and Son (price, £58). The following points were taken into consideration:—(1) Capacity for riddling and dust extracting; (2) bagging and elevating and feeding apparatus; (3) price; (4) durability and strength.

"The Whitlock cut the straw at the rate of 61¼ cwt. per hour, making an excellent sample for all purposes, and hay at the rate of 51 cwt. per hour, which it also cut satisfactorily. This machine is possessed of great riddling and dust-extracting capacity, is fitted with an elevator for carrying the cavings from the riddle to the top of the box, thus saving labour. The feed is compressed by a spiral spring, instead of a lever weight. The feeding apparatus in this machine was safe and in every way satisfactory."

"The Jackson cut the straw at the rate of 60 cwt. per hour not so marketable as the Whitlock, and hay at the rate of 52½ cwt. per hour in a satisfactory manner. Taking all the points into consideration, we awarded the gold medal to the Whitlock and a silver medal to the Jackson."

Agricultural Education in Lancashire.

The Lancashire County Council offers free education to farmers' sons and daughters and others engaged, or likely to be engaged, in agricultural pursuits who are residents of the Administrative County of Lancaster, and in addition make an allowance in aid of board and lodgings, or for travelling expenses thereto. The classes are held at the Harris Institute, Preston, and the session lasts from about the last week in September to the end of April in each year.

Education, with board and lodging, is given in butter-making and cheesemaking, milk sterilisation, breadmaking, and poultry keeping free of cost, to students attending the dairy school, at the County Council farm, Hutton, near Preston.

Instruction in butter-making and cheesemaking is given where required in the county free of cost; whilst lectures and advice are given in agriculture, horticulture, beekeeping, and poultry keeping.

An interesting *brochure* giving full details (together with illustrations) of the scheme to be carried out in the summer 1907-8 has just been issued by the Council, and those interested should obtain a copy, which can be had from the Director of Education, Education Department, County Offices, Lancaster.

PUBLICATIONS.

THE NEW ZEALAND FARMER. Stock and Station Journal. An illustrated monthly publication, containing practical and scientific information on Farming, Stock Breeding, Cattle, Horses, Sheep, Dairying, Fruit Growing, &c. The only paper entirely devoted to Farming matters and circulating throughout the Colony. Price 1s. 1d., by post 1s. 4d. Proprietors, The Brett Printing and Publishing Co., Ltd., Auckland. EDUCATIONAL.

ROYAL (DICK) VETERINARY COLLEGE, EDINBURGH.
Principal, J. R. U. DEWAR, F.R.C.V.S.
EIGHTY-FIFTH SESSION.
The only endowed Veterinary School in Great Britain. Under arrangements which are now being made, the equipment of the College will be strengthened and modernised, and the teaching facilities greatly increased. An Examination in GENERAL KNOWLEDGE for intending Students will be held on SEPTEMBER 5, 6 and 7. Next Session commences TUESDAY, OCTOBER 1. Further particulars may be learned on application to the Secretary.

TENDERS.

PARISH OF LAMBETH.
SUPPLY OF WHEAT.
THE GUARDIANS of the POOR of the Parish of Lambeth desire to receive TENDERS for the supply of 50 Quarters of Best English White Wheat, weighing 504 lbs. to the quarter, to their Workhouse, situate in Renfrew Road, Lower Kennington Lane, S.E.
Tenders accompanied by sample must be sent to me on or before Wednesday, the 31st July instant, at 11 o'clock, marked "Tender for Wheat." The Tenders will be opened and decided upon at a meeting to be held on the same day.
The Guardians do not pledge themselves to accept the lowest or any Tenders.
By Order,
W. THURNALL,
Clerk.
Board Room and Offices,
Brook Street,
Kennington Road, S.E.
July 17, 1907.

GREAT WESTERN RAILWAY.
The Directors of this Company are prepared to receive Tenders for the supply of:—
6,000 Quarters of Oats.
1,700 ,, ,, Beans.
4,000 ,, ,, Maize.
600 Tons of Hay—Upland Meadow.
600 ,, ,, Hay—Broadleaf Clover and Rye Grass.
200 ,, ,, Oat Straw.
400 ,, ,, Wheat Straw.
200 ,, ,, Packing Straw — Oat, Wheat or Barley.
200 ,, ,, Bran.
Forms of Tender (upon which alone Tenders will be received) may be obtained on application to the undersigned, by whom Tenders, marked outside "Tender for Provender," will be received not later than 10 a.m. on Tuesday, the 6th August.
The Directors do not bind themselves to accept the lowest or any Tender.
G. K. MILLS, Secy.
Paddington Station, London,
15th July, 1907.

Seasonable Topics.

Modern Haymaking. THE conditions of agriculture at the present day make it essential that devices should be adopted to reduce hand labour to the minimum, and this is done in haymaking as in other farm operations. In looking back over a spell of years we have seen many changes in methods, and probably the next generation will see more. The mowing machine has entirely taken the place of the scythe, and various improved machines have been introduced for turning grass into hay. As a rule, however, the methods of collecting up the hay for removal to the stack remain much as they were in the old days. It is true that on many farms the human pitcher has been displaced by a mechanical apparatus for loading the hay on to the waggons, and the elevator is employed for putting it on the rick. As evidence of modern changes, however, we may mention the case of a farmer we called on the other day who possesses three waggons, and in the midst of haymaking he had lent them to his neighbours. Fancy a farmer being able to do this in the old days!—but there, this man is quite up to date, and he gathers up his hay by means of a sweep-rake, puts it into cocks resembling small ricks, drags these bodily on to a trolley by horse-power, and removes them to the rick. Further, he considers the money spent on the modern apparatus for hay harvesting to be the best investment he has made of late years.

The Prospect of Corn Crops. THE welcome sunshine experienced of late has effected a change over the face of the cornfields, and in place of the dense green that was apparent a few weeks ago, one observes the first slight yellowish changes which mark the early stages towards ripening. Warmth and sunshine were what the cereal crops wanted above all things, and having been favoured with these conditions the crops have answered to the call, with the result that there is a decided improvement in the appearance of cereals generally. Pessimists who spoke dismally a short time ago about the prospects of grain crops are now growing more hopeful, and probably the harvest will not be so late as was anticipated. One may observe, as one always can in a trying season, that the outlook is the best in cases where the land is well farmed and the cultivation at the outset was the most thorough; and one thing is obvious this year, namely, that there will be high pressure throughout the harvest, for bad weather throws hay-making back, and farmers will have little breathing time between the close of haymaking and the commencement of reaping.

Police Duties and Inspectorships. IT is not surprising that the police authorities are beginning to resent the increase of the duties of the man in blue which has been brought about by the introduction of several Acts under which the police have to act as inspectors. To add another item to the list, there is the recently-introduced Fruit Pests Bill. Will the police be expected to act as inspectors under this Act as well? If compulsory measures continue to be piled on the top of each other, there will come the necessity for a special department to deal with them. We have the greatest respect for the man in blue and realise his usefulness for the prevention and detection of crime and the protection of life and property; but if a man or a department has got too much to do it means that nothing is done well. Probably this is the view taken by the Chief Constable of Cornwall, to whom reference was made in a recent issue by our West Country correspondent, and we agree that the police cannot be expected to efficiently carry out the duties for which they were intended if others of an alien nature are continually being added to them. This view of the matter does not appear to have entered into the calculations of the Board of Agriculture.

Turnip Hoeing. WAS there ever a season in which current and necessary operations have been so jumbled up and made impossible by the conditions of the weather? In that dripping time at the end of June and the first half of July while haymaking was impossible, the weeds grew rampantly amongst the root crops, and grow they had to, for there was no doing anything with them. Then the change came, and while all hands were wanted in the hayfield, the roots, all choked with weeds and in many places nearly hidden by obnoxious vegetation, asked in silent language for men to hoe them. The rush of work on all parts of the farm has been a great strain of late on the supply of labour, and we have wished that some of the inevitable unemployed were more employable. In some cases farmers can get the aid of women for turnip hoeing and singling, but in many districts complaints are becoming more general as to the difficulty of getting female labour for outdoor work of any kind. Nothing corners the farmer like unfavourable weather, and it is in a "catchy" season when the abilities of a man who can organise and scheme tell vastly in his favour.

A WELL-CARED-FOR FLOCK.

Farm Labour and Schools. IF the matter is looked at purely from an educational and perhaps economical point of view, there may be an advantage in centralising and having a less number of large and well equipped schools instead of so many small ones. Some county education authorities display tendencies in this direction, but in purely agricultural districts there is a strong local feeling against closing small schools for the sake of grouping, and the reason for the objection is a good one. In seeking employment, labouring men with large families invariably ask if there is a school handy, and if the reply is in the negative they go elsewhere for work. As a matter of fact, it is a saving to a working man in both food and shoe leather if there is a convenient school to which he can send his children; and even if arrangements are made for conveying the little ones free of cost to their parents, this does

not compensate for other drawbacks. We have heard a good many expressions on the subject, and have come to the conclusion that, even though there are small village schools which cost more to keep up than their importance seems to merit, these institutions act as a means of keeping people on the land and checking further reduction in the population of small parishes.

The Value of Knowledge.

WHILE we have always contended that for successful farming practical experience is the chief and most essential requirement, we also hold that farmers, particularly the rising generation, should get hold of as much scientific knowledge as possible which has bearing on their occupation. The man who is purely practical may succeed and do well, but he is not so well equipped as another who is equally practical and has in addition scientific knowledge to guide him. Perhaps the work-a-day farmer has not a high opinion of the scientist, and this may be because we have had certain so-called scientific teachers who were mere faddists and led farmers astray; but let us sweep away prejudices, and admit that knowledge is power. Agriculture is a many-sided industry, and no man can claim to be competent in all its branches. The scientist has the opportunities for finding out many things which the working farmer cannot possibly do, but the latter can benefit by the knowledge which the former imparts, just as he reaps the fruits of the ingenuity of the implement maker who provides him with the machinery with which he does his work.

Agricultural Politics.

BY A LOBBYIST.

An Admirable Committee.

There are some impetuous Radicals who resent what they describe as the tortoise like progress in committee of the Small Holdings Bill. Well, it was the tortoise who in the fable won the race; and I do not hesitate to say that a more business-like committee than this, one more penetrated with a genuine anxiety to evoke practical and sympathic legislation, never set in the House of Commons. There have, of course, been numberless divisions, but they have been due to the rival standpoints from which politicians approach the problem rather than to any merciless anxiety to thwart or baffle the main purpose of the measure. Both Mr. Chaplin and Mr. Harcourt stand out as types of practical, conciliatory statesmanship—of that statesmanship which desires and deserves to achieve. Mr. Harcourt has been admirably wise in comprehending that landlordism has after all its rights—that it does not deserve to be needlessly penalised. I would, in particular, instance three incidents in proof of this. The first is his concession to the demand that safeguards should be provided against the unnecessary breaking-up of old pasture land. The second is his unwillingness to keep landlords on whose land either the commissioners or the county council has fastened a fascinated eye too long on the wrack of suspense—in other words, to impose a time-limit, so that neither body will be able to play fast and loose in the game of bargaining. The third is the promise to limit the power to compulsorily acquire to specific limited areas, and thus to prevent the unfair punishment of the person who may be already cultivating the special land as a farm. These concessions are a tribute to the mutual practical common-sense which seems to animate this committee. Here the rival vehemences of the platform are subordinated to a sympathetic zeal and sagacious purpose.

* * *

The Character of the Sub-Committee.

Now, why should not Lord Morpeth's amendment—which has, of course, been ratified by the committee—that the local small holdings committee shall consist of a majority of the councillors, be accepted by the Government. Of course, in making this appeal I am not addressing politicians like Mr. Masterman—politicians possessed by a double dose of ineradicable hostility to councils and councillors. I can conceive that it will be well to have on this committee men who refuse to submit themselves to the turmoil of election or to burden themselves with municipal responsibility; but all the same, with a body composed in a large degree of men whose position is due to the popular suffrage you would have a new assurance of careful expenditure, and of well-curbed enthusiasm. One thing is certain—there must be a local committee. I suppose that even the Mastermans would not place the whole control and management of the small holding in the hands of the bureaucratic pundits sitting at Whitehall. This being conceded, it is as well that there should be upon that body a majority who have ever before them the chastening thought that their conduct must come up for popular revision. I comprehend that to those to whom the council is *anathema maranatha*—who have jaundiced their vision by wild fantastic pictures of the council being manned by landlords, parsons, and farmers, to all of whom a small holding is the most malodorous design ever conceived in the brain of malignance—it is useless to appeal. Mr. Harcourt, however, does not belong to this curious clan. He has shown that he has sound confidence in the councils, and that he is by no means desirous of provoking, by imposing insulting restrictions, the unfriendliness of the men who enjoy local confidence, and must thus be a chief influence in determining the success or failure of the new economy. Lord Morpeth's suggestion invokes that local sentiment in a more eminent degree than originally proposed by the Bill. That proposal would have allowed this committee to consist "wholly or partly of members of the council"—one member would, indeed, have sufficed. And I think Lord Morpeth has been excellently inspired.

* * *

Is this a Moral for the Anti-Councilites?

Heaven forfend I be drawn into the maelstrom of partisan politics; but I ask those zealous, unflagging politicians who never cease vituperating the rural county councils over this matter of small holdings whether an Irish Parliamentary incident of this week conveys no moral to them. This Small Holdings Bill proposes to establish three commissioners, who will have a certain initiatory and administrative authority. Those men will, of course, be appointed by the Ministers of the day; and it may be assumed that they will have certain sympathies with them. In Ireland there are in existence three estate commissioners, who were appointed under similar conditions. They are supposed to form a dispassionate tribunal. Recently one of those commissioners was written to by an Irish M.P. of very decided political views, warned that he was not doing what he was expected to do when he was appointed, and told that when his nominators had again power in their hands they would visit him with the punishment of an inquiry into his department. I do not for a moment believe that the incident could be paralleled, or ever will be paralleled in English Parliamentary life; but I ask again—does it not suggest a moral to the county council baiters? No attempt will ever be made in England to make an executive administrating official—even though he were first appointed for partisan services—a mere political instrument. Still this Irish story should provide the Mastermans at least with a subject for cogitation. Would a possible bureaucratic administration of this character be better than administration by county council?

* * *

Sir Horace and his Successor.

Mr. T. W. Russell, the new Irish Vice-President of Agriculture, has given those of us who comprehend the value of the work of his predecessor Sir Horace Plunkett cause for gratitude. He has not gone to his new department in an iconoclastic mood—with the intention of uprooting all Sir Horace's beneficent designs. Nay, he avers that he has no hostility to the past work of his department. "My duty is," says he, in effect, "to extend and consolidate that work wherever I find it to be on proper lines, and to amend it wherever it is not." This assurance is couched in an admirable spirit. Perhaps it was inevitable that the Vice-President for Irish Agriculture should be a Parliamentarian; but still to those who closely watched the agrarian evolution in Ireland under the Plunkett *régime*, and who appreciated the sedulous care with which Sir Horace reared his administrative fabric, his displacement was a regrettable episode. If the temper with which he pursued his duty, if the design which animated him still prevails, it is an excellent thing for Ireland. Sir Horace opened out to the Irish farmer, big and small, the prospect of his industry being a profitable one.

* * *

Mr. C. Wing Gray.

It is an excellent omen, in all sooth, when Liberals can join with Conservatives in doing honour to so unfaltering a Conservative as Mr. Wing Gray. Yes, there can be no doubt about the political texture of Mr. Gray; but when he represented the Maldon division in the House of Commons he revealed that he knew how to be dispassionate, cautious, and something better than a relentless partisan in the interest of agriculture. It may be that Mr. Gray has no further desire for senatorial dignity; but whether this be so or not now, it is little to the credit of Conservative officialdom—with its professional claim to directly represent the interest of the farming-class—that it has not sought to secure the return of so admirably-intentioned a farmer's advocate to the House of Commons. Mr. Gray belongs to the line of the Clare Sewell-Reads and the Duckhams, and the Spearsmen, whose sympathy with agriculture was the child of their association with it, of their comprehension of its economic needs, and of their patriotic faith and pride in their own class. Mr. Gray may not have an enduring or a lurid place in our national annals; he has, however, the consolation that his sojourn in the Parliamentary meads was marked by valued achievement.

* * *

Mr. Chaplin's Place in Politics.

Even the ranks of Tuscany can scarce forbear to cheer. Even Mr. Chaplin's political rivals can scarce withhold their appreciation of the manner in which the member for Wimbledon has imposed himself upon the imagination and the intellectual appreciation of St. Stephen's. He had been thought to belong, alike in his faith, and his outlook and his oratorical methods, to another generation; but he has almost at once assumed a more authoritative position in the Conservative hierarchy than he ever held before. The Statesman whom a Balfour could leave out of his Government has now become an indisputable influence in the councils of his party and an undeniable force in shaping its policy. Mr. Chaplin may vividly recall the grand, rotund manner in his Parliamentary method and speech; but he has shown that he can easily adapt his thought to the more agile and alert intellectual play which nowadays marks the Parliamentary combat. His selection to lead the Conservative criticism of the Small Holdings Bill was, perhaps, a tribute to his political traditions rather than to his present-day eminence; it has proved to have been an act of great wisdom. Mr. Chaplin has undoubtedly been the most notable figure on the committee. If he has lacked the querulousness of one or two of his associates, he has revealed a grasp of his subject, an appreciation of his stronger strategical positions, and a personal tact and dignity that have greatly impressed the assembly and have seriously influenced the debates. Mr. Chaplin's position in the Conservative leadership is generously and wisely admitted by his colleagues.

* * *

The Apologist of Milk-Blended Butter.

The Government has done admirably well in insisting that the Butter Bill shall pass this season. Did, however, Sir Edward Strachey, as the spokesman of the Board of Agriculture, do well in invoking—by his attitude in palliation of the sale of milk-blended butter—the vitriolic, searing cynicism of Mr. Healy, the criticism of Mr. Arthur Chamberlain, and the sarcasm of Major Seely? Why should skim-milk masquerade as cream? Why should the vendors of milk-blended butter be the object of a conciliatory provision? All's well that ends well; but it is an interesting reflection that it was an urban Minister like Mr. John Burns, and not a purely rural Minister like Sir E. Strachey, who suggested the compromise—that the wrapper containing this milk-blended butter should state its ingredients and the fact that it contains 24 per cent. of moisture or water. But I ask Sir Edward — why the number 24 should be a holy standard and 25 sacrilege against the commercial morals of the British people? Why should, in Mr. Healy's phrase, the 25 per cent. man merit three months' imprisonment and the 24 per cent. man the blessings of the community? The new standard is an anomaly.

THE SHEEP SALES.

DETAILS of the different sheep sales reported in the current issue show that the keenness of the demand for the best stud sheep of both sexes continues unabated. The competition for these comes from two sources, the home stud sheep-breeder and the export buyer. Between them they have raised the value of our leading stud sheep most materially.

THE home breeder requires these sheep for service at home to continue the work of breeding stud sheep for future years; the export buyer desires these sheep to enable him to breed in his own country the best and most typical sheep of the particular breed he supports, and by this means to rear up other stud sheep to improve the quality and character of the general sheep of the country to which he takes them, with the ultimate object of sending to our mutton market the resultant produce of these sheep, and at that centre to compete with our home producers of mutton for the custom and patronage of the consumer.

THESE are facts which need no emphasis to prove how essentially important it is that our home breeders of every class of sheep must leave no stone unturned to secure the best sheep available, in order that the quality of their mutton be maintained at the highest possible point, because it is only by producing the finest quality of mutton that our home breeder can secure a market that is not interfered with, to any considerable extent, by the imported supplies from abroad, for, at any rate, it will be some years before our imported mutton can reach that quality which will enable it to rank *pari passu* with the best which is grown and produced at home.

Thoughts on Sheep Sales.

THE leaderette in the issue of July 15, headed "Thoughts on Sheep Sales," contains much that is of value to the sheep-breeder within a very small amount of space. Much might be written upon the points touched upon by the leader writer, for he has evidently brought, as it were, within a nutshell the principles that should guide all flockmasters in the selection of their stud sheep, and, in addition, he has brought out plainly how essential it is that this greater care in selection should be exercised.

SO many breeders of the present day run away with the idea that there is only one market for stud sheep, and that every one ought to fulfil the requirements of that market, *i.e.*, the export demand. It is true that this demand is lucrative, and to those who are fortunate enough to secure the patronage of the export buyer it means prices of a higher range than those generally paid by the flockmaster at home.

The Home Demand.

WHILST every effort should be made to secure this trade, our flockmasters must not overlook the fact that the home demand is of equal importance; because after all, whilst the export demand is more lucrative, and, we are pleased to say, an increasing one, it only requires a small proportion of the number of stud sheep that are bred, and consequently it is quite as necessary to encourage the home trade as that mentioned above.

THE difficulty that besets the ram breeder is to convince the home flockmaster of the need of great care being exercised in the selection of his sires, and to prove to him that it pays better to use carefully-selected sires than those of the other kind.

IT is on account of this that the great value of the leader which appeared on the date mentioned comes out so clearly. Every effort must be made to show the ordinary sheep-breeder how needful it is for his personal benefit and profit that sires of higher value should be used.

Price of Mutton.

A REFERENCE to the mutton market shows that the prices being paid at the present time for English mutton of the finest quality are thoroughly remunerative, or, as a breeder expressed it last week, "There is no fault to find with the prices we have been receiving for our mutton."

AN examination of the prices published in the market reports shows that there is a marked difference between those paid for the best qualities and those paid for the second and third grades.

THESE are facts proved over and over again by reference to any series of market reports, and to carry the lessons that they convey directly home, would require a full examination of the system of management adopted by the breeders and feeders of those sheep that realise the highest range of prices.

Good Bred Sheep make the Most Money.

WE have no knowledge that such a test has ever been systematically applied, and regret that such is the case, but from personal knowledge and experience that has been gained by close attention to the result of sales in the fat stock market, the writer is of opinion that in nearly every case the sheep that realise the highest prices are those which have been bred in the best managed and most carefully selected flocks.

THIS is most tersely put in the leader referred to, when it says: "It is a fallacy held by many flockmasters that this selection of the sire and dam is only a matter for the ram-breeder to consider, but the experience of years proves that it is equally important for every flockmaster."

THE meaning of this is very clear, for it means that breeders of sheep, if they desire to produce the best, must select both sire and dam previously to mating, with a view, by the combination of the two, to produce a sheep that has a larger proportion of the more valuable parts of the carcase than those of secondary value, and it will be found, wherever this care is taken, that the resultant produce will have a greater value in the fat stock market by reason of the merits mentioned above, and also be more attractive to the buyer by reason of its uniformity of symmetry, type, and character.

Ram Exports.

IT is interesting to note that during the past six months 2,000 sheep have been exported at an average declared value of £15 9s. 7d., an average which is the highest on record for the first six months of any year since previously to the year 1895.

HAMPSHIRE DOWN TWO-SHEAR RAM.

The Hampshire Down Ram illustrated above is the property of, and was bred by, Mr. James Flower, Chilmark, Salisbury, and was first in the Class for Hampshire Down Shearling Ram at the Royal Show, Lincoln.

THE increase in the declared value of the sheep exported during the past six months over those exported during the same period of the previous year is £3 14s. 3d., a clear indication of the higher level of merit and quality of the exported sheep.

THE WEEK'S SALES.

Mr. T. F. Buxton's Hampshire Downs.

The dispersal of the celebrated Waters Place Flock took place on the 19th inst. The sale commenced with the ram lambs, and though no sensational figures have to be recorded, the average proved highly satisfactory. No. 1 fell to the bidding of Mr. Kerr (for Mr. H. C. Stephens) at 48 guineas, who also secured No. 22 at 34 guineas, No. 30 at 20 guineas, and No. 37 at 10 guineas. Mr. J. H. Dibben secured the highest priced lamb, No. 6, at 105 guineas, Mr. A. F. T. Drake No. 8 at 92 guineas, Mr. A. C. Hall No. 5 at 68 guineas, Mr. Gosling (Chertsey) No. 2 at 30 guineas, Lord Rothschild No. 3 at 34 guineas, Mr. P. C. Tory No. 4 at 36 guineas, and four others at 20 guineas, 12 guineas, 12 guineas, and 11 guineas respectively, Mr. B. J. Waters No. 7 at 20 guineas, No. 17 at 36 guineas, and another at 15 guineas, Mr. Stevens (for Mr. G. J. Thursby) No. 12 at 25 guineas, Mr. Harding (for Sir W. G. Pearse) No. 58 at 50 guineas. The average of the fifty-eight lambs was £20 8s. The 160 two-teeth ewes in lots of five and ten each came next, Mr. A. C. Hall securing a pen of five at £8 5s. each, the average of the lot being £5 within a small fraction. The 130 four-teeth ewes excited keen competition, and averaged £5 2s.

The sale concluded with fifteen grand shearling and one three-shear rams, which provoked some of the keenest competition of the day, Mr. Flower securing No. 3 at 90 guineas, Mr. Kerr No. 2 at 62 guineas, Mr. Blackwell No. 7 at 30 guineas, Mr. Goldsmith No. 9 at 30 guineas, No. 8 at 20 guineas, and No. 12 at 15 guineas; Mr. Taylor No. 14 at 19 guineas, Mr. Treble (for Mr. E. S. Hanbury) No. 6 at 16 guineas; the other shearlings ranging down to 7 guineas; Mr. Shatford James taking the grand three-shear Royal Dean at 30 guineas, the average of the sixteen rams being £24 17s.

Sale of the Woolverstone Southdowns and Berkshire Pigs.

In beautiful weather the well-known flock of Southdown sheep belonging to Mr. C. H. Berners was disposed of by Messrs. Thornton & Co. on Wednesday last, at Woolverstone, near Ipswich. This picturesque estate on the banks of the Orwell has been the home of a Southdown flock for many years, and a representative company, including H.M. the King's shepherd, the agents to Lord Cadogan, Lord Manvers, Sir Thomas Gooch, Sir Julius Wernher, Messrs. W. M. Cazalet, Kenneth Clarke, C. G. Drewitt, and W. Wrench. All of them made considerable purchases, H.M. the King securing the highest priced yearling ewes at 21os. each and another at 140s.; a pen of four-tooth at 306s., and five full-mouth at 140s. Sir Julius Wernher obtained the highest-priced six-tooth ewes at 105s. The ewe lambs made up to 45s. (Lord Manvers), Mr. C. J. Drewitt taking the principal lots. For the two-year-old Buckland ram Lord Cadogan paid 30 guineas, and Colonel Brymer 14 guineas for a yearling ram. Ram lambs made up to 6 guineas. The shearling ewes averaged 74s., the four-tooth ewes 87s., the six-tooth 55s., the full-mouth 48s., and the seventeen rams £9 2s. 7d. each. The seventy Berkshire pigs averaged nearly £5, Colonel Hammond paying 17 guineas for a good sow, the other principal purchasers being Messrs. Lawrence Curree, J. Jefferson, J. McMonies, E. Macintosh, and Arthur Walter. A capital show van was also sold to Mr. J. Colman at 40 guineas.

Photo by [*J. T. Newman.*

A GROUP AT THE TRING HAMPSHIRE DOWN SHEEP SALE.
The group includes Mr. Bishop, Agent for Mr. J. G. Williams, and Messrs. Bimker, Dickins, Reeve, E. Grange, &c.

Lord Rothschild's Hampshire Downs.

This annual sale took place on Monday, July 22, at the Home Farm, when sixty-nine rams (including two shearlings) and sixty-eight ewes were offered for sale, and all changed hands. Sir Alexander Henderson gave 45 guineas for the loan for six weeks of a lamb by Stonehenge 146th, and Mr. Carey Coles 40 guineas for the loan for the same time of one by Fulfilment. Two lambs were not let, as the bidding did not reach the reserved price. There was a good company present, including buyers from the Northampton and Peterborough districts, as well as some from Hampshire and Wiltshire. The highest price at which a ram sold was 28 guineas. At this figure Mr. J. G. Williams, of Pendley Manor, secured a fine type of animal by Fulfilment. The total amount realised by the sale was 698 guineas, the rams averaging £11 5s. 3d. The sale was held in a covered ring, so the storm which burst before the conclusion of the sale did not seriously interfere with the comfort of the company.

Mr. Edney's Hampshire Downs.

The first annual sale of ram lambs was held at the Farm, Horndean, when there was a good attendance. A large proportion of the rams found buyers at prices varying from 10 to 3½ guineas, the principal buyers being—Mr. G. Prior (five), Mr. Bloomfield (three), Mr. G. Brown (five), Mr. Melsome (two), Mr. C. H. House (two), Mr. Strong, Mr. Miles, Mr. W. Edney (two), Mr. W. G. Edney (3), Mr. Burt (two), Colonel Stubington (one), Mr. Pearson, Mr. Toup (three), Mr. R. Westbrook (three), Mr. J. Westbrook (three), and Mr. G. Webb.

Messrs. Brown and Sons' Cotswolds.

At Marham Hall Farm, on Thursday, Messrs. Salter, Simpson, and Sons, conducted the fifty-fourth annual letting of the famous pedigree Cotswold rams owned by Messrs. T. Brown and Son. As in previous years 120 ram lambs and eighty shearlings were offered for public competition. The following average prices were realised:—Lamb rams, £7 16s. 10d.; shearlings, £9 17s. Last year's average prices were:—Lamb rams, £8 6s. 3d.; shearlings, £9 8s. 8d.

Weyhill Fair.

The first draft of ram lambs from the Amport flock of the Marquis of Winchester, which is being dispersed on August 19, was submitted by auction at Weyhill Fair on Friday, when some exceptionally good prices were realised. Forty-six lambs averaged no less than £19 7s. Mr. Flower secured No. 1 at 200 guineas, Mr. Newton (for Mr. F. Lawson) No. 3 at 100 guineas, Lord Rothschild's agent No. 10 at 95 guineas, Mr. A. F. T. Drake No. 24 at 62 guineas, Mr. Kerr No. 2 at 30 guineas, Messrs. Williamson, Nicoll, Young, Prichard, Miles (for the Hon. P. Wyndham), Snow, Allen, Dare, Goldsmith, Newland, Pothecary, and others buying at 18 guineas, 17 guineas, 15 guineas, 12 guineas, &c.

The sale of first draft of ram lambs from the well-known Cholderton flock of Mr. H. Stephens was conducted at Weyhill fair on Friday. Six lambs were first let for the season at an average of £27 2s. 6d., Mr. Casares hiring at 50 guineas and 40 guineas, Mr. H. Waters at 18 guineas and 17 guineas, Mr. W. J. K. Waters at 15 guineas, and Mr. Lambert at 15 guineas. Forty lambs were then sold at from 25 guineas downwards, the auctioneer purchasing No. 14 for a client at 25 guineas, Messrs. More and Miskin buying at 12 guineas and 16 guineas, Mr. W. C. Young at 20 guineas and 14 guineas, Mr. Date at 20 guineas and 11 guineas, Mr. A. Edwards at 19 guineas, Mr. Goosey at 17 guineas, and 11 guineas, Mr. S. W. Cave at 18 guineas, Mr. R. G. Cave at 13 guineas, Mr. Newland (for Captain Chichester) at 14 guineas, Mr. B. J. Waters at 14 guineas, Mr. Hughes (for the Earl of Darnley) at 10 guineas, &c. The average of the 46 let and sold was £13 7s.

Photo by [*J. T. Newman.*

THE TRING SALE OF HAMPSHIRE DOWN SHEEP.
The Ram Lamb in the Sale Ring was let at 45 guineas.

The average of 70 lambs let and sold by Messrs. Waters and Rawlence at Weyhill Fair on Friday from the Dunley Manor flock of Mr. F. A. Holman was £7 15s. Mr. Cary Coles hired at 50 guineas, and Mr. Williamson at 11 guineas. Mr. Goldsmith bought at 18 guineas, Lord Rothschild at 13 guineas, and Messrs, Clift, W. Allen, H. Waters, Pridger, R. G. Cave, A. Edwards, E. H. Miles, Pothecary, Stiles, and others at 12 guineas, 11 guineas, 10½ guineas, &c.

Messrs. Ellen disposed of the annual selection of ram lambs from the well-known flock of Mr. S. H. Allen, of Eastover. Eleven guineas was paid for one of the ram lambs, and the remainder realised as follows:—Two were sold at 10 guineas, two at 9½ guineas, one at 8½ guineae, one at 7½ guineas, three at 7 guineas, one at 6½ guineas, one at 6 guineas, three at 5½ guineas, nine at 5 guineas, fourteen at 4½ guineas, and fifteen at 4 guineas.

Alresford Fair.

Alresford Fair, one of the most important of the series of Hampshire sheep and lamb fairs, was held on Thursday in favourable weather. The nuber penned was 12,000, or about 2,000 below last year. Messrs. James Harris and Son, of Winchester, had consigned to them 9,300 ewes and lambs, and seventy-five ram lambs, and with the exception of one lot the whole changed hands. Two-tooth ewes varied from 60s. 6d. (obtained for ewes from the Candover flock) down to 43s. 6d; draft ewes from 56s. to 37s.; wether lambs from 39s. to 32s., one lot going for 29s. 6d.; and ewe lambs from 43s. 6d. to 36s.

THREE WEST COUNTRY BREEDS.

Messrs. Harris and Son submitted fifty ram lambs from the highly-bred registered Hampshire Down flock of Mr. Donald Nicoll, of Burntwood. These changed hands at from 4½ to 8½ guineas, with an average of about £4 15s. They also sold twenty-five Hampshire Down ram lambs from the Botleys Park flock (Chertsey), which has been recently established by Mr. H. Gosling; the prices obtained varied from 3 to 3½ guineas.

Messrs. Waters and Rawlence offered ram lambs from the Long Sutton House Hampshire Down flock of Mr. J. A. K. Falconer, and the Swanmore House flock of Mr. W. H. Myers. The ram lambs from the Long Sutton House flock showed the true character and general excellence always so pronounced in this flock, and their sires were from some of the best flocks of the day. Four lambs were let at from 7 to 26 guineas, with an average of £15 10s., and forty-one were sold at from 4 to 18 guineas. The average of letting and selling together was 7 guineas. The ram lambs from Mr. Meyers' Swanmore House flock were a very strong lot, with more bone and better filled than is often the case, and probably only requiring a show reputation to make big prices. Thirty-seven were sold at from 4 guineas to 10½ guineas, with an average of £6 4s. each.

Messrs. Hall, Pain, and Goldsmith offered the annual selection of eighty ram lambs from the old-established Blendworth flock of Mr. J. Goldsmith, and every lamb was sold. The prices obtained were from 4½ guineas to 18 guineas, and averaged rather over £7 each.

Overton Sheep Fair.

This annual sheep fair was held on Thursday, and was largely attended. There was a good supply of sheep and lambs, which met a good trade at very satisfactory prices. The highest prices were 67s. for regular draft ewes belonging to Lord Ashburton, 58s. for two-teeth ewes, 55s. 6d. for draft ewes, 54s. for six-teeth ewes, 53s. for wether lambs, 42s. 6d. for fat wether lambs, 42s. 6d. for ewe lambs, 38s. 6d. for grazing ewes, and 36s. for mixed lambs. In the competitive classes the competition was keen, though the majority of the chief prizes were won by Mr. F. A. Holman, of Dunley Manor. The judges were Messrs. W. W. Webb (Andover), W. T. Hall (Highclere), and J. Dean (Chitterne). Their awards were as follows:—

Pen of wether lambs, 1, Mr. J. A. Holman; 2, Mr. J. Pickard, Chapmansford; 3, Mr. A. Butterworth, Hatherden.

The Pen of Three Dorset Horn Ram Lambs (Flower's 161, 162, and 163) won First Prize in the Class for Pen of Three Dorset Horn Ram Lambs dropped after Nov. 1, 1903, at the Royal Show, Lincoln, and are the property of, and were bred by Mr. W. G. Flower, West Strafford, Dorchester. They were sired by Petherton Lad 1733, dam by Nynehead No. 10 1202.

The South Devon Ram, Stooke's No. 3, was First in the Class for a South Devon Ram Shearling and Upwards at the Royal Show, Lincoln. It is the property of Mr. Henry Fairweather, Malston, Sherford, Kingsbridge, but was bred by Mr. John Stooke, Sherford, Brixton, Plymouth, and it was sired by Stooke's Hero 246.

The Exmoor Ram, Ashwick Wonder, is the property of Mr. Heber Mardon, of Ashwick, Dulverton, Somerset, but was bred by Mr. F. Yeandle, Nadrid, South Molton, Devon, and won First Prize in the Class for Exmoor Ram Shearling and Upwards at the Royal Show, Lincoln.

Pen of full-mouthed ewes for breeding purposes, 1, Mr. F. A. Holman; 2, Lord Ashburton.

Pen of two-teeth ewes (open to farmers only), 1, Mr. F. A. Holman.

Pen of two-teeth ewes (open to farmers and dealers), 1, Mr. F. A. Holman.

Pen of ram lambs of any breed, bred by the exhibitor, 1, Mr. H. C. Stephens, Cholderton; 2, Mr. F. A. Holman.

Special prize given by Sir Wm. Portal for the best pen of Hampshire Down ewe lambs, bred and exhibited by tenants on the Laverstoke and Malshanger estates, 1, Mr, E. H. King, Sopley; 2, Mr. W. Follitt, Malshanger.

Messrs. J. Harris and Son's entry at the fair included 7,500 ewes and lambs and 110 Hampshire Down ram lambs. Forty-five ram lambs from the flock of Mr. E. A. Phillippi realised from 4½ to 10 guineas, whilst sixty from the flock of Sir Richard Rycroft, Bart., fetched from 4½ to 6½ guineas. Regular draft ewes made 37s. to 67s. (Lord Ashburton making the latter figure); two-teeth ewes 50s. to 58s. (Mr. J. M. Berry, Tufton); draft ewes 37s. to 50s. (Sir George Judd); grazing ewes 30s. 6d. to 38s. 6d. (Mr. J. M. Berry); ewe lambs 33s. 6d. to 42s 6d. (Mr. W. F. Clifford, Ashe Warren); wether lambs 35s. to 48s. (Mr. F. A. Holman, Dunley Manor); mixed lambs 28s. to 38s. 6d. (Mr. A. Budd, North Oakley); fresh wether lambs 42s. to 46s. (Mr. H Harris, Steventon); fat wether lambs 41s. to 53s.)Mr. J. Pickard, Chapmansford).

A Profitable Ewe.

It is not often that such a good bargain is made as in the following instance which has just come before my notice.

The purchaser of the ewe in question may be congratulated on having made an uncommonly good bargain. The ewe was bought at his nearest market town for 32s; she reared two lambs, and the trio have just been sold at a price regarded as altogether very satisfactory.

The figures shall, however, tell their own tale:—

	£	s.	d.
The ewe, 12½ stones at 6s.	3	15	0
The two lambs, 14 stones at 7s. 8d. ...	5	7	4
Total	£9	2	4

With the exception of having had a little cotton cake in the winter, this has all been done running loose on the pasture, where there are bullocks fattening at the rate of more than the proverbial "one to the acre."

Forthcoming Sheep Sales.

Mr. Cary Coles has instructed Messrs. Waters and Rawlence to let and sell at the Manor Farm, Winterbourne Stoke, Wilts, on August 2, 100 ram lambs of his highly-bred Hampshire Down flock Mr. Coles is satisfied he will place before the public a selection equal, if not surpassing, that of 1906, Conveyances will meet the trains at Salisbury. Wilton, and Wishford.

The annual lamb sale at Ashford will be held by Messrs. W. and B. Hobbs, on Friday, August 2, when 12,000 Kent and half bred sheep and lambs from the best flocks in the district will be offered for sale. The sale will commence punctually at 10 o'clock.

Messrs. Cunnah and Roberts will sell on Friday, August 2, 3,000 yearling Cheviot wethers, Black-faced Scotch wethers, and cross-bred ewes and wethers from the flocks of the late Mr. Jas. Kemp and Mr. Chas. Kemp, at Burton Point Station, near Chester. The sale will commence sharp at half-past one o'clock.

Messrs. J. Swan and Sons will hold their great annual special "Lammas" lamb sale on Thursday, August 8, in the Southern Central Auction Mart, Newtown St. Boswells, N.B., when 31,200 lambs from the best flocks in Scotland will be sold.

Kidderminster great annual sheep sale will take place on Friday, September 6, when Messrs. Nock and Joseland will sell 2,250 sheep of all breeds, including several prize-winning flocks at the Royal and other shows.

Messrs. Lythall and Walters will hold their seventy-sixth annual sale of Shropshire rams and ewes on Thursday, August 22, at Bingley Hall, Birmingham.

Messrs. A. and D. Edwards will hold special sales of ewes and rams in Hereford Market on Wednesdays, August 21, September 4, and September 18, commencing with rams at 12 o'clock and ewes at 2 p m.

SHEEP-BREEDING IN NEW ZEALAND: MUSTERING FOR DIPPING ON THE MAORI HILLS.

Front Page Illustrations.

Our front-page illustrations are of:—

1. The Lincoln shearling ram which was first in its class at the Royal Show, Lincoln. It is the property of, and was bred by, Mr. Henry Dudding, of Riby Grove, Great Grimsby. It was the first ram to be sold at the recent Riby Grove sale, and was put in at 100 guineas, but after a lively tussle with Mr. F. Miller, who for years past has taken the first prize ram, Messrs. S. E Dean and Sons, of Dowsby Hall, Bourne, secured it at 900 guineas.

2. The Shropshire shearling ram owned and bred by Mr. M. Williams, of Whiston Hall, Albrighton, who won with him first prize in the class for Shropshire shearling rams at the Bath and West Show at Newport this year.

3. Pen of three Oxford Down shearling ewes, the property of, and bred by, Mr. James T. Hobbs, of Maisey Hampton. They won first prize in their class at the Royal Show, Lincoln, this year.

4. His Majesty the King's Sandringham pen of three Southdown ewe lambs which won first prize in their class at the Royal Show, Lincoln, this year.

Great Yorkshire Show at Barnsley.

The Mark Lane Express' Stand will be No. 179, where we shall be pleased to see all our friends and readers attending the Show.

Messrs. Waters and Rawlence will sell on Tuesday, August 6, at the Market House, Salisbury, eighty ram lambs from Messrs. J. H. Dibben's old-established Hampshire Down flock. Although Mr. Dibbin does not exhibit, he still maintains his position as one of the leading breeders of Hampshire Down sheep.

Messrs. Waters and Rawlence, in connection with Messrs. Franklin and Gale, have been instructed by Sir Alexander Henderson, Bart., to sell eighty Hampshire Down ewes from his well-known flock at Buscot Park, Berks. They are of great size, most symmetrical, and of excellent type and character, many of them being exceptionally good.

The twenty-second annual sale of the Lincoln Long wool Sheep Breeders' Association will be held at Lincoln on September 5 and 6, when the catalogue will consist as usual of consignments of rams and gimmers from various members of the association.

Messrs. R. R. Leonard and Son have been instructed by Mr. G. M. Gale to sell at Atwick Hall, Hull, sixty grand Lincoln Long-wool shearling rams and 100 gimmer shearling from his celebrated flock, on Thursday, August 15.

The great sale of pure-bred Southdown sheep by Messrs. Stride & Son, at Chichester, will take place on Wednesday, August 7, when 410 sheep will be offered from the flocks of a number of eminent breeders, included in which are the Duke of Richmond and Gordon, K.G., the Duke of Northumberland, K.G., the Duke of Devonshire, K.G., Earl Cadogan, Earl Manvers, Lord Northbourne, &c. At the same time the whole of Mr. J. W. Baxendale's pure-bred Southdown flock (No. 17 in the Flock Book) will be sold.

The jubilee sale of Oxford Down shearling rams, owned and bred by Messrs. J. and S. Treadwell, will be held by Messrs. F. D. Holiday and Son, on Wednesday, August 7, at Upper Winchendon, near Aylesbury, which will begin at two sharp.

Mr. James W. Taylor will sell at Cirencester August ram fair, on August 6, thirty pure bred Oxford Down shearling rams, bred by and the property of Mr. James Horlick, of Cowley Manor, Cheltenham. The rams are strong, good coloured, well boned and plenty of flesh, and being bred on the highest points of the Cotswold Hills, are noted for their hardiness of constitution.

We have received a pamphlet entitled "A Short Guide for Emigrants to Victoria, the Garden State of Australia," and from its pages one is enabled to form an idea of the state of agriculture to be found in that district. In Victoria the position of the farm labourer and milking hand is much superior to what it is in England. Here he has little prospect of being anything else but a labourer to the end of his days. But if he goes to Victoria, there, with the financial assistance the Government can give him, he may soon be on the way to become a farmer himself, and the opportunities for the advancement of his children are not to be found in older countries. From the pamphlet we gather that experienced agricultural labourers and domestic servants can rely upon finding employment readily. The Minister of Lands, being in touch with the farmers and graziers requiring assistance, and knowing their wants, will give newcomers every facility to secure employment, as well as to obtain homes for themselves.

AUCTION SALES.

By Messrs. J. HARRIS & SON.

COCUM FARM,
Six miles from Micheldever Station, two from Sutton Scotney Station, and seven from Winchester.

ANNUAL SALE and LETTING of HAMPSHIRE DOWN RAM LAMBS.

MESSRS. JAMES HARRIS and SON have been favoured with instructions from Sir George Judd to LET and SELL by AUCTION, on the premises as above, on THURSDAY, AUGUST 8, 1907:—

100 RAM LAMBS and
6 SHEARLING RAMS,

from his highly-bred Cocum Flock, entered in Vol. 1 of Flock Book.

The well-known excellence of the Cocum Flock will be fully upheld by the very high-class selection of Ram Lambs to be brought forward this season, which show exceptionally good breeding, and possess that remarkable depth of flesh, good wool, and beauty of form always so marked in the Lambs from this healthy flock.

The most fashionable sires have been judiciously selected by Sir George Judd, and a characteristic and popular type of Hampshire Down has been obtained, which the Auctioneers can confidently recommend to Exhibitors and Breeders, who should not fail to attend this annual sale.

Conveyances will meet the principal Trains at Sutton Scotney Station, and a Brake will leave Winchester Station at 12 o'clock and Andover at same time on day of Sale.

Luncheon will be provided at One o'clock, and Sale commence immediately after.

Sir George Judd will be pleased to show his Flock of Breeding Ewes, Ram Lambs, &c., to his friends or intending purchasers at any time previous to Sale.

Catalogues may be obtained of the Auctioneers, Winchester.

Sale at Half-past One punctually.
Sheep will be trucked free of charge.
Auction Offices: Grosvenor Buildings, Chester.

By Messrs. F. D. HOLIDAY & SON.

THE JUBILEE SALE.

UPPER WINCHENDON, near AYLESBURY, BUCKS.

The 50th ANNUAL SALE of about 60 OXFORD DOWN SHEARLING RAMS, bred by and the property of J. and S. Treadwell, will take place on WEDNESDAY, AUGUST 7, 1907, by F. D. HOLIDAY & SON, of Bicester, Oxon.

Sheep from this flock have sired many winners at the Royal and Christmas Fat Stock Shows.

This year's sheep are very big, bony, full of lean meat, of grand character, and colour, and have not been housed.

Conveyances will meet all trains at Aylesbury, on the North-Western, Great Central, and Great Western Lines; also at Thame on the Great Western; and Waddesdon Manor, on the Metropolitan and Great Central.

Luncheon from 12 o'clock. Sale at 2 sharp.

By Mr. JAMES W. TAYLER.

CIRENCESTER AUGUST RAM FAIR,
TUESDAY, AUGUST 6, 1907.
THE COWLEY RAMS.

JAMES W. TAYLER will Sell by Auction, in this Fair, at 11.15,

30 GRAND PURE-BRED OXFORD DOWN SHEARLING RAMS, bred by and the property of JAMES HORLICK, Esq., Cowley Manor, Cheltenham.

The Rams are strong, good colour, well-boned and plenty of flesh, and being bred on the highest points of the Cotswold Hills are noted for their hardiness of constitution.

Prizes have been won, 1907, at the Oxfordshire County Show, Royal Counties, Bath and West, Gloucestershire and the Royal Show at Lincoln.

OXFORD GREAT RAM FAIR.
WEDNESDAY, AUGUST 14, 1907.

JAMES W. TAYLER will Sell by Auction, in this Fair,

20 GRAND OXFORD DOWN RAM LAMBS, bred by and the property of JAMES HORLICK, Esq., Cowley Manor, Cheltenham.

Further entries will oblige.
Offices: Cold Aston, Cheltenham.

By Messrs. A. & D. EDWARDS.

HEREFORD MARKET

MESSRS. A. & D. EDWARDS will hold their Special SALES of EWES AND RAMS, in Hereford Market, on WEDNESDAYS, AUGUST 21, SEPTEMBER 4, and SEPTEMBER 18. Commencing with Rams at 12 o'clock, and with Ewes at 2 p.m.

Offices: Corn Exchange, Leominster, and 67, Newmarket Street, Hereford.

By Mr. W. BAINBRIDGE.

Highly Important SALE of
PEDIGREE HACKNEYS AND PONIES, the property of Sir Gilbert Greenall, Bart., at WALTON HALL, WARRINGTON, on WEDNESDAY, AUGUST 7, 1907, comprising—12 HACKNEY BROOD MARES and their FOALS, 10 HACKNEY PONY MARES and their FOALS, Two and Three-year olds, &c., &c., and a few Harness MARES. Included will be the double London Champion Mare 13964 Rosarene, 2069 Florence (dam of three London first prize winners), 13513 Gold Foil, Champion London winner, and many other first-class animals by Goldfinder VI., Copper King, Sir Horace, &c.

On view, August 2nd and 3rd.
Catalogues and further particulars from
Mr. W. BAINBRIDGE,
Walton House, Warrington.

By Messrs. R. R. LEONARD & SON.

ATWICK FARM, HULL.

HIGHLY IMPORTANT SALE of the ATWICK LINCOLN LONGWOOL RAMS and GIMMER SHEARLINGS (Flock Book No. 64).

ROBERT R. LEONARD & SON are instructed by Mr. G. M. Gale to SELL by AUCTION, THURSDAY, AUGUST 15, 1907,
60 GRAND LINCOLN LONGWOOL SHEARLING RAMS and
100 GIMMER SHEARLINGS from this celebrated Flock.

Sale after 12 o'clock luncheon.
Conveyances meet trains at Hornsea Station (Hull and Hornsea line).
Auctioneers' address, Field House, Preston, Hull.

LINCOLN LONGWOOL SHEEP BREEDERS' ASSOCIATION.

LINCOLN SALES, 1907.

The Twenty-second SALE of LINCOLN LONGWOOL RAMS and GIMMERS by members of this Association will be held in LINCOLN on THURSDAY and FRIDAY, SEPTEMBER 5 and 6, NEXT.

WILLIAM FRANKISH, Secretary.
St. Benedict's Square, Lincoln, February 12, 1907.

By Messrs. WATERS & RAWLENCE.

TUESDAY, AUGUST 6TH, 1907.
THE MARKET HOUSE, SALISBURY.
THE BISHOPSTONE FLOCK.

MESSRS. WATERS & RAWLENCE are instructed by Mr. J. H. DIBBEN, to LET and SELL by AUCTION, at their Market House Yard, on TUESDAY, AUGUST 6TH, 1907, at 2·30 o'clock,
80 RAM LAMBS,
from his highly esteemed and old-established Registered HAMPSHIRE DOWN FLOCK.

Although Mr. DIBBEN does not exhibit at the leading shows, he still maintains his position as one of the leading breeders of Hampshire Downs; it is well known with what care his flock has been bred, and wherever Bishopstone blood is in service the most satisfactory results are attained.

The Auctioneers have always the greatest pleasure in recommending these ram lambs, and they do so again with increased confidence.

Catalogues of the AUCTIONEERS, Canal, Salisbury.

FRIDAY, AUGUST 2, 1907.

THE MANOR FARM, WINTERBOURNE STOKE, WILTS.
Four miles from Wishford Station, six from Wilton and nine from Salisbury.

MESSRS. WATERS AND RAWLENCE are instructed by Mr. CARY COLES to LET or SELL by AUCTION, on the Premises, on FRIDAY, AUGUST 2, 1907,
100 RAM LAMBS
from his highly-bred Registered HAMPSHIRE DOWN FLOCK.

It will be remembered what an extraordinary grand lot of ram lambs were let and sold at Winterbourne Stoke last season and the corresponding almost record average price which resulted.

This year's Lambs are bred on similar lines, and many of the same fashionable sires were in service, with the result that Mr. Coles is satisfied he will place before the public a selection equal to, if not surpassing, that of 1906, and the Auctioneers trust they may again have the support which the Flock so richly deserves.

Luncheon at 12 30 and Sale after.
Conveyances will meet the trains until mid-day at Salisbury, Wilton and Wishford.
Catalogues of the AUCTIONEERS, Canal, Salisbury.

MONDAY, AUGUST 12, 1907.

BRITFORD FAIR.
One Mile from Salisbury.

THE CHILMARK FLOCK.

MESSRS. WATERS & RAWLENCE are instructed by Mr. JAMES FLOWER, to LET and SELL by AUCTION, in the above Fair, on MONDAY, AUGUST 12, 1907, at 10.30 o'clock,
100 RAM LAMBS,
from his renowned Registered HAMPSHIRE DOWN FLOCK.

In the year 1894 Mr. Flower, the popular owner of the Chilmark Flock, commenced showing, and from that time forward has stood unrivalled both in the Showyard and the Sale Ring. Year by year the competition has been more keen, and yet the exhibits from Chilmark are practically unassailable, and since the last Sale at Britford Mr. Flower has eclipsed all his former achievements; his pens of Ram and Ewe Lambs having been honoured by winning all the Champion Prizes of the year wherever shown, with animals that for perfect type, depth of flesh and general excellence are unsurpassed.

On August 12 Mr. Flower will submit to Flockmasters the best 100 Lambs that he has ever produced, and possibly the best that ever entered a Sale Ring.

Catalogues of the AUCTIONEERS, Canal, Salisbury.

FODDER CROPS.

ONE SHILLING. Post free, 1s. 1½d.

W. A. May, "The Mark Lane Express,"

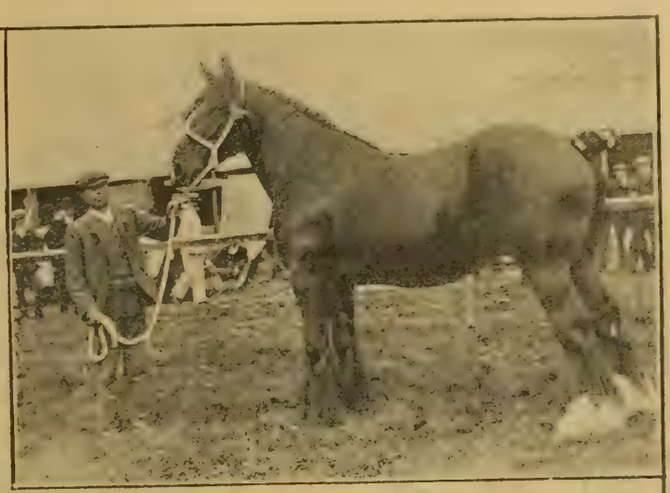
3, Wellington Street, Strand, W.C.

TUNBRIDGE WELLS SHOW.

A fixture ever popular, ever interesting and attractive, and what is of equal importance, ever well supported both financially and by an entry of high-class stock. Such is a terse but emphatic way in which to describe this excellent show it was the writer's privilege to witness on Thursday and Friday last. Twenty-one shows have come and gone since the writer visited this annual fixture. Many a well-known and popular breeder and exhibitor have during that period been lost. Such, however, is life. Old friends and supporters, many of them pioneers in the formation of the association are, alas! no more, but their sons and successors are equally to the fore, for year after year the show grows in importance, and thus becomes a lasting memorial to those who are no longer with us, under the capable management of the youngsters trained under the founders' guidance. These, profiting by the experience gained in former years, can show to those who attend the fixture one of the most interesting and attractive exhibits of the kind held anywhere in the South of England.

One, however, must not digress further, for, much as the memory loves to recall the pleasant reminiscences of former successes, the present demands our attention, and many a son of the three counties—Kent, Surrey, and Sussex—which, combined, form the area of the society's work, will be looking for in far off colonies, &c., the usual full report of the show that appears in this widely-circulated journal, which has readers wherever the Britisher finds a home beyond the sea.

HORSES.



The catalogue opens with the heavy horse section, now Shires and Agricultural horses, but in former years it was Clydesdales and Agricultural horses, one of the changes brought about during the period covered by the writer's connection with the show. The Shires have displaced the Clydesdales in this district, and the fine specimens of the breed briefly alluded to below that took leading honours at this year's show, are striking specimens of this noble breed of draught horses that will, we believe, despite the competition of the motor, be wanted for many a year to come. Norbury Menestrel, Mr. Salomons, led in the stallion class, followed by Lord Hothfield's Hutton Victor Chief, both weighty and typical horses of their breed, a description fully applicable, also to Mr. W. M. Cazalet's rn. Robert Burn's King of Tandridge won in the two-year-old class for Mr. Max Michaelis, and Danesfield Ringleader took the same position for Mr. R. W. Hudson in a good class of yearlings, Lord Hothfield's General of Hothfield being second. Lord Hothfield's Bella was best brood mare, her offspring taking second honours in the foal class, in which a grand colt by Childwick Champion, out of Poole Duchess, won first for Mr. R. W. Hudson. That grand mare Childwick Young took second honours in the brood mare class for Mr. Salomons, with the Marquis of Camden as rn. A capital entry was secured in the barren mare or gelding class; Mr. Salomons led with Briscot Chloris, followed by Locking Coquette, that hailed from the Tandridge stud. Sir E. Stern's Bardon Forest Rose led in the three-year-old fillies, followed by Norbury Desdemona from Mr. Salomons', whose Norbury Juno led in the two-year-old class, followed by her stud mate Norbury Surprise. Fuschia claimed for Mr. M. Pritchard first honours in the yearling class, with Sir Walpole Greenwell's Maiden Peach in close attendance. There were five classes with a local limitation in them, and those for any agricultural breed open to tenant farmers. Messrs. E. Neve, F. Brock, A. E. Poynter, R. Veitch, and J. G. Wright were leading winners. A grand lot of hunters were found in nine classes which comprised this section, well trained and mannered. The display in the ring was both satisfactory from the expert's point of view and attractive to the general visitor. Amongst those who owned the leading winners were Messrs. F. G. Colman, E. W. Robinson, J. H. Stokes, J. H. Joyce, W. Dawtrey, S. Lee, Smith, &c. The three classes of polo ponies were of good merit. Messrs. J. Barker, M.P., S. Mumford, and O. P. Brice were leading winners. The Hackneys, Hacks, and driving classes were largely supported, and the displays given in the ring kept both the railings and the Grand Stand well tenanted all through the two days the exhibition lasted. The Shetland ponies with two classes were quite a feature of the light horse section, and from the popularity of these classes with the visitors it is evident they would form an attractive addition to many a show that does not offer them opportunity for exhibition.

CATTLE

Kent was in the seventies a county in which more than one leading herd of Shorthorns was located, and if one may judge from the excellent cattle sent forward from the Kentish herds, it is evident there are several herds of the first rank in the county at the present time. It is also satisfactory to note that the value of the competitions here is such that breeders from distant parts enter and compete. Several of these were successful this year. Mr. J. Colman's well-known herd at Reigate won the challenge bowl for the best lot of Shorthorns on the ground—a fine lot they were—his bull Millhill's Favourite taking first in the old bull class, securing preference over Mr. Leon's Ascott Wanderer which was second, and Messrs.

TUNBRIDGE WELLS WINNERS.

Judging the Hunter Mares or Geldings at the Tunbridge Wells Show on Thursday last. The nearest horse is Mr. J. H. Stokes' Little Bronze, which proved to be the winner.

Mr. T. Henson's (Peterborough) Large White Sow, Bit of Fashion, which was First in the Class for a Boar of any Pure Breed other than Berkshire farrowed in or before 1906, at the Tunbridge Wells Show.

Shire Mare, Bella, owned by Lord Hothfield, which won the Shire Horse Society's Gold Medal and First Prize in the Class for Mare with Foal at foot or which has had a foal in 1907, at the Tunbridge Wells Show.

Mr. W. Millen's Kent or Romney Marsh Ram which won the Championship for the best Kent or Romney Marsh Ram registered in the Flock Book.

lead, Mr. R. W. Hudson following with Danesfield Barrington.

Sussex.

It was a very gratifying feature to find so good an entry representing this breed. Most of the classes were well filled, and the competition excellent all through. Champion honours and other special prizes, with first in the old bull class, were well deserved by that thoroughly typical Lord of Drungewick 5th, Mr. E. E. Braby's grand three-year-old bull. Mr. C. J. Lucas with Lord Eric was second and rn champion for males. It is questionable whether or not the placing of the Rev. R. P. Nevill's yearling bull Birling Prince before Mr. Hickman's Sammy in the next class was correct; be this how it may, the latter is quite one of the best bulls of its age. The Earl Winterton's Sunlight 5th and Sunlight 7th, first in the cow and three-year-old heifer class respectively, had a keen contest for the female champion honours; the latter won. Both are real good specimens of their breed. The Hon. R. P. Nevill was second in the former class and the Earl of Derby in the latter. Bewbush Evelyn and Tilsden Jessie were first and second two-year-olds, both fine heifers of choice quality, owned by Messrs. Swillard and Mr. F. Winch. In the yearling class Mr. Aungier took all three prizes with a grand trio of specially good heifers of fine quality.

Aberdeen-Angus.

A small entry of typical animals, in which champion honours and first in its class went to Mr. G. Drummond's Eboniser, a grand bull of its breed, Mr. Bridges taking second with Rubus. Sir G. A. Cooper, with Black for Ever, of Ballindalloch, led in the younger bull class; other leading winners in the female classes were Mr. G. Drummond, Sir G. A. Cooper, and Mr. J. H. Bridges.

Jerseys.

In this section there was found a grand entry of excellent merit. The competition was very close indeed, and the contestants included many of the leading animals of the breed. For the females Mrs. C. McIntosh, Ladies Hope, Lady De Rothschild, with Messrs. A. Miller Hallett, A. Pocock, and Sir E. Stern, were leading winners. In the capital classes for bulls Mrs C. McIntosh's winning yearling, Fossa Hero, took first and champion honours; Mr. L. Currie was rn for the winning old bull Glorious Lad, Mr. A. Miller-Hallett's Alfriston's Pride taking the premier place in the two-year-old class.

Guernseys.

This year's entry was fully an average one in number, with many very choice and typical animals amongst them. Messrs. E. A. Hambro, who won for cows, yearling heifers, and bulls; Mr. H. FitzWalter Plumptree, who won for two-year-old heifers; and Messrs. Smail and Hargreaves were the principal winners.

Dexters.

There were four classes of these cattle, two for males, and two for females. Mr. B. de Bertodano and the Duchess of Devonshire divided the honours equally in the first section, and the latter won in both classes of females. The quality of the entry was satisfactory.

The dairy cattle class was a large one of eighteen entries, and the entries in the butter test classes were twenty-six in the open class and two in the Guernsey class, whilst in the milking class no less than thirty-six entries were made for the three awards offered, a striking testimony of the interest taken in milk production at the present time.

SHEEP.

Two breeds are included in the schedule, namely, the Southdown and the Kent or Romney Marsh; both were well represented, and in all the classes the competition was very close and keen. The Southdowns take first place in the catalogue, the order of which we follow, hence the reason why reference is first made to this breed. A fine lot of two shear rams were present. Mr. W. M. Cazalet's Royal Champion ram repeated its success, followed by a fine entry owned by the Duke of Devonshire. Probably no better class of yearling rams has been seen for some time at this show than was the case this year. Thirteen entries were made, and in selecting for first honours and rn championship, Mr. J. Colman's very choice ram the judge put the best ram to the fore. The Exors. of Colonel McCalmont had second with a really good ram having plenty of masculine type and character. This was followed by a particularly good ram owned by Mr. F. Elmer Speed, having grand flesh and good fleece. The Exors. of Colonel McCalmont took the rn, and several others were hc and c. With an entry of eighteen ram lambs the next class was a notably good one. Here the Duke of Devonshire's entry secured the preference—a very fine and good-fleshed ram; but the Exors. of Colonel McCalmont, who were second, had a capital ram that looks like making a very fine yearling; this was second, followed very closely by Colonel N. W. Hammond's better entry that has a grand coat and very excellent flesh, the flock mate taking an hc. Many admired the rn lamb from Mr. Speed's flock, Prince Pretty, by reason of its grand flesh. Some six or seven others were commended. The yearling ewe class was a smaller one, but its merit excellent. Here Mr. J. Colman's pen went first, followed by those owned by the Duke of Devonshire as second and rn. Colonel Hammond won first and champion for females with a specially good pen of ewe lambs—a pen which was of the highest quality both for type, character, and quality. The Exors. of Colonel McCalmont were second, Mr. Cazalet third, and Colonel Hammond rn. Messrs. Wood and Toogood Parsons shared the honours in the tenant-farmer class.

Kent or Romney Marsh.

A few years back some ten pens were all that this breed's entries mustered. Now we find an entry of sixty-five with but a very small proportion of entries other than the best.

Mr. W. Milton won, in the absence of Mr. C. Files Royal Champion two shear, with a ram of real good merit in the two shear class, followed by Mr. F. Neame's entry as second and Mr. Quested's as rn. The yearling class, with an entry of twenty-two, three of which were absent, was so good a one that it was commended as a whole. First and second honours, a well-deserved distinction, went to Mr. J. B. Palmer. For a specially good pair of rams Mr. W. Millen was a close competitor, taking third honours with one that gave good satisfaction when examined, Mr. F. Neame's entry taking a well-deserved rn.

The merit and quality of the ram lamb class was equally good, in fact, we cannot call to mind ever seeing a better lot of this age at any previous show. The whole class was highly commended, and the first two places were filled by three grand ram lambs all owned by Mr. W. Millen, a very unique distinction, but one quite deserved; here Mr. J. E. Quested's entry took the rn. Mr. W. Millen was again to the fore in a particularly good class of yearling ewes in which Mr. J. B. Palmer had to be content with the second place, two of this Royal first prize pen having gone to New Zealand, Mr. F. Neame taking the rn. In a very fine class of ewe lambs, Mr. J. E. Quested was first with a well grown pen, Mr. A. J. Hickman followed, closely pressed by Mr. W. Neilson's two notably fine pens that were third and rn.

A good entry of wool was made, Messrs. H. Burton and H. C. Wickham winning for Southdowns and Messrs. Strouts and F. Neame for Kent fleeces.

PIGS.

The entry in the pig class was not a large one. Mr. G. T. Inman and the Duchess of Devonshire were leading winners for Berkshires, and Mr. T. Henson won all through the classes for every other pure breed.

A capital entry of goats were present, and there were also a large and good entry of poultry, pigeons, rabbits, &c.

Hertfordshire Show.

The annual show of the Herts Agricultural Society took place on Thursday at Hatfield. The horse entries compared very favourably with those of previous years, and so keen was the competition in the various classes that the judges had by no means a light task. A notable success was that of Capt N. P. Jeffcock, of Harpenden, whose exhibit of a fine three-year-old chesnut, named Happy Land, secured the premier award in the class for mares or geldings most likely to make a hunter, foaled in 1904. The animal was characterised as the finest two-year-old in the show. In the same class Captain Jeffcock secured a second with Harpenden Common, a brown two-year-old. One of the most interesting classes was that for light-weights, in which there were no less than twenty exhibitors, Mr. A. Cory Wright gaining the first, as he also did in the heavy-weights.

In the Cattle section Mr. C. F. Raphael, the well-known Shenley breeder, was to the fore. Mr. W. Jackson, the Hitchin breeder, was also a prolific winner, and he carried off the President's Championship Cup, for the best Shorthorn in the show, the property of a tenant-farmer, with his beautiful Waterloo Duchess. His young Roan Madeleine was the reserve for the same honour. Lord Mount-Stephen's Challenge Cup again changed hands, Mr. C. E. Wodehouse handing the cup over to Mr. A. D. Acland, of Welwyn. The Challenge Cup, for the best Shorthorn bull, entered in Coates' Herd Book, with a registered number, was won by Mr. C. F. Raphael's Shenley Baronet, a strong animal, and was second in its class to Viscount Enfield's Salperton Keeper. Mr. Raphael also won his own trophy, for the best Shorthorn heifer, with Queen Dorothy, a grand roan heifer, and was placed reserve with Shenley Goldie. Mr. A. D. Acland's Suspense won the first prize for the best Shorthorn cow, calved before 1904, but was closely run by Mr. Raphael's Golden Pearl, a roan five-year-old. Mr. Raphael captured the premier award for the best Shorthorn cow and two of her offspring, his competitors being Golden Pearl, Shenley Goldie, and a roan bull calf.

Mr. W. B. Greenfield was first for Polled bull with Duke of Haynes, and his Darling of Haynes took the first for the other sex. Some beautiful animals were shown in the section for Channel Island breed, and Lord Rothschild was a large and successful exhibitor. He won the only trophy for this breed.

Some excellent sheep were penned, and Sir Julius Wernher captured the majority of the prizes in this class. Hampshire Downs were not so strong a class as they have been at previous exhibitions, probably owing to the fact that Mr. T. F. Buxton, the well-known breeder, of Ware, recently sold a large portion of his stock. Sir Richard Cooper's Shropshires carried all before them in the department in which they were exhibited, and his seventeen moths old ram was an easy winner in the class from which Southdowns and Hampshires were excluded. Mr. Buxton's pen of three young Hampshire rams won the prize in their department, and also captured the championship prize of the best pen.

There is nothing like pedigree—among pigs—and the prize winners of the show were representatives and offspring of blue-blooded ancestors. The sexes were pretty evenly divided, and there was keen competition. The Hon. A. Holland-Hibbert's exhibits commanded chief attention, and were penned in grand condition. In the class for Berkshire boars, farrowed this year, he captured the three prizes offered, his stock beating some good animals. The Marquis of Salisbury was also a successful exhibitor, whilst Mr. R. A. Ayre and Mr. T. J. Morton upheld their reputation as breeders of valuable stock.

Harrogate Show.

The sixth annual show of the Harrogate and District Agricultural Society was held on Thursday. Unfortunately the weather was showery, but there was a capital attendance.

Shorthorns were shown by a handful of leading North country breeders. Mr. George Harrison's two year-old bull Czar and Lord Middleton's Illustrious Count were again placed in that order, while the Gainford Hall yearling bull Pride of Tees—a Dublin winner—was once more preferred to Capt. Clive Behrens' Swinton Waterloo Chief. Mr. Harrison's bull calf Charming Victor was beaten by animals shown by Lord Middleton and Mr. Richard Booth, of Warlaby, but otherwise the Gainford Hall stock was successful all along the line, the trump cards including the Royal winner Towy Princess.

Most of the Hunter classes were strong in numbers, and the quality was in some cases so even that a considerable time was taken in adjudication. There was a stiff fight in the aged class, particularly between a trio whose respective merits have often come up for judgment, and often evoked differences of opinion. Once more Mr. J. S. Rigg's grand Irish-bred chesnut Sir Lancelot—better known as Sligo—was brought to the front, as he was at Doncaster and at Bishop Auckland, while Mr. F. Rickaby's Revel and Mr. W. A. Simpson-Hinchcliffe's Silverthorn — both old winners—were placed second and third respectively. The four-year-olds were a small class. Mr. E. Hodgson's Sportsman—who carries the colours of the Royal and many other shows—again profited by the good qualities he has inherited from that famous sire Wales, and Mr. Rickaby's Red Prince gelding, Ripper, took second place.

It was an easy win in the two-year-old class for Mr. Hodgson's Mab, whose successful career this season includes victories at the Royal and the Highland Shows, though among the three-year-olds the Bridlington breeder's chesnut gelding Dignity had to give place to Messrs. T. and H. Ward's Adonis, a winner at the Northumberland and the champion at Gainford. The Stud Book Offices offered champion silver medals. That for the best Hunter filly foaled in 1904, 1905, or 1906 was awarded to Mr. J. O. Andrews, while the medal for the best mare or gelding foaled before 1904 was secured by Messrs. L. Snowden and Son.

The open classes for Hackneys attracted eminent exhibitors from a distance. Mr. G. C. Waud's Ferniehurst Fortuna, which beat Mr. Rickaby's Royal at Malton, was absent; so Royal stepped into the front rank in the harness class for animals not exceeding 13 hands. Among those not over 14 hands the chief award went to a Peterborough winner, owned by Mr. Cecil S. Fletcher. Other leading winners in the harness classes were Mr. Henry Watson (who also figured well in the smaller classes), Mr. J. W. Featherby, and Messrs. L. Snowden and Sons, who got the Hackney Society's silver medal.

The Shire Horse Society's silver medal was won by Mr. T. Burton, of Raskelf. The judges awarded Mr. W. A. Best's silver cup for the best mare or gelding, four years old or upwards, the property of a tenant farmer, to Mr. J. Theakston.

Cumberland County Council have declared in favour of the blackheaded gull as the friend of the farmer, his staple food being insects and worms, which are harmful to the farmer.

Welsh National Show.

The annual show of the Welsh National Agricultural Society opened at Aberystwyth on Tuesday. The weather was fine and warm, and there was a fair attendance during the morning, when the judging took place. In the afternoon large crowds flocked to the show ground.

The two Hereford bulls and cows sent by the King were a great attraction. His Majesty took second prize and special reserve for the best bull three years old or over with Admiral, first honours going to Endale, the property of Mr. Peter Coats, of Sheepcote, who also took premier place in the cow class. Mr. Joseph Rowlands was second, the King taking third place. In the class for the best bull, calved in 1906, the King came second with Yeoman, premier honours going to Mr. A. P. Turner (Pembroke). The principal winners in the class for Shorthorns included Lord Powis, Mr. F. A. Miller (Birkenhead), Sir Richard Cooper, Mr. R. Stratton (Newport), Sir A. Stepney, Lord Tredegar, Captain Harrison (Lichfield), and the Aberystwyth College.

A close fight for first place in the Welsh Black cattle section resulted in the honours going to Bangor College; Mr. R. M. Greaves; Mr. Richard Jones, of Towyn; Mr. J. S. Thomas, of St. Clears, and Lord Stanley of Alderley.

In the Shire Horse classes some well-known winners appeared. Mr. F. E. Muntz's King Forest was a winner, as was also his Aldeby Lady Jameson in the three-year-old class. The Earl of Powis had several cards, including first for yearling and two-year-old fillies. Mr. Humphreys won with his famous stallion Hendre Baronet and with a yearling colt. Other leading prize winners were Mr. J. B. Brooks, Mr. H. Oakley, and Mr. E. Green.

There was a small turnout of Hunters and a very much improved entry of Hackneys Sir Walter Gilbey had three first prizes with Brave Member, Gallant Girl, and Lively Birthday.

In the open Harness class, Mr. Evans (Wrexham) took the first honours. Tom J. Mathias (Cardigan) captured the Hackney Society's silver medal, and F. V. Grange (Farndon) secured first place in the jumping class. Farmers' turnouts:—1, W. Rowlands (New Cross); 2, Evan Richards (Capel Seion). Single harness exhibit:—1, Evan Jones (Llandilo); 2, T. J. Mathias (Cardigan). Best jumper, previous winner excluded:—1, Whittingham Bros. (Burton-on-Trent); 2, Dr. Davies (Machynlleth); 3, D. Jones (Pontyberem). Tradesmen's turnouts:—P. Edwards (Aberystwyth) took all the prizes. Hackney mare or gelding in harness:—1, Mr. Evans (Wrexham); 2, T. J. Mathias (Cardigan); 3, the Hon. Mrs. Ward (Old Colwyn).

The Welsh Ponies section was the strongest of the show, the principal prize-winners, including Lord Tredegar, Mr. C. Powell (Tregaron), Mr. T. J. Mathias (Cardigan), Mr. R. Falconer (Abergwe'i), and Sir Walter Gilbey, whose exhibit, Shooting Star, won the silver medal of the Welsh Pony and Cob Society.

In the open classes for sheep other than Welsh, the principal places were assigned to exhibits from flocks of Sir Richard Cooper, Mr. Frank Bibby, and Mr. Alfred Tanner (Shrewsbury).

There were some fine specimens of the Welsh mountain sheep shown, Bangor University College securing two firsts and seconds. Mr. R. E. Jones (Corwen) beat the University in the class for yearling rams. Mr. Lawton Moore (Brampton Brian), Mr. John Venables (Kerry), and Mr. W. Bishop (Broseley) took chief prizes for Kerry Hill sheep.

The pig classes were stronger than usual. Sir Gilbert Greenall had two firsts with Whites; Mr. Jefferson taking two first prizes with Berkshires.

Lord Plymouth presided over the general meeting of subscribers. Mr. Vaughan Davies, M.P., announced amidst cheers that the Prince of Wales had consented to become patron of the society.

The report of the council, recommending Welshpool as the next meeting place was moved by Sir Richard Green Pryce, and seconded by Mr. Coltman Rogers (Knighton).

An amendment was moved by Mr. Corbet (Wellington) seconded by the town clerk of Aberystwyth, that the show should remain at Aberystwyth for another year.

This was carried by a large majority.

Belfast Show.

The annual horse and sheep show held under the auspices of the Royal Ulster Agricultural Society took place in the fine and spacious grounds at Balmoral, Belfast, last Wednesday, Thursday, and Friday. It was somewhat noteworthy that even in agricultural matters the present trades' war in Belfast made unfortunate interference. Very little carting was done on the roads leading to the Balmoral grounds, the pickets being too vigilant, with the result that not a few of the shepherds had to transport their prize sheep to the pens as best they could. Difficulty was also even found in carting feeding stuffs to the grounds.

Only a limited number of the horse classes was judged on the first day. In the class for Thoroughbred brood mares Mr. Charles Dundee, Ballycarry, County Antrim, was both first and second, the gets of his exhibits also securing the foal prizes. Other winners in the brood mare classes were Mr. Patrick Turley, Castlewellan; Mr. James Milling, Comber; and Mr. Robert White, Crossgar. In the carting classes the leading prizes were secured by Mr. D. G. M'Cammon, Clough, County Down; Mr. Charles Dundee, Mr. Arthur Macan, Castle Bellingham; and Capt. R. Gr. O'Callaghan, Swords, County Dublin. In the two-year-olds the principal winners were Miss J. Allan, Stormont Castle, Belfast; Mr. James Simpson, Comber; and Mrs. Upton, Moutrav, Emyvale, County Monaghan.

The Deramore challenge cup for the best three-year-old hunter, was won by Mr. Michael Turley, Belfast with his bay gelding Ben Battle, Mr. Simpson, Comber, being reserve with his brown filly Miss Henry.

In the driving and riding classes several cross-Channel exhibitors figured prominently in the prize list. In the class for double-harness horses under 15.2 hands, Mr. John Makeague, Golborne Park, Newton-le-Willows, carried off the honours with his notable couple of bay geldings, Reflector and Luminator, which won in double and single at Glasgow, Mr. Alex. Gemmell, Ayr, making a spanking second with Prince of Ayr and Princess of Ayr, both favourites in the ring. Mr. Gemmell also won in the single harness 15.3 hands class.

The sheep made a somewhat larger muster than previous years, while the quality, especially amongst the Blackfaced mountain classes, showed considerable improvement. Among the Border Leicesters the quality was very high. In the class for rams, two-shear and upwards, Mr. T. W. Stokes, Anahilt, Hilsborough, led with a well-bred son of Midland Reward, lambed in 1905, and bred by Mr. James Dunlop. Shearling lambs were forward in larger numbers, and the red ticket again went to Mr. Stokes with a sheep of great size, sired by a grandson of Mertoun, which was bred by Lord Polwarth. The first winner, shown by Mr. Robert W. Bell, was a home-bred of great promise, having both wool and substance. The shearling ewes were not a very strong class, and Mr. Robert Bell again figured as the first prize winner.

Mr. Robert F. H. White, Aghavoe, Abbeyleix, Queen's County, led in the classes for aged shearling and ram lambs. He also secured first for shearling ewes, and was second for ewe lambs. Other prominent winners were the trustees of the late Miss Rose, Mallaghmore, Monaghan, and Captain W. L. Naper, Oldcastle, co. Meath. The Blackfaced Mountain sheep comprised one of the finest shows that has been seen in the North of Ireland for many years. In the class for aged rams Mr. St. Clair M. Dobbs, Glenariff, led with the Woolford-bred sheep purchased at Perth two years ago. The challenge cup for the best Blackfaced shearling ram was won by Mr. Barton, as was also that for the best group.

Malton Show.

A large entry was obtained for the Malton Show, which was held on Wednesday, but the fine weather for haymaking kept away a large number of farmers who are in the habit of visiting the show.

A grand mare from Mr. Watson, Tadcaster, took Sir Tatton Sykes's cup in the best mare and foal class. This is her sixth leading win this season, and the fiftieth in her career. The mare is by Champion Royal Danegelt, who did so much for Hackney blood in England.

In the two entire Hackney classes were sixteen entries, including two of Mr. Frank Buttle's best. The first prize for two-year stallion was won by John Beal, of Hull, and the second by Mr. Young, of Marton. The Rosador blood was very successful throughout. Mr. Grandage, of Yeadon, won for brood mare and foal. Mr. James Jebson, Pocklington, was first in the three-year-olds with a big, clean-limbed gelding by Storm King. Mr. Leaf, of York, was first for two-year-olds, and Mr. John Lett, Rellington, first for yearlings. Ninety hunters were shown, and the only weak classes were two-year-olds and tenants' brood mares, which came up badly. Lord Middleton won in the open brood mare class with a useful chesnut by his own horse, Gordon. Lord Garnock's prize of £20 for four year's hunting gelding drew a class of fifteen. The first prize winner was Mr. Stokes, Market Harborough, for Radiance, a Darlington and Doncaster winner, and the second Mr. William Brown, Slingsby.

Great attention is nowadays paid to Shires in the Malton district, and no one has done more to encourage the rearing of this breed than Lord Middleton. In the yearling class Mr. W. Nutt produced a big strong bay colt by Redmoor Victor, while two very nice two-year-old fillies were sent by Mr. T. Burton and Mr. W. Webster. Three-year-olds constituted a very attractive group, though Mr. Burton's brown filly, Sandcliff Daisy, by Mere Boy, was a clear winner from Lord Middleton's bay gelding Birdsall Harold.

All the cattle were Shorthorns. In the old bull class there was a keen contest between Mr. George Harrison's Czar and Lord Middleton's Illustrious Count, both of which have been the round of the shows this year, and have scored, met in the same class, with in and out results. On this occasion the judge decided in favour of Czar. In the yearling bull class eight animals competed, and again the judge had to decide between representatives of the Gunnard and Birdsall herds—Pride of Tees and Birdsall Brewer. The latter is much the bigger animal, but scarcely so shapely as Mr. Harrison's Northumberland winner, and no fault could be found with the verdict. Lord Middleton's bull won here last year as a calf.

Despite the bad season, the sheep were quite up to the Malton standard, but the competition was rather restricted. In the lamb classes Lincolns and Leicesters were grouped, and some confusion was almost bound to arise in assessing the respective merits of the two breeds.

Upholland Show.

The annual show of the Upholland and District Agricultural Society was held on Wednesday. The fine weather accounted for a record gate, and the popularity of the show from an exhibitor's point of view was reflected in the increase in the number of entries, which were 673, compared with 532 last year.

CATTLE.—Bull any age: A. Bentham, Upholland. Dairy cow, in calf or milk: E. Birchall, Rainford; M. Ashworth, Rochdale. Ditto, local class: W. Bradley, Upholland (1 and 2).

PIGS.—Boar or sow, any variety: Swales and Morris, Upholland; W. Hilton, Ince.

HORSES.—Roadster stallion: B. Edmond, West Derby. Draught stallion: R. Liptrot, Shevington. Mare or gelding, for draught or agricultural purposes: T. Kemp, Great Harwood; Exors. of R. Alty, Mawdesley, Ormskirk. Brood mare, for draught or agricultural purposes, with foal at foot: Exors. of R. Alty. Foal, foaled in 1907: Exors. of R. Alty; G. W. Bowker, Upholland. Brood mare, saddle or harness, with foal at foot: A. Smith, Crank; H. Haworth, Mawdesley. Light colt, gelding, or filly, foaled in 1906: J. Cubbin, Westhoughton; Swales and Morris, Upholland. Light filly or colt, foaled in 1907: A. Smith, H. Haworth.

Thorney Shire Show.

Interest centred in Thursday's annual show of the Thorney Shire Horse Society owing to the presence of several visitors from Germany, Major von Jagow and Major von Brauconi representing the horse-breeding department of that country, accompanied by Messrs. Van Dratten, Hubbe (Kattermark), and the Beselier (Saxony). They expressed unbounded admiration of the display made of the Fen Shires, and surprise at their great size. With the exception of the exhibits of four breeders, all the animals were shown by tenant farmers on the Duke of Bedford's estate, the entries totalling 124. The foals were a capital collection, while there were also great classes of yearling, two years, and three years old fillies and mares. The Shire Horse Society's silver medal—Mr. Topham.

SHOW GOSSIP.

Royal Lancashire Show.

The Royal Lancashire Show opens on Thursday next. The showyard is just outside Bolton proper on the Manchester Road, a very short tram ride from the station and a very short walk from Moses Gate. It occupies thirty-two acres, including the eighteen acres occupied by the show in 1894 on the land the property of the Earl of Bradford.

The following is a comparative statement of entries, showing this year's, the average for the past five years, and those at the Bolton show in 1894:—

Section.	1907. Bolton.	Average of preceding five years.	1894. Bolton.
Cattle	263	258	143
Light horses	264	301	249
Heavy horses	100	111	97
Sheep	97	93	95
Pigs	214	140	—
Cheese	69	79	45
Butter and working dairy	137	137	56
Eggs	64	34	—
Honey	56	108	56
Poultry and pigeons	1,447	1,441	712
Tenant farmers' and local classes	171	176	128
Implement stands, &c.	240	—	163
Total entries	3,142	3,135	1,764

The secretary of the Essex Agricultural Society (Mr. Fred Taylor), has been the recipient of a very handsome present from Sir Walter Gilbey, Bart., president of the society, comprising a solid silver Georgian tea and coffee service with silver kettle on stand and spirit lamp. Sir Walter, in sending the present to the secretary, in his accompanying letter states:—"I feel it is only a small acknowledgement of the many acts of kindness in carrying out successfully the Essex Jubilee Show." The following inscription also appears:—"Pre-

sented to Mr. Fred Taylor by Sir Walter Gilbey, Bart., president of the Essex Agricultural Society, for the Jubilee Show (50) at Chelmsford June 12 and 13, 1907, in recognition of his valuable services as secretary of the society."

The forthcoming Tring Show is a fixture which the whole countryside noted some time ago, and is always held on the Thursday in Bank Holiday week. However, from the information to hand, and from that contained in the very explicit programme that has been issued, it may be seen at a glance that the committee have planned an excellent day's arrangements for the usual large gathering of friends and visitors who will make their way to Tring on the 8th prox. Tring has well earned the title of being the best one-day show in the country and well deserves its popularity, as it is immaterial in which direction you turn, either to the agricultural section, the sheep-dog trials, the events in the large ring, the catering, or the minor details of the museum and grounds, or the music and fireworks, everything will be found complete, and will work out on the show day to the mutual satisfaction of visitors and those who had the arduous task of mapping out the various details. A programme may be obtained by sending 3d. in stamps to Mr. F. J. Brown, secretary, Tring.

At a meeting of the local executive committee of the Royal Agricultural Society held at Newcastle, a letter was read from the secretary to the Royal Agricultural Society, requesting the local committee to nominate members to serve on the General Newcastle Committee of the society, and the following representatives were accordingly elected:—The Duke of Northumberland, K.G., the Lord Mayor of Newcastle, the sheriff of Newcastle, Mr. Johnstone Wallace (Deputy Lord Mayor), Sir Joseph B. Ellis, Mr. J. J. Gillespie, Mr. Wm. Chrystal, Mr. W. J. Bolam, Mr. J. D. Walker, and the local secretary (Mr. A. M. Oliver).

The eighteenth annual show of the Warrington and District Agricultural Society will be held in Walton Park on Thursday, August 15. Prizes, cups, &c., are offered to the value of about £750. As in past years, Sir Gilbert Greenall, Bart., the president, gives a district champion cup value £10 and two silver cups value £5 each. Mr. F. Stapleton Bretherton gives a special prize value £5, and the vice-president, Col. Legh, a silver cup value £5, while Lady Greenall offers three special prizes of £2 each to the blacksmith for the best-shod horse which has been regularly shod at the same forge during the six months or thereabouts previous to the date of the show, in certain specified classes.

Medals are offered by the Shire Horse Society, the Hunters' Improvement Society, and the Hackney Horse Society. There are classes for Shires, Hunters, Hackneys, harness horses, jumpers, tradesmen's or tenant farmers' turnouts, cattle, pigs, cheese, and butter. Entry forms and all particulars may be obtained from Mr. H. Beresford Melville, Bold Street, Warrington. Entries close on Wednesday next, July 31. It should be noted that the society's district on the Cheshire side of Warrington now extends to sixteen miles from Market Gate, Warrington, and extends in the various directions as far as the Budworths, Kelsall, Wharton and Over, Ashton, Dunham, Thornton, Stoke, Barrow, Plinstone, Tarvin, Middlewich, Peover, Wilmslow, Cranage, Eaton, Mobberley, &c., and, of course, includes the whole of the district nearer to Warrington. Those parts of Cheshire lying east of the railway from Broadhurst to Manchester, and north of the railway from Broadheath to Stockport are excluded. The society's radius on the Lancashire side is twelve miles from Market Gate, Warrington.

The forty-third annual show of the Lancaster Agricultural Society will be held at Lancaster on Wednesday, August 21, and for it a most attractive prize schedule has been drawn up, including classes for horses, cattle, sheep, dogs, poultry, butter, cheese, honey, and roots. Good class prizes are offered as well as several specials, and the society should have another successful show. The dog and poultry sections have this year a considerably extended classification, and upwards of £250 will be offered in ninety classes for dogs and fifty-five classes for poultry. Entries close at 8 a.m. on Monday, August 12, after which time none will be accepted—there are no late entries. Forms, prize schedules, &c., can be had of the secretaries, Messrs. T. Armitstead and Son, Penney Street, Lancaster.

The schedule of prizes for the Woodstock Agricultural and Horticultural Association is now ready. The show will be held on Tuesday, September 10, in Blenheim Park, Woodstock, and the entries for the horse section will close on September 7. The schedule of prizes can be obtained from Mr. T. D. Hughes, secretary, Woodstock, Oxon., the new secretary of the association.

LINCOLNSHIRE FARMERS' UNION.

A goodly number of farmers assembled at the Gordon Arms Hotel, Market Rasen, on Tuesday, when Mr. Cook Holdershaw, J.P., chairman of local branch, presided over a meeting of this Union. He was supported by Mr. Howard (vice-chairman of the Union), the Rev. T. Hamilton, of Skellingthorpe, Mr. H. W. Palmer (the secretary of the Union), and Mr. J. H. Nettleship (hon. secretary for the branch).

Mr. Holdershaw said that if farmers would improve their position they must join the Union and stand forth as one man, and not submit to having first one imposition and then another placed upon them. Agriculture was the most important industry in the country, and were they going to submit to be dictated to and crushed and ruined by those people who, provided they got cheap bread themselves, did not care whether agriculture prospered or not. Mr. E. W. Howard followed with an interesting address, in which he touched organisation, "The Small Holdings Bill," and "The Lighting Bill" With respect to the former he said the Union were in favour of the formation of small holdings on sound economic lines, the whole cost of such to be paid out of the Imperial Exchequer; but they were opposed to the Bill in the present form. The Rev. T. Hamilton followed with a stirring speech, which was a real call to arms. He pointed out that it was only by combination that they would get their wrongs righted. In appealing for an augmented membership Mr. Palmer touched upon the question of insurances and railway rates, showing how hardly the farmers of Lincolnshire and Nottingham were handicapped in this respect compared to the farmers of Yorkshire. A vote of thanks to the chairman and speaker concluded a successful meeting.

SOCIETY ANNOUNCEMENTS.

WARRINGTON AND DISTRICT AGRICULTURAL SOCIETY.

President—Sir Gilbert Greenall, Bart.
Vice-President—Colonel Legh.

18th ANNUAL SHOW
To be held in
WALTON PARK, near Warrington,
On THURSDAY, AUGUST 15, 1907.
Prizes, Cups and Medals value £700.
Jumpers, Turnouts, Shires, Hunters, Cattle, &c., &c.
LAST DAY OF ENTRIES,
WEDNESDAY NEXT, JULY 31st.
Prize List, &c., may be obtained from the Secretary—
H. BERESFORD MELVILLE.
Estates Office,
Bold Street, Warrington.

HEANOR AGRICULTURAL AND HORTICULTURAL SOCIETY'S 35th ANNUAL SHOW will be held at Heanor, AUGUST 13, 1907. Entries close August 6, 1907. For schedules apply—Horses: J. Covel, 11, Market Street, Heanor. Poultry, Rabbits, &c.: G. H. Holmes, 22, John Street, Heanor.

THE EAST BERKS HORSE SHOW SOCIETY will hold its 11th ANNUAL SHOW at Hawthorn Hill Race Course, near Maidenhead, on THURSDAY, AUGUST 22, 1907. Entries close July 30, or, with double fees, August 6. Full particulars and Entry Fees may be obtained of the Secretary.
WM. ROPER,
Kentish Buildings,
Tunbridge Wells.

Fertilisers and Feeding Stuffs.

Agricultural Experiments in the Eastern Counties.

The Education Committee of the East Suffolk County Council have been conducting, with the co-operation of the Agricultural Department of Cambridge, a series of experiments, the results of which form an instructive object lesson for the farmers of the locality, and are of sufficient interest to agriculturists throughout the country to merit a notice. It has always been regarded as a problem whether poor meadow land can be improved at a moderate expenditure; recent experiments in various parts of the country have shown that trials with basic slag have helped to solve the question in a satisfactory manner, and the experiments to which we are now referring confirm this opinion. In 1901 a meadow of two acres was divided into eight quarter plots, one of which was left unmanured, and it is now again demonstrated that on heavy clay soils the most profitable increase has been produced by a single dressing of 10 cwt. of basic slag applied to it. This single application of manure has resulted in an average increase of 27 cwt. of hay during each of the past five years, and valuing the hay at 40s. per ton, there is a gross profit of £12 after deducting the 24s paid for the manure. The second best result has been obtained where superphosphate has been used in conjunction with sulphate of ammonia. This mixture, although it produces a heavy weight of hay, does not yield hay of such good quality as the basic slag, and it is not recommended for this type of clay soil. Another interesting point brought out was that it is better to give 10 cwt. of basic slag in a single dressing than the same quantity of the same manure in two dressings of 5 cwt. each. The latter only gave an increase of 20 cwt. per acre during each of the past five years, and a gross profit of £8 16s. after deducting the cost of the manure, as compared with 27 cwt. and £12 from the large single dressing.

Poor Pasture.

The experiments also included a set of trials framed on what is, after all, the most practical basis—namely, the effect of the fertilisers on differently-treated plots in sheep feeding in the pasture. In his report on the sheep grazing test, Professor Middleton records that, on the average, the slagged portion has carried three times as many sheep as the unslagged portion, and in the second year showed a profit of 69s. per acre, this figure not taking into account the unexhausted value of the slag, the effect of which "may last from ten to fifteen years."

Rotation Experiment.

The rotation experiment is another very important feature at Saxmundham, the object being to determine the effects of nitrate of soda, superphosphate, and muriate of potash, used both alone and in combination, on each of the crops of a four-course rotation, the crops being—(1) mangolds, (2) barley, (3) clover or beans, and (4) wheat. These experiments commenced in 1900, and have shown that, on this heavy soil, the best combination for roots was nitrate of soda (2 cwts. per acre) and superphosphate (2 cwt. per acre). For barley, the same combination had the best and most marked effect, raising the crop, on the average, to 43 bushels per acre, as against 33 bushels where superphosphate was used alone, and 30 bushels on the unmanured plot. Last year the barley crop at Saxmundham was a very fine one, superphosphates being especially beneficial, 2 cwt. of this manure, costing about 5s., having produced an increase of 12 bushels per acre on two of the plots. Clover is the next crop in the rotation, but where a good stand is not obtained beans are substituted. The best results with clover have been obtained with a mixed manure, of which superphosphate was the chief ingredient, but as a rule neither nitrate of soda nor potash gave any very paying results. With beans, however, the results have been most striking. The average crop has been increased by nearly twelve bushels by the use of superphosphate; and a mixed manure (2 cwt. nitrate of soda, 2 cwt. superphosphate, and 1 cwt. muriate of potash) produced a crop of fifty nine bushels per acre in 1906. For wheat, also, the most useful manure has been superphosphate, but although this is the case, the lesson seems to be that on land like that at Saxmundham, which has been farmed well in the earlier courses of the rotation, and which follows a nitrogen gathering leguminous crop, it is not likely to require any manure for wheat.

Soil Analysis.

Another point which these experiments have brought out is the unreliable character of ordinary soil analysis as a guide to the treatment of the land with fertilisers.

The experiments were conducted on two farms, one of them, according to soil analysis, well supplied with phosphoric acid, and yet the experiments, carried on for a period of six years, have clearly shown that the one chief requirement of the soil has been available phosphoric acid. On the other farm, containing less of this constituent in the soil, its application produced little effect, showing that what little existed in the soil was in a more available condition. This indicates the desirablity that farmers in a district, cultivating the same class of soils, should carefully watch the effect of fertilisers on the soil, and should be guided by such experiments as we are reviewing, made on soils similar to the soil of their farm.

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

BIBBY'S ANNUAL

EDITED BY

JOSEPH BIBBY

A New Number of the above

IS

NOW ON SALE

AT THE BOOKSTALLS

PRICE 1/- NET.

Some people say this is the best number we have brought out; others are not so sure. One newspaper remarked that, taking it altogether, it was the best magazine on the market; others expressed a contrary opinion.

On the first day of its publication we received the following telegram from Sir Alfred Jones:

"Heartiest congratulations upon completed 'Bibby's Annual.' Simply beautiful. Very proud of it as Liverpool production."

But the next morning a letter from an old friend, whom we had not seen for 30 years, admonished us for expressing opinions which did not square with the orthodox view of things.

It is, therefore, difficult to say whether the reader of this advertisement would do wisely to invest a shilling upon it or not.

He had better, we think, ask at the bookstalls to see a copy and judge for himself; or, if the Bookseller does not keep it, enclose stamps for the amount to the address below.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

THUNDERSTORMS.

A "typical" British summer has been described, somewhat sarcastically perhaps, as consisting of two or three fine days and then a thunderstorm. Perhaps this is not quite a fair description, but the fact, nevertheless, remains that if the weather takes an exceptionally warm turn we look for, and generally get, a taste of thunder which not infrequently upsets climatic conditions for the next few days.

Since the improvement came in the weather this summer, which made haymaking possible and put farmers into a better humour than they had been for some time before, the rolling of thunder, flashing of lightning with the accompanying deluge of rain, have been experienced in many places, and in some cases doing damage to life and property.

Without considering the risks which are always present when a thunderstorm is raging, these sudden deluges are always unwelcome at this time of the year, because they promptly put a temporary stop to haymaking operations, and have the effect of breaking down the grass and corn in a deplorable manner.

Under thundery conditions, too, the rain beats down with such force on to cultivated land that it pans down and cracks afterwards, and stirring with the hoe becomes a necessary operation.

BANK HOLIDAY SHOWS.

August Bank holiday is a great day throughout the land, and in many places the countryfolk spend it in their own way—by having a show, either horticultural or agricultural, or a mixture of both.

Generally speaking, it is the local agricultural societies which select Bank holiday for their annual exhibitions, and the reason is not far to seek, as this is the day when the world is playing, and a good gate may be expected.

We are brought into close contact with the agricultural societies of all kinds, and for none have we more respect than for the local institutions which hold one-day shows and are supported by local people.

The average farmer looks upon meetings like the Royal, the Bath and West, and other great shows as events to be visited if possible, but they are outside his particular circle. With the local show things are quite different, for it is his own, so to speak, as he visits it, supports it, and exhibits at it. As a matter of fact, local societies and their annual shows have an effect of a beneficial character amongst a class of work-a-day farmers that larger institutions do not reach.

A TOUCH OF HUMAN NATURE.

Side-lights often reveal characteristics which the direct rays of an illuminant cannot produce to the vision. Agricultural shows are in no sense different to other events in this respect, and a couple of little flashes upon the Bath and West Show at Newport have revealed delightful incidents, of interest to agriculturists and the general public.

The parade of veterans at the show for the inspection of the Prince of Wales has resulted in the arousing of permanent interest in the old soldiers and sailors of the place. The direct outcome of this is the proposal to found a branch of the Discharged Soldiers and Sailors' Association for the District. The movement is one which is deserving of every success.

One of the new movements of the commander of a station in the West is the training of soldiers whose time is about to expire for work on the land, so that the two things have a bearing on each other in a very interesting way.

The other limelight was turned upon the herdsmen of the show by the secretary, Mr. Plowman, who holds the opinion that "there are still some folk who do not need an Act of Parliament to induce them to follow in the steps of the Good Samaritan."

The story is, that two days previous to the opening of the Bath and West Show at Newport, a little lad, a town waif—very ragged and ill-shod—obtained admission to the showyard by concealing himself amongst a waggon-load of sheep, so escaping the notice of any gate-keepers. In the yard he made himself useful, and soon earned a character amongst the stock keepers of being "a real handy lad."

The men took rather a fancy to him, and generally cared for him in a fatherly way. At the end of the week these kind-hearted shepherds (they were mostly those looking after the Shropshire and Hampshire Downs) began to bethink themselves what else they could do for the boy, for they did not like to leave him the tattered and forlorn waif they found him.

They had a whip round amongst themselves, quite in a quiet and unostentatious way, and collected 23s. They escorted the lad to an outfitter's, and provided him with a complete rig out.

But beyond that one of the shepherds offered if nothing better were forthcoming, to take the

lad back with him into his own district, in the belief that he could find him a situation there.

One of the stewards on the Sunday morning, noticing a commotion round one of the standpipes for supplying the stock with water, went to investigate, and found the stockmen were doing their job thoroughly by giving the lad a complete grooming before putting him into his new suit. Then they took him along with them to the showyard service.

The Bishop of Llandaff, who was going to preach, was so pleased at the incident when Mr. Plowman mentioned it, that he made a direct allusion to it in his address. He said: "Since I have been on the ground this afternoon I have heard a pretty and touching story of the care and kindness you have shown to a little wanderer who has come across your path, and this act has proved you to be men of generous, kindly sympathy, and men of big and kindly hearts."

A sentiment that all will echo!

THE FARMERS' DIARY.

TUESDAY, JULY 30.—Meeting of the Bath and West Society's Council—Horse Sale at Lynn—Horse Sale at Wrexham—Cliffe and Selby Show—Cattle Fairs at Hornby, Penrith, and Bromsgrove—Linton Sheep Fair—Newtown (Monmouthshire) Horse Fair—Entries Close for East Berks Show—Entries close for the Gainsborough Show—Entries for the Durham County Show close.

WEDNESDAY, JULY 31.—Royal Agricultural Society, Meeting at 16, Bedford Square at noon—Crook Show—Elgin Show—Tadcaster Show—Thirsk Show—Chilton Lodge Ram Sale—Sale of Southdown Lambs at Chichester—Sale of Suffolk Sheep at Ipswich—Whitchurch Show—Fairs at Abergavenny, Saintfield, Alford, Market Harborough, and Uttoxeter—Lambeth Wheat Tenders to be sent in to Mr. Thurnall, Brook Street, S.E.

THURSDAY, AUGUST 1.—Lammas—Many old-fashioned fairs, otherwise obsolete, are still held on this day—Sale of Pedigree Rams at Totnes—Royal Lancashire Show at Bolton, first day—Fairs at Bolton, East Ilsley, Partney, Broughton, Devizes, Wisbech, Chepstow, Doncaster, and Malham—Sending-in Day for the Newbury Show—Entries close for Hackney Stud Book.

FRIDAY, AUGUST 2.—Lamb Sale at Ashford, Kent—Horse Sale at Ely—Royal Lancashire Show at Bolton, second day—Fairs at Stony Stratford, Billericay, Kingston, Northwich, Stockport, and Newark—Winterbourne Stoke Ram Sale—Live Stock Sale at Yeovil.

SATURDAY, AUGUST 3.—Royal Lancashire Show at Bolton, third day—Annandale Show at Lockerbie—Padiham Show—Perth Show—Fairs at Buckingham, Billericay, Bootle, and Redruth—Sending-in Day for the Chichester Lamb Sales.

MONDAY, AUGUST 5.—Public Holiday—Gainsborough Show—Hemel Hempstead Show—Wisbech Show—Royal Lancashire Show at Bolton, last day—Barnstaple Show—Kelso Show—Lydford Show—Felton Park Show—Hereford Horse Show—Sutton (Yorkshire) Show—Ludlow Show—Lutterworth Show—Tutbury Show—Hexham Show—Kingston-on-Soar (Derbyshire) Show—Hertford Horse Show—Fairs at Altrincham, Okehampton, Boston, Brigg, Northampton, Pocklington, Cheltenham, Kirkoswald, Welshpool, Aberystwith, Redditch, Crewe, Thrapston, Trowbridge, and Newcastle-under-Lyme—Horticultural Shows at Crediton, Grantham, Westerham, and Lichfield—Entries close for the Poulton-le-Fylde Show—Entries close for the Bakewell Farmers' Club Show.

Notes of the Week.

From henceforth St. Swithin must be regarded as a regular fraud. Not forty-eight hours after the bright sunny day devoted to the saint, down came the rain in a deluge.

The return of the unsettled weather was most disheartening to farmers with grass cut lying in the fields.

Considering the cold and wet season, the official report of the Board of Agriculture as to the unsatisfactory condition of the crops is only what one expected.

We may seek consolation in the fact that other countries have suffered even more severely, so that prices will most probably move upward.

The King made one of his tactful little speeches the other day at Calne.

"The interests of agriculture," said his Majesty, "have always occupied a considerable portion of my thoughts and interest, and you may be certain that I shall continue to feel the warmest solicitude for the prosperity of this most important industry."

The "all-red-route" is being pushed by Liberals as a counter policy to the movement towards preference, or protection of home industries.

A Government subsidy for quick steamers—that's the idea.

Farmers in the colonies get their land free, pay practically no rates or taxes on it, get all sorts of help and scientific advice from a solicitous Government, and, finally, are to have their produce shipped to this country in subsidised steamers.

In truth a lively prospect for our highly-rented and over-taxed farmers.

In consequence of the enormous demand for petrol for motors, its price is advancing rapidly, and there is talk of a petrol famine.

Cheap alcohol is a good substitute. Should there not be an opening for the manufacture of alcohol from potatoes in this country as in Germany?

In Germany something like 4,000,000 tons of potatoes are used every year in the preparation of alcohol and starch.

Potatoes tainted by disease or otherwise unsuitable for consumption are thus utilised.

The sensational campaign against our supplies of milk is still being waged in some of the daily papers.

If their suggestions were put in force, natural milk would be dearer and quite out of the reach of poor people.

As it is, many families can only afford cheap tinned milk. It is that poor stuff that makes babies rickety.

It is the poor who always suffer most from such unreasonable agitation.

Sir James Blyth has taken the title of Baron Blyth of Blythwood in the county of Essex. May he live long to enjoy the title!

"Gentlemen of the jury," exclaimed counsel for the defendant in a case connected with a deal in pigs, "there were thirty-six pigs, remember that fact. Exactly three times the number in the jury box."

The average under sugar beet in America last year was 399,552 acres, which produced 433,010 tons of sugar.

There are 63 factories engaged in the industry, which is in a prosperous condition, employing large capital and much well-paid labour.

In England the number of sugar-beet factories is still represented by a **O**, and is likely to remain so under the policy of the Government.

Honour to a shepherd. The Minister of Agriculture in France has made an old shepherd, employed 58 years on one farm, a Knight of the Order of Agricultural Merit. The old man will be justly proud of his bit of blue ribbon.

It is reported that by a process of cross-breeding a professor has evolved from the potash beetle another insect so large and voracious that he has to keep it chained up for fear of the depredations it might commit.

It sufficeth to say that the report comes from America!

Some way of protecting the rights of farmers against the rapacity of fern and root gatherers is highly desirable.

To this end a Bill, with the title of the Agricultural Larceny Bill, is in contemplation.

"Trespassers will be prosecuted" has no deterrent effect on a certain class of people, who break through hedges, leave gates open, and generally behave as if the land had already been nationalised for their special benefit.

The Tuberculosis Commission.

The second interim report of the Royal Commission appointed to inquire into the relations of human and animal tuberculosis was issued last week. The report, which forms Part II. of Volume I., consists of nearly 800 pages, and relates to the experiments which have been conducted at Walpole Farm and Blythwood, by Dr. A. Stanley Griffith, Dr. F. Griffith, and Dr. L. Cobbett, under the direct control and supervision of the members of the commission. The inoculation experiments showed that tubercle bacilli could be introduced into bovines, goats, pigs, chimpanzees, monkeys, lemurs, and other animals, and often with fatal results within a few weeks.

It is stated that feeding experiments with the bovine tubercle bacillus have been carried on with two objects—firstly, to ascertain the relative susceptibility of different species of animals, and, secondly, to study the anatomical distribution of tuberculosis produced by feeding. Altogether 318 animals have been fed, including fifteen distinct species. The majority of these have been fed with single doses of tubercle bacilli, either in the form of culture or contained in tuberculous milk; the rest were fed for varying periods with tuberculous milk, except in one case where culture was used.

In a general summary of the results of the feeding experiments it is stated that the method of inoculation by feeding is a less certain and a less severe method of producing tuberculosis than any of the other methods, and in general a larger dose of the infecting agent is necessary to produce a given effect. In feeding experiments, with single doses especially, many conditions may be present which may have an influence on the result. A catarrh of the mucous membrane, by causing the rapid expulsion of the intestinal contents, may result in the animal escaping infection; the period with which the bacillus is in contact with the mucous membrane is no doubt a factor of some importance; the longer bacilli remain in the alimentary canal the more likely are they eventually to become absorbed. Moreover, bacilli may be more readily absorbed from the alimentary canal of some animals than from that of others; they are very readily absorbed in pigs, and apparently less readily in guinea-pigs. Individual susceptibility no doubt exercises as important an influence on the result in feeding experiments as in other forms of inoculation.

It is obvious, therefore, says the report, that a classification of susceptibility based upon the amount of disease produced by the ingestion of a definite dose of tubercle bacilli cannot be made with the same precision as by subcutaneous inoculation, where all the bacilli inoculated remain in the tissues of the animal. The experiments, nevertheless, bring out clearly certain facts as to susceptibility which are confirmed by the subcutaneous inoculations.

The different species of animals used in the investigation can be classified into three groups.

In the first group the animals are very susceptible to the action of the tubercle bacillus, and infection, however small the dose, is almost invariably followed by general progressive tuberculosis. The animals placed in this group are the chimpanzee, baboon, rhesus monkey, lumur, rabbit, and guinea pig.

In the second group general progressive tuberculosis can be set up, but this depends on the dose of the infecting agent and on the age of the animal. This group includes the pig, the goat, the calf, the cat, and the dog. In all these species with the possible exception of the young pig, when the dose is small the tuberculosis may be limited to and arrested in the glands along the alimentary tract, and, whereas in the first group the age of the animal does not affect the result, in this group the adults are in all cases less susceptible than the young. These species exhibit varying degrees of susceptibility to tuberculosis, the young pig being the most susceptible, the adult dog the most resistant. The goat is less susceptible than the pig, and the calf apparently less susceptible than the goat. Cats are much more easily infected than dogs. General progressive tuberculosis is with difficulty set up in dogs, the adults of the species being more highly resistant than the young.

In the third group are included the rat and the fowl, which are apparently insusceptible to tuberculosis by feeding. Several rats have been fed with enormous numbers of tubercule bacilli, and nothing has been found in them beyond some minute necrotic foci in the mesenteric glands. In the few experiments performed with fowls no disease at all has been produced.

CATTLE.

Notes and Jottings.

ONE of the most important showyard events of last week was the Welsh National Exhibition at Aberystwyth, which brought together a very fine collection of cattle of three breeds—Shorthorns, Herefords, and the native Welsh Black cattle. The Shorthorn is creeping into all corners of the country, but a good number of these were from districts outside the boundaries proper of the Principality. Herefords followed, and these were one of the best lots of white faces that have been got together this season; this breed, however, were nearer to their own native county, and many very good herds of Herefords are to be found upon Welsh soil, especially in the vales where the soil is alluvial and rich. The Hereford cannot be styled a mountain breed.

COMING to the native blacks, there was a very large and good exhibition of these most useful cattle. Some of the old bulls were quite a joy to look at; their great wealth of natural lean flesh that suits all classes of consumers was very prominent, whilst size was also another conspicuous feature, and constitution undoubted. In some of the younger classes there was not too much apparent aptitude to fatten, and in the cow class and two-year-old heifers the appearance of milk was not as prominent as it should be in a dual purpose breed, the cows were specially lacking in good udders and milk appearance, and breeders may depend upon it that greater success in the future will depend much upon the adaptability to produce milk.

THE prospects for beef during the coming autumn bid fair to be very much in favour of the feeder, which, should this prove to be correct, will do much to relieve the short profits anticipated on account of the high price paid for stores to commence with. In America the markets do not appear to be at all over-supplied; indeed, rather the opposite, and even should the supply prove greater than is expected, consumption is on the increase very rapidly and very extensively, and is scarcely likely to decline again unless the various countries of the world should be overwhelmed by some severe depression in trade and manufactures.

THERE is no doubt, too, that the vastly increased consumption of milk necessitating a much greater supply of that commodity has had a great effect in reducing the quantity of beef produced. Many farmers in this country, hundreds and hundreds that forty years ago used all their resources for making beef, are now engaged in the production of milk, partly on account of its paying better, and partly from the convenience of obtaining a weekly or monthly supply of ready money. Then the imports of beef, dead and alive, do not at present more than make up the deficiency thus caused, and the quantity of extra beef consumed by the increasing population with increased purchasing power is tending to raise prices all the world over.

IT is to be feared, too, that the prices that have ruled for beef for a long time past have also had a share in reducing supplies. Many a breeder and feeder, or feeder only, has been tempted to convert his fields and folds into horse and sheep producing places as being more profitable than the bullock. Travelling recently in a district at one time famous for the number of fat cattle it turned out in the year, it was a little surprising to find every foldyard filled with horses and pigs instead of the sleek-coated bullocks of the past. All these attendant circumstances combine to shorten the beef supply, so that it is quite reasonable to look forward to a continuance of better prices for a long time to come.

THE grazing pastures in the best districts give promise of turning out a heavier weight of beef than for a long time past. Pastures are remaining succulent, and abundantly supplied with grass, and the cattle appear to have made great development of substance. A little drier and warmer weather would be of benefit for the ripening of the animals as the autumn comes on. Last season from this time forward pastures in many places were far too brown and bare for the cattle to make any great development of flesh and weight, many coming to market in quite a half-meated condition. There ought to be nothing of this in the autumn of 1907.

ANOTHER great help to the price of meat will probably be found in the excellent crops of roots that appear now to have become practically a certainty, especially that great bullock feeding root, the swede. This crop is a very level plant generally, and a large one appears to have been planted, whilst the colour of the plants and the growth they are making could not augur better for the future. With a good swede crop, half-meated cattle will not need to be forced upon the market, but may be finished off in the yards, sheds, or fields with swedes, hay, or cake. Half-meated cattle forced into the market invariably have a very depressing effect upon the price of beef even of the very best qualities.

IN the rich grazing pastures this year there appears to be a great predominance of Welsh and Hereford bullocks, and both breeds appear to have been thriving and growing at the same satisfactory rate; thus we must assume that the rich pastures and other matters are as suitable to the one breed as to the other; but in the regular way there is a good deal of difference. Breeds of cattle that suit a certain locality are frequently found totally unsuitable in another, and consequently unprofitable. Feeders in the grass country, therefore, who are new beginners will do well to follow the lines that have been drawn out by the older inhabitants and feeders in the district, whom they may take it have made themselves acquainted with the most profitable breeds to work with.

Devon Cattle Breeders' Association.

At the last meeting of the Devon Cattle Breeders' Society it was decided that the next sale of the society will be held at Taunton on Thursday, October 17.

The secretary (Mr. J. M. Risdon, jun.) read a letter from Mr. Chetwynd, of Dorchester, offering £20 for three years to encourage the formation of separate classes for Devon milkers at the Bath and West of England Show next year at Dorchester.

Mr. Norrish said Mr. Chetwynd was desirous of establishing a herd of Devons in Yorkshire, and he wanted to improve the milking qualities of them. It was a liberal offer. His (Mr. Norrish's) experience of the milking classes, as they came out at different shows, was that they were very poor. Everything was sacrificed to the milk, and the animal was a wreck.

The secretary said he had never heard so many inquiries for Devon milkers as now, and he would like to buy twenty if he could get them. The secretary explained that it was Mr. Chetwynd's idea to give two first prizes of £10, the society to provide the other prizes. Such a competition would take on with the Dorset dairy farmers next year.

The chairman said he was on the council of the Bath and West of England Society, and if he was able to ascertain that the Devon breeders took

LINCOLN RED SHORTHORN BULL, BRANDON BLEND.

The subject of illustration is the Lincoln Red Shorthorn Bull, Brandon Blend, which was First in the Class for Lincoln Red Shorthorn Bulls calved previously to 1903, at the Royal Show, Lincoln, and is owned and bred by Mr. John Langham, of Park Valley, Nottingham. Its sire was Brandon Lord Chancellor 2121, dam Bigby 319.

MANY Prize-Winners at the Royal Show use BATTLE'S DIPS.

A SPICE THAT WILL SAVE YOUR DAMAGED HAY.

What in many parts of the country promised to be a record yield, has been endangered as to quality, if not also quantity, by the recent excessive rainfall.

That considerable damage has been done in many districts is already known by the orders which for several days past have been reaching the makers of "PHŒNIX" HAY SPICE, these being accompanied in most instances by an urgent appeal for quick despatch.

This Spice supplies the valuable aromatic flavouring principle of "prime" Hay, and when sown in the ricks imparts a much stronger fragrance, and a specially powerful, attractive, aromatic flavour. Besides this, it increases the value of all Hay, both for feeding and sale, quite 20s. per ton. It gives a pleasant aroma, and is unequalled as a condiment for damaged or inferior feeding stuff. It makes damaged Hay tempting and palatable, more digestible, and makes all animals eat it with a greater relish, and thrive faster on it. It also removes mustiness and all defects, and imparts a good tempting flavour and fragrant smell to "weathered" Hay (even when black and seemingly worthless), and makes cattle eat it as well as the best, and thrive on it admirably.

It is a really efficient Hay Spice, in which all waste is prevented, as it gives to the most inferior, coarse, or damaged Hay a fragrant, tempting smell, and an excellent and appetising taste. One cwt. will dress 20 tons of Hay at a cost of about 1s. per ton.

The "PHŒNIX" HAY SPICE is packed in bags of 112 lbs. each; the price being 20s. per cwt., carriage paid to buyer's station.

Sole Manufacturers:

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

kindly to the suggestion, he would do what he could to realise it. The matter was referred to a sub-committee, consisting of Messrs. Bond (Dorset), Tuckett (Devonshire), Digby Collins (Cornwall), and the Hon. E. Portman (Dorset).

The secretary reported that he had written the Royal Society asking for a reduction of entry fees for Devon cattle, and had received a reply that the fees for horses had been reduced, and when the society got stronger it would make further concessions.

Sale of Earl Manvers' Shorthorns.

A draft from the herd of Earl Manvers at Holme Pierrepont came under the auctioneer's hammer on Thursday. The sale proved highly satisfactory, the big prices which have been realised at many recent sales, being maintained. The total result of the sale was £4,579 1s., fifty-five head of cattle realising £83 5s. 1d. The forty-four cows made 3,423 guineas, or an average of £81 13s. 8d., and the eleven bulls sold for 938 guineas, or an average of £89 10s. 9d.

Primula	Lord Salisbury	29

Sir Gilbert Greenall's Hackney Sale.

On Wednesday, August 7, Mr. W. Bainbridge will hold a sale of Sir Gilbert Greenall's high class pedigree Hackney and Hackney pony mares and foals, young stock, Harness mares, &c., at Walton Hall, Warrington. The sale catalogue consists mainly of a number of extraordinary good brood mares, many of them winners at London and other principal shows. All have bred valuable stock, or are from celebrated families that have done so. The progeny at foot are all well bred, and the young mares are equally valuable to breed or put to the stud. The extraordinary success of stock bred at Sir Gilbert Greenall's stud farms, or sired by stallions owned by him, has been almost phenomenal for some time past at the principal shows. At the Hackney Show, the International Show, and the Royal at Lincoln this year, in many cases every prize winner in the class was either bred at, or sired by one of the stallions from this stud. Past sales at Walton have turned out many novices which have proved very profitable to their purchasers. The stud will be on view on Friday, August 2, and Saturday, August 3, and intending purchasers are invited to see them on these days.

The twenty-fifth annual conference of the National Veterinary Association opened last week, at Yarmouth, under the presidency of Mr. William Shipley, who, in his inaugural address, said that disease after disease had been stamped out by their profession. Tuberculosis was an open book, but combined action by the medical and veterinary professions was requisite. Greater attention should be paid to human tuberculosis than an injunction not to spit, and veterinary surgeons shuddered when they saw men and women suffering from this fearful, but preventible, disease in its most contagious form, allowed to cohabit and mix with healthy children and mankind generally. The State should take as much care of tuberculous persons as they did of the insane.

VETERINARY.

Advice of a Veterinary character, by a M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of case should be addressed to the Editor, "MARK LANE EXPRESS," 5, Wellington Street, Strand, London, W.C.

Bezoars in Sheep.

In dealing with wool ball in lambs on page 79, reference was made to calculous concretions called bezoars, which are sometimes found in the abomasum or true digestive stomach of the sheep. A few notes on the subject of these concretions may be of interest. A strange feature is that they are commonly met with in the abomasum of sheep from August to November, but rarely at any other time. When, as frequently happens, they are found in fat sheep, people wonder what they are, and how they came there; but if the sheep chance to have died of disease, or has been "killed to save its life," the illness is often erroneously attributed to the presence of these concretions. There is no evidence, however, that they are productive of serious harm.

Bezoars vary both in shape and number, being sometimes irregular from attrition, but often of almond shape, or of the curve of the stomach itself, and range from one or two to as many as twenty in number. They are very light in weight in proportion to their size, and range in colour through shades of yellow, brown, and red. The concretions are composed of a mixture of wool, mucus, and earthy matter, arranged in concentric layers round a central nucleus of some hard substance. A peculiarity of bezoars, that is not a characteristic of concretions found in other parts of the digestive tract, is their soft velvety covering.

Bezoars can generally be cut with a knife, and are readily soluble in boiling water. Since they are never seen to be passed with the fæces, and are found in the stomach at about the seasons mentioned and not at others, they probably undergo solution in the juices of the stomach or bowels.

Their existence during life cannot be accurately determined; indeed, it is rarely suspected, while if there was any warrant for supposing them to be injurious to the health of the sheep, we should be much in the same position as we are with reference to the much more serious "wool ball" trouble in young lambs—unable to detect their presence until the animal is dead, and powerless to expel them if suspected.

Bezoars are really more interesting on account of the superstition that has always surrounded them, both as to their effects on the sheep, and the magical influence they were, indeed are, supposed to possess, than they are pathologically or clinically important.

Even now they are considered by the ignorant and superstitious to be of value as charms.

It used to be supposed that the stones were swallowed by the sheep, that the animals were very fond of them, but that the result of their ingestion was rapid wasting and death.

Youalt mentions that they were bought from butchers for the felonious purpose of throwing them before the sheep of obnoxious owners, and in France in 1790 two men were accused of having strewed calculi near some sheep. They were actually condemned to pay a fine of 1,500 livres, and in addition sent to the galleys for six years.

Their sentence was revoked on the veterinary professors at the Alfort School coming forward and declaring that the sheep would not willingly swallow the concretions, and if they were made to do so, the stones would pass into the rumen instead of into the pouch of the gastric mass—the abomasum—where they were found.

It is much easier, however, to understand their being thought destructive to sheep than to account for the faith that they possess wonderful virtues for the cure of human ailments; but in what we may call the dark ages of medicine, many curious substances were credited with medical virtues.

It is perhaps not to be wondered at that bezoars were supposed to possess a high therapeutic value when the official pharmacopœias of the College of Physicians of London of 1678, 1724, and 1742 credited such substances as human fat, dog's dung, unicorn's horn, toads, vipers, centipedes, and mummy powder with possessing valuable medicinal properties.

Bezoars were thought to possess all the powers of disenchantment against the poison of the viper and the scorpion, against vertigo, epilepsy, dysenteria, inflammation of the lungs, malignant fever, the plague, leprosy, and many other maladies.

Perhaps the next generation will consider the medical man of the last just as foolish and culpable in their treatment of consumption and other maladies as we do those of the pre-tabloid and serum age, who believed in bezoars. The name bezoar is supposed to be derived from the Persian Pâd Zahr—"Expeller of Poisons."

Other animals besides sheep have bezoaes, and

HORSES.

SHIRES.

BLAGDON SHIRE HORSE STUD. (Established 1879). Proprietor, CLEMENT KEEVIL, Billington, Leighton Buzzard, Beds. (late of Blagdon, Malden, Surrey). High-class animals for sale of all ages and both sexes; also massive sound Stallions to let for the season.

CONCHAR, JOHN, Wylde Green, Birmingham. Breeder of High-class SHIRES and HACKNEYS. Several have been successful in the showyard. Colts and Fillies by the leading Stallions of the day.

CROSS, J. L., Catthorpe Towers, Rugby. Shire Stallions, Mares, &c. Also Red Shorthorn Bulls from milking strains, and Oxford Down Sheep.—Apply F. CAMPBELL, Catthorpe, Rugby.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Hereford. Stud Horses: Lockinge Lord of Misrule and Lockinge Bonny Lad, both by Lockinge Forester, full brother to Lockinge Forest King. Colts and Fillies for Sale.

MUNTZ, FREDERICK ERNEST, Umberslade, Hockley Heath, Warwickshire. Shire Stallions, Mares, Fillies, prize-winners.—Particulars from Mr. JOHN T. B. HARTLEY, Estate Office.

MUNTZ, Sir P. ALBERT, M.P., Dunsmore, Rugby.—SHIRE-BRED STALLIONS, COLTS, MARES and FILLIES. About a hundred of all ages. Prize-winners London and other leading shows. Also high-class Shropshire SHEEP, winners first prize at Royal Agricultural, 1886, second in 1887, and first in 1888.—Apply THOMAS EWART, Dunsmore.

NOTTINGHAM CORPORATION, STOKE FARM.—Shire Stallions, Mares, Fillies, and Geldings of fashionable breeding, including prize-winners, on Sale. Inspection invited. Visitors met.—Address A. AVIS, Stoke Bardolph, Nottingham.

ROWELL, JOHN, Bury, Huntingdon. Breeder Shires and Hackneys; Stallions for sale, hire, or service at home; mares and fillies for sale.

HACKNEYS, &c.

MOORE, HENRY, Burn Butts, Cranswick, Hull. Pedigree Stud of HACKNEYS, including many prize-winners, yearlings, two years, and others.—Can be seen on application to Henry Moore.

SHETLAND PONIES.

BEALE, Mrs. A. J., Cacketts, Cudham, Kent. Prize-bred Pedigree Shetlands for sale; three grand Stallions at stud.

PONIES.

MILLER, W. S., Forest Lodge, Brecon, South Wales. Extensive Breeder and Exporter of best class of Welsh Mountain Ponies and Cobs.

CATTLE.

SHORTHORNS.

COWLEY Manor Shorthorn Herd, property of James Horlick, Esq. Bulls and Heifers of choicest breeding. Cruickshank and Bates blood, successful in dairy and showyard.—Apply, W. HITCH, Estate Office, Cowley, near Cheltenham.

PREECE, JOHN ADNEY, Drayton Home Farm, Thrapston, Northampton.—Herd of 250 Shorthorns, best Bates and Scotch blood; stock Bulls, Duke of Barrington 70th, Primrose Earl 89541, and Royal Baron 93192; Bulls and Heifers for sale.

ROTHWELL, R. R., Much Hoole, near Preston. Pedigree Shorthorns, chiefly Scotch blood. Stock bull Strowan Marquis 13th, winner of many prizes. Young bulls and heifers always on sale.—Apply to D. COLLYER, Estate Office, Miller Arcade, Preston.

TAYLOR, GEORGE, Cranford, Middlesex.—Bates' Shorthorns, deep milkers. Winners Milking Competitions, London Dairy Show, 1905-6. Bull Calves for Sale. Stock Bulls: Beau Fabreur, Drumcree, Rowbury, and Kirkcharm.

WORDSWORTH, Duffcarrig, Gorey, co. Wexford, Ireland. Pedigree Dairy Shorthorns (Cruickshank and Scotch strains). Successful in dairy and showyard. Young Bulls and in-calf Heifers of good colours for sale. Exportation orders executed.

SUSSEX.

BANNISTER, T., Limehurst, Haywards Heath, Sussex (mile from Station, one hour from London). Pedigree Sussex Cattle (descended from the oldest and best strains of blood), unrivalled for their early maturity, the production of the best beef and working oxen, and ability to thrive in all weathers on the roughest fare. Bulls, Cows and Heifers for Sale.

HEREFORDS.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Herefordshire. Pure-bred Hereford Cattle, with pedigrees dating back to very early volumes of Herd Book. Bulls and Heifers for Sale at reasonable prices. Shire Horses and Shropshire Sheep.

PULLEY, CHARLES THORNTON, Lower Eaton, Hereford.—Noted prize-winning herd of HEREFORD CATTLE. First prize Royal winners, Protector 19660, 1900; Eaton Champion 21351, 1903; and Ashleaf 3rd, 1905. This herd is headed by Eaton Champion and Glendower 2nd 22196, also a Royal winner. Bulls and Heifers for sale. Also prize-winning Shropshire Sheep.—Apply Mr. HEDLEY JONES, Lower Eaton Estate Office, Hereford.

THE SHEEPCOTE HEREFORDS, property of Peter Coats. Established 1900. This herd has in 1904 1905 and 1906 won more first and champion prizes than any other in England. Headed by Endale, Rage Protector, and Fusilier. Young stock on sale. Inspection invited. —Apply, J. K. HYSLOP, Estate Office, Sheepcote, Clifford Herefordshire.

CATTLE—*continued.*

DEVONS.

BOWERMAN, ALFRED, Capton Williton, Taunton, Breeder of Pedigree Devon Cattle. A speciality for large size, with quality and robust constitutions; colour dark red. Sent to all parts of the world. Prices moderate.

SKINNER, ALFRED C., Pound, Bishops' Lydeard, Somerset. Pedigree Devons, constitution, quality, size, milk; 600 prizes principal shows, many champions; exports most successful; bulls and heifers for sale. Inspection invited.

ABERDEEN-ANGUS.

BRIDGES, J. H.—This old-established herd of Aberdeen-Angus cattle of the leading families can be seen at Langshott Home Farm, Horley, Surrey (near Horley Station, L.B. & S.C.R.), and catalogues obtained on application to Mr. Albert Pulling.

HURSLEY PARK HERD OF ABERDEEN-ANGUS CATTLE, the property of Sir George Cooper, Bart., comprising Erica, Pride, Miss Burgess, Lady Ida, Matilda, Jemima of Morlich families. Prizes won during 1906: 7 firsts, 3 seconds, 3 reserves, 1 challenge cup, 2 silver medals, 3 reserve champions. Bulls, Cows, and Heifers for sale.—Catalogues on application to V. F. Leese, Estate Office, Hursley Park, Winchester.

THE ROCKLIFFE PARK HERD of Aberdeen-Angus Cattle, Ericas and Prides.—Apply, R. C. SWAN, Rockliffe Park, Darlington.

AYRSHIRES.

WALLACE, JAMES, J.P., Auchenbainzie, Thornhill, Dumfriesshire, Scotland. Breeder of pedigree prize-winning Ayrshire Cattle; hardy, healthy good milkers; bred for dairy purposes, beauty and style. Bulls and Heifers for sale.

RED POLLS.

CRANWORTH, Rt. Hon. Lord, offers reasonably, from his prize-winning herd of Red Polls, Bulls, Cows, Heifers, from good milkers.—Apply C. F. STEBBING, Letton, Thetford.

JERSEYS & GUERNSEYS.

CARY-ELWES, V., Billing Hall, Northampton. Breeder of Jersey cattle.

JERSEYS and pure Alderney, Guernseys, fresh calved and near calving. Prices, particulars.—WHEADON, Ilminster.

MERTON GRANGE GUERNSEYS.—Property of Frank Hargreaves, Esq. This Herd contains Champion Bull Royal Counties, Portsmouth, and Champion Cow Royal Derby, 1906. Bulls, Cows and Heifers of best Breeding for Sale.—Telegrams and particulars, W. J. EMPSON, Merton, Gamlingay.

STERN, Sir E. D., Fan Court, Chertsey, Surrey. Herd of pedigree Jersey Cattle. Bulls, Cows, and Heifers for sale.

TICHBORNE PARK, GUERNSEY.—Yearling Bulls and Heifers for sale.—Apply, D. MICHIE, Estate Office, Tichborne, Alresford, Hants.

GALLOWAYS.

GRAHAM, ROBERT, Auchengassel, Twynholm, breeder fashionable Galloway Cattle, winners at Royal and Highland Societies Shows. Pedigree Bulls, Cows, and Heifers, also Blue-greys for feeding, for sale. Commissions carefully executed.

KERRIES & DEXTERS.

THE DUCHESS OF DEVONSHIRE'S PRIZE-WINNING DEXTER HERD.—During 1904 and 1905 this Herd won more prizes than any other three Dexter Herds combined, including both first and second milking prizes Royal, 1905, and first London Dairy Show, 1906. Bulls, Cows, and Heifers generally for Sale.—CHILD, Compton Place, Eastbourne.

CORY, CLIFFORD JOHN, M.P., Llantarnam Abbey, Monmouthshire. Pedigree Kerries. Championship and other prize-winners, Royal and other Shows. Llantarnam Station, G.W.R.

RATTRAY, DAVID, Gortnaskehy, Ballybunion, Co. Kerry. Pedigree Prize-winning Herd of Kerries and Dexters. 155 Prizes and Honours won by Cattle from this Herd past three years. Bulls, Cows, and Heifers for sale.

SHEEP.

LINCOLN LONG WOOL.

ANDERSON, JOHN, Barton-on-Humber.—The old Barton Flock of Pure-bred LINCOLN LONG-WOOL SHEEP, Flock Book 106. This flock is noted for hard constitutions and fine, lustrous wool. Inspection invited. Telegrams as above.

ATKINSON, T., & SON, North Kelsey, Lincoln. Old-established flock of pure Lincoln Longwools. Rams, Ewes, and Lambs for sale. Noted for great size and long lustrous wool. Have given great satisfaction at home and abroad. Inspection invited

BROOKS, W. J., Stowe Lodge, Weedon, Northants (Registered Flock 165), has for sale Rams and Ewes of best blood.

SHEEP—*continued.*

LINCOLN LONG WOOL—*continued.*

BROCKLEBANK, JOHN, Bassingham, Lincoln (Flock 24). Pure-bred Lincoln Longwool Rams and Ewes. This old flock has been carefully bred for 100 years. Telegrams: Bassingham.

DRAKES, Wm., Tealby, Market Rasen. Flock No. 72 of Lincoln Longwool Sheep. Rams, Ewes, and Lambs of best blood for sale. Lincoln Red Shorthorns. Prices moderate.

DUDDING, HENRY, Riby Grove, Gt. Grimsby, Lincolnshire, has always for inspection and sale a large flock of pure LINCOLN LONG WOOL SHEEP, including many prize-winners, having taken the leading prizes for many years at the Royal and other shows for both rams and ewes, including champion medals at both the Paris Exhibitions, Vienna, Amsterdam, Canada, Australia, New Zealand, and all the leading prizes at Chicago; also the first for the best collection of Lincoln fleeces of wool at the Royal Windsor Show, which proves the character of this flock, which is most famous for their great size and 125 years' good breeding. Rams from this flock made the highest average on record last year. Riby Grove is seven miles from Great Grimsby, and 3 from Stallingboro' Station. Telegrams, "Dudding, Keelby."

SMITH, HENRY, jun, Cropwell Butler, Nottingham. Lincoln Longwool Flock No. 7, winner of £2,361 in prizes. Champion pen Lincolns, Smithfield Show, 1896; Association Championship, Leicester, 1897; Association Championship for pen of 3 Shearling Rams, Yorkshire, 1900; Championship, Rutland, 1902, 1903, 1904, 1905, and 1906. Rams, Ewes, and Lambs for sale. Station: Bingham, G.N.R.

HAMPSHIRE DOWNS.

THE CHILMARK FLOCK OF REGISTERED HAMPSHIRE DOWNS.—Owner, JAMES FLOWER, Chilwark, Salisbury. Leading Flock in Prize Records. Champions at home and abroad. Since 1894, out of 11 years competing, "The Salisbury Fair Challenge Cup" won eight times, thrice second, with pens of 8 ram lambs; a marvellous record. Prizes taken yearly at the Royal past 13 years; Champions in 1901-02-03-05-06. At the Royal at Derby, 1906, every First Prize, two Seconds, and the Champion were won; an unequalled success!! Champions Birmingham, 1905, over all breeds, Reserve in 1906. Breed Cup and Reserve Champion Short-wools, Smithfield, 1904-05-06. Highest average past 13 years. GEORGE HOYLES, Skidby Manor, near Hull.

GEORGE HOYLES,

SKIDBY MANOR, HULL.

Breeder of Pure Lincoln Long Wool Sheep. Lustrous Fleeces. Good Constitutions.

SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

they have been found in the deer, antelope, llama, porcupine, elephant, rhinoceros, and many other beasts.

Those most esteemed and the earliest used came from the east, and were obtained from the stomach of the Persian wild goat. When ten times their weight in gold was the market price, and bezoars were actually sold for the extravagant sum of £800, it must have been tempting to "corner" bezoars, and even better than selling mutton to-day.

It was put down to the astonishing power of a bezoar that Edward IV. was strengthened and preserved from the effects of a poisoned wound, and the same magical influence was supposed to have enabled the Emperor Charles V. to free himself from dreadful thoughts which haunted and disturbed his mind, but these things are comprehensible as compared with the superstition of the twentieth century Englishman who carries a bezoar in his waistcoat pocket "for luck."

M.R.C.V.S.

Preston Cheese Fair.

At this fair there was a pitch of about 65 tons and a good attendance of buyers. Market opened with brisk inquiry for finest lots, which sold at prices ranging from 57s. to 62s, medium 52s. to 55s., and lower grades down to 45s.

Chester Cheese Fair.

Buyers representing most of the wholesale houses of the North and Midlands attended. Farmers brought in 65 tons of good quality cheese, and there was a brisk inquiry for fine Cheshire, which realised from 57s. to 62s.; medium qualities, 52s. to 55s.; and common, 45s. and upwards per cwt.

Earl Carrington, President of the Board of Agriculture, has kindly consented to attend the annual conference of the North-Eastern Agricultural Federation, to be held at Northallerton on Friday, October 25. The arrangements for the gathering are in the hands of Mr. J. O. Trotter (president); Mr. C. Marshall, Broomhaugh, Riding Mill-on-Tyne; Mr. J. Knox Lyal, Peepy, Stocksfield; Major Hedley, Newcastle Farmers' Club; Mr. P. B. Kent, Farmers' Protection Association, Darlington; and Mr. W. Frank Hall, Stockton Chamber of Agriculture (acting hon. secretary). The subjects submitted for discussion will be Legislation affecting Dairy Farmers, Municipal Milk Depots, Tuberculosis, Small Holdings, and Taxation.

West Country Notes.

TO find a Board of Guardians willing to spend £60 to emigrate one family, the Local Government Board to sanction it, and a Colonial Government willing to accept the risks of admitting them to their territory is a combination of events worthy of comment. The circumstances were these:—The husband and father emigrated to Canada, did well there for ten years, married, and then returned to England with the little capital he had acquired, to try his luck with a small holding at home. His pluck did not meet with the return he anticipated, and he failed to make the progress here that he did in Canada; and, with his family growing, came to grief.

SOME little time since he was accidentally killed, and his wife and family came "on the parish." Her importunity resulted as indicated above, and, with comforts for herself and her ten children provided by the generosity of the good people of South Somerset, she is now on her way to seek her friends in Canada.

THERE is an old West Country saying anent the families of Horner, Popham, and Thynne, that when the monks popped out they popped in. The three families are still in possession of estates which formerly were held by the Abbots of Glastonbury; and it is not a little curious that in the week that sees a service being held in the Abbey ruins, after a lapse of nearly four centuries, all these three names should be prominent in the minds of their neighbours.

THE wedding of the daughter of the Mr. John Horner of the present day is a happy event associated with the first of these families, whose "plum" came to them by purchase. The friendship of the Home Secretary and Mrs. Herbert Gladstone recalls, by its demonstration in connection with the wedding, their own happy days; for it was on a drive to visit Mr. J. W. W. Horner, at Mells, that the charming young daughter of Sir Richard Horner Paget consented to change her name for that of Gladstone, and her politics at the same time.

THE head of the Popham family, whose tenants in Somerset and Wilts assembled in full muster at Chilton Foliat, near Hungerford, to pay a last tribute of respect to their landlord, will be greatly missed by them. The distance they travelled bore testimony to this.

THE Marquis of Bath, head of the Thynne family, in his position of colonel of the Wilts Imperial Yeomanry, was one of those to welcome the King to his week-end visit to the West, an event which brought a little grist to the mills of the farmers around Chippenham and Calne. These, though not averse to letting their waggons be used, for a consideration, as grand stands, cared a great deal more to have an opportunity of showing their loyalty.

THE King's allusion to his interest in agriculture in his thanks to the mayor and corporation of Calne, was very well timed, and much appreciated by those who gave up hay-making in a risky period to show their loyalty.

THE thunderstorm the King experienced whilst motoring on Sunday, did considerable damage to the crops of the West from the Mendips over the Cotswolds. Unhappily it was the precursor of many more rainstorms, though of less violence, so that hay-making is again checked.

Dairy breeders wanting reliably-bred heifers from good milking cows by one of the best dairy-bred bulls in England, are offered twenty nice yearlings sired by Darnley, who is descended on both sides from cows averaging 1,000 gallons of milk annually, both his dam and sire's dam giving this quantity. For further particulars apply to E. Goodwin Preece, Crosshill, near Shrewsbury.

The prospectus of the Department of Agriculture of the Leeds University for the session 1907-8 has just made its appearance. The courses of study embrace a general course designed without reference to the requirements of any examining body; a course for the National Diploma; and a course for the B.Sc. degree. The instruction has been arranged to meet the requirements of young men who intend to become farmers, land agents, valuers, and teachers of agricultural science. The complete course extends over three winters, and prepares students for the examination for the National Diploma in Agriculture. Students are also prepared for the examination of the Surveyors' Institution. A laboratory for the exclusive use of agricultural students has been added to the department, whilst practical instruction is provided at the Educational Farm at Garforth, where students will be required to attend classes also. All those taking a full course will be required to closely follow the farm work, including field operations, methods of feeding stock, and progress of experiments.

Northern Notes.

THE barometer was falling on Tuesday, but the weather held fine for haymaking, though next day a temporary interruption occurred. The hay crop is tremendous in bulk, and if in some districts the labour of winning it is great on account of the frequent turnings of the swath, the yield amply compensates for the extra efforts. Haymaking is a very prosaic business in comparison with the procedure in bygone years, when the hooded and aproned women were to be seen raking up the "sweep of the scythe," and when children, too, could help their parents in the fields. The picturesqueness of this first harvest of the year has vanished, and in place of a dozen hands in a field, we now see a boy on horseback directing the evolutions of a swath-turner. By means of machinery the harvest is vastly expedited; but old hands meet one with the assertion, "Well, we used to have well-won hay without these new-fangled things," and so we had. Then we could move more leisurely.

WE had a very pleasant interlude this week in our daily round of common tasks, by attending the coming-of-age of the only daughter and child of a popular Yorkshire landowner. Oh how delightful it was to see and to make mental notes of the happy relations existing between the squire and his tenantry, who had foregathered at the ancestral home! The charming wife and daughter, standing with the head of the house, received every tenant and their "better halves" in the hall, and extended to them and other invited guests—myself among the number—a most cordial welcome, and left nothing undone to afford pleasure to all who had assembled.

AFTER the necessarily stately and becoming formality of an introduction was carried out, the family moved freely among their numerous guests. Then at the luncheon the speeches of the oldest of the tenant-farmers who had been "bred and born on the estate," made congratulatory and eulogistic speeches that were without doubt emanations from the sincerest of hearts, and put into homely, fervent language and phraseology. Summed up, they meant they had lived and were living under one of the very best landlords in Great Britain.

SIDELIGHTS on the agricultural situation of thirty years back and at the present day were afforded at this assembly. Mr. St. Quintin came into possession of these Yorkshire estates thirty-one years ago, and began his career as a landlord towards the end of what may be called the prosperous years of agriculture. For three years there was no agricultural trouble. After that came "a dismal cycle," during which landlords as well as tenants suffered very materially, and many owners had to retrench their expenditure and shut up their country houses. The "dismal cycle" lasted long, and it is not a settled point whether its aftermath has altogether disappeared from this land.

MR. ST. QUINTIN confessed that but for the moderation and consideration of his tenantry in making known their wants to him, he also might have had to seek retirement as other landlords had done. Anybody having but a meagre acquaintance with country life can easily estimate what the meaning of an absentee landlord is to a community—the shutting up of the house, the discharge of servants and a whole retinue of dependents is a serious blow to a district, and has accounted for that depopulation of rural districts, in many instances, and which we all deplore.

THIS lengthy reference to an incident in agricultural and country life is made with the object of illustrating how cordial are the relations existing on many of our great landed estates; the men, women, and children being as one happy family, each in their own spheres, acknowledging one head, and all feeling more or less interdependent upon each other for their welfare and happiness.

EARL CARRINGTON is willing to be made much use of by societies formed in the interests of agriculture. His lordship is booked to attend the conference of the North-Eastern Agricultural Federation at Northallerton on October 25. This will be the second time that the President of the Board has appeared at the annual conference, and his acceptance is taken as an indication of the noble lord's belief in federation. It is a good plan for farmers to aim high, to get at the heads of any department of the State concerned in their vital interests. The terms on which this federation is constituted are for taxation and representation to go hand in hand, and the subscription is the modest one of a sovereign per annum for every hundred members, one member to be elected to a seat on the executive.

PAPERS on important subjects are read at the great central meetings which are never heard of again, and it is recalled that over thirty years ago a Yorkshire gentleman read a paper before the Chamber in London on the unjust incidence of local taxation, being afterwards complimented on the way in which he dealt with the subject. Now, what has been done since with this matter? Successive governments have shelved the whole question of the reform of local taxation. The Agricultural Rates Act was passed as a sort of stop-gap; it was never intended as a permanent measure. Yet where are we to-day? The incidence of local taxation presses upon the agricultural interest more severely than ever! Rate collectors are required to exercise the patience of Scriptural Job!

NORTHERNERS are of opinion that a federation which it is intended shall embrace the various agricultural associations in Northumberland, Durham, and Yorkshire, would be better as a distinct association, than a central one with London as its headquarters. The association already embraces chambers of agriculture, farmers' clubs, and farmers' associations, all having pretty much the same objects, and being divided merely by a non-essential name. The Central Chamber focusses the national sentiment, may be. On the other hand, if the country could be federated into districts of several counties each, according to their agricultural importance, and these were affiliated, or not, what instruments for good they would undoubtedly become.

July 25, 1907.

Lincolnshire Notes.

THE details are coming to hand of Earl Carrington's experiment with the Lincolnshire Crown lands. A 750 acre farm which has been voluntarily surrendered by a large farmer has been taken up by the Moulton Parish Council with a view to creating twelve small holdings and equipping them with cottages and all necessary buildings. The Moulton Parish Council is a courageous body, some people are saying. But even if it is a council of mechanics, of labourers, and small holders, I have a strong prejudice in its capacity to manage the business all right. They understand farming down South Lincs way.

THE other farm of 560 acres is being taken up by the Small Holdings Association, which, with Mr. Winfrey at its head, first showed us how to make small holdings pay. The association proposes to establish seven homesteads and holdings of various sizes, one of them being reserved as a fruit farm for the Labour Co-partnership Farms, Ltd. Whatever may be the probabilities of success of the experiment, there are no fears whatever as to whether or no the farms will let. Already there are more applications than can be satisfied.

SPILSBY horse show produced some good animals, although the entries were down. The competition was largely open, but the awards were all kept in Lincolnshire. Mr. Addey, of Caythorpe, Mr. B. S. Carnley, of Alford, Mr. H. Simpson, of East Ville, Mr. R. Dring, Hubbert's Bridge, Mr. T. Bland, Burgh, Mr. E. A. Kirk, Slewton, Mr. W. W. Soulby, and Mr. E. S. Smith were the principal winners, Mr. R. Dring obtaining the Shire Horse Society's silver medal.

THE weather has been having its black side out again, but not for long enough to destroy the farmers' hopes. A good deal of hay has been got in, but the sound of the mower has been heard over the land not a little this week end, and last year the first fruits of the corn harvest fell in the first week of August. We shall hardly expect the self-binder in the field during the next few days of 1907.

ARE you well insured? The farmer who has not protected himself against the Workmen's Compensation Act is taking rather a long risk. Until he is thoroughly indemnified, every man, woman, and boy in his employ, whether they are making his hay, churning his butter, or herding his cows by the green lanes, is a source of financial danger to him. Everything may be all right, and the harvest may be proceeding merrily, when there may be a careless, may be a wilfully careless act, a spill and a broken limb, perhaps a life lost, and the farmer will be lucky if he escapes with nothing worse than his year's profit gone.

EARL YARBOROUGH'S serious illness is regretted not merely by his lordship's tenants, but by every agriculturist in the county. Everybody knows that his ailment was aggravated, if not induced, by his exertions to make the Royal Show at Lincoln a success. He was out of sorts both before and during the show week, and in all probability had he considered his personal comfort he would have spent the week in bed. But he stuck to it to the last, and Nature is exacting the penalty for his disobedience of her commands. We all hope that the dame will have due regard to the extenuating circumstances and be merciful. May his lordship soon be completely restored.

THE Market Rasen meeting of the Lincolnshire Farmers' Union will be remembered for the "chaplain's" racy and thoroughly excellent speech. Mr. Hamilton has made so many excellent speeches on the Union's behalf that we have come to expect more than ordinary things from him. But he has never disappointed us. May his ready wit and lively eloquence never falter.

CONINGHAM SHOW was revived, after a couple of years' rest, last week. It did not compare favourably with 1905, owing to the heavy mortality amongst foals which has been exacted by the inclement weather. There have been extensive losses both in Coningham and in Kexby and Springthorpe. But the stock shown comprised a sturdy, hardy lot, a fine example of the survival of the fittest. Mr. Geo. Bingley, of Wheatley Grange, took an excellent first amongst the older foals, with a colt which was awarded second at Nottingham Show, and in the younger class Mr. G. Waterhouse, of Wildsworth, won well with the magnificent Dick Whittington filly. Amongst the brood mares the competition was shared by Mr. J. Dook's Reamer II and Mr. Waterhouse's Wildsworth Pansy, two noted animals. The silver cup for cart foals bred on the Sowerby or Thonock estates went to Mr. P. Bacon, of Coningham, and Mr. Dook's Reamer II. carried off the Shire Horse Society's medal.

July 25, 1907.

Official Crop Prospects.

The crop estimators of the Board of Agriculture, reporting on the condition and prospects of the principal crops on July 15, unanimously comment on the adverse influence of the wet and cold weather which prevailed during the spring and early summer, and remark that the recent advent of fine warm weather has materially improved the outlook. The continuance of favourable conditions generally since the reports were made must be further taken into account.

Wheat is reported as generally promising an under average crop in every division of Great Britain, except in the west Midland and south-west counties and in Wales, where it appears to be about an average. Barley is below average in all divisions. The best of the cereal crops on present appearances is oats, which are reported as above average in all but the northern and north-western divisions of England and in the west of Scotland.

Potatoes are under average, while roots promise to be an average crop.

In every division of England and in Wales there has been an abundant yield of hay, well exceeding the average, but the quality is reported as indifferent, owing to excessive wet and to the bad conditions under which much of the crop has been secured. In Scotland, however, the yield appears to be somewhat below average.

As regards fruit, the crop of apples is generally short and in some districts quite a failure, owing to sharp frosts in the late spring. Plums promise a plentiful crop, but strawberries, though generally abundant, have been retarded by the absence of sun.

Hops are generally backward, but are not so badly affected with vermin as last year.

Labour is generally plentiful, but in some districts, owing to local circumstances, the supply is rather scarce.

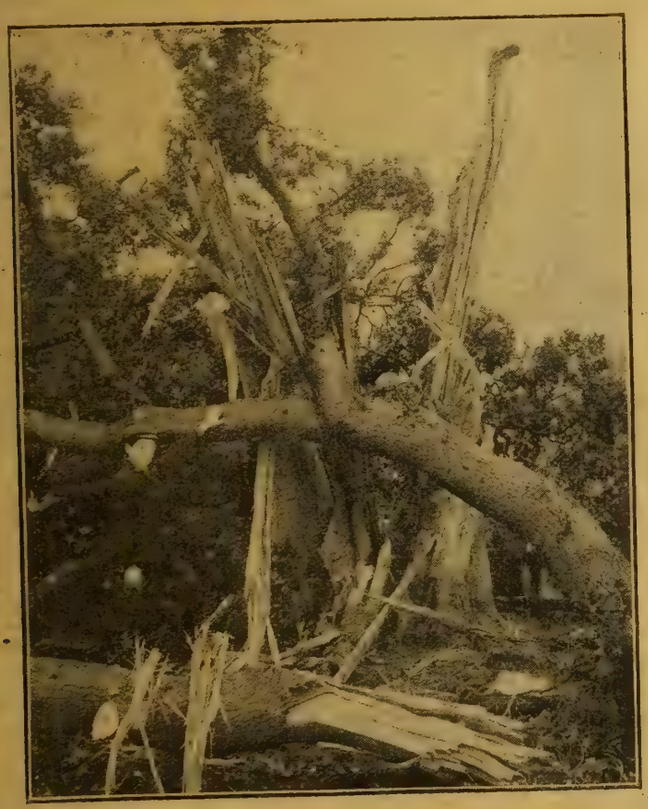
Summarising the reports, and representing an average crop by 100, the appearance of the crops in mid-July indicates yields for Great Britain as a whole which may be represented by the following percentages:—Wheat, 99; barley, 98; oats, 100; potatoes, 97; roots, 100; hay, 106.

The council of the Suffolk Agricultural Association does not believe in letting the grass grow under their feet, for they have issued in pamphlet form a complete record of their show at Sudbury last month, the details including a full prize list, judges' reports, and a balance-sheet showing the result of the exhibition. We are glad to be able to record that there was a profit of £166, as compared with a deficit of £233 when the Association last held their show at Sudbury (in 1885). The profit is not, of course, so good as at some previous shows, notably at Ipswich, but is nevertheless most gratifying considering all circumstances, and we should think that in future the society will make the interval between their visits to the town a little less lengthy than in the past.

Midland Notes.

"THREE fine days and a thunderstorm" make up the English summer—at least in foreign estimation. Up to date the fine days have numbered about six, but then the thunderstorm has been of at least double ordinary violence. Pleasantry apart, the storm of last Sunday left some very nasty marks behind. In the torrential rains—mingled with hail in some places—fruit trees somehow got rather badly knocked about, and the losses of stock from lightning were exceptionally numerous. These mischances often do not get reported in small local newspapers, so that to guess at their total number is impossible even for one who mingles much with farming people in the cheerful gossip of market and showyard. But I hear of losses in Warwick, Worcester, Gloucester, Salop, and Leicester. At Upton St. Leonards, which lies east of Gloucester, three cows and a heifer were killed, and two ponies belonging to one owner suffered at Malvern Link. One or two rick fires attributed to the same cause have also been noted.

AT the end of last week a large area of hay had still to be cut throughout the Midlands. On an average the work is probably at least a fortnight later than in a normal year. Still, in Warwickshire and Staffordshire the bulk of the crop has now been more or less well saved, and thanks to the increased use of machinery every fine interval has been turned to profitable account.



IN this catchy and difficult season the North of England system might have been—perhaps may still be—worth consideration. We, as a rule, make our hay as they do in the south; that is to say we carry it as soon as possible after tedding and drying in the sun. It is strange to a Midland farmer to see the hay in Northern counties going from the swath into small cocks, and thence to larger ones of perhaps half a ton apiece. But these larger cocks, which remain in the field perhaps a fortnight before the final stacking, do help to make good hay in a bad season. The worst of the Northern system is that it is rather costly, and demands more hand labour than is sometimes to be found.

CERTAINLY the Oxford Downs are a progressive breed. There is reason to suppose that they are being used increasingly for crossing purposes (which is not to be wondered at when the results of trials in this direction are remembered); and their flock book shows that nowadays pure-bred flocks are to be found far away from their original pastures. Furthermore, Oxford Down rams are getting a good deal of attention from the exporters, whose agents have been very busy since the show season culminated at Lincoln. As a result, Mr. George Adams alone has lately despatched forty-three lambs and ewes to Argentina and thirteen to the United States. Canada is also showing a disposition to try the Oxford Down.

WHILE on this topic, let me record the success of one of the Oxford Down rams sent last year to Mr. McKerrow, the well-known U.S.A. buyer, by Mr. Hugh Stilgoe, of Adderbury. An unbeaten record at five State fairs and the great International, alike in ordinary and championship classes, is something to be proud of. In the circumstances, Mr. McKerrow has again this season been a notable purchaser of lambs and shearlings from the Adderbury flock.

NO one will feel the relapse to rain and dull inclement days more than our hop growing friends. The hops have made marked advance during the last fortnight, but they have still a good deal of leeway to make up. In some of the older Worcestershire gardens the bine is now only just topping the strings and poles, while round Tenbury and Leominster and along the Teme Valley there are fresh instalments of blight. Washing, therefore, is compulsory, and washing in between the downpours of rain does very little good, although it costs as much as at any other time.

July 25, 1907.

Phot. by [*J. T. Newton.*

THE EXPLOSIVE FORCE OF LIGHTNING: SINGULAR EFFECT ON AN OAK TREE.

During a thunderstorm on Monday night, July 20, a massive oak tree, four feet in diameter and fifty feet in height, standing at Cold Harbour Farm, Berkhampsted, was struck by lightning, the effect being very singular. The huge trunk was rent asunder and blown up as by an explosive, hundreds of pieces being scattered around, some of which, nine feet in length and a foot in diameter, were carried 250 feet, and smaller pieces still further. The tree stood in a hedge, there being on one side a field of turnips and on the other mowing grass; on both sides the effect was the same.

No fewer than 218 varieties of wild flowers—all gathered within a week—made up the winning bouquet in a competition among the pupils of a girls' grammar school at Wigton, Cumberland.

The Treasury appeared to prosecute, in a case at Brentford on Wednesday in which Edward Nash, a grocer, was charged with having obtained 4,283 eggs and hundreds of chickens by false pretences. It was stated that Scotland Yard had received hundreds of complaints from all parts of the country. Nash had, it was alleged, obtained produce by advertisements representing that he wanted weekly supplies for a large store. He was sent for trial.

Nottinghamshire Notes.

FARMERS have had another disappointment this week so far as the weather is concerned, for further heavy falls of rain have to be recorded which have done a great deal of damage to growing crops. I noticed a field of wheat to-day at Ruddington which had been "laid" as flat as a pancake. Oats and barleys have also suffered severely, and the outlook is begininning to be serious from an agricultural standpoint.

DELVING into legal lore of the sixteenth century was necessary in a case heard in the Nottingham County Court on Tuesday. It had reference to a claim of £5 put in by Mr. J. W. Burnett, a farmer, of Woodborough, near Nottingham, against Mr. W. Dickman, a pinder, of Lambley, an adjoining village. It appears that some of Burnett's sheep had strayed. Dickman placed them in the penfold, and charged 1d. per head for thirty-five animals. At first plaintiff refused to pay the full amount, but subsequently did so. It was alleged that the penfold was not large enough for thirty-five sheep, and owing to being crowded one died. Another animal was also missing.

MR. R. A. YOUNG, a Nottingham solicitor, who appeared for plaintiff, stated that Dickman was liable to a penalty of £5 for having extorted a sum of more than 4d. for the whole of the sheep impounded. The sum of 4d. was decided by an Act passed in 1558, at the time of Mary and Philip, part of which Act was quoted and discussed. In the alternative the claim was made on the ground that defendant had no right to keep the sheep there, and that it was because he insisted upon keeping them that one had died.

EVIDENCE was given showing that plaintiff went on the first occasion with a man named Porter to get the sheep out of the penfold, but defendant refused to take Burnett's offer of 4d. A good deal of argument ensued, but the judge gave judgment for plaintiff for £4 damages and costs.

MR. ARTHUR STRETTON, of Sibthorpe, near Newark, who was judge at the Staffordshire Show at Burton-on-Trent, last week, in the dairy classes, made some pointed remarks at the show luncheon. Responding to the health of the judges, Mr. Stretton said in judging his policy was never to try to please everyone; he had always found enough to do to please himself. As a judge he always stuck to his own opinion till someone was able to convince him that he was wrong, and then he was content to sit down humble enough. I might add that Mr. Stretton at one time farmed in Staffordshire, while he will be remembered as one of the judges in the farm competitions held in connection with the recent Royal Show at Lincoln.

DEATH has this week removed from our midst one of the leading farmers in the county in the person of Mr. George Brown, of East Stoke, near Newark, at the age of sixty-two. Only as late as a week ago Mr. Brown was out of doors, though he had suffered a long time from a clot of blood in the main artery of the leg, and this appears to have touched a vital part. For a number of years prior to taking the farm at East Stoke he had a large holding at Flintham, belonging to Mr. Hildyard. He was considered a very good farmer, and held in high esteem by his fellow agriculturists. He was a good judge of live stock, and was generally a prize-winner at the Newark Christmas Fat Stock Show.

BY the side of the Trent, in the parish of Hoveringham, there is a remarkably fine crop of winter oats, which have attained the great height of over 6 ft. The heavy rains of the present week have, however, laid a good portion of the crop.

UPKEEP of main roads was the chief question discussed at a meeting of the Newark Urban District Council on Tuesday. Mr. F. Waud said that anyone who passed along the main roads would notice the great damage done to them by motor traffic, and he thought the time had arrived when the roads should become a national charge. The chairman (Mr. J. C. Kew) thought it would be an advantage if the cost of the upkeep of main roads was made a national charge, providing payment was by means of Imperial grants to the county councils. The latter bodies now possessed the necessary plant and equipment, also the experience in the repair and maintenance of main roads. It would be well to retain county council control over the roads, as they were open to pressure and representation from the different localities. Eventually a resolution to this effect was carried.

THE member for the Newark division (Mr. J. R. Starkey) has been placed on the Grand Committee which has the Small Landowners (Scotland) Bill under consideration, and he is devoting a good deal of attention to its provisions. Mr. Starkey is a thoroughly practical man, for he has a farm near Southwell, in which he takes a good deal of interest, while he is also a member of the Midland Farmers' Co-operative Association.

IT is just 100 years since the following circular was issued:—"Whereas several principal horse-dealers have suggested that it would be of great convenience to the public if a show of horses for two days previous to the annual fair held at Newark-upon-Trent on the 2nd day of August (or the day after when the second happens on a Sunday) were established in the said town. Notice is therefore hereby given that there will accordingly be a show of horses at Newark-upon-Trent for two days previous to such annual fair.—By order of the magistrates, Wm. Ed. Tallents, Town Clerk, July, 1807." Both the show of horses and fair have long since ceased to exist.

THERE was not a large attendance at the sale of Earl Manvers' Shorthorns at Holme Pierrepont this afternoon, yet the prices realised were very satisfactory. Among those present were Earl and Countess Manvers, Lady Cicely Pierrepont, Lord Middleton (who is now in residence at Wollaton Hall, near Nottingham), Lady Grantley, of Elton Manor, near Newark, the Right Hon. F. J. S. Foljambe; Mr. Henry Dudding, Riby Grove, Grimsby; Mr. Deane, Dowsby; and most of the leading breeders of Shorthorns in the Midlands.

THERE was one thing noticeable—viz., that Mr. R. Millington Knowles, of Colston Bassett, intends to have a first-class herd of Shorthorns, for he purchased three or four of the highest priced cows. The Duke of Portland is also going in for Shorthorn breeding again, and his agent purchased several good cows and heifers, as did also the Right Hon. F. J. S. Foljambe, of Osberton Hall, near Worksop. An average of £83 5s. 1d. for fifty-five animals is not bad, and Earl Manvers appeared to be well satisfied with the result of the sale, as did also Mr. Norris, his steward.

R K.

July 25, 1907.

DAIRY.

International Dairy Conference at the Hague.

We have been favoured with the full programme of the third International Dairy Congress, which will take place at the Hague from September 15 to 20. An extensive and varied programme has been mapped out, and those who are interested in dairying in Holland will have an opportunity of seeing the principal butter and cheese-making districts of the Netherlands. The first portion of the congress will consist of papers on various dairying subjects, and subsequently to this excursions into various districts of Holland will be made, while those who can afford to devote another week can also include a visit to Friesland, where, perhaps, the co-operative system is at its highest point of development.

Full details as to all excursions and the official programme (printed in English) may be obtained from the general secretary, International Dairy Congress, 83, Lange Voorhout, the Hague, Holland.

National Diploma in Dairying.

The National Agricultural Examination Board announce that the annual examination in the science and practice of dairying will be held for English students at the Midland Agricultural and Dairy College, Kingston, Derby, on September 21 and following days, and for Scottish students at the Dairy Institute, Kilmarnock, on September 30 and following days.

The last date for the receipt of applications to sit at either of these centres is August 31.

The subjects of examination are: The general management of a dairy farm, the management of a dairy, chemistry and bacteriology, practical skill in dairy work, and capacity for imparting instruction to others.

Forms of entry and copies of the regulations may be obtained of Mr. Thomas McRow, secretary, Royal Agricultural Society of England, 16, Bedford Square, London, W.C., or Mr. James Macdonald, secretary, Highland and Agricultural Society of Scotland, 3, George IV. Bridge, Edinburgh.

CORRESPONDENCE.

"An Injustice to Farmers and Cultivators of Land."

SIR,—The reading of an article lately in the *Spectator* brought home to my mind in a very forcible manner how unfair is the burden of local taxation on the farmer and small holder.

The *Spectator*, as my readers doubtless are aware, is one of the oldest and most respected of our weekly papers, and has a wide and extensive circulation amongst thoughtful people of all shades of political and religious thought.

I have found it a paper in a large measure free from party or religious bias, or I would not waste my time in reading it.

I could not do better than quote from the article itself:—"The injustice of our present practice can best be illustrated by watching the tour of a rate-collector in a country parish. Let us observe him calling, to begin with, at a noted factory—say a paper mill—where the owner's house adjoins the works. His first business here is to collect the rates on the owner's residence, gardens, and grounds, which he does; he then proceeds to ask for the rates on the mill buildings and warehouses, and on these buildings he takes his toll. Upon their contents, however—that is, upon the raw material which is to be converted into paper—he levies no charge.

"The tax collector then goes a hundred yards up the road, and comes to a farmhouse with buildings. He then collects the rates for the farmhouse, for the stables, cart-houses, cow-sheds, and other buildings. If he were to treat the farmer as he does the paper mill owner, his work would then be finished; but, and here is the injustice of it all, he says to the farmer, 'Now I must collect a rate upon your land, considered quite apart from your buildings that is, I must collect a rate upon your raw material, out of which you produce and market your corn, milk, cheese, beef, mutton, wool, and garden produce. On that raw material you must pay rates and taxes, calculated not upon your profit but upon the amount of raw material used in your farming business. You have, I see, 100 acres under cultivation. These 100 acres are rented at £150 a year, and therefore you must be further rated on that sum.' If the farmer asks why the chief raw material of his industry—namely, the land—should be singled out for special taxation, while the paper industry and the boot industry and the wool industry are not so treated, although their profits may be far greater than his, he is told that such is the law.

"Another illustration of the gross injustice of rural rating:

"Mr. Blank lives in a large villa in a rural district, with garden and grounds, which are rated at £100 a year. His income is £6,000 a year. Next him is a yeoman farming his own land of 250 acres. His farmhouse and farm buildings and agricultural land are rated in all at £250 a year. His income, derived from the land and the profits of farming, are a bare £300 a year. Yet he contributes to local taxation a sum nearly double that paid by the man with £6,000 a year. Can it be said that the two men are contributing in accordance with their ability—the test not only originally intended by the law but, the test of all equable taxation."

I think that these quotations I have given from the *Spectator* article put our case clearly and well. Now I would ask, Are the tenant farmers, small holders, and cultivators of land going to submit much longer to this unjust treatment? Isn't it about time that we aroused ourselves and demanded fair treatment, not only in the matter of local taxation, but also in several other matters which urgently need reformation? I hope to deal with some of those questions in another letter.—Yours, &c.,

H. B. M. BUCHANAN.

Hales, near Market Drayton, Staffordshire, July 22.

Outlook in North Lincolnshire.

SIR,—The month of July is slipping away quickly, too quickly indeed, for there is a vast area of grass and seeds yet to be won, and the turnips are suffering for want of singling. All the work comes together, that is, we dare not cut more than fifteen acres of grass at once during the wet weather, it was too risky, and so haying and turnip thining have all come together.

Turnips, I think, on the light soils are a good plant. Strong land perhaps got a little run together with the wet, but on the whole we feel assured of our winter stock food.

The grazing pastures are ankle deep with succulent meat, white and alsike clovers especially showing up thickly; indeed, I never saw them so fine before.

Still I fear for the health of the lambs. With such wet pastures they may have contracted the lung-worm (*Strongylus filaria*), which, if so, will make its dreaded appearance in the next six weeks. It behoves us to get much strength into our lambs to resist it by giving plenty of trough food, which must be of a health-giving sort, such as linseed cake and old oats.

Harvest is a far cry, so we will leave it for the present.—Yours, &c. NORTH LINDSEY.

North Riding Prospects.

SIR,—The outlook for harvest is not promising. On the best soils and on the best cultivated farms the crops are fairly good, but on poorer soils the outlook is very bad indeed. There are more poor, thin, weak, bad crops than I remember for many years past.

Mangels are fairly good, quite up to the average, but swedes are distinctly late and irregular, and, moreover, are exceedingly dirty. We have good crops of grass and clover, but at the time of writing (July 19) hay time has just well commenced, and very little has been stacked.

Pastures have borne little eating, and grazing is poor, despite the wet. We have now had a few fine, hot, sunshiny days, and seldom have they been more needed; they cannot, however, redeem the situation, and the ultimate result cannot be satisfactory.—Yours, &c., W. P.

Milk Fever.

SIR,—I would leave this question alone, as I consider it was fully answered by "M.R.C.V.S.," but when the writer of "Cattle Notes and Jottings" (who does not give his name) attacks me by stating that he believes I am liable to be prosecuted by the R.S.P.C.A. for not milking a cow after calving for twelve hours I think he put his leg before the wicket.

Overstocking is keeping the calf from the cow by muzzle or otherwise so as to distend the udder. I still uphold my theory of not milking the cow for *twenty four* hours, not twelve, after calving, but we always allow the calf to run with the cow during that time.

I should be pleased to show our shed of cows to any interested.—Yours, &c., THOMAS DAWS.

Soggs House, Ewhurst, Hawkhurst.

Disease Among Chickens.

SIR,—Can you give me any information respecting a disease which we have among some of our hens and chickens? They get warts on their legs and also eyes, which causes blindness; and it also seems to affect their throats, for they open their mouths much the same as chickens with gapes, and soon languish and die. I hope you may be able to tell me a remedy.—Yours, &c.,

W. HOOPER.

Yellam, Chagford, Devon.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended July 20, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (9,623), 9,278; sheep and lambs (1,084), 2,269; horses (487), 316.

Fresh meat:—Beef (59,529 cwts.), 65,411; Mutton (81,261), 44,035; pork (2,997), 5,654.

Salted or preserved meat:—Bacon (94,259 cwt.), 101,593; beef (2,940), 2,119; hams (33,673), 27,658; pork (6,882), 6,477; meat (7,216), fresh, 5,925; salted, 986; meat, preserved (9,180), 7,096.

Dairy produce and substitutes:—Butter (78,903 cwt.), 89,083; margarine (19,262), 12,402; cheese (57,579), 65,728; milk, cream (76), 115; milk, condensed (17,074), 19,491; milk, preserved (23), 98.

Eggs (great hundreds):—(336,511), 321,308; poultry (value £3,711), £1,950; game (value £19); rabbits, dead (not tinned), (749 cwt.), 1,699; lard 35,831 cwt.), 43,381.

Corn, grain, meal, and flour:—Wheat (1,851,900 cwt.), 1,515,800; wheat meal and flour (219,400), 179,600; barley (29,500), 121,700; oats (271,400), 180,700; peas (28,810), 12,000; beans (28,810) 12,000; maize or Indian corn (717,900), 1,269,900.

Fruit (raw):—Apples (16,507 cwt.), 15,981; cherries (15,945), 9,995; gooseberries (977), 687; strawberries (5,665), 2,480.

Hay (5,210 tons), 2,087; straw (1,203 tons), 840; moss litter (1,281 tons), 1,001; hops (3,606 cwt.), 1,836; locust beans (4,280 cwt.), 15,020.

Vegetables, raw:—Onions (61,993 bush.), 172,329; potatoes (103,074 cwt.), 158,448; tomatoes (54,833); 44,058.

The net revenue obtained during the last twelve months it was in operation from the 1s. a quarter registration duty on imported corn was £1,876,664, of which £1,565,176 was derived from corn, &c., imported from foreign countries.

Cropping Notes.

England.

This time last week we were rejoicing in the advent of "glorious summer." Straw hats and muslins were universally in evidence, and our anticipations of a prolonged spell of warmth were undisturbed. This week, although we cannot fully accept the declaration that *nous avons changé tout cela*, we are conscious that a marked change has taken place. The wind has been blowing from northerly quarters, the sun has been obscured, and the night air especially chilly, the temperature occasionally falling very near to freezing-point. I have therefore looked carefully and somewhat anxiously through the plantation reports that are before me, and find traces of the natural results—in check to the growth, and to the development of burr, with some indications of increase of fly and lice. But, on the whole, I do not find that any damage has been done, and am able to conclude that the situation is practically unaltered.

The only effect of the cooler weather seems to be an inclination to slightly reduce the estimates of the possible crop, but I take little notice of these varying opinions, especially as the meteorological experts detect the appearance of a fresh anticyclone in the South West, which they say is favourable to the re-establishment of fine weather for some time. Should their forecast be realised, we have very little to fear, as under such influences our plantations will flourish, the flowering will rapidly advance, and the foundations of the fruit will be safely laid.

Certain persons are emphasising the continued presence of blight, and pointing to the danger of its increase, alleging that too little time remains to get rid of it before the formation of the cones. But I have confidence in the energy and skill of our planters, and in the efficacy of their appliances, and am pretty certain that they will be able to cope with whatever risks may arise in this direction, and therefore look for improved reports next week.

America.

I received a cable message from California a few days ago, in which was an estimate of the United States of America crop from 290,000 to 310,000 bales. This is much lower than I have previously received from other sources. Other correspondents speak of the crop prospects as "brilliant," putting the possible yield at not less than 350,000 bales, and expecting that there will be at least 100,000 bales available for exportation of the 1907 crop. A letter from the Pacific Coast just to hand informs me that in consequence of the outlook the markets are all very depressed, and that one of the finest lots of Oregons has been sold lately at 6½ cents (less than 3¼d.) per lb. to the grower.

Germany.

Messrs. John Barth and Son, of Nuremberg, have favoured me with a report, dated July 17, in which they say:—"We have had lately very cold and rainy weather, nevertheless it has not yet done any damage to the plants. Everywhere in Germany the outlook is a good one. Bavaria will most likely have a fairly large yield, the early hops are already in bloom. Also in Wurtemberg, Baden, Alsace-Lorraine, and Posen the plantations promise a good crop. Bohemia expects to have a large yield too, and the Saaz district seems especially favoured. France and Russia send very favourable news." I have this information partly confirmed from other sources, one correspondent saying:—"the plantations have a remarkably beautiful aspect in the great majority of districts, and if the weather continue to be favourable and there is no blight, we may expect a harvest equal to that of 1905."

Austria.

The Austrian Board of Agriculture reports to the middle of July as follows:—"In Saaz the conditions are somewhat unequal, but generally satisfactory. Much rain has fallen recently, but warm weather is desired. The nights are cold, and as the period is critical, better weather is needful. In Auscha, Polepp, and Dauba hail has caused some damage in several places, but generally the conditions are good. The plants are free of insects. In upper Austria the growth is somewhat unequal, and insects have appeared. In Styria the long expected rain has fallen, but the development of the plant is hardly satisfactory, the weather being too cold. In Galicia the conditions are not very favourable." Altogether the position in Austria does not appear to have improved, and my correspondent says that a large crop is not now expected.

Belgium.

The Poperinghe planters are bothered with blight, and some of them are compelled to use washing machines. There is, however, much difference of opinion as to the danger of the attack, many being inclined to consider it of no importance. In the Alost districts there is no alarm from this cause; the plants are reported to be, with very few exceptions, healthy and vigorous, and are making rapid progress. But the cold weather has been very trying, and the anticipations of a heavy crop are now somewhat modified.

The World's Markets.

London.

The Borough trade is in a languid condition. A few transactions are passing, and as stocks are so limited, prices remain fairly firm. But this position has been recently affected by the more favourable news from the plantations, therefore an under-current of weakness is discernible. I have just heard from America that large consignments of hops are being shipped to England amounting altogether to nearly 5,000 bales, and my friend there says that he would not be surprised to see quite a few more consignments being sent over this month. He adds: "This consignment business will no doubt put a further damper on your markets. Unless we get rid of our hops that way there will be a heavy surplus here to drag down prices on the coming crop. With the large quantity of 1906's in existence, and the fine prospects, the situation looks quite critical from the growers' point of view. The hop industry has now reached a state where only the strongest can stand, as too many hops are being grown in the world, and good prices cannot prevail again until there is a heavy reduction in acreage." *Verb. sap.*

Nuremberg.

As was to be expected, the favourable news from the plantations is affecting the market considerably. Values are falling rapidly, and sales are decreasing, not more than 130 bales having changed hands during the past week. The prices paid varied from 55s. to 65s. for medium, and 80s. to 90s. for best qualities. Other qualities are being offered from 20s. upwards, and the tendency is towards further depression. Some samples of new Styrian hops have been already received, and are reported as being of good quality and colour; they found buyers at the fancy price of 2s per lb.

Brussels.

This market is exceptionally firm, but as quotations are entirely speculative, there is but little notice to be taken of them. At the moment the gamblers on the Bourse are trading on the varied reports received from day to day concerning the crop prospects. The weather being considered unfavourable to the development of the plant, advantage is taken of the possible reduction of the yield to "bull" the market, and prices of 1907 Alosts have been pushed up to 62½ and 65 francs. I do not suppose that these figures will be upheld, but expect that we shall hear of reductions in a short time.

The Branding of Imported Hops.

This matter, to which attention was recently called in the House of Commons by Captain Courthope, is still being anxiously debated by hop growers, the great majority of whom earnestly believe that in the complete administration of the Act of 1866 they would find some relief from the present depressed condition of the industry, tending as it does towards absolute annihilation. Our friend the editor of the *Kentish Observer* has

W. A. MAY, "Mark Lane Express,"

2, Wellington Street, Strand, London, W.C.

taken up the cudgels on their behalf in publishing a long article dealing with the question. He has always been a consistent supporter of our industry, and we venture to congratulate him upon the boldness and thoroughness with which he has tackled this important issue, and the care he has taken in making himself acquainted with all the bearings of the case.

He points out *inter alia* that the matter is not well understood by English growers, who for want of knowledge fail to appreciate its importance. Many planters think there is nothing more in it than the application of a stencil plate to the foreign bales, and as this is so simple they cannot see how they would be benefited. But in this simple process lies hidden the crux of the whole matter. At present foreign hops are imported free of duty and of guarantee. Mixed hops are bought and sold by foreign dealers, and are in turn dealt with by English merchants, while the consumers in this country are for the most part in ignorance of what they are buying. This license to sell without guarantee gives our opponents the opportunity of underselling us, and deprives our growers of their legitimate remuneration. If the Act of 1866 were applied, as it was evidently intended to be, to all imported hops, as well as to our own products, such unfair competition would be necessarily and immediately ended. It is, however, argued by some that the guarantee thus secured would prejudice our brewers in favour of the foreign growths, and that thus we should be further damaged.

This contention is very fallacious, inasmuch as any guarantee of quality tends to enhance value, and therefore it is clear that the result must be seen in the improvement of our general market. There is another and even more important point involved in this compulsory branding. The system under which Continental hops are grown, in small quantities by peasant farmers, makes it almost impossible that each bale shall contain any one individual growth. This fact is urged by the opponents of this movement as an insuperable obstacle. But we reply that we have nothing to do with such conditions; we look at hops as hops, wherever and however they may be produced, and if our competitors cannot comply with the regulations to which we are subjected they must be content to find some other outlet for their produce. The obvious result of such procedure would be the withdrawal of a considerable quantity of Continental hops from the London market, and the proportionate diminution of competition in prices from which our home industry has suffered too long. There is also satisfaction in the knowledge that there can be nothing detrimental to the public welfare in such moderate defence of the interests of English planters. In short, this is "fair trading" as we understand it, and in this sense it cannot be looked upon as a party question, but must commend itself to reasonable men on both sides of the House as being outside the region of debate, and therefore claiming prompt settlement.

But however attractive this proposal may appear to producers, the question arises, "What do consumers think of it? Are they desirous for the application of the 1866 Act, as is demanded by English hop growers?" Fortunately we are provided with satisfactory evidence of the feeling of brewers, which we are glad to find is in accord with our own. The *Brewers' Journal* has been at the trouble to ascertain the views of their clients. Mr. Collard (Messrs. Barclay, Perkins and Co.) thinks it would only be fair that foreign hop growers should mark their bales in exactly the same manner as their English competitors mark their pockets, with the growers' name, parish or district, county and year. He recognises the difficulty in carrying such a regulation into effect as referred to above, but considers that home growers have a real grievance; and he goes further in saying that he would like to see an import duty also, as he is satisfied that we can grow in this country all the hops we require. As far as the marking of foreign hops is concerned, Mr. W. W. Butler (Messrs. Mitchell and Butler) expresses the same opinion, strongly holding the view that it would be advantageous to our brewers to have all packages of foreign hops marked with the district in which they are grown and the year of their growth. He regards the present system as not only weak from the honest trader's point of view, but also unfair to the English planter. A similar view is held in the West Country by Mr. A. C. Terry (Messrs. Georges and Co., Bristol Brewery), who considers that the provisions of the 1866 Act should be as rigorously enforced in the case of the importer as in that of the home grower. There are some others who do not share these views exactly, but their chief objection seems to be the difficulty of making the Act applicable to imported hops. We have, however, sufficient evidence to prove that no actual hindrance would be raised by our brewers, and we therefore agree with our contemporary when it says in its concluding paragraph:—"If the hop grower demands the marking of foreign hops, and if the brewer have no objection to this procedure, by all means let the Government adopt the provisions of the Act of 1866."

MARK LANE EXPRESS" STAND AT BARNSLEY.

The "Mark Lane Express" Stand at Great Yorkshire Show at Barnsley will be No. 179, where we shall be pleased to see all our friends and readers attending the Show.

Thatchers Wanted.

FORTUNATE is the farmer in a catchy season like this who has a Dutch barn into which he can draw his hay and know that it is safe from further harm. But there, every farm is not furnished with one of these useful structures, and there has been such a run on rick cloths this season that the demand has been quite in excess of the supply. The outcry in many districts just now is for thatchers, and they are not forthcoming. We visited a man the other day who has two stacks, but only one cloth. Having topped up his first rick, he removed the cloth to protect the second, and got straw at hand ready for thatching. But not one of his small staff of men is able to thatch, and while he was waiting for the local expert, who was engaged elsewhere, the drenching rain of a series of thunderstorms penetrated the rick and saturated the hay for some way in. There is hardly need for further comment, except to say that it is in a season like this when one wishes that more labourers understood the simple art of thatching, and there are many who apparently never take the trouble to learn. Admitting that in many ways machinery has taken the place of hand labour, there are directions in which the expert workman is indispensable, and this is one of them

Careless Workmen.

WE know that accidents will happen in the best regulated of families; but the fact, nevertheless, remains that so-called accidents on farms are often the direct result of carelessness. Here is a case in point. During the spell of fine weather we had a short time ago, when it was expedient that every effort should be made to push on with the haymaking, a careless workman ran the pole of his employer's mowing machine into a tree and broke it. There was apparently no excuse, and perhaps the accident was not what one would call grave; but it was a very serious thing for the farmer to be deprived of his mowing machine for a few days at a time when it was most expedient that he should be using it, particularly when the loss of time and expense might have been avoided had reasonable care been exercised. Bearing on the same point is the Workmen's Compensation Act, which in its way is a very good measure; but we hope that employees will not take it in the light of relieving them of personal responsibility, or we fear the possibility of an increase of those accidents which are due to carelessness. We do not wish to charge labourers as a class with being careless, but our farmer readers will agree that there are many who do not treat their master's property as if it was their own.

Borrowing Farm Implements.

WHEN recently discussing the advisability of spraying as a means of destroying charlock, we suggested, on the grounds of economy, that it might be well for a number of farmers to combine in the purchase of an apparatus, but the idea met with opposition. One farmer was particularly emphatic about it, and had convinced himself through past experience that if a man had sufficient use for any implement, the best plan was to have one of his own. Regarding the spraying machines, he argued that if it was a company affair everyone would be wanting it at the same time, and there would sure to be friction. No, if it was worth while spraying charlock he would have a machine of his own, and if looked at from this point of view, the logic of the argument will be admitted. At the same time, we did not suggest a selfish attitude. Farmers always did borrow and lend, and in their mutual interest it is well that they should be ready and willing to help each other, but in the case of implements when an operation is seasonable on one farm it is seasonable on another, and it is best for every practitioner to have his own equipment.

The Trying Summer.

DEAR, dear, how it drags on to be sure! By the world at large farmers are classed as a community of grumblers, but it must be admitted that they need all the patience that in an ordinary way is given to suffering humanity. As we write, the agricultural world is again sighing for sunshine, and memories are being racked to think of a summer that was worse than this. It is wearying work to see the spoiling hay scattered about the fields, knowing all the time that expenses are mounting up and the summer is passing away. Farmers smiled and their hearts grew light during that week—the one solitary week—of summer we had in July, but the thunder came all too soon with its disturbing influence, and gloom and showers and dulness have been our portion since. Oh, to see the last load of hay in the yard! What a weight would be lifted from the mind of many a wearied farmer who is heartily sick of haymaking, and yet is helpless to help himself. The last time we had occasion to write dismally of the weather, a bright change came before the date of publication. We heartily wish that the same thing may happen again, but at the moment farmers are not the only people who have reasons to grumble.

The Bean Crop.

ONE redeeming feature about the present season is that beans are good, and given favourable weather for harvesting, the outlook is distinctly promising. We have watched the progress of winter beans in our own district throughout the season, and though here and there the black aphis has got hold of them, for the most part heavy rains have prevented the pest from making progress. One notices the difference that cultivation makes in this respect, and with beans, as with other things, it is the plant that is pining for the want of food, or through some other cause that first falls a prey to the ravages of insect foes. Abundant moisture is largely responsible for long stalks which have padded well, and there is another thing to be said, beans are selling well now. We hope that this will be the case when the present crop is harvested.

Education and the Influence of Sport.

IT is generally agreed that when the time comes for a boy to leave the elementary school—be he town or country bred—he has by no means completed his education, and the means of further acquirement of knowledge are offered to him if he has the good sense to take advantage of them. Many do this, but the fact remains that the increasing craze for sport is one of the stumbling blocks to what is known as higher education. In rural districts in particular the winter is necessarily the season when evening classes are held, and it is also the time when the football passion is at its height. We have nothing to say against reasonable indulgence in football and other sports, but there are more serious objects in life than these, and to sacrifice the latter for the sake of the former is decidedly a wrong thing. The same argument may be carried from the village and its facilities for education and self-improvement to agricultural and other colleges that are centres of learning. Whatever may be the opinion held as to the value of agricultural colleges in training farmers, it is unfair to condemn a system or institution if a student in one of these establishments looks upon work as a means of occupying time between the hours of sport. That the college student requires sport and recreation is admitted, but it should be taken in the light of relaxation to fit him better for the serious business of his college career—work and the acquirement of knowledge.

Potato Leaf Curl. ON our correspondence page of this issue will be found an answer to an inquiry respecting that peculiar disease of the potato known as "leaf curl," and we mention the matter here for the purpose of drawing the attention of our readers to the subject. There can be no doubt that this "leaf curl" disease, whatever it and its origin may be, is greatly on the increase, and probably crops suffer more through this evil than through the blight (*Phytophthora infestans*). There are acres of potatoes this year, particularly early varieties, that will hardly be worth digging on account of the "curl" disease, which may be detected by the weakly growth and spindling stems of the plants. For the present, however, we do not wish to add anything to what is written by our correspondent on the page referred to, but we hope to receive letters from persons interested in potatoes with the object, if possible, of throwing further light on this peculiar disease.

August. WHEN June gave way to July we felt that the first month of the summer had been a failure, and, with the exception of one solitary week, we may say the same of the month that has now given place to August. And through it all time is fleeting, for the summer, such as it is, is passing away. August, at its best, can be a glorious month, and we hope it will be for the sake of the belated haymaking, the harvest of the corn, and last, but not least, to make up for the shortcomings of its predecessors. August is the month of holiday-making, the harvest-time of seaside landladies, but for farmers it will be more than usually a month of work, because, through circumstances which they could not control, they have been in a continual state of getting behindhand for months past now. We hope for the best, but if August should fail us the summer of 1907 will go down to posterity as a dismal affair.

Agricultural Politics.

BY A LOBBYIST.

The Interest of Displaced Labourers.

Perhaps no more practical illustration of the sympathetic and receptive statesmanship of Mr. Harcourt in connection with the Small Holdings Bill has been provided than in the cogently-worded and unambiguous clause which he has added to that measure protecting the interest of the displaced labourers. There can be no doubt but that a good deal of fear possessed many members of the House of Commons that the new policy would operate to the hurt of that portion of the urban population whose position is below that of those qualified to be tenants of these holdings. There was in every part of the House an anxiety that the displaced labourers should not be unduly penalised—that they should, provided they could prove what I will describe as an "economic hurt," be compensated. It was appreciated that the existence of a possible danger to the resident labourers, and to the stability of their employment, would be a chief influence in deterring county councils from putting the Act into operation. How, forsooth, could they be expected to jeopardise the position of a body of labourers, their wives and families, in order to establish a few small holdings? Why, the suggestion that they should connive in such a policy would naturally appear to some of the more hesitant spirits on the county council to be an invitation to still further denude the countryside of muscle and brain. Mr. Harcourt has, with characteristic sensitiveness to the Parliamentary mind, established such a safeguard as must banish this fear. He has, in a word, facilitated his own purpose, and removed from his method an ill-omened suspicion.

* * *

The Purpose of Mr. C. D. Rose, M.P.

May I diverge for a moment to say how seriously the attacks which have been made on Mr. C. D. Rose, M.P., in connection with his experimental small holdings at Burwell are deplored on both sides of the House of Commons. Into the incidents of the unhappy and embittered business I will not enter. It is felt, however, that, if partisan sentiment is to be invoked to thwart the generous and unselfish anxieties of landowners, social reformers and philanthropists in the interest of the rural class, a new evil will be introduced into our already sufficiently afflicted country-side. In thus writing, I am reflecting the views of Conservative as well as Liberal legislators. Perhaps this Burwell experiment may have been attended with incidents we should avoid in a perfected state—I do not know whether this be so or not. Mr. Rose cannot, however, be suspected of having deliberately designed or intended them. What is appreciated at St. Stephens is that Mr. Rose sought at some sacrifice to realise an intention which would, as he believed, benefit the rural population. "Oh," it may be scoffingly retorted, "he had a political object in view. Don't you know he is the Member for the division? He wanted to get kudos." Well, if a man be generously inspired, and if he possess the wherewithal, where, in the name of common sense, should he seek to realise his inspirations but in the constituency which he represents in the House of Commons? The Burwell small holding experiment has a distinct economic value; it thus has a legislative significance. Should a legislator be barred from any legislative design affecting his own constituents? Do not, for heaven's sake, let us weaken or thwart the anxieties of the generous-minded because of party divergence. When partisanism essays this work it is a malignant growth.

* * *

The Meaning of the Defeats.

Certain of the opponents of the Government have been a good deal chortling over the defeats which the Ministry has sustained in the committee-stage of the Small Holdings Bill. Frankly, I believe that those defeats have, excepting in one instance, meant the improvement of the Bill. The removal of the minimum limit to a small holding, and thus permitting of a small holding being of any area up to 50 acres—by the way, this was a Radical proposal, though it had the strenuous support of Mr. Chaplin—certainly improves the measure and tends to simplicity in its operation. All the same, these defeats yield no real occasion for partisan gloating. As a fact, they in themselves provide a very effective evidence of the fair and dispassionate temper possessing the committee. Of course, the party-mood has occasionally exhibited itself—this must inevitably be so where men approach a principle from different standpoints; but I have never known a committee debating a grave economic departure in which the party whip has been so seldom cracked or in which it has commanded less obedience. The committee reflects in its component parts the general character of the House of Commons. If partyism and partyism only had reigned, the Government would have had a majority whenever it choose. These defeats are certainly a matter for rejoicing in this sense: They reveal that, in the careful, detailed examination of a great issue, Parliamentarians can emancipate themselves from the shibboleths and pettiness and jealousies of electoral warfare. And this is a good thing. Mr. Chaplin, I am persuaded, will regard his victories on this committee in the same sense. They have not yielded him scalps to triumphantly hang at his girdle.

* * *

Co-operation and Agriculture.

It is a thousand pities that any debate should have taken place on the committee stage of the Small Holdings Bill which could induce the belief that there is a strong body of politicians, who are opposed alike to the initiation of co-operative effort in connection with the small holdings and to the establishment of agricultural credit banks. Mr. Yerburgh and his immediate friends in the movement are, of course, too clear-eyed to permit themselves to be possessed by this mistake. Credit banks will be found to be not merely wise, but an absolute necessity of the new policy; the application of the co-operative principle to small holdings—which will chiefly mean the prevention of waste in the distribution of the produce—is one of the best assurances of success and profit. As a fact, Mr. Collings' antagonism to the clause which gives power to county councils to promote the formation of and assist co-operative societies, credit banks, and societies for the formation of small holdings was based upon objection to the principle of financing trading concerns out of the public funds. As a fact, too, Mr. Hicks-Beach's antagonism was based upon his objection to making the county councils rather than the State the financial fount. The idea that the committee is in any sense opposed to the co-operative principle in agriculture—that is, to the adoption of a mutual system of distribution and even to the mutual use of the machinery of production—or to the establishment of credit banks is thus an illusion. It is, I repeat, unfortunate that it should have been inadvertently fostered. To be antagonistic to the idea of financing trading concerns out of the public funds is a very different thing to being opposed to the association of the co-operative principle with small holdings. The incident simply illustrates the lack of flexibility in our philology.

* * *

Prime Minister and the Scottish Bill.

The Prime Minister would have been well advised had he not accused certain of the members of the committee on the Scottish Land Bill of obstructive tactics. Certainly the discussion has been rather a case of linked sweetness long drawn out. Let, however, Sir Henry Campbell-Bannerman reflect for a moment what the Bill means to politicians of the type of Mr. Walter Long, Colonel Kenyon-Slaney, Mr. Cochrane, and Mr. Lambton. In my view, these Parliamentarians have appalled their mind with too fearsome spectres. I do not believe that the Bill means chaos or the reign of the sans culotte or sown land nationalisation. It certainly, however, comes to them in the guise of revolution as an upsetting of the natural order designed by Providence; and it must be even admitted by men whose knees do not quake at the prospect the Bill has opened out that it is farther reaching than any previous act of agrarian legislation. To have neglected to seek to draw its fangs, to have practically acquiesced by a brevity of speech and an impersistence of method in its proposals, would have been to these politicians an act of recreancy. They were in their own view fulfilling their duty—they did not want as landlords to shoot Niagara without entering their protest against what they regard as a very predatory and unnecessary proceedings. Well, I don't think they need be possessed by aught but indignation. Their fears may be banished—at least for a while. The peers will not hesitate to use the pruning-hook.

* * *

Sir E. Strachey's Position.

It is only fair to Sir Edward Strachey that the explanation of his attitude on the milk-blended clause of the Butter Bill should be emphasised in this column. Why did Sir Edward so persistently refuse the safeguards against its unfair sale which were so vigorously demanded from all sides of the House—safeguards subsequently conceded by the President of the Local Government Board? Well, the fact is that Sir Edward is not really an executive Minister. He could not therefore depart from the specific methods accepted by the Ministry, and in particular approved by the Board of Agriculture. He is, so far as the agricultural policy of the Government is concerned, really the mouthpiece rather than the author. Hence it is that he was in the unfortunate position of being unable to immediately make the concession which was demanded of him, in perhaps a little too arrogant a tone. He had, first of all, to seek Ministerial authority. It was different with the President of the Local Government Board, an administrator who may be said to be directly responsible for the purity of the nation's food, and who in the present instance has made this the subject of a direct solicitude. Sir Edward has been the subject of a good deal of criticism in connection with his representation of the Board of Agriculture, more particularly at the hands of his Radical friends. In view of my explanation as to the peculiarity of his Parliamentary position this would appear to be somewhat lacking in generosity.

A field of rye was cut on August 1, near Chelmsford, Essex. Some winter oats on the same farm are about ready.

A meeting of Plumbley, Knutsford, and Lostock Gralam farmers resolved to send a strong protest to the Cheshire Lines Committee about the delay occasioned in sending their produce to the early Manchester markets. It was contended that though Northwich and Chester produce reached local stations much later, they were first on the Manchester market.

Royal Lancashire Show at Bolton.

THE first day of the Royal Lancashire Agricultural Society's Show at Bolton added another to the already long list of successful shows held by this society. The weather was extremely favourable, and there was a large attendace, the number paying for admission amounting to 5,505, a figure which beat all past records. There was a large collection of stock of all kinds, but the quality in the strictly agricultural section was hardly up to the standard of many previous exhibitions.

The show remains open until to-day (Monday), but the early date at which we go to press prevents us dealing with anything beyond the first day.

CATTLE.

There was an excellent display of Shorthorns. The Derby Challenge Cup, value £50, for the best bull in the show, was won outright by Mr. Miller's Linksfield Champion, which was champion at the Royal. In his class he beat Mr. T. Atkinson's Pride of Sunshine, which was bred by the King, but which failed to get in the money at Lincoln. The two-year-old bull class was topped by his Majesty's Royal Windsor, which was first at the Royal, and was stood reserve for the championship. Mr. George Harrison was second with Elvetham Sweetmeat, bred by Lord Calthorpe, and out of his lordship's champion cow, Sweetheart. The yearling bulls were a capital lot, and occasioned the judge no little difficulty. The King, however, nobly assisted by his win with Evander, a roan by Royal Chatham. There was a close struggle for the second position, which was ultimately awarded to Mr. George Harrison's Pride of Tees, though many judges round the ring would have preferred Mr. P. D. Pothwell's Lord Brilliant, the roan which sold for 1,000 guineas at the Royal, where he stood second, and easily beat the two which were placed in front of him.

In the Shorthorn cow class, in calf or milk, Lord Calthorpe won with his Royal winner, Sweetheart. She was awarded the Derby Challenge Cup of £50 for the best cow or heifer in

Lady Ellesmere giving the Derby Challenge Cup for the Best Cow or Heifer in the Shorthorn Section to Lord Calthorpe's Cow, Sweetheart, at the Royal Lancashire Show at Bolton on Thursday last.

Earl Egerton of Tatton's Shire Stallion, Tatton Dray King, who won the Shire Championship and First Prize in his Class at the Royal Lancashire Show at Bolton.

The Right Hon. Victor Cavendish's Shropshire Ram Lamb, which won First Prize for a Shropshire Ram Lamb at Bolton.

Judging the Shorthorns at the Royal Lancashire Show at Bolton on Thursday last.

Mr. J. H. Stokes's Hunter Gelding, Axiom, which was the Champion Hunter and First in its Class at the Royal Lancashire Show at Bolton.

Messrs. F. and A. Hall's Hackney Stallion, King of the West, which won the Hackney Championship and First Prize in its Class at the Royal Lancashire Show at Bolton last Thursday.

the section. Second to her in the class was Mr. George Harrison's Ursula Raglan, a big, strong cow, and the third was the well known Ratcheugh Witch, belonging to Mr. W. Bell, of Alnwick. One of the surprises of the day was forthcoming in the three-year-old heifer class, in which Mr. R. R. Rothwell's Royal winner, Lady Graceful, was deposed from the leading position for the first time in her career. After a minute examination, the judges placed Mr. T. Atkinson's Jenny 19th at the top.

Mr. George Harrison led a quartet of heifers calved in 1905 with Montrave Wondrous, a Scottish-bred heifer. Mr. T. Atkinson's Lily of the Dale, a white by Chewton Victor, stood second. In the open class of yearlings his Majesty the King had an unquestionable win with Marjorie, who thus repeated her Royal victory.

Shorthorn dairy cows in milk, four years old and upwards, were judged largely on the yield of milk which was drawn in the ring. Mr. R. Cock, of Rossall Grange, was third with a cow which yielded 32½ lb., while Lord Rothschild's Fairy Queen 5th had a record of 34⅛ lb. There were only two claimants for the prizes in the younger class, Lord Rothschild being first with a roan which yielded 28¼ lb., and Mr. R. Cock second with a beast which fell short of that return by nearly 5 lb.

Of Dexter cattle, there was one of the finest shows that has ever been seen at the Lancashire Show, and it was a very strong department indeed, the judges having much difficulty in several classes in fixing the awards. Amongst the winners here were the Countess of Sefton, who was credited with a first and champion in the Dexter bull class, calved in or before 1905; the Duchess of Devonshire, Baldomero de Bertodano, Lady Greenall.

In Jerseys, Lord de Rothschild, Lady de Rothschild, and Jersey de Knoop were the principal winners.

HORSES.

Hunters are fairly numerous, and there was keen competition for the championship prizes. The Manchester Challenge Cup for brood mares or fillies was won by Mr. J. T. Wilkinson, of Edwinstowe, Newark, with Rosalinda, a Royal winner. The foal prizes went to Messrs. W. Brown (Lancaster), F. I. Grainger (Boston Spa), and R. Needham (Knutsford). Mr. J. H. Stokes, of Market Harborough, came out first in a good class of four-year-olds and upwards, to carry 15 stone, beating Mr. Wilkinson. In the novice Hunter class, however, Mr. Wilkinson reversed the order of things, Mr. Stokes's horse being placed second to his five-year-old brown horse Summertime. In the competition for four-year-olds, to carry 12 stone, Mr. Stokes won both first and second awards. The Storey Challenge Cup, for the best four-year-old Hunter in saddle, was awarded to Axiom, a beautiful brown horse, shown by Mr. Stokes, and special prizes were also awarded to Mr. E. W. Robinson, of Esher, Surrey, for his aged chesnut, Golden Leaf, and to Mr. Wilkinson for his bay filly, Lady Bird.

The Hackney classes were rather sparsely filled. The Ainscough Challenge Cup, for the best stallion in the showyard, was awarded to King of the West, a shapely chesnut, shown by Messrs. T. and A. Hall, Copmanthorpe, York. The Royds Challenge Cup for the best Hackney mare or filly was won by District Maid, an animal well known in South Country showyards, belonging to Mr. R. P. Evans, of Reigate. She was the winner of the first prize for Hackney brood mares, with foal at foot. The Hackney Society's silver medals were awarded to Messrs. T. and A. Hall and Mr. R. P. Evans. Sir Lees Knowles secured a first prize in the class for Hackney stallions foaled in 1906, and the novice prize for Hackney stallions of any age was taken by Angram Rosamede, belonging to Mrs. E. Fletcher, of Angram, York.

The riding and driving classes produced some well-known animals, premier honours going to Mr. John Kerr, Hertfordshire, with his harness pair, Loudwater Gougelt and Loudwater Grangelt. Mr. H. Le Marchant, London, was a close rival.

The Shires were the best classes in the horse section. The challenge cup for the best Shire stallion in the show was won by the Earl Egerton's well-known bay Tatton King, which also takes the place of honour in the class for Shire stallions foaled in 1904. Mr. Walter Cunningham, of Gateacre, Liverpool, is a good second in a class of five with Childwall Chanter. Earl Egerton is also successful in winning the red ribbon in the class for Shire stallions, foaled in or before 1903, with his seven-year-old Tatton Friar, though he was run closely by Mr. Dewhurst's Macclesfield Monarch. Another Cheshire horse, Rustic Friar, the property of Mr. Lewis Dodd, Tarporley, takes the first place in a class of Shire stallions foaled in 1905, beating Tatton Swell, a son of Tatton Friar, owned by Messrs. E. and J. Whinnerah, of Carnforth. In the yearling class, Mr. A. Grandage, of Bramhope, Leeds, is first with Bramhope Royal Duke. Shire brood mares, foaled in or before 1904, with foal at foot, formed one of the strongest classes in this section of the show. Lord Rothschild's Belle Cole here added another to her list of substantial victories. For the championship of the show, however, she was beaten by Bardon Marion, a finely proportioned brown, shown by Mr. W. T. Everard, of Bardon Hall, Leicester. Captain Heywood-Lonsdale, of Market Drayton, was second, and Earl Egerton took a third prize. The prizes awarded to the foals in this class were taken by Lord Rothschild, Mr. H. W. Kearns, of Accrington, and the Earl of Ellesmere, Worsley Hall. Mr. W. T. Everard's Bardon Marion was placed first in the class for Shire fillies foaled in 1904, Earl Egerton's May Queen securing the second place. Seven Shire fillies, foaled in 1905, came before the judges, who awarded the first place to Combermere Abbess, owned by Mr. Egerton Orme, of Etwall, Derby. Lord Rothschild's Misty Morn added, in this class, another second prize to those won by her at Islington, the Royal, and Peterborough shows. Shire fillies foaled in 1906 numbered sixteen, and included representatives of many well-known studs. Mr. Everard secured another victory here with Bardon Flower of the Forest.

Agricultural horses are few in number. Mr. H. W. Kearne is first in the class for barren mares with Knottingley Rose, who has to her credit victories at Islington, Newchurch, and elsewhere. In a gelding class of five, the Lancashire and Yorkshire Railway Company secured both first and second prizes.

SHEEP.

There is a poor show in this section owing to absence of competition.

Sir Richard Cooper, Sir Walter Corbet, Mr. J. J. Brown, of Birkenhead, Mr. Victor Cavendish, M.P., and Mr. Alfred Tanner, of Shrewsbury, send all the Shropshires. Sir Richard Cooper takes the special prize for the best pen with three good ewes.

The exhibitors of Oxford Downs are Mr. E. Gibson Heslop (Darlington), and Mr. Thomas Oswald (Byers Garth, Durham). Mr. Heslop has three firsts, two seconds, a third, and a special prize.

Wensleydales are a larger section, but here half a dozen flockmasters only are concerned—Lord Henry Bentinck, the Executors of the late Thomas Willis (Carperby, Yorkshire), Mr. Richard Procter (Clitheroe), Mr. J. Dacre (Lancaster), and Mr. R. H. Milner, Hest Bank. The Executors of the late Thomas Willis won the special prize for the best pen. Mr. W. J. Crossley, M.P., sends a number of Herdwicks from Ambleside, and has secured three first prizes and a special.

Mr. Edward Smith (Keighley), Mrs. Blackburn (Nelson), and Mr. D. Hague (Clitheroe) are the principal prize-winners for Lonks.

PIGS.

Berkshires were a particularly strong class, chief honours here falling to the Earl of Ellesmere, Sir Gilbert Greenall, and the Duchess of Devonshire.

The Tamworths were a comparatively small section, and but for Mr. R. Ibbotson's entries would have been very few indeed.

JUDGES.

CATTLE.—Shorthorns: Mr. G. J. Bell, Standingstone, Wigton: Mr. Robert Bruce, Dublin. Dairy: Mr. Henry William Woods, Worksop. Jersey: Mr. John T. Keddie, Blythwood, Stanstead. Dexter and Kerry: Mr. F. N. Webb, Babraham.

HORSES.—Hunters: Mr. William Heslop, Staindrop; Rev. E. A. Milne, Chilfrome, Dorchester. Leaping Competitions: First day, the Hunter judges; second day, the Hackney judges. Hackneys and Riding and Driving Competitions: Mr. T. M. Bentley, Driffield; Mr. R. G. Heaton, Chatteris. Shires: Mr. Joseph Theakstone, Little Ouseburn, York; Mr. William Richardson, Doddington.

SHEEP.—Shropshire, Mr. T. S. Minton, Montford, Shropshire; Oxford Down, Mr. J. H. Toppin, Penrith; Wensleydale, Mr. Joseph Towers, Nether Kellett; Herdwick, Mr. John Newby, Broughton-in-Furness; Lonk, Mr. W. S. Airey, Whalley.

PIGS.—White, Mr. George White, Skelton Road, York; Berkshire, Mr. Richard E. Horwood, Drayton, Tring; Tamworth, Mr. T. S. Minton, Montford; large black, Mr. William Towsend, Stroud.

Cleveland Show.

This year's annual show of the Cleveland Agricultural Society took place at Redcar on Wednesday. The total entries reached 958, these being made up of 154 cattle, sheep, and pigs, 294 horses, and 510 poultry, pigeons, rabbits, and farm produce. The display of cattle, sheep, and pigs was in point of numbers the best on record, and the quality of the stock did not suffer by comparison with that seen at recent shows held under the society's auspices. The exhibition of horses was undoubtedly seriously affected by the counter attractions at Crook and Thirsk, but the effect was mainly noticeable in the driving classes.

Horses only made a fair show in the Cleveland section. Mr. George Grandage's brood mares, Woodland Briar and Woodland May both achieved great prominence. Mr. Grandage, indeed, had things pretty much his own way. He won in the filly foal and yearling classes with nice young stock of the Cleveland breed got by Woodland Pride; another by the same sire was second to Mr. George Elders' prize-winning two-year-old filly, and he took another two-year-old second prize in the coaching section. Strength, freedom of action, and nice bone generally characterised the winners, and Mr. J. H. Tyreman's Aislaby Beauty, another Royal success, in those points ranked as a particularly good second to the younger mare, Woodland Briar.

Agricultural horses, three times as numerous, made a show well worthy of the district. The foal classes were capitally filled, in strong contrast to some for older stock. Many of the youngsters competed for prizes given by Lord Middleton, the Shire Horse Hunt Committee, and the Cleveland Cart Horse Society. Hunters were nearly as many as the last-named section, and included a good sprinkling of that strong, useful sort of animal which is needed for getting over the Cleveland country. The encouragement to breeding given by Mr. W. H. A. Wharton, M.F.H., was demonstrated in more than one class, and both the Cleveland Hunt Prize and the President's Prize (that of the Marquess of Zetland), went to Hunters of distinction, well-built, stylish, and showing fine movement—in the latter case Mr. J. S. Rigg's chesnut gelding Sir Lancelot, and in the former to Messrs. T. and H. Ward's five-year-old Craig Royston gelding.

In the cattle classes the honours of the afternoon were carried off by Mr. D. Sanderson, of Stainton Vale, Stockton, whose bull Scottish Monarch beat Mr. J. W. Harrison's Orange Boy in the Shorthorns, and also took both of the pieces of silver plate offered as special prizes. Mr. Harrison, however, was successful in taking both prizes for bull calves, and his heifer calf, Adelaide, also beat all opposition in her class. Mr. R. W. Hebron, of Stokesley, secured two winning tickets in the class for pedigree cattle, whilst Mr. C. Curry, of Norton, was equally successful in the section for grazing bullocks and heifers.

In the section for pigs two firsts were won by Mr. H. Bullock, of Marton, and Mr. G. Myers, of Guisbro, was similarly successful.

In the department for sheep Mr. J. Dawson, of Danby Castle, repeated his successes of previous years by taking first and second prizes for shearling and aged Leicester rams; Mr. R. Peirson, of Stokesley, took a first card with a pen of three breeding ewes; and also showed the three best shearling gimmers, but for gimmer lambs he was unplaced, and premier honours went to a Skelton exhibitor in the person of Mr. W. Petch, who was also able to satisfy the judges in the class for tup lambs. For cross breds Mr. A. W. Moon and Mr. R. Pierson were the only winners of firsts.

Cumberland Show.

The Cumberland Show was held at Carlisle on Saturday week, when a good entry was attracted.

The agricultural horses, though rather fewer than for two or three years back, were again a feature of the show, and the female championship in this section was again secured by Mr. W. M. Wood's Cedric Princess, which won the same distinction last year. A three-year-old gelding of Messrs. Kerr's was the male champion. Generally speaking, the female Clydesdale classes contained superior stock to the male classes.

The slight falling off in heavy horses was more than counterbalanced by a larger display of light horses, in which section the champion prize was awarded to a hunter belonging to Mr. W. L. Carlyle, which won the prize in the two-year-old filly class. The Hackneys included Mr. Ferguson's Queen Go-Bang from Macclesfield, which proved invincible, and the best Hunters were seen in the competitions for the special prizes given by the High Sheriff, Lord Leconfield, and Mr. Geoffrey Howard, M.P.

In the cattle section both Shorthorns and Galloways were representative of the type of those breeds as they are cultivated in this part of the north-west country and in the south of Scotland. The championship of the entire cattle section went to a Shorthorn—a two-year-old bull sired by Douglas Conqueror, and owned by Mr. Joseph Barnes, of Barugh. A Shorthorn, too, was his nearest rival—a heifer, the property of Mr. Joseph Harris, of Brackenburg Tower, who obtained the challenge cup for the best three Shorthorns. Lord Brougham sent a selection from his herd, and was moderately successful, winning a first and a second with Stoneytown Pride heifers, and a third with a Rosedale Fame heifer calf.

Several Galloways shown at the Highland were here, and most of them, in the absence of the keener competition of Edinburgh, went up a stage or two. The Shorthorn Society's £10 county prize for Shorthorn bulls was awarded to Mr. John Hewson, of Parton, and the corresponding prize for Shorthorn dairy cows was, as last year, won by Mr. A. Ritson, of Micklethwaite.

Border Leicesters were the best among the sheep, while there was a good show in other departments.

Whitchurch Show.

The annual show of the Whitchurch Agricultural and Horticultural Society took place on

Wednesday. The Shire Horse Society's silver medal for the best Shire mare, filly, or filly foal was won by J. Broad, Worthenbury. The silver medal given by the Hackney Horse Society for the best Hackney or pony, mare filly, or filly foal was gained by H. Rogers, Kenwick's Park. The silver challenge cup for the best bull in the show went to A. Blake, Malpas. Mr. Blake also won the silver challenge cup for the best dairy cow in the show, the property of a tenant farmer.

SHOW GOSSIP.

Yorkshire Show at Barnsley.

The show of the Yorkshire Agricultural Society opens at Barnsley on Thursday. The total number of entries is 1,088, as compared with 1,196 last year at Middlesbrough, and 1,099 the average for the last five years, or a decrease of 111 upon last year's show, and fourteen upon the previous five years' average. The entries for horses are 377, or 100 less than last year, and the cattle entries, which number 180, are forty-three lower than the Middlesbrough show. Sheep are twenty down, numbering 107, as compared with 127 a year ago; whilst pigs show an increase, the number being 115, as against ninety-seven last year. The total live stock entries are 779, last year's figures being 930, and the previous five years' average 844. Other entries are: Cheese, 43 (last year 47); hives, honey, &c., 86 (last year 85); horse shoeing, 130 (last year 107); butter making, 32 (last year 27); and bottled fruit 15, this being a new section—giving a total of 1,085.

The Entries.

The following table shows the entries for the respective sections, with the comparisons with last year, and the previous five years' average:—

	1907. Barnsley.	1906. Middbro.	Average for last 5 yrs.
HORSES:—			
Thoroughbreds and Hunters	121	159	157
Hackneys	65	54	73
Cobs and Ponies	16	19	22
Cleveland Bays	10	26	16
Yorkshire Coach Horses	41	50	57
Shire	44	48	46
Agricultural	5	6	—
Polo Ponies	21	16	—
Harness Horses	32	26	25
Jumping Competitions	21	41	42
Local Classes, &c.	—	32	8
Total for Horses	377	477	446
CATTLE:—			
Shorthorns	113	141	116
Dairy	41	44	40
Jersey	10	16	30
Aberdeen Angus	16	22	25
Total for Cattle	180	223	212
SHEEP:—			
Leicester	32	33	30
Lincoln	35	48	34
Wensleydale	24	27	28
Black-faced Scotch Mountain	15	19	16
Total for Sheep	107	127	108
PIGS:—			
Society's Classes	115	97	97*
Local Classes	—	6	—
Total for Live Stock	779	930	844
Cheese	43	47	38
Hives, Honey, &c.	86	85	60
Horse shoeing	130	107	131
Butter-making	32	27	26
Bottled Fruit, &c.	15	—	..
TOTAL ENTRIES	1085	1196	1099

* Swine fever prevalent in 1902; no entries accepted.

Prize Money.

The prize money is also rather less this year than it has been for some time. The total amount offered is £2,060, as compared with £2,400 last year, and £2,189 the average for the previous five years. The amounts apportioned to the several sections are:—Horses £1,137, cattle £430, sheep £257, pigs £112, cheese £30, hives, honey, &c., £15, horse-shoeing £42, butter-making £29 10s., bottled fruit £7 10s. The principal decreases are horses £275 10s. (there being this year no local classes, for which £104 15s. was given last year), and cattle £59. The sheep prize money is £6 more, and the amount for pigs the same as last year. The total decrease compared with 1906 is £340, and the sum is £129 less than the average of the years 1900-5.

For the exhibition of implements, &c., 5,096 feet frontage will be required at the show ground. This figure is about the same as last year, but represents over 1,000 feet decrease on the average of the previous five years. Appended is a comparative statement:—

Implement Shedding, &c.

	1907. Barnsley.	1905. Middbro.	Average for last 5 yrs.
	Feet Frontage.		
Machinery in motion, gas and oil engines, &c.	1176	1274	1344
Agricultural implements, carts, wagons, &c.	2070	2010	3040
Carriages, harness, &c.	300	450	670
Seeds, manures, feeding stuffs, and other miscellaneous exhibits	1550	1380	1480
Total	5096	5114	6534
	Square Yards.		
Open space for rustic houses, greenhouses, building material, &c.	1096	793	1160

The "Mark Lane Express" Stand at Barnsley will be No. 179, where we shall be pleased to see all our friends and readers attending the Show.

The well-known Newbury Horse Show will be held this year on the Newbury racecourse, which is specially adapted for such a show, as the railway station is adjoining the ground. The prizes are well worth competing for in all classes, as much as £20 being offered in several classes. Hunters, agricultural horses, jumpers, and driving classes are all catered for. Entries, for double fees, close on Thursday next, August 8, and entry forms, schedules, &c., should be obtained at once from the secretary, Mr. W. J. Forster, Broadway, Newbury. Shelter is provided for all exhibits.

DAIRY.

Preston Cheese Fair.

At Preston cheese fair, on Tuesday morning, there was a big pitch, consisting of 1,901 cheese, an increase of 888 cheese over the corresponding fair last year. This was attributed to less country buying by factors. Quotations were:—Medium, 52s. 6d. to 55s.; fine, 57s. 6d. to 60s. Few choice dairies, 63s. per cwt.

Whitchurch Cheese Fair.

At his fair on Wednesday 94 tons of cheese were pitched, being 10 tons in excess of the corresponding fair last year. A slight reduction in price has to be recorded, viz., best 56s. to 61s., medium 50s. to 55s. down to 46s. The trade was well represented, but buyers were extremely cautious. The prices last year were: Best 60s. to 65s, medium 55s. to 58s., down to 50s.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

A Tithe Question.

Sir,—I. How many years arrears of tithe can be claimed? 2. Does tithe lapse by reason of its not being collected for a number of years? If so, how many? 3. If land changes hands by sale or otherwise, and at the time of sale it is believed to be tithe free, can a claim for the payment of tithe on such land after a period of twenty years be enforced?—Yours, &c., A. B. C.

*** No one is personally liable to the payment of a tithe rent charge. By the Act, chapter 8, section 2 (9), tithe rent charge is recoverable under an order of the county court of the district where the lands out of which it comes are situate. This order can be executed by distress, or entry where the owner is the occupier of the lands, but if the owner is not the occupier, by the appointment of a receiver of the profits. Not more than two years' arrears can be recovered in this way. The right to tithes when in the hands of laymen is subject to the same period of limitations as the right to land. Under the act of 1874, no person shall make an entry or bring an action to recover land, but within twelve years next after the right to do so first accrued. It would, therefore, seem that if twenty years have elapsed, the Statute of Limitations (Real Property Acts) could be pleaded. I think this answers your questions, for presumably the occupation would be adverse.—Barrister-at-Law.

SOCIETY ANNOUNCEMENTS.

BATH HORSE SHOW.
SEPTEMBER 4 & 5, 1907.
Nearly £700 in Prizes.
Great Jumping Competitions.
Entries close August 17.
Schedules and all particulars to be obtained of Lewis C. Mundy, Secretary, 41, Milsom Street, Bath.

NEWBURY HORSE SHOW SOCIETY.
President: W. J. Yorke-Scarlett, Esq., M.F.H.
17th ANNUAL SHOW on NEWBURY RACECOURSE (station on ground),
WEDNESDAY, AUGUST 21, 1907.
Shelter provided for all Exhibits.
Cash prizes value £350. 14 Open and 11 Local Classes. Show opens 10.30 a.m. Entries close: Double Fees, Aug. 8.
Schedules and all particulars from
E. J. Forster, Secretary.
Broadway, Newbury.

HEANOR AGRICULTURAL AND HORTICULTURAL SOCIETY'S 35th ANNUAL SHOW will be held at Heanor, AUGUST 13, 1907. Entries close August 6, 1907. For schedules apply—Horses: J. Covel, 11, Market Street, Heanor. Poultry, Rabbits, &c.: G. H. Holmes, 22, John Street, Heanor.

CHILTERN HILLS AND SOUTHERN BUCKS AGRICULTURAL ASSOCIATION SHOW, at HIGH WYCOMBE, on WEDNESDAY, SEPTEMBER 11, 1907.
OPEN CLASSES for SHIRES, HACKNEYS, HUNTERS, JUMPING and DRIVING, JERSEYS, SHORTHORNS, BUTTER, and HONEY.
For Schedules and Entry Forms apply to
Joseph Bliss, Secretary,
26, High Street, High Wycombe.

GREAT YORKSHIRE SHOW, Dodworth Road, Barnsley.
Thursday, Friday, and Saturday, August 8, 9, and 10, 1907.
Stock and Implements &c., Jumping Competitions, Military Bands.
Saturday—Show of Dogs, and at 3 p.m., Military Tournament.
Admission: Thursday, 9 a.m. to 5 p.m., 2/6; Thursday, 5 p.m. to 8 p.m., 1/-; Saturday, 8 a.m. to 6 p.m., 1/-.
John Maughan, Secretary.

ROYAL JERSEY AGRICULTURAL and HORTICULTURAL SOCIETY.
Agricultural Department.
President—W. Duret Aubin, Esq.
Summer Show of Bulls, Cows, Heifers, Horses, &c., at the Society's Show Grounds, Jersey, AUGUST 21 and 22, 1907.—John A. Perree, Secretary.

LEIGHTON BUZZARD & LINSLADE FOAL SHOW SOCIETY, held on
SEPTEMBER 17 (TUESDAY).
Entries close September 3. Post entries (double fees) September 10.
Walter C. Prudames, Hon. W. Gravely W. Willis, Secretaries

LANCASTER AGRICULTURAL SOCIETY. President—The Right Hon. the Earl of Sefton. 43rd ANNUAL SHOW, WEDNESDAY, AUGUST 21, 1907. Upwards of £600 in Cash Prizes, in addition to valuable Specials. Jumpers, Turnouts, Shires, Hunters, Hackneys, Cattle, Sheep, Honey, Dogs, Poultry, &c. Entries finally close 8 a.m., Monday, August 12, after which hour none will be accepted, excepting Dogs which will close August 15 (positively). Schedules now ready (kindly state for which section required). Thos. Armistead & Son, Secretaries. Auctioneers and Valuers, Lancaster.

WELBECK TENANTS' AGRICULTURAL SOCIETY.
EIGHTEENTH ANNUAL SHOW
will be held at
WELBECK,
Tuesday, August 6, 1907.
1,221 ENTRIES.
Alex. Galbraith, Sec. and Treas.
Norton, Cuckney, Mansfield.

CLYDESDALE HORSE SOCIETY.
STUD BOOK VOL. XXX.
ENTRIES at ORDINARY FEES CLOSE on 31st inst. Forms and all information from—
Archd. Macneilage, Secretary,
93, Hope Street, Glasgow.

BUXTON HORSE SHOW.
SATURDAY, AUGUST 24, 1907.
President:
His Grace the Duke of Rutland.
Over £300 in Prizes, including Challenge Cups and Gold and Silver Medals.
Entries close Thursday, August 15.
For Prize Lists, &c., apply to the Secretaries, Hampson Bros., 3, The Quadrant, Buxton.

HAY HORSE SHOW, FRIDAY, SEPTEMBER 20, 1907.
Entries close on September 5th; double fees, September 12th.
Reece Morris, Secretary,
Broad Street, Hay, Hereford.

TRING SHOW.
THURSDAY, AUGUST 8.
TRING PARK, TRING, L.& N.W.R.
£1,270 IN PRIZES, the most given at any one day's Show in England.
The FAMOUS SHEEP DOG TRIALS have a large entry, and will be a grand event.
The display of DAIRY CATTLE in the Tests will be the finest held at any Show this year.
The HARNESS CLASSES, Pairs, Tandems, and Single Harness, will include some of the best Horses in England which competed at Olympia.
JUMPING COMPETITIONS, &c.
Catering by Messrs. Lyons & Co., Ltd.
BAND of H.M. KING'S COLONIALS
Every available comfort for Visitors.
The Grounds of Tring Park and the fine Museum open to all.
Fancier's Association Show on the Ground.
Patroness—H.H. Princess Victoria of Schleswig-Holstein.
Special and Additional Trains from nearly all Stations.
Full Programme sent, with pleasure, on receipt of 3d. in stamps.
F. J. Brown, Secretary,
Tring.

MID-SOMERSET AGRICULTURAL SHOW, SHEPTON MALLET.
TUESDAY, SEPTEMBER 3, 1907.
W. Ozzard, Secretary,
Shepton Mallet.

Northern Notes.

THE position with regard to the small holdings question is at present ambiguous. We hardly know where we are. The North is scattered all over with small farmers, from the Humber to the Scottish border. The prospective increase does not exactly fill us with alarm, but there is a feeling of misgiving lest many men with a very limited amount of capital may rush into small farming without counting the cost—in money and in muscle.

WE attended at a saleroom last week, when the auctioneer put up a holding of just under 80 acres, with homestead and an equipment of farm buildings. A nice portion of the land was in grass. What was the result? Two or three people beyond those identified with the property only assembled, and not a single bid was forthcoming. In the present state of hopeful anticipation, we had expected to see a crowded room of eager aspirants to the title of "landed proprietor" which the acquirement of such a desirable property would have carried.

THERE is notwithstanding a genuine demand for small holdings in the North; and applications have poured in to the clerks of certain councils from all sorts and conditions of men—tradesmen, professional men, gardeners, and allotment holders. What all the applicants would do with the holdings when they get them is a puzzle. If all turned market gardeners, the district would be choked with supplies, and prices become so reduced as to leave no margin of profit.

WE want to do our best for agriculture, and it will be absolutely necessary to exercise a degree of caution, which is not lacking in the characteristics of hard-headed northerners. There are wild ideas afloat that it is the desire of people engaged in agitating for small holdings to have the large landed estates cut up and parcelled out to small occupiers. This would be a wasteful and uneconomic policy; as is it not fairly obvious that the centralisation of effort and capital, whether it is in the person of a capitalist or a State official, is one of the great necessities for the development of any industry in modern times? Is it not equally desirable in regard to agriculture, that the person who administers an estate should be well acquainted with the district, and have a keen personal interest in the promotion of the economic efficiency of the concern.

THE present system of land tenure in England, the heir to a great estate in the North said recently, undoubtedly throws out greater attractions to the landlords to do these things than any Government system of salaries and inspectors could to an official appointed to do the work of a landlord, and anyone who chooses to study the matter will find that in future a landlord there is going to be, either in the shape of a Government official or the present owner of property. The Government now in office has no thought of establishing independent small owners. Rightly or wrongly it wishes to reduce the size of holdings, to transfer the great ownerships to the State; but the matter of tenancy is apparently to be the *status quo*. Time will show which of the two systems will endure.

IN the north-west of Lancashire the wheat harvest promises to be even better than last year, the straw being well grown, and the heads feeding rapidly. Oats are rapidly redeeming themselves. In some districts they look quite as well as ever they did, and in others, where the straw was short and yellow, the generous warmth of the sun and the amount of moisture in the ground have united to give a fillip to growth, which has been truly phenomenal.

A LARGE percentage of the potato crop of Lancashire was ruined by the severities of the earlier season, and it was feared that the rest of the crop lying in saturated ground would be rotted by the hot sun when warm weather came. This fear is not justified, the general reports of the crops indicating sound robust growth. The cropping grounds between Preston and Liverpool are perhaps unequalled in the United Kingdom for production and high farming, save and excepting the East Riding of Yorkshire, which has the reputation of being the best-farmed country in the world! In other northern counties potatoes have not looked less promising for very many years. The haulm in most cases looks small, with a curled, burnt appearance that promises badly for an average crop. Half an average is about the extent of expectations.

THE Tenant Right Valuers' Associations have been discussing the Agricultural Holdings Act of 1906, and it seems to be generally surmised that it will give lawyers and judges something to do, and increase the difficulties of valuers in their duties. Mr. W. Harrison, of Huttons Ambo, the new president of the North Riding of Yorkshire Valuers' Association, has a great reputation among his professional brethren east, north, and west; and he was one of the first farmers in Yorkshire to be honoured with a place on the Commission of the Peace. That was some years ago. Since that day the benches of magistrates have been "invaded" by many tenant-farmers or gentlemen retired from farming. County benches were formerly the preserves exclusively of squires, and of clergy in the enjoyment of rich livings. How we have moved since those days! Now the squire has to sit cheek by jowl with tradesmen in the administration of justice and the transaction of county business.

A YORKSHIRE farmer has mentioned to me that in his wheat fields and of some others, he has spoken to about the matter, the plant has flowered several times. He regards it as a phenomenal occurrence, none of his oldest acquaintances having been cognisant of such a thing. The ears are not filling well. It is in a wheat-growing district.

August 1, 1907.

Lincolnshire Notes.

THE stormy week has been very disastrous in its effect on crops, which had just begun to recover nicely from the effects of the incessant rain. Many fields of corn are beaten down, and with the prospect of more rain the harvest outlook becomes very gloomy again. "Man wants but little here below." It is surprising how little sunshine we can make shift with. But this year things are too bad altogether.

THE Board of Agriculture's forecast promises a fair average harvest. The wheat crop is reported as in a good healthy condition with abundance of straw, whilst generally the accounts from this county are good. But a few days' continuance of the rain which is steadily falling, and the cold which is exerting its influence, or of the heavy storms which made day hideous on Tuesday, will soon alter the face of smiling prospects.

THE Holland County Council is in earnest on the subject of rural education. So, at any rate, it informed the committee of the Lincolnshire Farmers' Union last Friday. They believe in it thoroughly, and all that is troubling them is some anxiety as to the way how. That seems to be the case of every local and county authority. There never was such an amount of good intention running to waste. Is it not about time that somebody with a few ideas on the subject began to make them known? A conference of county councils, chambers of agriculture, and the Farmers' Union might have important results on the education policy of the county next year. Public authorities naturally don't like trying experiments in the dark, particularly educational experiments.

THE Farmers' Union has extended to Yorkshire. A branch was formed as the result of a most enthusiastic meeting at Doncaster on Saturday.

MR. WINFREY is not to become a paid commissioner under the Small Holdings Bill. He would not accept such a position if it were offered to him he told a meeting of his constituents last week. He will remain where he has done so much useful work already at Earl Carrington's elbow. Nevertheless, his advice and practical help will be wanted when the provisions of the Act begin to come into operation. I don't suppose the first adventures of the Act are going to be a picnic by any means.

SOUTH Lincolnshire is furnishing a remarkable object lesson just now in the value of fruit and potato farms. When the district began to face the problem of agricultural depression, it did so in a practical way. To-day the Spalding area is one vast garden of flowers, green peas, fruit, and potatoes. It is estimated—I quote from the local journal—that 50,000 acres of potatoes are grown annually in the district; in the area between Kirton and Wisbech, large tracts have been converted into fruit and flower gardens, and new industries galore have sprung up in connection with agriculture. In a single week, during the bloom season 80 tons of flowers were despatched from Spalding Station to the great centres; the strawberry farms are so productive that several train loads have on occasion passed through Spalding on a single night; so great has been the demand upon the rolling stock, that the railway companies have appropriated antiquated carriages for the purpose of fruit conveyance; and, now that the potato season has commenced, nobody can traverse the district around Spalding, Kirton, Surfleet, Moulton, Holbeach, Gedney, and Long Sutton, without being struck with the activities of the land and the large amount of male and female labour employed thereon." Labour is in great demand, and there are cases of woman and child earning 5s. to 6s. a day. There are fine times all round, and if the weather be favourable there are still finer ahead.

TWO important Lincolnshire estates changed hands on Tuesday. The Gate Burton and Knaith estates, which have been in the possession of the Hutton family for the last 200 years, were put up for auction. Burton Chateau, with 1,100 acres of land, was purchased by Mr. J. D. Sandars for £20,000, and the same purchaser obtained Knaith Hall, with 1,312 acres of land, for £26,500. Many other lots of land were included in the sale, which altogether realised £58,131.

IN the Fens, too, some valuable estates have changed hands. Part of the Coldham Hall estates, about four miles south of Wisbech, came under the hammer this week, 152 acres, but, with a bid of £7,900, at which figure the property was withdrawn. Subsequently, however, it was sold in nine separate lots, and realised the satisfactory sum of £9,700. The vendor was General L. V. Loyd.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended July 27, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (13,253), 10,495; sheep and lambs (1,659), 2,114; horses (253), 460.

Fresh meat:—Beef (191,008 cwts.), 117,472; Mutton (137,012), 135,233; pork (4,756), 4,360.

Salted or preserved meat:—Bacon (101,362 cwt.), 113,113; beef (4,039), 1,609; hams (28,747), 23,036; pork (6,558), 5,751; meat (18,012), fresh, 11,153; salted, 1,172; meat, preserved (8,634), 5,236.

Dairy produce and substitutes:—Butter (95,031 cwt.), 90,038; margarine (22,637), 16,288; cheese (115,121), 64,457; milk, cream (114), 102; milk, condensed (18,323), 13,083; milk, preserved (107), 76.

Eggs (great hundreds):—(467,761), 314,422; poultry (value £3,306), £2,778; game (value £6), £25; rabbits, dead (not tinned), (423 cwt.), 15,448; lard (34,643 cwt.), 32,450.

Corn, grain, meal, and flour:—Wheat (1,927,300 cwt.), 2,522,900; wheat meal and flour (245,300), 200,300; barley (193,800), 123,300; oats (513,300), 319,500; peas (60,230), 28,720; beans (10,480) 1,160; maize or Indian corn (905,000), 1,501,000.

Fruit (raw):—Apples (2,6703 cwt.), 10,382; apricots and peaches (1,641 cwt.), 10,247; bananas (169,032 bunches), 174,227; cherries (4,254 cwt.), 10,567; currants (13,749), 14,455; gooseberries (1,827), 685; grapes (704), 364; lemons (20,628), 30,872; oranges (3,439), 11,448; pears (23,317), 5,630; plums (67,396), 21,438; strawberries (1,682), 2,803.

Hay (5,599 tons), 1,762; straw (1,666 tons), 631; moss litter (1,426 tons), 1,604; hops (5,833 cwt.), 7,579; locust beans (11,357 cwt.), 59,290.

Vegetables, raw:—Onions (187,696 bush.), 160,204; potatoes (92,850 cwt.), 87,347; tomatoes (51,149); 34,488.

Mr. and Mrs. Holliday Harrison, of Bomby, Westmorland, who are 83 and 85 respectively, have, without assistance, just secured the hay-crop from their ten acres of meadow. He forked the hay, and she did the loading and mowing.

The Manchester County Bench on Tuesday dismissed, with two guineas costs, the summons against Harry Ballingall, milk dealer, Oxford Street, Old Trafford, for selling what was alleged to be adulterated milk. At a previous hearing it was decided that a sample be sent up to the Government analyst, and Mr. W. H. Wilson, for the prosecution, said that having regard to the certificate received from Somerset House, he would like the Bench to hear Dr. Collingwood Williams. Dr. Williams said that so far as his scientific analysis was concerned, he was quite certain it was correct. It was a difficult matter to analyse crude milk. The Stipendiary said they were practically of opinion that in this case the milk did not afford evidence of added water. The Bench had no doubt that the county analyst exercised great skill in making the analysis, but they were bound by the decision of the Somerset House authorities. To his mind 4 per cent. of added water was such an infinitesimal quantity that no chemist could possibly detect it.

Midland Notes.

THE Board of Agriculture harvest forecasts this year are the cause of many smiles among Midland farming folk—but they are smiles betokening small inclination to merriment. Wheat only 1 per cent. under a full average, barley only 2 per cent. under, oats a full and perfect crop, and hay 6 per cent. over a full average. These are figures giving the impression of one of the best years on record. And 1907 will not be that.

IT comes, of course, from the official necessity to count chickens before they are hatched, and bushels of corn per acre before they are reaped. There is no doubt about the oats doing well; but careful examination of wheat fields in Oxford and Warwick leads to the conclusion that the ears are far from setting as they should; and in Warwick, Stafford, and Northants there are more poor fields of barley than good ones. Two more points have also to be noted. At present the chances seem much against the cereals ripening by the ordinary time, and a late harvest is never welcome. Also the area of corn laid by the recent heavy rain and tempestuous wind is very considerable. In short, the corn must almost infallibly disappoint official expectations unless the season mend—which it shows no signs of doing—and the ingathering in many cases must necessarily be troublesome and expensive. On the whole, it looks as though the bean fields would be more profitable than the wheat or barley.

IN North-West Staffordshire, where the by-election has been going on up to to-day, farmers have divided their attention between haymaking and Tariff Reform. Of the former there is still much to be done; and the latter seems to have ousted all other political topics from consideration.

HERE, as in Rutland recently, the Small Holdings Bill seems to have fallen quite flat. There is no doubt that in both these constituencies the average labourer wants ownership, not tenancy under a district council; and the average farmer looks with dislike upon any proposal which may end by sending up his rates. Nor have attacks of the familiar kind on landlordism in general met with much encouragement. It was interesting to see how promptly Mr. Stanley was "pulled up" at Eccleshall when he told an audience of farmers that of rating relief already granted "the landlords had taken four-fifths."

IN North-west Staffordshire the cry of "no future but the workhouse" for the labourer does not go down very well. The instances to the contrary are too numerous. Writing from Stone, a small farmer tells me that "the forefathers of some of the largest farmers in this district were labourers. . . . I know a man in this neighbourhood who was a labourer, and is now our largest farmer, holding 1,000 acres." And on £1 2s. 6d. a week, with extras, the farm hand in this part of the country is distinctly better off than some of his fellows.

BIRMINGHAM has just decided against a proposal to start municipal milk depôts. But the city has not yet finally decided against an allotment scheme which is singular enough to deserve a note. It has been proposed to create twenty-eight allotments, let at £1 a year apiece, on what is known as the Black Patch—a piece of land between two railway embankments on the Birmingham and Smethwick boundary. An official of the Estate Committee has been sampling the soil, the place having been used as a dumping-ground for ash and cinders and rubbish for many years by.

AT one spot he dug 4 ft. 2 in. deep without finding the original soil; at another he "struck bottom" 2 in. short of 5 ft. down, having passed on the way through a 12 in. layer of broken bottles. To cart this vast accumulation of rubbish bodily away being impracticable, it is suggested that the surface should be "covered 12 in. deep with well-rotted manure." And so the matter stands. The land is to be bought, though chiefly for other purposes; the question of allotments still hangs in the balance. It seems to be a pretty opportunity for Prince Krapotkin to step in and illustrate his well-known ideas of intensive culture upon "made" soils.

THE cost of Warwickshire road maintenance has often been a source of complaint by farmers in the county. It has gone up again. In 1904, the roads directly under county council control cost £27,566, in 1905 6 they cost £32,158; for the last twelve months the figure is £37,440. With a £10,000 advance in four years, can it be wondered at that the cry of extravagance is raised? The cost of road maintenance last year worked out at £579 a mile.

THE autumn sales, which will make the next two months so busy, are already beginning. Next Tuesday (August 6) we have the Oxford Down and Cotswold sale at Cirencester, and Mr. J. Hobbs's sale at Oxford; the day after, some of Sir Alexander Henderson's Hampshires come under the hammer, and so do the Oxford Downs from Messrs. Treadwell's. Friday also sees the Honeybourne lamb sale, Oxford ram fair is fixed for August 14, and eight days later the Birmingham sale of Shropshires at Bingley Hall takes place.

ALL these are sales which interest Midland flockowners, who, by-the-way, are more extensive patrons of the Hampshire Downs than is always remembered. One must look far, to be sure, to find a pure-bred flock; but the Hampshire-Oxford cross is a recognised favourite, especially upon cold, heavy land.

August 1, 1907.

LINCOLNSHIRE FARMERS' UNION.

ENTHUSIASTIC MEETING AT DONCASTER.

Formation of a Local Branch.

On Saturday, the 27th ult., the officials of the Lincolnshire Farmers' Union held a propaganda meeting at Doncaster, where a large number of principal local farmers gathered.

The ex-Mayor of Doncaster (Councillor G. Smith) was to have presided, but was out of town, and Mr. T. Harrison, C.C, was voted to the chair.

Amongst the numerous company present were Messrs. Law, W. Hinchcliffe (Adwick-le-Street), Chatterton (Intake Farm, Doncaster), R. Coward (Skellow), Everatt, Ford, Farr, Otley, A. Hand (editor of the *Doncaster Gazette*), and C. Dawson.

The Chairman welcomed the officials of the Union to Doncaster, and went on to express the views that farmers in this district had been very dilatory, and that it was high time, and not only that, but absolutely necessary, that a union should be formed; moreover, the moment was opportune for them to combine to protect interests too long neglected. From the report of the Union good work was being done in Lincolnshire, and the officials were anxious to continue that good work in Yorkshire, which was a laudable object and worthy of all support. On behalf of Yorkshire tenant farmers he welcomed a movement that would bring them into touch with such matters as closely affected and would advance them.

Mr. Campbell said that that good attendance at that busy time of the year and on that busy day demonstrated that at last farmers were beginning to see that it was really necessary that they should take a leaf out of the book of every other trade and profession in the kingdom, and organise themselves. It was as the result of a wish expressed by several gentlemen at the Lincoln Show, where the Union had a stand, that they should come to Doncaster and try to open a branch. The Union commenced in Lincolnshire in a very small way, and now had branches in Nottinghamshire, Leicestershire, and Rutlandshire. Their foremost object was to organise for Parliamentary purposes. They were aware of the great benefits that had accrued to other callings through organisation, and though only a small body, they approached candidates in Lincolnshire, at the last election, with certain questions, which, he was happy to say, were mostly answered in the affirmative. They were a non-political body, and embraced people of all political creeds. Up to now, neither on the central body nor in the branches, had there been any friction. They were first farmers and then politicians. They thought that Parliament should treat all the questions that affected them, not as political, but as national ones. In regard to the Small Holdings and Allotments Bill, they recognised that if it were carried out on proper lines, it would be a very good thing indeed, but they did not approve of the Bill as at present drawn up, and there would certainly have to be some alterations. One of the principal things that they felt in this connection was that as this was a national question, the expense—and he was afraid it would be great—should come out of the national exchequer. Another feature of the Parliamentary programme that interested them was the Lights Bill, to which a Lincolnshire member had brought an amendment that provided for the leading of harvest without the necessity of lights on the carts after dark. The insertion of that clause would confer a boon, and county councils in various parts would no doubt constitute bye-laws accordingly. The legal aid section of the Union work was a very good feature. The subscription was only ½d. per acre for the first year, and half that amount afterwards, and they took up all kinds of cases that interested them as farmers. Any member might find himself the victim or instigator of legal proceedings, but no matter how small the subscription, the Union would support its member, who might get back his subscriptions many times over after his first year of membership. Railway companies and others were apt to put pressure upon farmers in the way of litigation, but with the strength of a union behind them the farmers would be better able to hold their own than was the case when individuals found themselves involved. They had succeeded in one or two of the cases they had taken up. He hoped there would be another meeting at Doncaster after the harvest, and that the movement would grow into a national farmers' union.

Mr. Palmer, dealing with the organisation of the Union, said that the subscription paid upon a 250 acre farm would represent only what a miner paid to his society. There were two things that the Union was particularly fighting for. One was the matter of insurance, in which they were pretty well treated in Yorkshire, where they paid 20 per cent. less than the farmers in any other part of the country. They certainly did not want Yorkshire to be "levelled up" to the ten shillings rate, but to bring the others down to the Yorkshire rate. The other matter was that of railway charges. From Doncaster downwards to March and other places 25 per cent. more had to be paid than on the London and South-Western and North-Eastern Railways. Individually they could do nothing, but collectively they could do something. They met the railway companies once and failed, but they would stick to them and the Board of Trade until they made matters more equal. The central committee of the Union comprised the chairman and secretary of each branch, as it was formed, so that there was intercommunication always between the central committee and each branch. The two essentials of the Union were that it should be free from party politics, and that it should be purely and simply a farmers' union. If they stuck to those two, federation would be as easy as falling off a tree.

The Rev. T. Hamilton, in an interesting and eloquent speech, spiced with a pleasing element of humour, put the advantages of combination lucidly before the company. This was his first experience, he said, as a speaker to a Yorkshire audience. He had every admiration for the Yorkshire character, and he had no doubt that if the cultivators of the broad acres of Yorkshire would join the Union success would be assured. Farmers were the backbone of the nation, for agriculture was the first industry, without supplies from which the great industries of spinning, of coal and iron, could not exist, for was it not "the staff of life," the bread that the farmer produced, that enabled society to exist and the industrial system to be carried on?

Several of those present expressed their views upon the subject, and there was a general agreement with the movement.

Mr. Law said that England appeared to be sitting down, while other nations were up and trampling over her. It was time the farmers did rise, for as matters had too long stood they had no power to say anything, not to speak of taking action. It was of no use for one or two men to speak, because they were easily swamped by the overwhelming interests that could be brought against them in many matters, but as a Union, it commended itself to common sense, farmers must at once be recognised as a power, and therefore he was in favour of this Farmers' Union, and the forming of a local branch. He thought, by the aspect of that meeting, that a new enthusiasm would be created in the cause of combination. There had been many movements commenced in Yorkshire that had fallen through for want of proper enthusiasm and a sound line of combination. Recently there was a meeting at York, but on investigation he found too much of the landlord element for his taste, so he stayed away. What they wanted was something for farmers, not landlords. He wished the Union movement every success, and he hoped Yorkshire farmers would join the Lincolnshire Farmers' Union, which he intended to do.

Mr. W. Hinchcliffe (Adwick-le-Street) said this was a sound movement, and he should do what he could towards furthering it. While men like miners had the sense to combine and so be able to demand fair treatment, it was not much to the credit of farmers, he thought, that they did not organise.

Mr. Chatterton also briefly supported the movement, the good of which, he said, was so apparent that it scarcely needed any words.

Mr. R. Coward (Skellow) said that he felt in this matter what he once expressed in proposing a

A SPICE THAT WILL SAVE YOUR DAMAGED HAY.

What in many parts of the country promised to be a record yield, has been endangered as to quality, if not also quantity, by the recent excessive rainfall.

That considerable damage has been done in many districts is already known by the orders which for several days past have been reaching the makers of "PHŒNIX" HAY SPICE, these being accompanied in most instances by an urgent appeal for quick despatch.

This Spice supplies the valuable aromatic flavouring principle of "prime" Hay, and when sown in the ricks imparts a much stronger fragrance, and a specially powerful, attractive, aromatic flavour. Besides this, it increases the value of all Hay, both for feeding and sale, quite 20s. per ton. It gives a pleasant aroma, and is unequalled as a condiment for damaged or inferior feeding stuff. It makes damaged Hay tempting and palatable, more digestible, and makes all animals eat it with a greater relish, and thrive faster on it. It also removes mustiness and all defects, and imparts a good tempting flavour and fragrant smell to "weathered" Hay (even when black and seemingly worthless), and makes cattle eat it as well as the best, and thrive on it admirably.

It is a really efficient Hay Spice, in which all waste is prevented, as it gives to the most inferior, coarse, or damaged Hay a fragrant, tempting smell, and an excellent and appetising taste. One cwt. will dress 20 tons of Hay at a cost of about 1s. per ton.

The "PHŒNIX" HAY SPICE is packed in bags of 112 lbs. each; the price being 20s. per cwt., carriage paid to buyer's station.

Sole Manufacturers:

F. WALKER, Tithby, Notts

certain toast, that farmers were the biggest fools to themselves of any class in the country. In connection with that same toast he proposed a local union with Doncaster as the centre, but there was no sort of cohesion, and the matter fell through. Forty or fifty years ago there was a farmers' club that degenerated into a brandy and water club, and they did not want a movement nowadays that was likely to become a whiskey and water club. What they wanted was a movement, organised on business lines, carried on in an independent manner, by farmers for farmers. If they did not do this thing it was as plain as the light of day that other nations would come in and swamp us. Farmers had money at stake, in insurance and other things, and they could not possibly allow themselves to be jostled out of their place in life.

Mr. Everatt said that it was evident to him, and had been for some time, that the Union would be a great benefit to them all. He should like to see a local branch in activity at once.

Mr. Ford said he made up his mind to join the Union before he went to that meeting. It was a thing that was right. Farmers' movements had in the past been carried on by landlords and land agents, and the farmer, who had a view to expound, or a grievance to ventilate, could not do so because it was not beneficial to him to open his mouth, unsupported by a body of his own class, in the presence of the landlords and their agents. With a union he could speak fearlessly, knowing the power that he had at his back. These matters had been discussed over and over again at at the old agricultural clubs, but the old agricultural clubs were not established on a proper basis.

Mr. Farr (Scawby) was indignant that farmers had so long held back. He was for immediate action, and longed to see a strong Union in operation.

Mr. Otley brought in the question of the middleman, and wondered how a union of this kind would affect him. The farmer, he pointed out, could not do without the other trades, like those of corn merchant and cattle dealer, and yet some time ago there was an interference with the latter. He did not see why there should be interference, because they were mutually bound up, and this being so, he felt that the Union would be a good thing.

Mr. Campbell said they had not touched the matter of the middleman at all. They had not taken up the trading question. They intended to keep the Union a farmers' union, made up of *bonâ fide* farmers, and the question of the affecting of the trades associated with farming did not come in. They were not against the landlord nor labourer, both of whom had many things in common with farmers, and did not want to do anybody any harm, but simply themselves a bit of good. The land agents had a society, and the labourers were likely to have one in the near future. The farmers had been approached by the land agents, and as time went on it was probable that they might establish a round table conference, where land agents', farmers', and labourers' representatives would meet to deal with matters mutually affecting them, and which could not thus be amicably and justly settled but for the existence of Unions.

Mr. Law moved, and Mr. Farr seconded, that a Doncaster and district branch of the Lincolnshire Farmers' Union be formed.

This was unanimously carried, and Mr. T. Harrison was appointed first chairman, with full power to carry on organisation business with headquarters pending the appointment of full committee and secretary.

A number of farmers, representing in all about 9,000 acres, enrolled themselves as members.

OBITUARY.

Archibald Hunter.

We regret to record the death of Mr. Archibald Hunter, of the firm of Messrs. Thomas Hunter and Sons, implement makers, Maybole, which took place at his residence, Daisy Bank, Culzean Road, on Friday forenoon, July 20. Mr. Hunter was widely known, his figure being a familiar one all over England, Scotland, and Ireland, where he attended all the principal agricultural shows and stock markets. He was an active and enterprising business man, could drive a good bargain, and could crack a good joke. We are glad to know that his eldest son, now about eighteen years of age, who has been serving his apprenticeship with Ransome and Co., Ipswich, will take his father's place in the business. The firm of Thomas Hunter and Sons is well known throughout the three kingdoms, and has valuable connections in every agricultural district.

Oats in America.—A cable received in London on the 1st inst. stated that July had been most unfavourable to oats in America, and that it was now certain that the yield of that cereal would barely suffice for home consumption. New crop shipments are not offered, and the United States are even expected to be buyers from Canada.

Plantation Reports.

The festival of St. Lubbock, commonly referred to as "Bank holiday," disturbs many persons and things, and as it sends us to press earlier than usual, the period allowed for my reports is shortened. Consequently I have had but little time for observation this week, and the position of affairs being subject to but slight alteration, my remarks are necessarily brief.

The prognostications of the weather prophets, referred to last week, have been only partially realised. We have had a larger allowance of sunshine, for which we are grateful; but the wind has remained more or less northerly, and a somewhat cool atmosphere is the result. Especially have we felt chilliness during the night hours, and at this critical time such experience is by no means desirable for the hop plant. But despite these apparent hindrances, there is a general note of progress in the reports I have received.

The increased vigour imparted by the previous higher temperature seems to have assisted the bine in resisting the subsequent slight check, and I gather that the prospects of the crop are, on the whole, brighter within the past three weeks.

The increase of blight in places, and the partial spread of mould, are the only drawbacks I can hear of. This involves continued washing, and as the laterals are getting stronger, and the burr is freely appearing on all the early sorts, the continued presence of fly assumes a somewhat serious aspect. But there is good ground for hope that Nature will provide her own remedy, and that, under normal conditions, the development of the flower and fruit will go forward to a satisfactory conclusion.

With respect to mould damage I have not much fear, being guided thereto by the limited demand for sulphur, which has much disappointed the dealers in this article this season. I ascertain also from the Borough traders that they are not so doubtful about the probable weight of the crop, as its quality. As the rays of the sun are needful for the sweetening of fruit they are equally necessary for the production of lupulin in the hop cones. It is therefore possible that our crop may be somewhat deficient in this respect, but we hope always that the finishing month will make up for all present deficiencies, and that after the anxieties we have passed through we shall be, in the end, rewarded.

Germany.

My correspondents in Alsace-Lorraine anticipate a full crop of hops, although the weather has been cold and rather too much rain has fallen. Consequently some of the gardens are rather backward. In the Hagenau district there is a good deal of vermin, but, on the whole, the results are expected to be satisfactory, except in the matter of prices. The reports from Baden are also very promising. Throughout Bavaria the crop prospects improve daily, although the weather is not ideal. Coldish nights and only moderate warmth during the day have been general, but these conditions have not interfered with the growth and development, which progress steadily and indicate good results.

Belgium.

The Poperinghe planters profess to be alarmed by the renewed attack of vermin, which, despite their efforts in washing, stubbornly stick to the bine. But there is no apparent interference with the growth, which is vigorous and promising. Some of the districts in Alost are also bothered with a similar visitation, while other districts are quite free. The general outlook is, however, in favour of a full normal crop.

America.

There is no practical change in the favourable conditions of the growing crop, as previously reported. The prospects of a full and plentiful yield remain undisturbed.

Market Conditions.

These may be disposed of in a few sentences. The Borough traders have little or nothing to do, and the small amount of business transacted shows that values are rather in favour of buyers. The knowledge of the scarcity of good hops, and the limited stocks of all descriptions does not induce consumers to operate. They are evidently content to wait till the new crop comes forward, and are apparently satisfied that they are running no risks by such reticence.

The large consignments from America to which I referred last week have not affected our trade, as these hops were almost entirely shipped in fulfilment of earlier contracts, and have therefore passed direct into the possession of consumers. Many of our people are taking advantage of the stagnant state of affairs, to have a few days recreation, or to make journeys of observation through the hop growing districts.

The Nuremberg market is [illegible] situated. The favourable reports from the country cause holders to be anxious to clear their stocks, and as brewers are buying so sparingly, prices are gradually but steadily falling. The sales during the past week have not exceeded 120 bales, and as arrivals have equalled this quantity, stocks are not reduced. The tendency of business is toward further reduction. Some small lots of new hops continue to arrive, a few hundredweights having been sold at 100s. per 50 kilos.

The Belgian markets, supported by speculation, were again firm at the beginning of last week, but a reaction set in when the efforts of the "bulls" were exhausted. I do not think the trade will recover its firmness in the face of the improved weather and the consequent advancement in the prospects of the growing crop.

In America there is very little being done except in the execution of early contracts. Prices for new business remain very low, and are likely to fall still further.

Tunbridge Wells Agricultural Show.

Amongst the numerous exhibits of implements, the stand of Messrs. Drake and Fletcher, of Maidstone, was very prominent. It occupied a space of 90ft. in length, and included all kinds of machines useful to farmers, and especially to hop growers. Their enterprise was recognised by the award of a gold medal. The chief novelty that attracted the attention of hop growers was Joyce's new patent automatic pure hot-air plant for hop drying. This was closely examined, and its merits were acknowledged by the judges who awarded to it a silver medal. I understand that the makers of this apparatus have received sufficient orders from planters in the southern and midland districts to keep them fully occupied until the harvest of the new crop commences.

POULTRY.

The Utility Poultry Club's Twelve Months' Laying Competition.

The Utility Poultry Club have now completed their arrangements for holding a twelve months' laying competition, beginning on October 1 next.

Mr. E. W. Ricardson, the hon. secretary of the club, who for some years was lecturer on poultry for the county of Bedford, and subsequently for that of Cheshire, will manage the competition on his farm at Rayne, near Braintree, in Essex.

The competition will be run on somewhat different lines from that of the four months. A pen will consist of six pullets instead of four, and the prizes will be given for value of eggs produced rather than numbers. For the purpose of obtaining a fair value, the average price each week of three leading egg markets will be taken for the basis of calculation.

From January 1 to April 30 the pens may be mated up, and competitors will be allowed to purchase the eggs laid by their own birds upon payment of the average market price and a fixed charge for packing and despatching them to the required destinations. This arrangement will obviate the loss of a valuable breeding season, while in the case of pens doing well the eggs should fetch considerable prices and so recoup the competitor.

Prizes and medals to the value of £10 will be given, and additional silver and bronze medals will be awarded for such pens as the committee of the club shall deem of sufficient merit, the new method of adjudication preventing any standard of excellence being settled before the competition begins.

The entry fee is £6, which may appear excessive; the expenses of the committee are, however, very heavy, and the club, even with this fee, estimate to lose over £50 on the competition. The competition is open to all, and entries close on August 17. Full particulars and forms can be obtained on application (with stamped addressed envelope) to the hon. secretary—C. Dunkley, Wednesfield, Wolverhampton.

"Uveco" Lamb Food.—We have received from "Uveco" Cereals Ltd. a sample of their "Uveco" lamb food, which is composed of "Uveco," linseed cake, split peas, and locust beans, proportions of which are guaranteed, forming an excellent combination. A great point claimed for this food is that, being practically free from dust, the waste in the feeding troughs usually associated with lamb foods is almost entirely avoided. A large quantity of this food is being used in Shropshire and Lincolnshire with unqualified success.

Fertilisers and Feeding Stuffs.

Relation of Potash to Potato Blight.

The requirement of the potato crop for a liberal supply of available potash is well known, and is acted upon by the most successful growers. When large quantities of farmyard manure are given, it is not usually necessary to apply chemical potash, but it is generally now recognised that the more profitable method of cultivation is to use more moderate quantities of farmyard manure and to supplement it with artificials; in such cases a liberal proportion of potash should be included.

Another advantage of potash is now being drawn attention to. It enables the tuber to resist the attacks of blight. In the report of the Massachusetts agricultural experiment station, there is a record of some observations on this point.

The potatoes in the experimental field were carefully sprayed with Bordeaux mixture, the dates of the successive applications being June 27, July 7, August 2, and August 10.

Early in August it was noticed that the leaves of all the no-potash plants were beginning to be blighted, while the foliage on all the plots to which potash had been applied still appeared to be practically unaffected. The blight made rapid progress on each of the five no-potash plots, while the foliage of the vines upon all the other plots for the most part ripened normally. Practically all the leaves on the no potash plots were dead by the end of August, at which date there was still considerable living foliage on the other plots. There was no decay of the tubers, however, in any of the plots, but the marked inferiority in yield of the no-potash plots was, no doubt, in considerable measure due to the relatively early death of the foliage.

No explanation, continues the report, can be offered at this time for the observed phenomena. Earlier observers, among them Dr. Goessmann and Professor Maynard, have held that a liberal supply of potash exercised a marked influence in enabling the foliage of fruits to resist fungous diseases. Some European investigators have attributed a similar effect to potash in connection with potato diseases. This matter should evidently receive further and most careful study, for if potato blight can be in a measure controlled through more liberal use of potash salts, this will afford a comparatively easy method of reducing the amount of the injury done to the fungi attacking the foliage of this important crop.

Calcium Cyanamide against Wild Mustard.

Experiments indicate that this new fertiliser may be used with advantage as a means of checking that troublesome weed, wild mustard. It is reported, as the result of trials, that the material broadcasted at the rate of ¾ cwt. per acre destroys the weed, and that even smaller quantities hold it in check. It was found that the calcium cyanamide had the effect of hindering the growth of the weed to such an extent that the crop of oats was able to get the better of it. The oats also suffered and caused anxiety, but directly rain came recovered quickly, and now surpass the crop growing on land not treated.

The question remains, What would have been the result if rain had not fallen?

It would be interesting to know whether any of our readers who have been trying calcium cyanamide this season have noticed similar results from its use.

Why Does Farmyard Manure make the Soil Fertile?

During the International Agricultural Congress Professor Stoklosa read an interesting paper on the above subject. He gave a brief sketch of the views hitherto held, and reported the results of a large number of experiments made by him with the special object of ascertaining the important part played by bacteria in farmyard manure. He considered that the application of 40 tons manure, calculated as dry substance, was equivalent to inoculating the soil with about half a ton of bacteria. According to his investigation the respiration of bacteria was greatly increased by the farmyard manure, and, as a consequence, the temperature of the soil raised correspondingly.

Experiments have also clearly demonstrated that the conversion of insoluble with soluble or available phosphoric acid proceeds with much greater energy in a soil dressed with farmyard manure, but if the manure has been first sterilised this action does not take place, thus proving that it is caused by the bacterial activity in the manure.

With regard to the actual plant nourishment furnished by farmyard manure, Professor Stoklosa confirmed the views of other authorities that the requirements of cultivated crops are not covered by farmyard manure, as its contents do not correspond to the latest investigations of plant physiology, and, moreover, there are not sufficient quantities of it to satisfy the needs of the crops. According to the opinions of the best authorities, such as Stutzer, Pfeiffer, and, it may be added, of Dr. Voelcker, Dr. Dyer, and others, it is not advisable to apply at one time very large dressings of farmyard manure, but it is better to give smaller dressings at shorter intervals. By application of small quantities, the soil is equally well inoculated with the bacteria, and the micro-organisms present in the soil are stimulated to greater activity.

He cited several instances in which the best results on various crops—beetroot, wheat, potatoes, and rye—were obtained from quite small dressings of farmyard manure, 10 tons per hectare (4 tons per acre), supplemented with concentrated fertilisers in the well-known forms offered to farmers. and he closed his very interesting lecture with the remark that the problem before us is not how much crop increase may be due to farmyard manure or to chemical fertilisers, but how to wisely make use of both, because it is certain that the best and most profitable system is the use of the two judiciously combined.

Chemical fertilisers supplement the natural manure, and both exercise a special but distinct influence, not only in the chemical and physical condition of the soil, but also in the development of the plant. The words of the French investigator, Jean Dumas, spoken 50 years ago, are as true as ever:—"One of the first duties of agriculture lies in the production of good farmyard manure and its judicious use." This is, and will always remain, the basis of successful farming.

Effect of Lime on Turnips.

It is the common practice with farmers in Aberdeenshire and some other districts to apply a small dressing of ground lime at the same time as other artificial manures—that is, with the seed. In order to test how far this practice is a good one, some experiments were made by the Aberdeen and North of Scotland College of Agriculture. The result showed that the effect of the lime applied at that time was to diminish the crop on all the farms except one. Thus the best average results were obtained from a dressing of—

1½ cwt. nitrate of soda.
1½ ,, superphosphate.
¾ ,, sulphate of potash.

producing an average crop of 12 tons 10½ cwt. per acre, an increase over the no-manure crop of 8 tons 9½ cwt., showing a profit due to the manures of 49s. 5d. per acre. When the same fertilisers plus 10 cwt. ground lime were applied, the average crop was 7 cwt. per acre less, the profit being reduced from 49s. 5d. to 39s. 8d.

The application of the lime *at the wrong time* was the direct cause of this loss. As the report explains, lime in order to benefit the turnip crop should be applied at least some months before the land is drilled, and should be worked thoroughly into the land during its cultivation. It is a mistake to apply it at the same time as the other manures.

The lime so applied will probably do good in subsequent years, but, except in cases such as on one farm, where lime was urgently wanted, the probability is that little good will be done to the turnip crop, and the use of lime may, as has been the case in four of these experiments, be followed by an actual diminution of the crop. It is to be remembered that the action of lime is not like the action of nitrogenous, phosphatic, and potassic manures. These are needed mainly for the direct nourishment of the plant. Lime has much more complicated functions to fulfil. Its main use is not to directly feed the plant. It is more largely needed to keep the soil in proper condition, and to enable it to render up its stores of nitrogen in condition fit for the use of crops. So long as the lime present in the soil is sufficient for the proper performance of these indirect services to the crop, there will be abundance present for its direct consumption. The main action of lime on the crop is slow and long drawn out, and in order to benefit any crop, the lime should be applied, if possible, before the seed and worked into the land. In the case of these experiments, they were arranged so late that it was impossible to apply the lime at what we considered the proper time. We therefore decided that the next best thing would be to apply the lime at what we considered an improper time, but the time at which it is applied by many farmers. This we have done, and the result has been precisely what was to be expected.

The reason why bone meal acts well in soils rich in organic matter is not only on account of the solvent action of the humus, but also because of the greater activity of the acid-producing bacteria in those soils.

The Intelligent Use of Fertilisers.

In a discussion on this subject, the Hon. Alva Algee, at a Farmers' Institute in New York, said:—"A large sum of money is expended annually for fertilisers, and much of it is not invested intelligently. The growing plant requires ten different elements in the soil. Six or seven of these elements are present in cultivated land in abundance. The only elements lacking in available form are nitrogen, phosphoric acid, potash, and sometimes lime. Nitrogen is a costly element, and should be got chiefly from stable manure, clover, beans, &c. Every pound of it as a commercial fertiliser costs from 15 to 18 cents.

"But if the field is to be planted, and it is not able to procure a heavy growth of stock and leaf, there must be nitrogen in the fertiliser used, because it is nitrogen that makes the rank growth of wood, stock, and leaf. If nitrogen is needed, do not buy a fertiliser containing only 1 per cent. of it. That is folly. Buy a fertiliser containing several per cent. of nitrogen, if this element is needed. Don't waste money on this element if none is needed.

"Potash usually is needed on muck and sandy lands. It can be had in muriate and sulphate of potash or in ashes. Clay soils are naturally rich in potash, and can supply all the crops needed if organic matter is rotted in them. If the land is badly deficient in vegetable matter, there probably should be potash in the purchased fertiliser, but the rational thing to do with clay and clay loam soils is to supply organic matter and enable this land to free its own potash.

"The element of the phosphoric acid is usually not abundant in soils. It should be the controlling element in the purchased fertiliser for all land. If nitrogen is obtained from manure and clover, and if potash is freed from the land by the use of organic matter, then phosphoric acid becomes a 'complete fertiliser' for land thus tested. It is obtained in animal bone, in superphosphate, and in raw phosphate rock. Steamed bone is a choice carrier of phosphoric acid, but it is unduly costly. Superphosphate—phosphate treated with sulphuric acid to make it available—is the common source of phosphoric acid. Its use is all right when the land is kept full of humus-making material and is not deficient in lime. Superphosphate, either alone or in so-called complete fertilisers, does harm when no rotting clover sod and manure are used to keep the physical condition right.

"Lime may be needed. Where clover does less well than formerly, or where acid fertilisers have been the sole dependence, lime is often needed—1,000 lb. to the acre. Then seed to clover, and let the land have the benefit of the clover by feeding the hay and returning the manure."

Water constitutes about two-thirds of the weight of an animal's body, entering into the composition of all its tissues and fluids. As it does not form nearly so large a proportion of the ordinary ration fed to stock, it is easy to understand why water as a drink should form a separate part of the animal's supply of food.

The objects of feeding may be summarised as follows:—

1. To maintain bodily heat.
2. To repair waste of tissue.
3. To reproduce young.
4. To form new tissues or organs.
5. To perform muscular labour.
6. To secrete various products.
7. To lay up reserve stores.

It is estimated that the production of phosphate rock for the manufacture of superphosphate in America was at least 2,000,000 tons during 1906.

Two of the greatest friends that man possesses are the dog and the cow. A man may fall so low that friends and relatives will desert him, but his dog will stand by him, and has been known to starve himself when protecting the dead body of his master. The cow in the same way, no matter how poorly she is fed or how roughly she is treated, will still yield milk and cream. She is the only animal that works night and day. During the day she gathers food and is continually converting it into articles of diet and usefulness for mankind.

G. L. McKay.

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).										
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Ammonia, organic as in Guano and Bones	17 6	12 6	15 0	—	—	12 6	—	—	15 0	15 0	—	—	—
,, in Sulphate of Ammonia ...	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
,, calculated from Nitrogen in Nitrate of Soda ...	—	—	—	13 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	—	—	2 0	—	—	—	2 0	—	2 0	2 0	—	—	—
,, assimilable...	1 6	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
,, insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June 1906.

Cakes and other Feeding Stuffs.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.		s. d.
Albuminoids	2 8	to	3 0
Oil or fat	2 8	,,	3 0
Carbohydrates	1 1	,,	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.			=	Feeding units.
Albuminoids	22·1	×	2½	=	55·2
Oil	5·2	×	2½	=	13·0
Carbohydrates	33·2	×	1	=	33·2
Total feeding units					101·4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

THE STANDARD

FOR QUALITY—PURITY—ECONOMY.
It carries the Highest Guarantee.

Of Practice & Science.

The remarkable success of **Silcock's Fattening Cake** has brought it to the forefront as a **Standard Food** for rapid and economic fattening. Breeders and feeders speedily realised the benefit to be derived from using a cake compounded specially for one purpose, and the enormous demand has taxed their extensive mills and machinery to their utmost. It has done more, however; it has produced the inevitable crop of imitators. These camp-followers of every successful pioneer are remarkably alike in their methods.

We ask you to consider the following points:—

WHY do they claim that their cake is just as good as Silcock's?

WHY do they make their cake look like ours?

WHY do they sell at a slightly lower price than ours?

BECAUSE Silcock's Fattening Cake is recognised as a Standard Food for fattening Cattle and Sheep.

BECAUSE ours is a good-looking cake, and is as good as it looks.

BECAUSE they can well afford to do so, for their cake is not as good as ours, or anything like as good as it looks.

Purchasers of these foods are really buying a more expensive and much less valuable food. Remember that analysis and feeding value are not identical. You may get an analysis as high as ours, but the feeding value may be much lower, for it is possible to produce a cake, showing a good analysis and yet of poor feeding value, either from the use of unsuitable or unsound materials.

We make only one quality—the best.

We test the cake regularly in our Laboratory and at our experimental farm.

We guarantee to pay the cost of analysis and three times the value of any deficiency, should such be found.

We use only the best and purest materials.

We are among the largest buyers of raw materials in the market, buying for cash at the lowest price

We have our mills equipped with the most modern labour-saving machinery.

THEREFORE we can and do sell at the lowest possible margin of profit.

No Firm can supply a similar quality at a lower price than we quote.

. . . . . Lower Rates simply mean Poorer Cakes. . . . . .

BUY SILCOCK'S FATTENING CAKE—THE STANDARD BRAND.

It is the best and cheapest on the market for quality and rapid fattening. Why buy imitations when you can secure the real article? You cannot lose, you will certainly gain, by using our brand, for we make one food do one thing well.

CAN WE SEND YOU A TRIAL LOT?

For further particulars apply to local Agent, or to

The Cow is a Good Chemist!

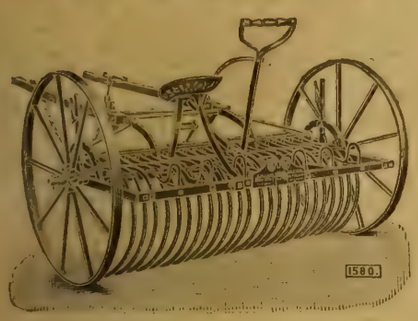
And it may be relied upon always to report, through the milk pail and in its own condition and health, whether its food is what it ought to be or not.

Being ourselves both practical farmers, and probably the largest buyers of feeding stuffs in the country, we have been, so to speak, compelled to study this particular subject.

Our experience has been that for the Dairy Cow the best quality of feed is none too good, and we have directed our efforts towards producing the very best dairy foods it is possible for human skill to produce.

We also happen to own a large and well-equipped Mill for the production of Feeding Cakes and Meals; we can, therefore, manufacture economically, and sell at a price which is very little in excess of that paid for ordinary feed.

In these facts will be found the simple reason why observant dairymen everywhere are beginning to recognise that in



BIBBY'S DAIRY MEAL, CAKE AND CAKETTES

they have feeds ready to their hands which yield a better economic result than is otherwise to be obtained.

THE COMING SHORTAGE IN WHEAT.

There are few observers indeed who expect that the British wheat crop of 1907 will equal that of last year, but for the purpose of this article we shall not need to assume any home change.

With respect to France things are almost precisely as they are with us; that is to say, the crop estimators do not anticipate as good a yield as in 1906, but are as yet by no means agreed as to the extent of the falling off. We shall therefore assume of France, as of Great Britain, that the figures of 1906 will stand.

When, however, we come to the German Empire we have full and specific news, both official and agricultural, that the wheat yield is about 4,000,000 qr. less than last season.

In Austria-Hungary the yield is 6,000,000 less than last year, not that any great deficiency is manifest, but that 1906 was the best year on record in Austria-Hungary, and bumper crops hardly ever repeat themselves in the following season.

Roumania, which is a great speculator in wheat growing for exportation, has just completed this year's wheat harvest. Owing to peasants' dissatisfaction with the land laws—there was an abortive rising in May—the Roumanian Government is said to be mimimising the crop deficiency so as to obviate disturbances. If this be so the situation is bad, for the Government put the yield at only 8,500,000 qr. against 13,600,000 qr. last year. This is a difference of over 5,000,000 qr. The great shipping lists put it at more than 6,000,000, but we may as well stick to the official figures.

Spain has a full average crop, but will need to import about 2,000,000 qr. of wheat, that being the extent to which population has now outrun production. The great yield of 1906 made Spain self-supporting for the first time since 1902. The Italian wheat harvest now completed is not a bad one, but is still 2,000,000 qr. smaller than last year, which was, generally speaking, a decidedly prolific one, and has caused exaggerated expectations for the present season.

Finally, we have Servia, Bulgaria, and European Turkey, where the export surplus of wheat is put by the most favourable accounts at 2,000,000 qr., against 3,000,000 last year actually exported.

These figures will be seen to disclose how, without any arresting disaster in any one particular country, the wheat needs of Europe, without including Great Britain, will, for the cereal year beginning September 1, and now quite close upon us, be fully 20,000,000 qr. more than for the previous campaign.

This is a formidable shortage in itself, but it becomes still more important when we look round for sources whence it is to be met and find that our chief wheat-producing countries, the United States and Russia, have each of them admittedly smaller crops from last year. That Canada will be able to supplement the shipments of the United States to the same extent as during the past twelvemonth is decidedly unlikely. Even the optimism of Lord Strathcona has stopped short this summer of crediting the Dominion with an unprecedented crop. The Canadians, like ourselves and the French, will evidently be very relieved if they get home—harvest home—with as much corn as in 1906.

The situation, therefore, is one of much concern for intending wheat buyers, and it is to be hoped that the British farmer will remember that 1907 wheat is already at a premium as compared with the prices at which 1906 wheat opened. Let him thresh as little wheat as possible between September and November. Good prices by Christmas are assured, if only a very reasonable reserve in new deliveries is shown.

SWINE FEVER: PREVENTION AND CURE.

In a recent issue a correspondent made a suggestion which throws interesting light on this disturbing and very serious matter. In going about the country we do not fail to hear the complaints of people who suffer, perhaps necessarily, in the interests of the community but unfortunately for themselves, through the swine fever regulations as at present carried out, and it is a moot point whether the Board of Agriculture in its efforts to stamp out the disease is not attempting the impossible.

Our correspondent pleads for attempts at prevention by the registration of pigstyes and the keeping of animals under more sanitary conditions, and this line of argument has our sympathy. Prevention is better than cure all the world over, and it is impossible to obliterate an evil without ascertaining the cause, treating it at the root, and striking the evil there. Doubtless the Board of Agriculture is doing its best, but if, as our correspondent suggests, it begins at the wrong end, an obviously wise course would be to turn round.

AGRICULTURAL COLLEGES.

Cirencester.

The summer term of this college closed on Wednesday. The Principal, the Rev. J. B. McClellan, M.A., referring to the term's work, alluded to the valuable lecture on Forestry by Mr. H. J. Elwes, F.R.S., President of the British Arboricultural Society. Among external successes he mentioned important appointments gained by old students, and said Mr. M. G. Godlonton, a former student, had contributed a prize essay on "The Rotation and Manuring of Crops" to the *Agricultural Journal of the Cape of Good Hope* for April. Nine recent diploma students had been successful in the examination of the Surveyors' Institution, five obtaining the professional associateship. In the present diploma examinations the two highest students had done so well and so equally that each had been awarded a gold medal, and two students from Egypt had done creditably in obtaining the certificate of associateship. The chief awards of the class list follow:—

Honour Diploma of Membership (maximum marks, 2,100; qualifying marks, 1,400).—Wathen Arthur Waller, Leek Wooton, Warwick, 1,892; Robert Henry Price, Cloudesdale Road, Balham, 1,828.

Gold medals (qualifying marks, 1,750).—W. A. Waller, 1,892; R. H. Price, 1,828.

Certificate of Associateship.—Gaston Piah, Cairo, Egypt, 1,319; Mohammed Soubhy, Cairo, Egypt, 1,244.

Scholarships (open to the whole College; maximum marks, 3,600; qualifying marks, 3,000).—First scholarship, £25, William Girvan Wright, Dunard, Row, N.B., 3,506. Second scholarship, £10, Harnam Singh, B.A., Amritsar, Punjab; India, 3,443. Third scholarship, £10, Randle William Carr, Stancombe, Dursley, Glos., 3,404. Honourable mention for scholarships (in order of merit), Lal, H., Campo, Cassey, A., Peek, Gopal. Honourable mention on the term's work other than for scholarships (in order of merit), Lal, P., Sowerby, Datta, Prashad, Holmes.

Cheshire.

The Cheshire County Agricultural and Horticultural College, Holmes College, celebrated their prize day on the 24th ult. Mr. G. Baker Wilbraham, chairman of the committee, who presided at a meeting during the afternoon, said there was a natural spirit of conservatism among agriculturists, but farmers were now taking advantage of the teachings of science, and were getting into

touch with the new spirit of scientific inquiry from which they had hoped to see the best results.

Professor A. D. Hall, director of the Rothamstead Experiment Station, who distributed the prizes, spoke of the valuable work which colleges of that description were doing in the country. The Cheshire College was doing exceptionally good work, because it was a college primarily created for the advantage of Cheshire farmers.

South-Eastern.

There was a large gathering at the South Eastern Agricultural College, at Wye, for the annual distribution of prizes.

Mr. M. J. R. Dunstan, Principal of the College, who presided, said they had every reason to be satisfied with the progress which was being made in every department of the college.

The distribution of prizes and diplomas was carried out by the Right Hon. Ailwyn E. Fellowes, who afterwards made an interesting speech. He remarked that he had taken the opportunity of going round the buildings to see what was being done, and he could say, without fear of contradiction, that the college was doing a very good and most useful work for agriculture in this country. The county councils of Kent and Surrey were to be heartily congratulated on the interest they had taken in the college, sparing no expense in its maintenance and equipment.

Lord Ashcombe, in moving a vote of thanks to Mr. Fellowes, said he considered agriculture a science which required to be studied more than any other.

Sir William Hart Dyke seconded. He alluded to his own thirty years' farming experience, and spoke highly in favour of the colleges like Wye, which gave the men an opportunity of learning something about the business they were about to undertake.

Mr. Laurence Hardy, M.P., in supporting the motion, referred to the successful way in which Mr. E. S. Salmon, one of the college staff, had succeeded in getting Parliament to pass a measure dealing with a pest in fruit culture, and enabling county authorities and the Board of Agriculture to deal promptly with such things in future. He also expressed pleasure at the college's success in forestry, and hoped they would continue their work in this direction, and soon be in a position to give them some information for the better treatment of their woods in Kent.

THE FARMERS' DIARY.

TUESDAY, AUGUST 6.—Mr. Humphries addresses the British Association at Leicester on the Causes of Strength in Wheat—Welbeck Agricultural Show—Sale of the Bishopstone Flock at Salisbury—Cirencester Ram Sale—Sale of the Londesborough Stud at Market Weighton—Agricultural Shows at Winslow, Coleshill, Chepstow, and Durdham Down—Fairs at Altrincham, Chertsey, Bicester, Dorchester, Thurles, Cowbridge, Trowbridge, Cirencester, and Derby.

WEDNESDAY, AUGUST 7.—Chichester Sheep Fair and Sales, first day—Jubilee Sale of Rams at Upper Winchendon, Bucks—Sir Gilbert Greenall's Horse Sale at Walton Hall, Warrington—Shows at Newport Pagnell, Pembroke, and Worthing—Sale of Mr. Chetwynd's Dexters at Doncaster—Sale of the Buscot Park Flock of Hampshire Downs—Sale of Hampshire Down Rams and Lambs at Cambridge—Great Annual Lamb Sale at Honeybourne, near Evesham.

THURSDAY, AUGUST 8.—Tring Agricultural Show and Sheep-Dog Trials—Great Yorkshire Show at Barnsley, first day—Chichester Sheep Fair and Sales, second day—Shows at Bognor, Kirby, Keele, Madresfield, and Market Bosworth—Fairs at Burgh, Blandford, and Bungay—Cocum Farm Sale, Winchester—Sale of Devon Longwools at Brendon Hill—Sending-in Day for the Birmingham Shorthorn Show and Sale.

FRIDAY, AUGUST 9.—Great Yorkshire Show at Barnsley, second day—Show at Barnard Castle—Loughborough Cattle Fair—Yeovil Horse Sale.

SATURDAY, AUGUST 10.—Great Yorkshire Show at Barnsley, third day—Show at Whitworth—Talgarth Agricultural Fair—Sending-in Day for Oxford Ram Fair.

MONDAY, AUGUST 12.—Britford Agricultural Fair—Sale of the Chilmark Flock of Hampshire Downs—Fairs at West Malling, Oakham, Lisburn, Castle Douglas, Warwick, Bridgnorth, Carmarthen, Evesham, Hailsham, Ludlow, and Stowmarket—Horncastle Horse Fair, first day—Hastings Horticultural Show—Grouse-Shooting Begins—Sending-in Day for Lancaster Show.

Notes of the Week.

The Royal Lancashire Agricultural Society's meeting is invariably an exhibition worthy of the name.

That of this year at Moses Gate, Bolton, goes one better, and certainly is not lacking in importance.

In my opinion the best-managed show in the country!

Compact and exceedingly well laid out, no waste room anywhere in this year's yard.

By sheer contrast, one reflected on the unnecessary tramp, tramp, tramp that had to be endured at Newport, and especially at Lincoln.

And what is more to the point, an entire absence of the "get off the earth" type of officialdom one meets with at certain shows which shall be nameless.

One, of course, did not look for a *picturesque* ground in a place like Bolton.

We were sheltered on one side by the towering walls of the "Bee Hive" spinning mill.

Immediately under its shadow we had appropriately enough, a bee-keeper's supply store bearing the legend honey.

And the busy bees bustling about the yard, the pretty frocks of the Lancashire lassies, all fanned with a health-giving breeze, made a very animated scene.

The society again saw to its own catering arrangements, which in effect left little to be desired.

Here again they take a lead which many might follow, to the material advantage of all concerned.

The band of the Royal Marines, it would seem, was absent obeying a Royal command.

And on Thursday the excellent musicians occupying the bandstand I understood to be the "Black Dykes," hailing from Queensbury, between Halifax and Bradford.

Judging from the number of visitors up to 6 p.m. on the first 2s. 6d. day, Bolton bids fair to make a record.

5,196 had then paid for admission, as compared with the average of 3,389 for the past five years.

Brought about doubtless by the excellent travelling arrangements, the railways and tramways vieing with each other to provide good services.

Those of the electric tramways showed in striking form how sadly behind the times are dwellers in the south!

At a point adjacent to the show ground arrived through cars not only of the Bolton, but also of the Bury Corporation and of the South Lancashire Tramways from the other direction, which in turn connected up with the Manchester and Salford Corporation Tramways.

Hearty congratulations to the genial and indefatigable secretary, Mr. Edward Bohane, who thoroughly deserves all the success that should crown tireless energy and tactful organisation.

And may the society not allow so many years to roll by before again visiting this week's venue.

"Back to the land."—An old farmer, reputed very rich, died. It was found, however, after his death that he died penniless. His will was brief. "There is only one thing I leave: I leave the earth. My relatives always wanted that; they can have it."

Press a button and electricity will do the rest. Experiments in forcing plants by electricity have begun at the Royal Botanic Society's Garden in Regent's Park.

The electric current is to provide an ample supply of different-coloured rays of light, a fertilising agent, plentiful moisture, and high temperature.

That sounds like a big order, and natural conditions will be relegated to a back seat; but Nature, one may be sure, will reassert itself.

Signs of the times.—Picking up at random some provincial papers, we come across such paragraphs as "Lady Secretary to Sheep Society," "Lady's Fruit Bottling Experiment," "Successful Lady Farmer," "Small Holdings for Women," &c.

The Coggeshall Seed Farms.

The county of Essex has been long and deservedly famed for its seeds for many years past, in fact, long previous to the present generation seed corn from Essex was held in high repute. Travellers on the Great Eastern Railway have brought before their eyes in the district that lies between Chelmsford and Colchester any number of farms which are practically devoted to the raising of farm and flower seeds. As one sits in the train it is the horticultural side of the business that makes itself most evident, and perhaps there is no finer sight than to see a field of several acres a mass of nasturtium bloom, although many other flowers also produce a magnificent show.

We will leave, however, the horticultural side of seed growing in abler hands than ours, while we look at what is more distinctly our province—the raising and improving of wheat, barley, oats, mangels, swedes, and other crops which are purely of an agricultural nature. Last week, in response to the invitation conveyed to us by Messrs. John K. King and Sons, of Coggeshall, we had an opportunity of inspecting the half-a-dozen farms which Messrs. King and Sons use in testing and producing their seed stocks. These farms, it may be explained, do not adjoin, and this for a good reason, as a little consideration will show that while different species of plants may be grown on the same farm, varieties of the same species should not be grown in close proximity.

The weather last week was so broken in character that such a close examination of Messrs. King and Sons' specialities was not possible, as is often the case, but in all cases the crops looked remarkably promising, and although the harvest will not commence for another ten or fourteen days, the yield should be an excellent one, while the length and strength of the straw was most remarkable.

The seed trials carried out by Messrs. J. K. King and Sons are conceived and executed on a very extensive scale. No doubt the testing of all the varieties of seeds sold by the first-class seedsmen is an expensive matter, but it has the great advantage from the customer's point of view that the grower is getting seed of a genuine character and one that will grow true to type. There was a very fine crop of their Emperor wheat, which produces an extremely large ear and is naturally a big cropper. Another white wheat was Rent Payer, which is not only a good yielder, but an excellent millers' wheat. Cereals grown on the stiff, heavy soil of Essex are found to be a splendid change of seed. The Royal Jubilee white wheat is most popular among their customers, and while the straw is bright and clear, a good heavy berry is obtained, giving a yield of seven to eight quarters per acre. Of red wheats there were many good crops, among the kinds represented at Coggeshall being Champion, Squarehead, Long-eared Essex, Rough Chaff, and Essex Conqueror, while a fine pedigree selection Squarehead Master showed good results, and was remarkably true to type.

Barleys from Messrs. John K. King and Sons have long been held in high esteem, their prize Chevalier holds a prominent place amongst those which are pre-eminently suitable for malting purposes. The Chevalier barley, we may add, was originated in East Anglia, or to be more precise, was first grown in the county of Suffolk. We understood from Mr. Herbert King, who was good enough last week to show us many of the interesting features of the firm's farms near Coggeshall, that the Rev. J. Chevalier who introduced the barley which bears his name is a maternal grandfather to Lord Kitchener, and if the present brilliant soldier has left his name on the page of history, in the annals of agriculture, at all events, he will be surpassed in fame by the man who introduced the world-renowned Chevalier type of barley. A large number of varieties of oats are also grown; Scottish Chieftain was perhaps the favourite, while Black Tartarians were also largely represented.

Of mangel seeds there seem to be no end, acre after acre was devoted to the raising of this particular root. As far as one can judge, there seemed to be a promise of an excellent crop, but as in all farming matters, a great deal depends upon the weather of this and next month. All root seeds, it may be mentioned in passing, are greatly improved by growing near the sea, and Messrs. King and Sons take advantage of this fact by raising large quantities on the Essex coast.

A visit to a seed farm on the scale maintained by Messrs. John King and Sons at Coggeshall is full of interest, and could farmers only see what care is bestowed by a first-class house to keep their reputation unspotted and untarnished, he could safely sleep at nights when he had planted the seed without any disturbing fears as to whether the crop would come up true to type and of first-class character.

HORSES.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

Comparisons.

I WAS at a show the other day when I heard a man who has been a large exhibitor for upwards of thirty years, and who still shows a good horse occasionally, say that there are not so many good horses nowadays as there were a quarter of a century ago. And he pointed to a class of four-year-old Hunters that were in the ring and compared them with a class in days gone by. The class he had before him was certainly a good one, but the one with which he compared it was certainly a better one. In the first place, it was more than twice as big, and I think it would be pretty generally admitted that the winners on that occasion would have done more than hold their own with the horses that were shown a few days ago.

Another Standpoint.

I WAS at another show on the following day, and as we were watching the Hunters a gentleman remarked how very few really good horses there were. I replied that I thought there were as many good horses as ever, for when one comes to think of it really high-class horses have never been quite as plentiful as berries on a bush. My friend said he supposed that it was the cash, and that it was the great demand for horses amongst the wealthy classes that made the seeming scarcity. In other words, the demand for a certain class of horses still exceeded the supply.

A Pessimistic Wave.

I MUST admit at once that this pessimism struck me very forcibly. One man, at any rate, I knew to be a man with not the slightest leaning to pessimism—a man who takes life easily—a hard-working man, but one who never worries and who takes life cheerily. And the question of once presented itself to me, Why does this man take such a gloomy view of our position as a horse-breeding country? For it means that we have fallen from our high estate, and that, even if we are still the stud-farm of the world, we have not much to boast about. I have considered the question seriously, because the gentlemen I have mentioned pointed to weak classes where there was wont to be strong ones, and showed, where a few short years ago there were plenty of young horses of merit to be bought, there are comparatively few now.

A Different View.

YET, much as I respect and value the opinion of my two friends, I cannot for the life of me support their theories or endorse their statements. I have been amongst horses for more than forty years, having during the whole of that time had practical dealings with them, and for thirty-four years been an owner of horses, whilst for many years I bred a few. And my opinion is that leaving out a few brilliant exceptions—those exceptions which only come two or three times in a century—the class of horses that comes into the ring at shows to-day is very much higher than it has ever been. Ten or a dozen years ago we were told there would never be such another show Hunter as Gendarme. Where would Gendarme be should I sell a horse I like?" he asked very pertinently. Another man hummed and hawed, and at last said, "Well, I want so and so for him, naming a sum which was a hundred pounds more than his value. I informed him of the fact, and he told me politely that he was aware of that, but that he wanted a horse to do his work, and he would not sell this one unless he could sell him for the price he had named. And sooner or later he will get it, though it would mean ruination to a dealer to give anything approaching the sum asked and then have to wait for a customer.

The Reason of It.

NOW, I can remember when horses of the type I am writing about—horses, say, from 14 hands 3 in. to 15 hands 1 in., up to weight, with action and manners, and capable of jumping a fence or two if called on and of enabling a man to see a good deal of fun in a provincial country, could have been found in any dealer's yard. And they were not very much pampered, they had a good deal of hard work to do, and the demand for them was limited. For in those days retired tradesmen and merchants did not find their way into the hunting field in any numbers. In my younger days you could count on the fingers of a hand the men who hunted regularly and who had no connection with the land. But a large proportion of the modern hunting field is made up of business men, very few of whom have any pretensions to "witch the world with noble horsemanship." They don't want the high-mettled "handful" of a horse whose many little peculiarities are thought little of by the hard-riding sportsman who means to be "there," provided he can gallop and jump and stay

Changes in the Horse Trade.

ANOTHER important factor in bringing about the scarcity of dealers' horses, of which dealers are always complaining, is the different

COACHING STALLION.

The Coaching Stallion illustrated above was First in the Class for a Coaching Stallion foaled in 1904 or 1905 at the Royal Show, Lincoln. He is the property of Mr. George Scoby, of Beadlam Grange, Nawton, York, but was bred by Mr. W. Rooke, Rookborough, Kirkby Moorside, and his sire was Ingleby Lord, dam Queen of the Valley.

Shires.

NOT very long ago a gentleman was talking to me of one of the foremost Shire horse men of the day, a man who has had some of the best horses through his hands, and whose name, were I to mention it, which I am not justified in doing, would claim unrivalled respect as that of a man who knows his business. And to my intense surprise he told me that our mutual friend had expressed the opinion that our heavy horses are much deteriorated, and that the good agricultural and lorry horses that used to be so plentiful are getting scarcer and worse to find every day, and that the substance of horses was deteriorating.

with Whisky to-day? Then, again, amongst Hackneys, would Reality compare, say, with Rosador? And similarly amongst our Shire horses, how would the horses of the 'eighties compare with Birdsall Menestrel?

An Instance of the Scarcity.

SOME days ago a friend wrote me asking if I knew of a saddle horse of a certain type. I happened to know of several, but my friend is without a horse yet, unless since I saw him he has bought one I told him about. The first man I asked would not sell at any price. He was a large farmer, and does a big trade in horses. "Why

way in which trade is done from what it was a few years ago. Then the breeder who had horses to sell took them to a fair where the big dealers bought them. Now many a horse gets to the man who uses him, and probably wears him out, without the dealer ever touching him, and this, of course, makes horses scarce from the dealer's standpoint. I say without the dealer's intervention, but not without that of a middleman. I am of opinion that the middleman is more to the fore in horse transactions than ever he was. Then, again, the multiplication of auction marts and the increase in the number of sales are all circumstances which tend to make the market in which the dealer buys a contracted one.

The Shire Horse Again.

THERE may be something in the contention that there is a falling off in the quality of those Shire horses which come into the market where dealers buy, but I am convinced that, take him for all in all, the Shire horse of to-day is superior to the Shire horse of twenty-three or four years ago. Somewhere about that time I was judging agricultural horses at a very important show, and there was a class of twelve brood mares, 50 per cent. of which had sidebones. I was at a show at the same place a short time ago, and there was not a sidebone to be found. Again, look at the number of horses there were rejected by the veterinary surgeons during the early years of the Shire Horse Society's Show, and compare it with the few rejections of recent years. Then, again, not so very many years ago greasy legs were prevalent amongst horses that were upwards of nine or ten years old, and now they are comparatively few. I think if, as my friend complains, there are fewer good Shires in the market, it is because many men who were formerly buyers are now breeding their own; and I am of opinion, though it is a question one cannot generalise upon with any degree of confidence, that the farmers of England are better horsed than they were a quarter of a century ago.

Summing-up.

SO that if there is this difficulty in finding good horses—and it is just possible that the difficulty is not so great as is made out, for men are sometimes apt to be pessimistic when their plans are not running smoothly—it is due rather to economic changes than to any comparative shortage in the real article itself.

THE LOOKER-ON.

Suffolk Horse Society's Annual Sale.

The twelth annual sale of Suffolk horses took place on Monday at Ipswich. There were twenty-two foals, twenty-three mares and fillies, besides a number of entire colts and geldings.

The Suffolk Horse Society has called attention to the fact that of late years the foreigner has been making heavy demands on the breeding mares left in this country. In order to retain this class of stock, the society inaugurated a scheme whereby they were not only prepared to assist small farmers to purchase Suffolk mares, but guarantee to give them a remunerative price for the foals. This annual sale was promoted by the Suffolk Horse Society with the object of selling the society's foals, the produce of free nominations to the leading sires of the year, distributed amongst small farmers having Suffolk mares practically sound. It had been found that many farmers had during the agricultural depression been compelled to dispose of their best mares. Therefore, a further object for inaugurating an autumn sale was to bring a class of mares before the public that, if purchased by tenant farmers of 300 acres and under, would be eligible for a free nomination another year, subject to the usual conditions.

The sale was a successful one. Mr. William Pipe's prize foal was started at a good figure, and other foals, though they did not come into the ring with quite the same high credentials, made remarkably good prices:—

NOTE.—The figures for the current year are approximate only.

A milk dealer named Frederick Pedley was fined 20s. at Hexthorpe on Monday for selling adulterated milk. It was stated that the sample taken by the authorities contained 28 grains of crystallised boric acid to the gallon, which was put in as a preservative.

The directors of the London and County Bank, in submitting to the shareholders the balance sheet for the half-year ending June 30 last, report that, after paying interest to customers and all charges, making provision for bad and doubtful debts, and allowing £28,052 15s. 3d. for rebate on bills not due, the net profits amount to £303,225 16s. 2d. From this sum has been deducted £100,000, transferred to an Investments Depreciation Fund, leaving £203,225 16s. 2d., which, with £97,371 4s. 8d., balance brought forward from last account, leaves available the sum of £300,597 0s. 10d. The directors have declared a dividend for the half-year of 10 per cent., which will require £200,000, leaving the sum of £100,597 0s. 10d. to be carried to the Profit and Loss New Account. The dividend will be payable on or after Monday, August 12.

Notes and Jottings.

IT is a generally admitted fact that the competition of the present day in all business matters is very keen and close. To realise a profit necessitates, or should necessitate, every possible care and attention being given to see that one's business is carried on in the most profitable manner and no stone left unturned to secure the greatest profit that can be earned.

DO our flockmasters thoroughly realise this? They oftimes say it is difficult to make things pay, but latterly, owing to the current demand for the home-grown mutton, they have worn brighter faces, and few if any have been able legitimately to complain of the result of the returns received from their flocks.

ARE these returns as good as they should be? One is inclined to say No, because there is one source of income from the flock that, in the opinion of very many well qualified to judge, is neither developed to its full extent, nor is it properly looked after. This source of income is the wool produced by sheep.

THE writer's attention was particularly called to the fact by a remark of the judge of the wool classes at Tunbridge Wells. He mentioned that a very considerable proportion of the entries of these classes was put up and sent to the show in such a manner as did not show it to full advantage. The inference is that those competitors to whom this remark applies are equally careless and indifferent as to the manner in which they prepare and pack their wool for market, and if such is the case they certainly do not do all they can or all they ought, to secure the highest possible price for this product, which of itself forms a very considerable portion of the income derived from sheep.

THE wool exhibition at Tunbridge Wells has been mentioned because it was there that this important question, the preparation of wool for the market, was so vividly brought to the notice of the writer.

LOOKING back through the shows of the current year and of previous years also, it is unfortunately only too true that the remark quoted above is found so applicable to many another breeder.

GREAT prominence was given to this important question by the paper read twelve months ago (at the International Conference of sheep-breeders held at Derby) by Mr. Hollings, who, perhaps in somewhat strong language, brought out most distinctly and clearly that there was need and room for a great improvement in the manner in which the British farmer prepared his wool for the market.

CAREFULLY considering all the different points raised by the experience gained in looking back over our notes made in connection with the wool competition, &c., it appears to the writer that the agricultural societies would be conferring a very great favour upon the wool growers of this country if, in addition to the prizes offered for the best fleeces of wool, they would also institute a series of classes offering prizes for the wool best prepared for the market. If such competitions could be brought into effect and entries secured, with the awards being made by a practical wool buyer fully acquainted with the requirements of the market, there is no doubt but that the result would be an increased income for the wool grower derived from this source.

THE subject is a most important one, and there are so many aspects of it that one desires to place before sheep breeders, that it is almost impossible to summarise it sufficiently not to occupy more space than it should; but if for one week only our notes and jottings are given over to this important subject, we are convinced that by directing attention to it the interests of sheep breeders are receiving good service.

"WHY is it," a wool grower said in Lincoln the other day, "that greater notice is not given to this important produce of the flock; even at the Royal Agricultural Society's Show hardly any notice at all was found in the agricul-

tural papers of the wool classes, many of which were well supported?" The reply is difficult, for a reference to the whole of the agricultural press shows that not only at the Royal Show at Lincoln and previous Royal Shows, but at every other show at which one finds classes for wool, the report of the critic is confined, generally speaking, to a brief acknowledgment that such classes were included in the schedule, and possibly a few words giving the names of the leading winners.

THIS want of greater publicity doubtless arises from the indifference that is known to exist amongst flockmasters as to how they prepare their wool for the market, or as to what quality they grow. The latter arises most distinctly from the fact that as a rule in many districts of the country there is one general price fixed for the wool grown in it, and consequently the careful breeder and grower of wool reaps no benefit by the enhanced price his better quality wool should realise.

HOW can this position be altered? There is only one way, and that is to evolve some means whereby the growers of wool shall be able to sell their produce at its actual worth on the market.

WOOL auctions are unquestionably very excellent institutions, and if it were possible for them to be so arranged as to cover the whole country, it is the writer's opinion, and the opinion of many others fully acquainted with the details of the trade, that a very great step in the right direction would be attained.

A REFERENCE to the reports of the Colonial wool sales in London and to such few reports of the wool auctions held in different parts of the country, most clearly and emphatically shows that the buyers at these sales differentiate between the different qualities of wool on offer. If, then, at an auction sale in which wool from the same locality is offered, the different lots give a varying result at the price per lb., it needs no further proof to show how utterly wrong is the system that prevails in so many districts of one buyer buying up the whole of the wool produced in that district at the same price.

THESE remarks, to which many others might be added, will, it is hoped, lead to woolgrowers ventilating their opinions upon this important matter in the columns of such papers as should in the interests of flockmasters do their level best to end a condition of affairs that is unsound and unprofitable to the grower, and institute a fresh condition whereby the growers of every class of wool should be assured of being able to receive at sale time its proper proportionate value, considering the quality, &c., of the product.

Sheep Sales and Fairs.

Sir W. G. Pearce's Hampshires.

The annual letting and sale of ram lambs from the Chilton flock of Sir William G. Pearce, Bart, took place this year for the first time at Little Hidden Farm, on the estate near Hungerford. Seventy excellent lambs, which reflected the greatest credit on the manager, Mr. J. B. Harding, were submitted by Messrs. Waters and Rawlence. A good company was present, and four lambs were let at an average of £20 10s., Mr. Irons (for the Hon. D. P. Bouverie) hiring No. 5 at 42 guineas, Mr. Welch No. 3 at 16 guineas, and Mr. Cary Coles Nos. 1 and 6 at 10 guineas each. Of the sale lambs Mr. Flower bought at 20 guineas, Mr. Darling at 20 guineas, Mr. Dibben at 16 guineas, and Mr. Welch at 11 guineas and 8½ guineas, Mr. J. Matthews (for Mr. Hutchings) at 9 guineas (twice) and 8½ guineas, and Mr. Eady (for Lady Wantage) at 10½ guineas, 7½ guineas, &c. Messrs. J. Brown, S. Brown, W. Brown, Hughes, Hellard, Gore, Lea, Rawlings, W. Rawlings, Willis, and others also bought at from 8 guineas to 5 guineas. The average of 66 let and sold are £8 5s.

The Late Mr. Wm. Harris' Hampshires.

Messrs. J. Harris and Son, of Winchester, on Monday offered for sale the whole of the widely esteemed flock of the late Mr. W. M. Harris. The flock was established in 1864, and was dispersed on Monday owing to the owner's death. Sires from the most celebrated flocks have recently been used, and the whole of the sheep were of good size and colour, and full of quality. The fifty ram lambs averaged £5 11s. 6d., Mr. E. Clift purchasing at 11 guineas, and Mr. F. Gowlett (for the Rev. C. H. Brocklebank) at 10 guineas. The other purchasers of ram lambs at from 7½ to 5½ guineas included Messrs. W. Candy, W. Bowden, J. Nicoll, A. Doris (for Sir G. Cooper) E. A. Mason, J. Stockdale, A. Parsons, J. Westbrook, C. Tubb, W. Follett. Two shearling rams were sold to Mr. H. Waters at 8 guineas and 7 guineas respectively. The two-teeth ewes, numbering 140, averaged 77s. 9d. apiece, Mr. J. Flower giving 125s. per head for one lot, and Mr. K. Heaton (for Mr. H. Hutton) 91s. each for another lot. The four-teeth ewes averaged 70s apiece, the six-teeth ewes 61s. 10d, the full mouthed ewes 56s. 3d., and the ewe lambs 49s. 2d.

Wooler.

The second special sale of lambs took place at the Wooler Mart last week, when the entry comprised close on 3,000 top three-parts cross Oxford and half-bred lambs. Although the lambs were good for the season, they did not compare favourably with those presented at a similar sale last year, which was an exceptional one, yet prices were firm, and in most instances last year's figures were exceeded. Three-parts made up to 40s. 3d. from New Etal, and half-breds brought 33s. 3d. There would be an average rise of from 6d. to 1s. a head.

SOMERSET AND DORSET HORN SHEARLING RAM.

The Somerset and Dorset Horn Shearling Ram illustrated above is the property of, and was bred by, Mr. E. A. Hambro, of Milton Abbey, Blandford, Dorset, and won First Prize in the Class for a Somerset and Dorset Horn Shearling Ram at the Bath and West Show at Newport.

Suffolk Sheep at Ipswich.

The special sale of Suffolk sheep from registered flocks took place at Ipswich last week, when a large number of choice ewes were disposed of. There was a record average, but not a record price. The latter was witnessed in 1899, the figure then reached being 280s. for ewes. The top figure this year was 200s., the highest figure for many years. The highest last year was 120s.; in 1905 it was 100s., and in 1904 115s. There was a rise this year of 10s. to 15s. per head.

Wool Fairs and Sales.

Dublin.

An extensive catalogue, comprising 400 lots (about 500,000 lbs.), was submitted for competition at Messrs. Ganly's second auction sale of wool for the season. There was a full attendance of buyers, including representatives from English and Scotch centres, in addition to the home merchants and manufacturers. The condition of the trade was reflected in the biddings, which were of a quiet and subdued character, and prices all round mark a considerable reduction on the quotations ruling at the June sale. About one-fourth of the quantity offered had to be withdrawn owing to reserve prices being too high; the remainder was disposed of at the following rates:—

	Washed.	Greasy.
Shrops and Downs	12d. to 12½d.	10d. to 10½d.
Super and Pick Hogs	12d. to 12½d.	10d. to 10½d.
Deep Hogs	11½d. to 11¾d.	9½d. to 9¾d.
Super and Pick Wethers ..	11½d. to 11⅝d.	9¾d. to 9¾d.
Deep Wethers	10d. to 11d.	8½d. to 9d.
Mountain, Seaside, and Cheviot	8½d. to 10d.	——
Blackface and Scotch	8½d. to 9½d.	6½d. to 8d.

Ipswich.

At the second Ipswich wool sale 4,000 fleeces were offered. Comparing the prices of washed wool with the first sale, prices showed a drop of 1d. to 1½d. per lb.; unwashed wool about maintained the prices realised at the previous sale. The top price was 11⅝d.

Alnwick.

The first clips of the season in the Alnwick district were sold on Monday. The attendance of farmers and buyers were most numerous, and many clips were sold. Prices throughout bore a significant reduction from last year's full quotations, notably in half-bred hogg and ewe clips, which met a fall of 4s. per stone. Quotations: Half-bred hoggs, 24s.; half-bred ewes, 22s.; Cheviots, 20s. per stone.

The Polled Cattle Society.

The twenty-eighth annual general meeting of the members of the Polled Cattle Society was held in the showyard at Aberdeen. Mr. George G. Walker, Portlethen, was called to the chair.

The Chairman moved the adoption of the report, stating that the membership of the society now amounted to 527. He referred briefly to those members who had died during the year, particularly the Hon. Charles Carnegie, of Aldroughty, Elgin, who had been a member of the society since its inception; and Colonel Wolrige-Gordon, of Hallhead and Esslemont, who had been a valued member.

Mr. Robert Walker, Elgin, seconded, and the report was then declared carried.

On the motion of Mr. Black, Cortachy, Colonel M'Inroy, C.B., of The Burn, Edzell, was unanimously appointed president of the society. Colonel M'Inroy returned thanks.

Colonel George Smith Grant, Auchorachan, Glenlivet, was re-elected a vice-president of the society, and Mr. J. J. Cridlan, Maisemore, Gloucestershire, was elected vice-president.

After a scrutiny, Messrs. John H. Bridges, Surrey; George Cran, Morlich, Glenkindie; and J. Ernest Kerr, of Harviestoun Castle, Dollar, were unanimously elected members of the Council.

At the last meeting of the council of the Devon County Agricultural Association, the Parliamentary Committee reported that whilst being desirous of promoting the increase of small holdings on sound economic principles, they believed the Small Holdings Bill now before Parliament would be attended by the danger of placing on the soil men who, from lack of practical knowledge of agriculture, could not succeed. The committee was also of opinion that the proposal to appoint commissioners to override the decision of popularly-elected county and borough councils was unjust to those bodies, and contrary to the principles of democratic government; and since the compulsory clauses could only result in the eviction of the present occupier, they considered that great caution should be exercised in the use of these powers; and in any case where land was taken compulsorily compensation should be paid. The committee was further of opinion that, seeing the artificial creation of small holdings as proposed by the Bill was purely a national question, all expenses incurred by the experiment should be defrayed from the National Exchequer, and not from local rates. This report was adopted without debate, and it was decided to send copies of the report to the Prime Minister, the Minister in charge of the Bill, and the members of Parliament for Devonshire.

Notes and Jottings.

TRAVELLING in Sussex recently it was a very satisfactory matter to see some of the herds of this beautiful dark-red breed of cattle looking in such fine condition and displaying the most perfect symmetry that any breed could be expected to display. There is no doubt the breed has wonderfully improved during the past ten or fifteen years, but much more so during the last fifty years, the time that has elapsed since the foundation of the Herd Book of these South-Eastern rubies. Breeders will very shortly be able to reap greater benefit from this improvement than they are able to do at present, as the breed requires to be better known at a distance from its own home. The cattle were bred in their earliest days very largely for working purposes.

SINCE horses have been more generally used, or may be said to have entirely superseded oxen, breeders have directed their attention almost exclusively to the production of beef, and to the shape and beauty of the animals, with the result that at the present day herds of Sussex steers may be purchased that present the most uniform appearance and high quality. Some such lots have found their way into the great grazing districts of the Midlands, where their importation will be a great help, and where the richness of the pastures will give size and condition that is certain to commend them to the notice of feeders generally. The herds seen in the Midlands have done remarkably well, and look like leaving quite a fair record behind them in the way of profit.

DUTCH cattle appear to be gaining very rapidly in favour if the sales announced from herds are correct. The great cry for milk must be accounted as the reason for this, but the question is how will the crossing of so many herds of other good breeds affect matters that do not altogether affect milk, such as the calves that are not females, and therefore will either have to be converted into steers or sold at once for killing at such price as can be obtained for them, which is usually but very little. It is true that in the Ayrshire districts of Scotland bull calves have been of but little value in their pure state as a rule, therefore little will be lost, and it is quite possible that the Dutch blood will mix so well with the Ayrshire that the female produce will pass muster as purely-bred ones.

QUITE a large number of very interesting sales of Aberdeen Angus cattle are to take place during the coming autumn, Messrs. Macdonald, Fraser and Co. having quite a long list of these events already published, and which include drafts from several of the most prominent herds of the breed as well as the entire dispersion in other cases. The demand for these should be better than for several years past, the better prices and demand ruling for beef being one item likely to induce better bids. Then there is the fact that the rival beef-breed, the white-faces of Herefordshire and its borders are selling so well and rapidly that many would-be buyers of that breed are quite likely to find themselves unable to obtain their requirements of a satisfactory class.

WITH so many foreign buyers of our British breeds of live stock, it will soon become a question if the teaching of other languages ought not to be looked after in our board schools. It is very necessary now that herdsmen, grooms and shepherds who are connected with high-class farming and pedigree stock should be able to explain to the German, the Spaniard, or the Frenchman when he makes inquiries either in the showyards or at the homesteads of breeders, what strains of blood are being shown, the treatment the animals have been receiving, and any other matters that very much affect stock breeding, and are likely to be asked concerning them. The general labour question is also affected very much now by this, such people as hotel servants often being perplexed by questions asked them in in languages other than their own.

DEVON cattle-breeders are a little perplexed, it appears, by an offer of £20 a year for three years for prizes for milking Devons at the Bath and West Show. As there are now two distinct breeds of Devons—the North and South, the former a magnificent beef breed, the latter a dual purpose breed with a large milk yield—it would seem a great pity to induce breeders of the very old type of North Devons to alter their points or their aims in breeding. Surely there are milk breeds galore to suit all conditions of soil and climate. Why spoil a first-class beef-breed in order to make another such? One member of the society instanced the miserable appearance of the wrecks of animals of other breeds competing in the milking trials at our shows as being calculated to prejudice breeders against the acceptance of prizes to induce the spoiling of a good breed of beefers to make milk, and we cordially agree.

NOTWITHSTANDING the above note, we have always advocated, and still do so, the paying of greater attention to the milking properties of the beef breeds to such an extent as to insure each cow being able to bring up her own offspring, and to do so from a neat and shapely udder, well up to the body, so as not to interfere with the butcher value of the dam, should she abort, and so that she may give not only a sufficiency of milk for her calf, but a sufficiency to grow it well and rapidly. There is a great difference between breeding to such a standard as is here indicated, and breeding wrecks for competition in milking-machine classes only.

RATHER a novel experiment appears to have been tried recently in the way of growing calves. Two lots of youngsters—two similar lots of eight and nine—were selected and treated exactly alike in all respects, save that the one lot were kept continually in the shed, and the other kept in the shed at night and turned out into the open yard during the day, fresh air being the only different treatment the one lot experienced from the other. At the end of five weeks both lots were weighed, with the result that the lot that had been subjected to the open-air treatment during the day had made a gain of 58 lb., whilst the closely-confined ones had made but 39 lb. increase.

AMERICAN and some other papers, or papers from other countries from which representatives had visited the Royal Show at Lincoln, give in very high terms their opinion of the old Longhorn breed of cattle which was there exhibited in not especially strong fighting form, but sufficiently to give pause to those pessimists who but a few years ago spoke of the race being either totally extinct or past reviving. It was a great point that a Longhorn cow at that show should have stood very nearly at the top in the way of butter, having produced over two pounds of that product per day without forced feeding. The cattle also attracted strangers by their great size and their heavy flesh as well as by their picturesque general appearance, which has always been a means of attracting attention.

FOR crossing purposes we have several times mentioned the Longhorn as being quite one of the most valuable, if not entirely the most valuable, of all breeds; the last line we add because the Longhorn, when crossed upon almost every other known breed of cattle, gives you females possessing very high dairy properties and dual purposes, as well as males that will hold their own for beef against all comers, whether they be purebreds or crosses. There are now some twenty herds of this old breed doing good work in England, and so popular has the Longhorn cross become that bull calves are all sold in advance for the purpose, and at prices that pay their breeders well. These cattle are being used now with great advantage to cross upon West Highland, Sussex, Galloway, Devon, Angus, and Shorthorn, as well as other breeds.

IN the above Longhorn note we mention the word butter. Surely there is no bovine product in this or any other country so foully murdered in its management as butter. What legislation will be enacted to assist in improving its general quality is hard to say, but there is one thing that may be said truthfully, and that is that in the case of foods of any kind, whenever laws have been passed to protect the article, they have been so grossly neglected as to be practically worthless, and it is to be feared that it will be so in the case of butter. This note is called for from the fact that having had to purchase some butter recently for keeping up a supply, it has been utterly impossible to obtain samples fit to fill high-class orders.

WHAT is very strange, too, and disappointing is that trials have been made from creameries supposed to be well managed, as well as from individual farmers, and practically all with the same result, that the butter is not sufficiently or carefully worked, the samples varying, however, somewhat considerably in this respect.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible. Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

By Messrs. HOBGEN BROS.

CHICHESTER EIGHTEENTH ANNUAL SALE of PURE-BRED SOUTHDOWN SHEEP.

HOBGEN BROS. beg to announce that they will hold their Eighteenth ANNUAL SALE of PURE-BRED SOUTHDOWNS in their Auction Repository in the Chichester Cattle Market on THURSDAY, AUGUST 8, 1907, when a large and choice selection of Rams, Ram Lambs and Ewes from the Flocks of the Duke of Richmond, K.G., the Duke of Devonshire, K.G., the Duke of Northumberland, K.G., Lord Northbourne, Earl Bathurst, C.M.G., Earl Cadogan, K.G., the Exors. of the late Col. H. McCalmont, Mr. J. E. Allen, Mr. A. Heasman, Mr. A. G. Paul, the Exors. of the late Mr. George Peel, Mr. E. Hobgen, Mr. Percy Herrington, Mr. A. C. Harris, and others will be offered. Sheep can be taken in under cover two or three days previous to the Auction, and green food will be provided free of cost.

HOBGEN BROS. will also give £10 in cash, or, if preferred, a piece of plate, to the Owner being the Breeder of the Shearling Ram which shall be sold at the highest price at such Auction

N.B.—This Sale is open to all Breeders of Southdown Sheep, and is unrestricted to numbers. Hobgen Bros. respectfully solicit early entries to the Sale, in order that the public may be notified of the same.

Sale to commence at 12 o'clock precisely.

Refreshments may be procured in the Hall.

By Messrs. WATERS & RAWLENCE.

MONDAY, AUGUST 12, 1907.

BRITFORD FAIR.

One Mile from Salisbury.

THE CHILMARK FLOCK.

MESSRS. WATERS & RAWLENCE are instructed by Mr. JAMES FLOWER, to LET and SELL by AUCTION, in the above Fair, on MONDAY, AUGUST 12, 1907, at 10.30 o'clock,

100 RAM LAMBS,

from his renowned Registered HAMPSHIRE DOWN FLOCK.

In the year 1894 Mr. Flower, the popular owner of the Chilmark Flock, commenced showing, and from that time forward has stood unrivalled both in the Showyard and the Sale Ring. Year by year the competition has been more keen, and yet the exhibits from Chilmark are practically unassailable, and since the last Sale at Britford Mr. Flower has eclipsed all his former achievements; his pens of Ram and Ewe Lambs having been honoured by winning all the Champion Prizes of the year wherever shown, with animals that for perfect type, depth of flesh and general excellence are unsurpassed.

On August 12 Mr. Flower will submit to Flockmasters the best 100 Lambs that he has ever produced, and possibly the best that ever entered a Sale Ring.

Catalogues of the AUCTIONEERS, Canal, Salisbury.

By Mr. ARTHUR SAUL.

THE LINCOLNSHIRE CURLY-COATED PIG BREEDERS' ASSOCIATION

Will hold SALES at BOSTON

On WEDNESDAY, AUGUST 28, and WEDNESDAY, OCTOBER 9, 1907, at 11 o'clock.

For particulars apply

ARTHUR SAUL, Bourne, Auctioneer.

Messrs. CHALK, Auctioneers,
11, Alexandra Street, Cambridge, and Linton, of whom catalogues may be obtained.

SOCIETIES.

Royal Agricultural Society.

The last monthly meeting of the council of this society before the autumn recess was held on Wednesday, at 16, Bedford Square, W.C. In the unavoidable absence, through ill-health, of the president, the Earl of Yarborough, Sir John H. Thorold, Bart. (trustee), was called to the chair. Amongst those present were H.R.H. Prince Christian, K.G., Earl Egerton of Tatton, the Earl of Northbrook, Lord Middleton, Lord Moreton, Right Hon. Victor C. W. Cavendish, M.P., Right Hon. Ailwyn E. Fellowes, Sir Richard Cooper, Bart., Sir Gilbert Greenall, Bart., Mr. Charles R. W. Adeane, Mr. Thomas L. Aveling, Mr. S. N. Bankart, Mr. J. Bowen-Jones, Mr. Henry Dent Brocklehurst, Mr. Percy Crutchley, Mr. R. M. Greaves, Mr. Joseph Harris, Mr. William Harrison, Mr. Robert W. Hobbs, Mr. John Howard Howard, Mr. Walter F. Ingram, Mr. Ernest Mathews, Mr. T. Horrocks Miller, Mr. Claude M. S. Pilkington, Mr. Frederick Reynard, Mr. Ernest W. Shackle, Mr. Henry Herbert Smith, Mr. Richard Stratton, Mr. George Taylor, Mr. John Thornton, and Mr. Thomas McRow (secretary).

The following members of the Newcastle local committee were also present:—The Lord Mayor of Newcastle-upon-Tyne (the Right Hon. J. W. Oubridge), the Sheriff of Newcastle (Mr. John Fitzgerald), the Deputy Lord Mayor (Mr. Johnstone Wallace), Mr. William Chrystal, Mr. J. D. Walker, and Mr. A. M. Oliver (local secretary).

Seven governors and 109 new members have been elected.

Gloucester in 1909.

A large and influential deputation was received from the city and county of Gloucester in support of an invitation which had been tendered to the society to hold its show of 1909 at Gloucester. The deputation, which was introduced by Mr. Brocklehurst, the Gloucestershire representative on the council, consisted of the Mayor of Gloucester (Mr. Samuel Aitken), Viscount St. Aldwyn (Lord High Steward of the City), Sir John Dorington, Bart. (chairman of the Gloucestershire County Council), Sir Nigel Kingscote, G.C.V.O., K.C.B., Councillor Braine, the Mayor of Cheltenham (Mr. W. N. Skillicorne), Mr. Russell Rea, M.P. (City Member), Mr. F. A. Hyett (deputy chairman of the Gloucestershire County Council), Colonel Curtis-Hayward, Mr. H. W. Bruton, Mr. William Priday, Mr. J. W. Lister, Mr. E. T. Norrish, Mr. R. Adcock, Mr. W. Newton (Midland Railway), Mr. G. H. Roberts (Great Western Railway), and the Town Clerk of Gloucester (Mr. G. S. Blakeway).

The Mayor of Gloucester stated that he had been deputed to offer a very hearty welcome to the Society to hold its show of 1909 in their city. The invitation, cordially supported as it was by the whole of the county, would, he hoped, appeal to the council and secure for Gloucestershire the presence of the Royal Show two years hence. Gloucester was situated in an essentially agricultural district, and the facilities which the Great Western and the Midland Railway Companies could offer were of an exceptional character. He ventured to say that if the society could see its way to accept the invitation it would have a most cordial welcome and a reception that he sincerely believed would be in every way satisfactory.

The invitation having been supported by Viscount St. Aldwyn, Sir John Dorington, Sir Nigel Kingscote, and the Mayor of Cheltenham, the deputation withdrew; and on the motion of Sir Gilbert Greenall, honorary director, seconded by Mr. Henry Dent Brocklehurst, it was unanimously decided to accept the invitation tendered by the Mayor of Gloucester on behalf of the city and county to hold the society's show at Gloucester in 1909, subject to the usual conditions of the society being complied with.

Dates of the Newcastle Show.

Sir John Thorold reported that the General Newcastle Committee at their meeting held that morning, at which the Lord Mayor of Newcastle and other local representatives had been present, the date of the Newcastle Show had been fixed for Tuesday, June 30, till Saturday, July 4, 1908.

Financial Result of Lincoln.

Mr. Adeane, in presenting the report of the finance committee, said that the committee were not in a position to give the actual figures with regard to the Lincoln Show, because they felt it would be unbusinesslike to do so until the figures had been checked. He could say, however, that the result of the Lincoln Show was far beyond their expectations, and was greatly in excess of the profits made at the Derby Show. The committee were glad to be in a position to recommend an increase to £5,000 in the grant for the prize-sheet for the Newcastle Show. It would be understood, however, that it was not intended to increase the amount of the prize-sheet, but to keep it at the level of the Lincoln prize-sheet. He hoped that it would not be taken that the society was in such a flourishing state as not to require assistance, and he trusted that the Breed Societies especially—whose interests were identical with those of the Royal Agricultural Society—would continue to support them as generously in the future as they had done in the past.

Other Business.

The Earl of Northbrook, from the Committee of Selection, reported the resignation of Mr. Charles Whitehead, a vice-president of the society, and moved the election of the Earl of Yarborough to fill the vacancy thus caused. This motion was seconded by Mr. Crutchley, and carried unanimously.

The resignation was also reported of Mr. Alfred J. Smith, the representative on the council of the Division of Suffolk

Other business having been transacted, the council adjourned over the autumn recess until Wednesday, Nov. 6 next.

Alnwick Horse and Cattle Fair.—The annual fair was held on Monday. There was a numerous attendance of dealers and farmers and a fair amount of business was transacted. In horses, the supply was greatly in excess of last and many previous years, and several better class animals were shown as carriage horses. Draught horses of a fairly good appearance sold from £25 to £35. Inferior draughts at from £15 to £20. Cobs, a numerous show, sold from £7 10s. to £15; carriage horses from £12 to £15; ponies at prices ranging from £5 to £8 each. Cattle were not numerously shown, but business was good. One and a half year old heifers from £6 to £7 10s.; two-year-old heifers from £8 to £9 per head; cows from £8 to £10. Keeping pigs sold well at prices ranging from £18 to 21s. each.

There were 99 hours' less sunshine in the past July than in that of last year.

CORRESPONDENCE.

What is the Best Flooring for Pig Sties?

SIR,—Will you kindly advise me through your valuable paper what kind of floors you would recommend for pens for breeding pigs?

Would old railway sleepers, sawn across and laid on the ground, be suitable? Or would they be liable to get wet and cause any injury to the pigs?—Yours, &c., BEGINNER.

July 31, 1907.

The Feeding of Stock.

SIR,—A week ago I sent one shilling's worth of stamps asking if you would oblige me by sending the analysis of our common sorts of corn. Not having received it, I write thinking my letter might be mislaid. Our family having taken the MARK LANE EXPRESS for many years, I took this liberty, thinking you would be sure to have this by you. If you have the best mixtures of corn already decided for different animals that is what I want. With the analysis by one at hand one can mix their own grown corn.—Yours, &c.,

July 29, 1907. T. C.

*** I take it that what you really want is not so much the analysis of different kinds of corn for feeding purposes as much as some particulars that will guide you as to the digestible constituents which the above contains. As it would take considerable space to supply you with what you ask for, namely, the best mixtures of food for different animals, I think I can best answer your question by advising you to get Leaflets No. 74 and No. 79 issued by the Board of Agriculture and Fisheries, and dealing respectively with the purchase of feeding stuffs and rations for farm stock. If you apply to the Secretary, Board of Agriculture and Fisheries, 4, Whitehall Place, London, S.W., these leaflets will be sent to you free of cost, and a letter of application addressed to the above department need not be stamped. In the leaflets referred to you will find a good deal of useful information on the subject of feeding farm stock, but if you do not see what you require, please write again, and we will do our best to assist you. —RUSTICUS.

Potatoes Affected.

SIR,—I am enclosing a few specimens of potato tops which were given to me by a neighbouring farmer while looking round his garden. Although a man of long experience, he said he had never seen anything like it, and I had to confess that it was altogether new to me; but he told me of several other people who had potatoes similarly affected. It appears that when potatoes become thus affected all development is checked, and he told me that he did not believe that they would do any more good, some of the tops were quite brown. You will notice that in the angles betweeen leaves and main stem there are lumps formed, from which are suspended what look very much (especially in some instances) like root fibres. I thought at first that the lumps might be caused by some kind of parasite, but on cutting one open I could not discover anything.

I shall be glad if you can throw any light upon the matter in the correspondence column of your next issue. I ought to add that all the potatoes in the garden are not like it, part of the bed being as healthy as one need wish to see.—Yours, &c.,

PUZZLED.

*** It needs but a glance at the specimens to to hand to tell that your neighbour's potatoes are suffering from the disease *Macrosporium solani*, commonly called the "leaf curl" disease, owing to the peculiar way in which the leaves become crimped and curled at the edges. I am a little surprised to hear that you have never seen anything like it before, as the disease is wide spread over all parts of the country; and though I have been intimately acquainted with it for some years I have never known it to be so bad as this season. There can be no two opinions about the seriousness of leaf curl, and at the present moment the disease, its cause, and how to remedy it, are matters which are perplexing scientists and practical men alike. In the first place, there are doubts as to what leaf curl really is, and I believe it may be brought about by two or three causes. The general symptoms, however, are as follows:—To all appearance the sets are sound and good when planted, but they either fail to grow altogether or else they send up weak splindling stems (like those you sent), and clear indication of the presence of the disease is the curling of the leaves, and as the fungus mycelium increases in quantity in the tissues, the haulm becomes limp and collapses. Generally speaking, when affected plants are lifted the old seed tubers are found in the ground in a perfectly sound and firm state, and there is no telling how long such tubers would remain in the ground without rotting. Some people have tried cutting the tubers to facilitate decay, but if the seed potato is affected with the fungus this course is useless, and at the end of the season I

GILTS AND BOARS ALWAYS ON SALE

At Reasonable Prices.

have frequently found half sets that were cut at planting time not decayed in the least. In my experience I have found leaf-curl disease to be much more prevalent amongst early than late varieties, and as the mycelium is in the tubers when planted or the fungus pores are in the land, we must look here for the remedy. On no account would I save seed potatoes from an infected crop; and, indeed, I have had so many disappointments through leaf-curl that I question whether it is worth while saving seed potatoes at all, at any rate, not early varieties. At the present moment I have early potatoes growing, the seed of which was fresh from Scotland last year. Some of the varieties are an absolute failure through leaf curl, yet potatoes of the same variety growing by the side of them from seed obtained fresh from Scotland this year show no sign of the disease, and are cropping splendidly. I believe the best preventive measure is a radical change of seed from uninfected land. Personally I have had little trouble with leaf curl in seed potatoes obtained from Scotland, though, of course, others may have had different experience. Another course, which I merely suggest as a preventive measure, is, if seed potatoes are saved for planting the following season, to lift the tubers while the skins are soft and before they are ripe, store carefully through the winter in a cool outhouse, either boxing or spreading the tubers on a brick or earthern rather than a wooden floor, and set the potatoes up in shallow boxes some time before planting so as to get them sprouted. It is important, particularly in the case of early varieties and in view of this disease, that the central and main shoot should not be broken, but kept intact. The lumps to which you refer are merely miniature tubers forming in the axils of the leaves, which peculiarity is not uncommon in the case of perfectly healthy potatoes and much more general when crops are affecteed with "leaf curl." The reason why some of the potatoes in the garden you mention are quite healthy is due to the fact, of course, that these plants are unaffected. So far as my experience goes, spraying is of little use in the case of "leaf curl," and the remedy is in getting fresh seed from an uninfected area. I have dealt with the subject at some length, because I realise its importance and am alive to the losses that potato growers are suffering through the curl disease. I am convinced that there is a great deal more to be learnt about this peculiar disease in the potato, and with the permission of the editor, I invite other readers of the MARK LANE EXPRESS to give their views on the subject, as a discussion might lead to some useful result, particularly as the writer of the above letter is only one amongst hundreds who are puzzled by the disappointing behaviour of their potatoes.—RUSTICUS.

WATERLOO FEEDING CAKES FOR ALL STOCK.

(As supplied to H.M. the King by appointment.)

For Rapid Feeding.

For bringing Stock to Early Maturity.

For Success in the Prize Ring.

For Young Stock.

BANKS, INSURANCES, &c.

LONDON & COUNTY BANKING COMPANY, LIMITED.

Registered under "The Companies Acts." Established in 1836.

Capital £8,000,000, in 100,000 shares of £80 each.

REPORT ADOPTED AT THE HALF-YEARLY ORDINARY GENERAL MEETING, 1st AUGUST, 1907.

WILLIAM EGERTON HUBBARD, Esq., in the Chair.

The Directors, in submitting to the Shareholders the Balance Sheet for the half-year ending 30th June last, have to report that, after paying interest to Customers and all charges, making provision for bad and doubtful debts, and allowing £28,052 15s. 3d. for rebate on bills not due, the net profits amount to £303,225 16s. 2d. From this sum has been deducted £100,000 transferred to an Investments Depreciation Fund, leaving £203,225 16s. 2d., which, with £97,371 4s. 8d. balance brought forward from last account, leaves available the sum of £300,597 0s. 10d.

The Directors have declared a Dividend for the half-year of 10 per cent., which will require £200,000, leaving the sum of £100,597 0s. 10d. to be carried to the Profit and Loss New Account.

The Dividend, £2 per Share, free of Income Tax, will be payable at the Head Office, or at any of the Branches, on or after Monday, 12th August.

H. R. WYATT, Head Office Manager.
W. G. GRIBBLE, Country Manager.
T. J. CARPENTER, Chief Accountant.

London and County Banking Company, Limited, 12th July, 1907.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with, and we report that we have examined the Balance-Sheet and Profit and Loss Account, dated the 30th June, 1907, have verified the Cash-Balance at the Bank of England, the Stocks there registered, and the other investments of the Bank. We have also examined the several Books and Vouchers and certified Returns showing the Cash-Balances, Bills and other Amounts set forth, the whole of which are correctly stated; and in our opinion the said Balance-Sheet and Profit and Loss Account are properly drawn up, so as to exhibit a true and correct view of the Company's affairs as shown by the books of the Company.

(Signed) HY. GRANT, THOS. HORWOOD, STUART PLEYDELL-BOUVERIE, } Auditors.

London and County Banking Company, Limited, 18th July, 1907.

Seasonable Topics.

Progress of Haymaking. SLOWLY and wearyingly the haymaking season drags itself along, and it appears as if it will never be brought to an end this season. The weather seems determined not to take up and be fine this summer, and if we get one good hay-day, the next is almost sure to be unfavourable. We have met with a good many farmers during the past week, but as a rule they were not in a cheerful frame of mind. The exceptions were in the cases of a few men who, not having much haymaking to do, had finished, and were relieved in consequence, but there is a lot of hay to be got in yet. In journeying about the country this week we have observed a good many fields yet to be mown, but considering that we are now well into August, we see no advantage in letting the grass stand. Earlier in the season there was a good excuse for waiting till the weather settled before getting a lot of grass down, but things are different now, and if the grass is cut there is the possibility of getting it turned into hay when fortune favours us with a fine day or two.

The State of the Corn. NATURE will not be denied, and, in spite of the dull and cheerless weather, there is a golden gleam spreading over the corn fields which tells of the grain ripening to harvest. In some places corn cutting has begun amongst the oats, and if we could only get a spell of settled weather harvesting operations would soon be general. Speaking from our own observations we see prospects of a fair harvest, but the heavy storms we had in July have played havoc in the cornfields. It is no uncommon sight to observe fields of oat and wheat where the crop is laid as flat as if it had been rolled, and difficulties will present themselves when reaping commences. In other districts which have escaped the full vigour of the storms the corn is standing better, and tall straw is crowned with good heads of grain. As to financial prospects of the corn crops there are reasons to think that the British farmer will be able to sell his wheat well, but what he is most anxious about just now is good weather for the harvest. The experience of the summer up to now has been sufficient to make him anxious.

Useful Education. THE Berkeley Hunt Agricultural Society, which held its annual show under the shadows of historic Berkeley Castle on Bank Holiday, is one of the most progressive institutions of its kind in the West of England, and we would draw attention to a new departure made this year that might be adopted elsewhere with advantage. The Berkeley Hunt Society believes in education, and knowing that the boy makes the man, it offers unique facilities for the young farmers in the district to acquire useful knowledge on matters connected with agriculture. At the recent show on Bank Holiday prizes were offered to young men under twenty-five years of age for judging a number of cattle and most correctly placing them in order of merit. A time limit was given, and the competitors had to give reasons for their decisions in writing on cards provided for the purpose. The competition created considerable interest, and there were sixteen competitors for the prizes. We consider it to be a matter of importance that the farmers of the future should be good judges of stock, and we look upon this as being an excellent means of teaching.

The Progress of the Royal. CRITICAL they may be, and perhaps not always very patient, but, nevertheless, we can answer for farmers as a community rejoicing in the hope that the Royal Agricultural Society has left its days of adversity behind it, and is now safely on its way to that position of prosperity which a premier and Royal Society show should occupy. We recall the days of Park Royal as a bad dream and an ill-fated experiment that nearly brought disaster in its trail, but there is an enthusiasm now about Royal shows that is encouraging and speaks well for the future. This year Lincoln rose nobly to the occasion, and we may safely leave the northern grit of Newcastle to do the same next. And what of 1909? It is a far cry till then, but the farming folk in the West of England are loyal, and the prospects of having another Royal Show in the ancient city of Gloucester are being discussed with favour. Nothing succeeds like success, and we feel sure that Newcastle next year and Gloucester the year following will spare themselves no pains to uphold the records of Derby and Lincoln.

The "Mark Lane Express" Stand at the Yorkshire Show at Barnsley.

Village Flower Shows. THOUGH the interests of this journal are chiefly agricultural, the sister arts of farming and gardening are so closely bound up with each other that we make no excuse for devoting one paragraph to the local flower-shows which are now held in so many of our rural villages. In our opinion, and in spite of little things that are not always fair and above-board, village flower-shows are commendable institutions. It is good to see cottagers and allotment holders taking interest in their gardens, and the produce which is staged at village shows by men who work hard in the time they have to spare in order to obtain it reflects the greatest credit on them. And many of the village societies do not confine themselves to fruit, flowers, and vegetables, for there are industrial sections for needlework, cookery, &c., as well as departments for poultry, eggs, butter, and other commodities. In fact, village shows have done great things in the past to encourage home industries, and there are reasons to think that their usefulness will increase in the future. Anything, we say, that encourages country people to take greater interest in their homes and surroundings is worthy of support and commendation.

Wasps. IT is said that when we have a good plum year we are sure to get a plague of wasps. We may get them later on, because wasps, like other things, have perhaps been thrown back by the unfavourable season, but judging from the number of queens there were about early in the season, there was every prospect of a plague. Whatever trouble we may have later on, however, it is gratifying to know that every queen wasp that was abroad early in the season did not live to have a nest, for at an agricultural show we visited the

other day we saw some thousands of these insects pinned on cards and displayed to public view. One man was responsible for the presence of nearly 2,000 queens, and was rewarded by winning first prize in the class for them. A gentleman informed us recently that he paid his workmen a penny each for all the queen wasps they presented to him, and this year he paid for over 600. If a warfare like this was carried on in every district against queen wasps it is only reasonable to say that we should have less trouble with these hungry pests when the fruit is ripe.

Contract and Day Work.

THE difficulty which many farmers are experiencing just now is to get labour at all, and for this state of affairs the climatic conditions of the season are largely responsible. Apart from this, however, there are certain operations on the farm that can only be done by day work, while others can be performed by contract. The advantage from a farmer's point of view in selling work by the piece is that he is relieved of further responsibility in the way of supervision, as the men are only paid for what they do. Just so, but then the question comes in as to whether the work will be done well, and here it is very largely a matter of men. A conscientious workman will make a good job, no matter whether he is working by the day or by contract, because his reputation stands or falls by his work. But the truth must be told that all labourers are not conscientious, and if not carefully looked after some men will scamp their work when doing it by the piece. No doubt these are the very fellows who want continual watching when working by the day, so that the whole thing reduces itself to being a matter of men.

Agricultural Politics.

BY A LOBBYIST.

How will the Motor Duty be Applied?

Now there is one point which it behoves us to carefully consider. Mr. Asquith meditates increasing in his new Budget the duties on motor-cars. How is the sum thus secured to be dealt with? Is it to be utilised towards helping to supply the deficit in the national exchequer caused by the relinquishment of the sugar duties? Is there not—if I may continue in very favourite Socratic vein—a more consistent and desirable purpose to which it can be applied? "An admirable suggestion, indeed," quoths that cleared-eyed statesman Lord St. Aldwyn, "especially if the money is to be applied to the maintenance of high roads." And it must be the aim of every county and urban authority to see that this is the destination of the sum secured by the tax. The motor-traffic is something more than a social terror to village-life. Social terrors soon lose their hideousness; we become habituated to their lineaments. Motors impose a grave and an ever-increasing burden on the local rates—a burden emphasised by the fact that they are in themselves a much too-fragrant and too-odorous source of personal discomfort and a distinct enemy to roadside herbage. There is scarcely a county council which has not been taxed by them without any adequate return having been received by the local district, either in the way of concession from the national exchequer, by direct payment to the local exchequer (even the taxes imposed on the scarifying bounder who imagines the local roads to have been created for his special behoof and for the wilful mutilation of all who dare oppose his royal lightning-like progress is but as a drop in the ocean), or by an added local trade. Local rates for the maintenance of high roads have an overwhelming right to a considerable part of this meditated tax. And Lord St. Aldwyn's approval of the tax if it be utilised for this purpose is a distinct invitation to an early and persistent rural demand for this policy. If we do not accept this invitation we shall be foolishly recreant to our own interest.

* * *

The Butter Bill and its Friends.

We have at least much to be thankful for in the prospect of the Butter and Margarine Bill soon receiving the King's assent. I see that one of the anti-Ministerial journals have gloated over the fact that the Government was defeated on a division in the House of Lords in connection with this measure. The question, forsooth, over which Ministers were defeated was as to whether the inspection under the Bill should in London be limited to officers of the borough councils. A grim and dramatic achievement this to herald on a contents' bill in the portentous type usually utilised to proclaim an appalling, newspaper-selling tragedy! As a fact, no Bill of recent years has had from the two great parties in the State a more sympathetic, dispassionate, and practical consideration. Certain Irish members interested in the Irish trade and certain other Parliamentarians interested in the English grocery business have been a little restive and belligerent; but on the whole the discussion on the measure has been marked by a mutual anxiety for rescuing the English butter trade from an ungenerous, unfair, and penalising competition—for giving it its righteous position in the markets, and for putting a penalty on the nauseous or unwholesome or adulterated products which have too long masqueraded under its name and usurped its fair fame. If the final achievement belong to the Government, an achievement accomplished as a sequel to a general Parliamentary sympathy, it must not be forgotten that the basis of that achievement was laid by Mr. Ailwyn Fellowes. I do not wish to detract from the Ministerial credit; but Earl Carrington would himself be the first to admit Mr. Ailwyn Fellowes' part in the movement of which this Act will be the crown. The fact that Mr. Ailwyn Fellowes was baulked by his fellow-Ministers—or, rather, that more lurid issues usurped the Parliamentary mind—was Earl Carrington's opportunity. Well, it must at least be said of his lordship that he admirably took advantage of it.

* * *

What of the Displaced Farmers?

One fact the trend of events has made assured. That is, that the new English Small Holdings Bill will—before it emerges from the Lords; and that that body will accept it is now no longer disputable—make a fair provision for displaced labourers, and a fuller provision than is yet meditated for the farmers who may have been mulcted as a consequence of the operation of the new legislation. The Liberals generally accept the view that there should be full provision for the displaced labourer—that the new economy shall not be made an instrument for deepening his discontent with the Arcadian life and thus become an additional source of the continued denudation of the countryside. But, it is to be urged, if there is to be compensation for unintentional and accidental injury that compensation should not be confined to one class or section. Whoever is injured, whoever's means of livelihood and prospects be unhappily affected by the measure, whoever has been despoiled, be he farmer or be he labourer, there ought to be a full measure of compensation. At one time the Liberals generally loaked with askant eye at this suggestion. It seemed to the more susceptible to be opening the flood-gates to the national spoliation of the State. They in their sensitiveness saw every attempt to cut a farm into small holdings being made the excuse for arrogant demands for undeserved compensation. However, there is a gathering appreciation even in those ranks that if compensation is accepted as a principle it would be an unmitigated example of class-prejudice to differentiate either in the recipients of it or in the scale on which it is based. If the Lords insist on the farmers penalised by the new enactment being fairly treated—on the compensation offered them being somewhat more than niggard in character—they will not find the Commons anxious to try a fall with them on the issue.

* * *

How the Scottish Bill is Lauded.

There is no doubt about the fact that the Liberals are greatly building on the belief which animates them that the Conservative attitude towards their Scottish Land Bill will greatly strengthen their position in the esteem of the Caledonian electors. They even profess to see that that attitude will banish the three Conservatives who are still sent from the northern kingdom to St. Stephen's, and that in the next Parliament the Scottish representation at St. Stephen's will be as unanimously and unbrokenly Radical as is that of Wales to-day. I have no individual means of estimating how far this prophecy is justified; but, at all events, I have heard Scottish Radicals repeat it with delighted unction. The character they give the Bill is very different from that which its Conservative antagonists give it. They declare that so far from permitting spoilation, the Bill will prevent it. Let me epitomise the contentions of its three chief exponents, the Right Hon. John Sinclair, the Lord Advocate, and the Solicitor-General for Scotland:—

a.—The tenant will under it obtain security of tenure.

b.—The tenant cannot under the Bill be rented on his own improvements.

c.—The landlord, so far from being despoiled, will have his rent made more secure.

d.—Wherein the new system will seriously differ from the old is that instead of the rent being governed by the cupidity, the caprice, the impecuniosity, or the extravagance of the landlord, it will be fixed at a fair figure by an impartial tribunal.

e.—The landlord will be so far protected that he will have every security against the dilapidation of his holding.

f.—The Bill does not propose to establish dual ownership and thus to invoke the dangers of the Irish system, for the simple reason that the holder will not be able to sell his tenant-right.

* * *

Deft Playing to the Electorate.

There may be few landlords who will accept this Radical picture of the character of the new Bill, and few who do not share the opinion of moderate Liberals like Mr. Munro-Ferguson and Sir E. Tennant that the Bill is not needed, and that it is calculated to introduce a new spirit of disquietude and unrest into Scottish agrarianism for the sake of experimenting in the field of needless Quixotry. There may be few landlords, too, who do not see in the Government's refusal—I note this only as an example—to compensate landlords or farmers for any loss they may suffer as a consequence of the action of the Land Courts or Agricultural Commissioners another illustration of the invincible antagonism possessing it towards all associated with the land above the sacro-sanct rank of labourer. They may be few landlords who do not resent what is described as the coercive temper animating the Bill towards the landlord class—a temper revealed on every page and in every clause, and who do not see in this attitude a proof that the view is that the landlord is a parah deserving neither generosity, consideration, or sympathy. All the same, this brief epitome of the measure which I have pointed will have a greater fascination for the Scotchman than will all the fears, direful prophesies, and melancholy visions of Mr. Walter Long, Sir Henry Craik, and Mr. Munro-Ferguson. Whether the Bill pass the Lords or not, it will have served its purpose. Deep unto deep will have been held to have cried. The Government will be held to have sought to redeem its plighted word to Scottish Liberalism. Mark my words, rejection by the Lords will not affect the place of Radicalism in the Scottish esteem. The Bill will be held to have been the thing.

* * *

A Point for Sir John Rolleston.

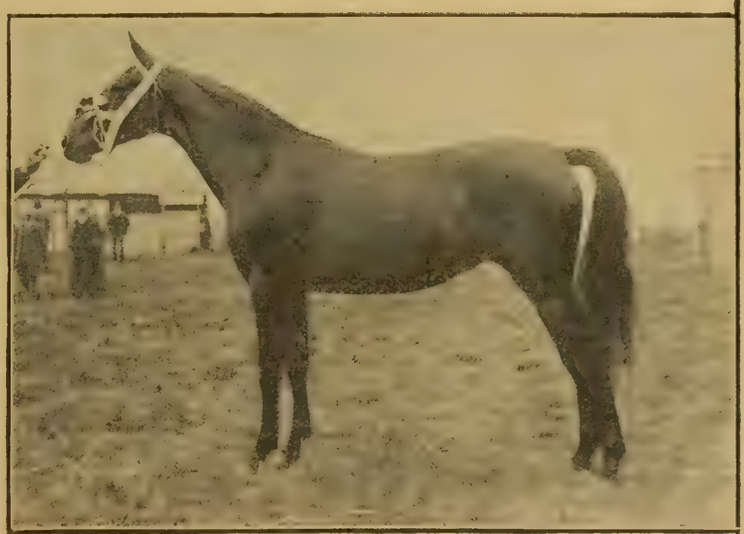
What does Sir John Rolleston mean by this language to the British Association? "No system," he declared, "would enable occupiers in this country to place their produce on the markets of Paris or Copenhagen. All we have here is a small share in our own markets." But would Colonial preference better the position? Canada is to be invited, like Australia, to enter our markets under improved conditions. Canada's only products are agricultural. Canada could supply us with all our necessities. Canada can grow those products cheaper than we do, and offer them at a cheaper rate. There is a nut for you to crack, Sir John. Can you extract a kernel of hope?

The Right Hon. Jesse Collings, M.P., speaking on small occupying ownerships, in the Economics Section of the British Association's Conference last week, said we had the land and we had the men standing idle. To bring men and land together was the work of the State, acting through a central department and local authorities. He advocated a better system of rural education and the establishment of co-operation among the cultivators, both for purposes of buying and selling.

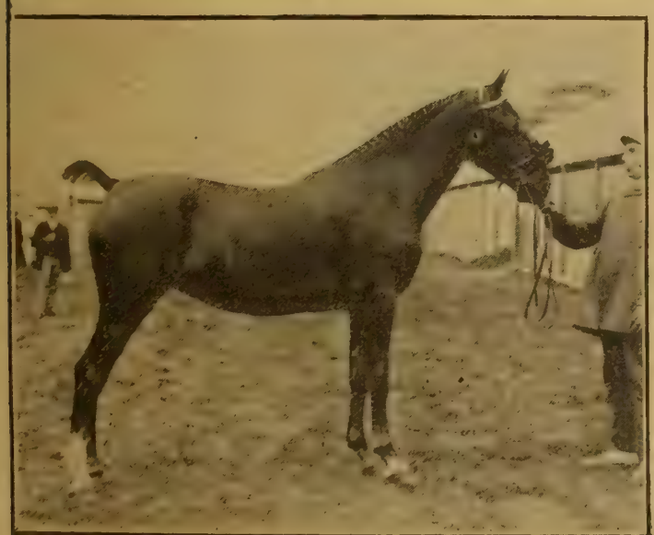
The Yorkshire Show at Barnsley.

THE annual show of the Yorkshire Agricultural Society was held at Barnsley on the last three days of last week, when a convenient site had been obtained. The entries of stock were not so good as on many previous occasions, partly due to the curtailment of the prize-list and also largely to the fact that the show extended over a Saturday, which is much disliked by exhibitors from a distance. The weather held up well, and the attendances on the various days will be seen from the table below. Next year's show, it has been decided, is to be held in Halifax.

	Barnsley, 1907.		Middlesboro', 1906.		Average of 5 yrs.
First day	5,995	..	3,026	..	5,308
Second day	18,356	..	28,936	..	32,066
Third day.....	22,035	..	10,960	..	12,116
Total	46,386	..	42,922	..	49,880



HORSES.



The Yorkshire Show is famous as being one of the best shows of light horses in the country, and if quality only is considered the Barnsley Show may be said to stand out as well worthy of the traditions of the show. But at the Yorkshire we have been accustomed to see large classes in every section, and at Barnsley numbers were certainly wanting. There was a decrease of 100 in the number of entries in the horse classes, and 95 per cent. of the decrease was in the light horse sec

Judging the two- and three-year-old Yorkshire Coaching Stallions.

Judging the Yorkshire Coaching Stallions, four years old and upwards.

Mr. G. Wilson's First Prize Hackney Filly, Cedar Camilla.

The Cleveland Bay Fillies before the Judges.

Mr. Sylvester Leaf's two-year-old Coaching Filly, Josephine, First Prize and Champion.

Mr. J. Jebson's Kettledrum, the First Prize three-year-old Harness Gelding.

tions. And at a place so easily reachable as Barnsley, with several railway companies running into it, one might have looked for an increase of entries rather than such a marked decrease.

Hunters.

One of the most interesting classes in the show was that for Thoroughbred stallions, and more than one man well qualified to express an opinion and with an experience of many years' Yorkshire shows, stated that it was the best class of Thoroughbred sires that had ever been seen at a Yorkshire show. There was half a dozen entries, and there was not a weed amongst them. First and second prizes went as last year to Lord Middleton's Wales and Mr. Wickham Boynton's Roe O'Neill, the latter a much improved horse that ran the winner close this time. Third prize went to Mr. Henry Cholmondeley's Foundling, an useful brown that made a good show, and Lord Middleton's Scotch Sign, a rare bred one by Ayrshire—Marken by Ocean Wave, her dam Dutch Girl by Dutch Skater, was reserve. He has only just come out of training, but he is built on the lines of a high-class Hunter sire, and we shall hear of him again.

In the weight-carrying brood mare class Mr. W. B. Swallow's fine old mare, Beatrice, was first, this being the fifth time she has won at the Yorkshire. She was once second, and her Peterborough record is three firsts and a second. Mr. J. A. Mullens' Royal winner, Everlasting, was second, and Mr. Cotton's Creole, a short-legged brown by Marmiton, that shows plenty of quality and has plenty of liberty, was third. Nothing in the class moved better than the winner.

In the light-weight brood mare class her daughter, Tugela by Anklebiter, ran Mr. F. B. Wilkinson's Rosalinda very close, and for a considerable time the issue hung in the balance. Rosalinda won, and Mr. J. A. Mullens' Glowworm, another Royal winner, was third. Mr. Swallow's Recruit had no difficulty in adding to his Royal, Doncaster, and Peterborough victories in the class for yearling colts or geldings, his only opponent being Mr. John Maclaren's Tommy, a very useful local horse, but scarcely of the class of Mr. Swallow's horse. Four out of the six entries were absent. Yearling fillies made a very good show. Mr. Wilkinson's Ladybird followed up her Bolton and Welbeck successes by winning, a good second being found in Mr. E. Hodgson's Actress, a useful bay by Red Prince II.; Mr. Sylvester Leaf's very good looking Red Poppy, who was second at Malton in a good class, was third, and the Malton winner, Lord Middleton's handsome brown Scalpay, was reserve.

The two-year-old gelding class caused a considerable amount of discussion, most of the exhibits having keen supporters, a sure sign of the quality of the class. Mr. Hodgson's much-improved Killarney, who was third at Bridlington, was the winner. He has good limbs, but needs to grow down. Mr. Wilkinson's well-known His Grace was second, and third prize went to Mr. Cholmondeley's Aeronaut, who is a very promising young horse that will probably beat the lot some day. Mr. Edward Harrison's Link Boy, the Darlington second, was reserve. Two-year-old fillies were also a good lot, Mr. E. Hodgson's Mab, which should certainly not have been put back at Bridlington, taking first honours. Lord Middleton was second with Modwena, a rangy brown by Wales, that was high up in the premium list in London. Mr. W. B. Swallow's Alpha, also a London premium filly and second at Doncaster and third at the Royal, was third.

Three-year-old geldings were a good lot, but four of the ten entries were absent. Mr. Wilkinson's Expert, the Royal and the Royal Lancashire winner, was first; Mr. W. B. Brown's David, who was second at Darlington and first at Malton, taking second honours. David is a good-looking, well-bred horse, full of quality, but he scarcely moves so well as Expert. Mr. Swallow's Red Morn, a fine horse of a different type, short-legged, and powerful and at the same time full of quality was the third. He has beaten Expert once, viz., at Doncaster, and is not unlikely to make the best Hunter in the class, for he is a rare bred one. Messrs. Ward's Adonis, looking all the better for not carrying so much condition as he did early in the season, was reserve.

Fillies of the same age made a poor show, Mr. Wilkinson's Hasheen winning very easily from Mr. Jefferson's Millie, who has won a few prizes in Yorkshire.

The four-year-old geldings made a very good show, many well-known winners being found amongst the sixteen entries. Mr. J. H. Stokes won with Mustard, a short-legged chesnut with fine quality and a good mover. He was second at Darlington, and won at the Tynemouth Show. Second prize went to Mr. John Brown's Beaula, who was third at Malton. He is a powerful horse, nicely turned, and a fine galloper, and has beautiful manners. Mr. Drage's Mr. Druce, who was third, is a useful brown, but he scarcely gallops in such good form as Mr. Brown's horse. Mr. Hodgson's Sportsman, who won at the Royal and the Highland, was reserve.

In the class for four-year-old mares, Mr. Stokes's Radiance was the winner. As she always does, she made a brilliant show, and she is undoubtedly the best mare of her year. Second to her was a stable companion in Black Pearl, who is growing to quality, and who, it will be remembered, began the year well by winning in London. Mr. Mullens's Paleface was third, a place she held at the Royal Lancashire.

Weight-carriers made a very good class, first and second prizes in which went to Mr. J. H. Stokes's Axiom and Mr. F. B. Wilkinson's Summertime, as was the case at Bolton. Mr. Simpson Hinchcliffe's Silver Thorne was third, and Mr. Stokes's Biscuit was reserve.

In light-weight class Mr. John Brown won with His Lordship, a chesnut by Court Ball that has nice quality and that gallops well. Mr. Drage's Chatterbox, who was second to Fable in London, was second, and Mr. Stokes's Greytick third, with Mr. Rickaby's good looking Malton winner Revel reserve.

Mr. Stokes's Mustard was champion, with Radiance reserve.

Hackneys.

Hackneys made a better show than they have done at the Yorkshire for some years, and though a few more entries would have been welcome, the competition in most classes was excellent. In the class for stallions four years old and upwards, Mr. Buttle's Kirkburn Toreador had no difficulty in following up his Malton victory, though the opposition was a strong one. Mr. Fewson's Hedon Duke, who was fourth at Islington, was second, and Mr. Stephen Cliff's London reserve; New Gold was third.

The class for two or three-year-old stallions was a good one, but unfortunately Mr. Hall's Copmanthorpe Performer could not be shown, though he was on the spot. Mr. Nottingham's Forest Danegelt, a greatly improved horse since he was commended at the Hackney Horse Society's show was first. He is a beautifully balanced chesnut with magnificent action, and seems to be at the outset of a very successful career. Mr. Fewson's handsome chesnut, Hedon Fashion, who has fair quality and action, and who won at Pocklington, was second, and Mr. John Beal's Silver Heels, who was second to Copmanthorpe Performer at Islington, was third.

The Brood mare class was not a big one, but it was a good one. The old rivals, Mr. Evans' District Maid and Sir Walter Gilbey's Gallant Girl, were again first and second, with Mr. Henry Watson's Queen of Newton, a good winner in Yorkshire, third and Messrs. Cockayne's handsome mare Paddock Queen, who ran her very close, reserve.

The yearling class was a weak one, only two out of the six entries being forward, Mr. Cliff's Crayke Sunshine beating Mr. H. T. Parke's Withnell Snowdrop, as was the case at the Royal Lancashire.

The two-year-old class provided something of a sensation. Mr. George Wilson's Cedar Camilla, who won at Malton, was first. She is a very neat and shapely mare, and she moves well, but perhaps she might be a little better on her shoulders with advantage. Sir Walter Gilbey's Lively Beeswing was second, this being the first time she has been beaten in her life. She was certainly unlucky, and she did not go with her usual fire and dash. The ring was a little side swung and slippery, and perhaps to this is to be attributed the show she made. Or she may need a rest. Third prize went to Mr. Ashley's Nelson Mystery.

Cleveland Bays.

The Cleveland Bay classes only filled badly. Mr. John Letts's Royal winner, Special Light, was an easy winner in the class for two or three-year-old stallions, his only opponant being Mr. Kettlewell's Skelton Special, a big horse, rather on the coarse side that made a good show. In the brood mare class first and second prizes went as at the Royal to Mr. Tyerman's Aislaby Beauty, and Mr. Bateman's Woodland Rose with Mr. Horsfall's Lady Salton, who has many Yorkshire and Royal honours to her credit was third. In the class for two or three year old fillies, Mr. Grandage's Woodland Flower, a fine mover that was shown at the Royal was first with Mr. Elders's Hawthorn Beauty, and Mr. J. W. Letts's Special Pride second and third.

Yorkshire Coach Horses.

Yorkshire coach horses made just a fair show. In the class for stallions four years old and upwards, Mr. Stericker's Breaston Prince was first. He is a big, good-looking horse, with very fine action. Mr. Burton's fine old horse Willoughby Emperor was second, and Mr. Grandage's Woodland Pride was third. The class for two or three year old stallions was only a small one, with Mr. John Letts's handsome Sunray, who made a very good show first, Mr. G. Grandage's Woodland Duke was second, and Mr. George Burton's Knight of the Garter was third.

In the three-year-old class Mr. R. P. Evans won with Medelin, who has grown into a very nice filly. She won well, as she did at the Royal Lancashire last year. Second prize went to Mr. Tennant's Special Beauty, who as usual made a good show, and who has a record of seven first and two second prizes at important shows, since she was second at the Royal. Messrs. Hall's Copmanthorpe Queen was third and Mr. Clarke's Skeffling Lily, the Royal winner, was reserve. This is the first time she has met Special Beauty since Doncaster.

Weight carrying mares or geldings made a fair class, in which the prizes went to Mr. Watson's Newton Swell, Mr. Makeague's Luminator, and Messrs. Hall's Copmanthorpe Duke, and in the lightweight class Mr. Featherby's Astonishment was first, Mrs. Fred Holmes' Dainty Kate was second and Mr. Rodmill's Prince Fortunatus was third.

Mr. J. A. Green's Kitty Loch was the winner in the class for cobs, Mr. A. D. Oates's Ryburn Bantam was first in the class for ponies not less than 12 hands 2 in. and not more than 14 hands 2 in., and Mr. W. H. Walker's Star of the East won in the class for children's ponies.

The brood mare class was a small one, with Mr. George Grandage's Woodland Briar, first at Royal and Malton, first, and Messrs. Dutton's Woodhouse Queen second.

The yearling class was a good one, with Mr. Letts' Malton winner, Rillington Delight, first, and Mr. G. Grandage's Woodland Count second. Mr. Elders's Aislaby Hero, who was second at Malton, filled third place.

In the two-year-old class Mr. Sylvester Leaf's Malton winner, Josephine, was first, with Mr. Grandage's Woodland Glade second, and Mr. Brunton's The Vicar third. The three-year-olds were very useful, and two good geldings were first and second in Mr. S. Leaf's Royal and Royalty, Mr. Grandage taking third honours with Woodland May.

Shire Horses.

Mr. Arthur Lindley's Lockinge Sunshine heads the aged class. Earl Egerton's Tatton Dray King, which was first and champion at the Royal Lancashire, leads a good class of three-year-old stallions. The second horse, Mr. Lewis Dodd's two-year-old bay, Rustic Friar. Lord Egerton's Tatton Aurora is placed first in a small class of brood mares, and probably her fine promising foal helped her to the honour, for in Mr. Kay's Wantage Witch, she beat a six-year-old bay which was regarded as Lockinge Manners' best mare. There was an important reversal of judgment in a grand class of yearling fillies, where Mr. H. H. Smith Carington's Folville Festive, a very pretty bay certainly, is placed before Mr. Everard's brown filly, Bardon Flower of the Forest. London opinion was endorsed in the class of two-year-old fillies, where Mr. Egerton Orme's Combermere Abbess still retains her pride of place.

Three-year-old Shire fillies made a splendid show. Tatton May Queen is first, and deservedly so. Mr. Everard's Bardon Marion, the second filly is, Like Lord Egerton's, a daughter of Lockinge Forest King. Two others in this class—Mr. Thomas Burton's Cambrian Lady and Mr. J. C. Jackson's Knottingley May Queen—competed for the gold medal offered by the Shire Horse Society for the best mare or filly bred in Yorkshire. The judges decided in favour of Mr. Burton's filly.

Harness Classes.

The class for three-year-old harness geldings found Mr. Jebson's Kettledrum, the Pocklington winner and second at Selby and Malton, where he was beaten by his stable companion Storm King, in the first place. Mr. Sylvester Leaf was second and third with Professor and President, two browns that make a nice match. In the class for horses in harness over 15 hands Mr. Makeague won with Luminator, the other prizes going to Mr. Featherby's Astonishment and Messrs. Cockayne's Paddock Performer.

The class not exceeding 15 hands found Mr. Rodmell's Prince Fortunatus again winning, with Mrs. Holmes's Dainty Kate second to him, and Mr. Watson's Newton Swell third.

Mr. Makeague's Luminator and Reflector were the winning pair.

CATTLE.

Shorthorns.

Only four old bulls were entered, but they included Linksfield Champion, and naturally he added to his successes. Mr. Thos. Atkinson's Pride of Sunshine was placed second, and Mr. R. Rothwell's Strowan Marquis 13th came third. Bulls between two and three years old provided another very good class. Here Violet's Pride, belonging to Messrs. Denny, of Edenbridge, Kent, took the premier award. Mr. George Harrison's Elvetham Sweetheart was the second winner, and Lord Armstrong's Baron Merry Beau came third. Of the fifteen yearling bulls entered the verdict went in favour of Mr. George Harrison's Pride of Tees. Prominence is nothing new to this son of Primrose Pride, nor is showyard fame strange to Mr. Rothwell's Lord Brilliant, the second prize-taker. Bold Prince, belonging to Mr. T. B. Earle, took the Shorthorn Society's special of £10, confined to the county for bull calved in 1906. Lord Middleton's Birdsall Braiser was at the head of the bull calves. Mr. Bell furnished the second winner in a good blocky calf, Lord Ronald, third honours falling to the Duke of Northumberland for Lucky Star, a most promising calf. The reserve and

highly commended tickets fell to Mr. Charles W. Kellock and the Messrs. Denny respectively.

Cows above three years old were headed by Lord Calthorpe's Sweetheart, Mr. Harrison's Ursula Raglan second, and Mr. Bell's Ratcheugh Witch third—repetition of the Lancashire placing. Among the two-year-old heifers, Mr. Rothwell's Lady Graceful stood out prominently. The yearlings were headed by Mr. Harrison's Gainford Fragrance, a lengthy, good, hairy heifer, a well-known winner, and just now at her best. Second came Elvetham Sweetheart. The calves were numerous. Mr. Rothwell showed the winner in Hoole Fanny, a good-backed heifer with a nice coat which stood well. Mr. Dudding came second with a very young one, which promises exceptionally well. The pedigree dairy cows, judged for milking properties, gave excellent results. In the older class, Lord Rothschild's Tulip Leaf, the winner, from which 25 lb. of milk was required, yielded 34 lb.; and 33 lb. was given by the second prize-taker, the same exhibitor's Warwickshire Hettie. The winner in the younger class—Mr. C. R. W. Adeane's Babraham Treasure—gave 20 lb. of milk, or 5 lb. more than the required quantity.

In the family class there are five entries. The winning family comes from Elvetham Park, and consists of Lord Calthorpe's celebrated and typical Sweetheart, Elvetham Monarch 88513, and Elvetham Sweetheart. Second honours go to Captain W. B. Harrison for a grand quartet—Primrose, Aldershaw Primrose 2nd, Aldershaw Primrose 3rd, and Aldershaw Primrose 4th. The third group is made up of a trio of animals which do credit to Mr. W. Bell's renowned herd, viz., Ratcheugh Witch, Ratcheugh Beauty, and Ratcheugh Lady.

Jerseys.

Few Jerseys were shown in two classes. Lord Rothschild's Fly 3rd stood first among the cows, and beat Mr. R. J. Streatfeild's (Bawtry) Sapolia, a splendid-looking dairy cow, but rather coarser than Lord Rothschild's property. Sapolia secured the silver challenge bowl, for Fly 3rd was not bred in Great Britain or Ireland, and thus was ineligible. Mr. Streatfeild was again to the fore n the heifer class. In this he showed Chasse winner, Mr. Jordan coming second, but the third winner was bred by Mr. Cranswick, Hunmanby.

The Lincoln sheep were hardly so strong as last year. The shearling ram shown by Mr. Dudding was one of a successful pen of five at Lincoln, and the two ram lamb winners sent by Messrs. Dean and Sons formed part of a pen of three which took second honours at the same show. The special prize offered by the Lincoln Long-Wool Sheep Breeders' Association for the best two-shear, shearling, and lamb ram exhibited in the classes for single rams, or selected from a pen of three, was taken by Mr. F. Miller, Birkenhead, with his two-shear winner, Mr. Henry Dudding's shearling being placed reserve.

Among Wensleydales, Lord Henry Bentinck and the Executors of the late Thomas Willis again came into competition. The two shear rams were both very fine animals, Royal Derby, the premier winner, taking similar honours at Lincoln and Bolton in the present year. Crown Prince, his companion, was similarly placed at the Lancashire Show, but at the Royal the judges preferred Lord Bentinck's King of Blues, which was awarded third place as at Bolton. The shearling ram class provided another win for the Willis exhibit. The position was reversed in the ram lamb class, where Lord Bentinck's Lancashire winner beat a beautiful blue-headed rival. The placing of the gimmer class was exactly as at the Royal and Lancashire Shows.

The show of Scotch Mountain sheep, though not large, was good. The two chief ram winners, magnificent specimens of this breed, each two years old, won well as lambs last year, and seemed to justify their selection this, though curiously their positions were reversed at the Royal Show, the second winner being, at Lincoln, placed in front of the first winner.

PIGS.

There was a capital collection of pigs, and winners from many of the other big shows were again forward. In the Large White classes the winner of the special was Mr. Spencer's well known boar, Holywell Czech 2nd. This is only the second appearance of this particularly good class boar, which took the lead at the Royal Show. Sir Gilbert Greenall's, Walton Rise 39th, was in front amongst other sows exceeding twelve months old.

The Berkshires made a good show. In the boar class above twelve months the first-prize winner was bred by Lord Alington, and is now the property of Mr. G. Talfourd Inman, of Highmoor Hall, Henley-on-Thames. In two other classes the same exhibitor comes out first with previous prize-winners. Lord Calthorpe and the Duchess of Devonshire also takes prizes in the Berkshire section. The Tamworths were numerous, the four classes being well filled for a type of pig which, except at shows, is seldom seen in the north. Mr. Frank W. Gilbert and Mr. Robert Ibbotson divide the premier awards.

SPECIAL AWARDS.

Gold medal or bronze medal and £5 for the best Hunter brod mare.—Mr. J. A. Mullens's Everlasting, Barrow Hills, Longcross, Surrey; r, Lord Middleton's Sympathy, Birdsall House, York.

Silver medal or £1 for the best Hunter filly.—Mr. F. B. Wilkinson's Hushcen, Cavendish Lodge, Edwinstone, Newark; r, Lord Middleton's Modwena, Birdsall House, York. £1 to the breeder of the winning filly.—Mr. Harrison, Colton Mill, Hovingham.

Silver medal for the best Hackney mare, filly, or filly foal.—Mr. W. J. Tennant's Special Beauty, Carleton, Pontefract.

Silver medal for the best Hackney stallion, entire colt, or colt foal.—Mr. F. W. Buttle's Toreador, Kirkburn Manor, Driffield, Kirkburn; r, Mr. F. Nottingham's Forest Danegelt, Riplingham Grange, Hull.

Challenge piece of silver plate value £25 for the best Cleveland Bay stallion or mare.—Mr. J. Lett's Special Light, Cleveland Stud Farm, Rillington, York.

Silver medal for the best Cleveland Bay stallion.—Mr. J. Letts's Special Light, Cleveland Stud Farm, Rillington, York.

Silver medal for the best Cleveland Bay mare.—Mr. J. H. Tyerman's Aislaby Beauty, Pond Farm, Hinderwell, S.O.; r, Mr. G. Grandage's Woodland Flower, MoorCroft, Yeadon, Leeds.

Champion prize of £5 for the best Yorkshire Coaching stallion or colt.—Mr. F. H. Stericker's Breaston Prince, Westgate House, Pickering; r, Mr. J. Lett's Sunray, Cleveland Stud Farm, Rillington, York.

Champion prize of £5 for the best Yorkshire Coaching mare or filly.—Mr. S. Leaf's Josephine, Glade Farm, Escrick, York; r, Mr. G. Grandage's Woodland May, Moor Croft, Yeadon, Leeds.

Gold medal, value £10, for the best Shire mare or filly bred by, or in the possession of, a resident or occupier of agricultural land in the county.—Mr. T. Burton's Cambrian Lady, Sandcliffe House, Raskelf, Easingwold; r, Mr. J. C.

SCENES AT THE YORKSHIRE SHOW AT BARNSLEY.

Judging the Shire Stallions, four years old and upwards.

The Shorthorn Bulls, over one year and not exceeding two years old, before the Judges.

Leda, a very beautiful heifer, lengthy, and full of quality.

Aberdeen-Angus.

The three classes for Scottish polled cattle brought out some good animals. The champion gold medal, offered by the Angus Society for the best animal in the showyard, goes to Mr. Bainbridge's cow, Eileen, of Abergeldie, bred by the late Queen Victoria, at Ballater. In this class of aged cows Mr. Cridlan's Mabel 8th, which was second, seems to have been prepared for Smithfield, and it was probably the extra beef that put her in front of a very pretty cow from Skidby Manor, owned by Mr. Hayles. Mr. Cridlan's two-year-old bull, Everwise, is an easy first in the male class, and he receives the silver medal of the English Society as the best animal of the opposite sex to that of the champion.

SHEEP.

Four breeds only figure in this section, but they make a fair display. Leicesters open the catalogue, and the most prominent winner was Mr. G. Harrison, of Gainsford Hall, Darlington, whose stock was successful in all classes but that for this year's ewe lambs. Mr. Harrison and Mr. Jordan were in competition in the three shearling ram class with stock that had never been previously shown in trio, the latter gentleman being sandwiched between the two Darlington pens, whilst two of his four 1907 lambs penned, captured prize money. In the class for gimmers, the placing of the first two sheep was exactly as at this year's Royal Show, where Mr. Harrison took premier honours with a last year's Royal and Yorkshire

Mr. Tong's somewhat older boar, Shand Roger, taking the reserve card. In the class for White boars over twelve months old Messrs. Wherry's well-known Giant Goliath, which took the second at the Royal Lincoln Show, failing to find a place. In the class for boars not exceeding twelve months, Mr. Spencer was again in front with his Holywell Dayboy 2nd. The class for sows above twelve months old was not particularly strong, Mr. R. Millington Knowles winning with his well-known exhibits Colston Lass 13th and 14th, easily clearing the field. The competition by sows not exceeding twelve months was moderately reduced owing to the disqualification of several animals which failed to qualify under the veterinary's test for age. Sir Gilbert Greenall's Walton Lady Alice 27th, a most promising animal, made a first successful appearance.

There were only five animals in the class for boars of Middle White breed exceeding twelve months old, and here Sir Gilbert Greenall's Walton Dainty 3rd was the winner. The fact that the animal had already carried off the gold medal of the National Pig Breeders' Association caused him to stand aside, and Walton Clumber 4th, a two-year-old from the same stud, took the medal for the best animal in the Middle White classes. Mr. Spencer's Holywell Victoria Duchess was placed reserve. For the same breed not exceeding twelve months Sir Gilbert Greenall's Southampton Prince followed up a successful first appearance at Birkenhead a few weeks ago. Another Royal Show winner of Jackson's Knottingley May Queen, The Grange, Askern, Doncaster.

Special prize of £5 to the breeder of the winner of the Shire gold medal.—Mr. W. Prytherick's, Anglesey, Bodfedden, Tycross, S.O.

Blythwood silver challenge bowl for the best Jersey cow or heifer in milk bred in Great Britain or Ireland.—Mr. R. J. Streatfeild's Sapolia, Rossington Hall, Bawtry; r, Lord Rothschild's Canopy, Tring Park, Tring, Herts.

Champion gold medal for the best Aberdeen-Angus animal.—Mr. T. H. Bainbridge's Eileen of Abergeldie, Eshott Hall, Felton, Northumberland.

Silver medal for the best Aberdeen-Angus animal of the opposite sex awarded the gold medal.—Mr. J. J. Cridlan's Gverwise, Naisemore Park, oGlucester.

Champion prize of £5 for the best Lincoln Long Wool two-shear ram, shearling ram. or ram lamb.—Mr. F. Miller's Nocton Energy, La Belen, Clifton Road Birkenhead; r, Mr. H. Dudding, Riby Grove, Great Grimsby.

Gold medal for the best Large White animal.—Mr. C. Spencer's Holywell Czech 2nd, Holywell Manor, St. Ives, Hunts; r, Mr. G. Tong's Shard Roger, Great Towbrick Farm, Hambleton, Poulton-le-Fylde, Lancs.

Gold Medal for the best Middle White Animal.—Sir G. Greenall's Walton Clumber 4th, Walton Hall, Warrington; r, Mr. C. Spencer's Holywell Victoria Duchess, Holywell Manor, St. Ives, Hunts.

Gold Medal for the best Tamworth Animal.—Mr. R. Ibbotson's Cholderton Jennie, The Hawthorns, Knowle, Warwickshire; r, Mr. F.W. Gilbert's Mickleover Fearless, Cattle Bridge Creamery, Swarkestone, Derby.

Piece of Plate, value £5, for the best Tamworth exhibit.—Mr. F. W. Gilbert's Mickleover Fearless, Battle Bridge Creamery, Swarkestone, Derby; r, Mr. R. Ibbotson, The Hawthorns, Knowle, Warwickshire.

JUDGES.

HORSES.—Hunters: Mr. Thomas Calder, Swinton Hill, Coldstream, N.B.; Sir Alfred E. Pease, Bart., Pinchinthorpe House, Guisborough; Mr. E. P. Rawnsley, Harrington Hall, Spilsby, Lincs.; Mr. J. E. Rogerson, Mount Oswald, Durham. Hackneys, Cobs, and Ponies: Mr. S. B. Carnley, Norbury House, Alford, Lincs.; Mr. John Wreghitt, East Thorpe, Market Weighton, S.O. Cleveland Bays and Yorkshire Coach

Horses: Mr. Samuel Baker, Wilton, Pickering; Mr. Thomas Curry, Oxford Road, Linthorpe, Middlesbrough. Shire and Agricultural Horses: Mr. John Slater, Clifton, Morpeth; Mr. Richard Slater, Sibsey, Boston, Lincs. Polo Ponies: Mr. Gerald H. Hardy, Foston Hall, Derby. Harness Horses: Messrs. Samuel Baker and Thomas Curry; Messrs. S. B. Carnley and John Wreghitt.

CATTLE.—Shorthorn: Mr. George Bell, Standingstone, Wigton, Carlisle; Mr. Henry W. Woods, Ivydene, St. Andrew's Road, St. Anne's-on-the-Sea, Lancs.; Mr. Charles Marshall, Broomhaugh, Riding Mill-on-Tyne. Dairy Cows: Mr. John Howard, Pagett Hall, Gargrave, Leeds; Mr. Richard Pratt, Skibeden, Skipton. Jersey: Mr. William Arkwright, Sutton Hall, Chesterfield. Aberdeen-Angus: The Rev. C. Boldero, Preston Bissett, Bucks.

SHEEP.—Leicester: Mr. John Dowson, Danby Castle, Grosmount, S.O.; Mr. Thomas Leefe, Fryton, Slingsby, York. Lincoln: Mr. J. R. Kirkham, Manor Farm, Garforth; Mr. Thomas Spink, Hunmanby, S.O. Wensleydale Longwool and Black-Faced Scotch Mountain: Mr. Metcalfe Spensley, Castle Bank, Leyburn, S.O.

PIGS.—Mr. Arthur Hiscock, Manor Farm, Motcombe, Dorset; Mr. T. S. Minton, Montford, Shrewsbury.

Royal Lancashire.

The Royal Lancashire Agricultural Society have every reason to be highly delighted with their visit to Bolton, for not only was a record entry received, but a record number of visitors put in an appearance, so that the show should prove as big a financial success as it was from an agricultural show point of view. A report of the first day's proceedings during which the chief sections were judged appeared in our last issue, so that here we confine our notes to the subsequent days, and first of all reference must be made to the attendances. Up till just after four on the second day the weather was beautifully fine, but at half-past four rain came down heavily, and coming as it did just when those who wished to take advantage of the reduced charge for admission of 1s. would be starting, it, of course, marred the attendance, and as a result the total for the day fell short of what it might have been. Still it was very good, the number being 11,027 as compared with 9,358 at Lancaster last year; at Liverpool it was 11,328, at Southport 12,744, at Manchester 8,980, and at Preston 29,013.

The third day opened none too well for the success of the show, for the weather was dull and depressing, whilst in places the showyard was impassable, here and there were small lakes, everywhere discomfort and mud, and near the large ring on the side opposite the grand stand, where thousands of the public should congregate, it was a sea of puddle. The main avenue, however, kept splendidly sound, thanks to the care Mr. Bohane had taken that no traffic connected with the erection of the show itself or with the exhibits should be drawn along it. At 11.30 a.m., however, on Saturday out came the sun, and the whole afternoon was hot and fine. In places the ground soon dried, in the ring a small cinder track was laid for the horses and traps, very rough and very trying, and a magnificent day's attendance finally turned the council's sadness into exuberance. At three o'clock the ten turnstiles were kept continually on the turn, and the attendance was 32,237, against an average for the five years of 15,503! In the next hour over 12,000 people entered, and at four o'clock the paying attendance was 44,245, against the average of 19,787. The average attendance on the first shilling day for the past five years is 22,370, and the "record" for the day is 22,517 at Liverpool in 1899. The largest attendance recorded at any shilling day is 42,339 at Liverpool on Bank Holiday in 1905. The total attendance at Bolton was 48,276, or nearly 6,000 more. Bolton thus holds the record. At Lancaster on the third day the number who paid for admission was 12,942, at Liverpool (1905) 21,413, Southport 27,952, Manchester 15,388, and Preston 34,277.

On the concluding day (Bank Holiday) there was another splendid attendance, with the result that the total for the four days worked out the best on record. At one o'clock the attendance was 15,117, or 3,000 over the average; at two o'clock 20,769, as against the average of 17,138; and at three o'clock 29,376, as against an average of 22,725. At seven o'clock the total attendance paying at the gate had reached nearly 33,200. On the fourth day at Preston the number was 14,191, at Manchester 26,825, at Southport 6,628, at Liverpool 42,339, and at Lancaster 19,386. Casting up the total attendances on the four days, and neglecting odd figures, it appears that this is the largest total attendance ever recorded, for the number paying at the gate was close on 100,000. At Lancaster the total was 44,000, Liverpool 78,000, Southport 51,000, Manchester 54,800, and Preston 82,300.

On the second day of the show a deputation from Manchester consulted with the society with a view to the holding of the show in that city next year, and after due consideration the society unanimously accepted the invitation, so that Manchester will be the scene of the next Lancashire show, and it may be taken for granted that the citizens of the Lancers town will do their best to this year's splendid record of Bolton.

As regards the show itself, there was plenty to interest the visitors on each of the days. On the second day the dairy cattle were judged, and these classes brought out splendid displays of milkers, mostly of the Shorthorn cross, and the judges had a difficult task in making their award. Some harness and saddle classes were also decided, and as many well-known winners were forward, some keen competition was witnessed.

Butter-making, poultry trussing, and further harness classes were the features of the third day, when also were judged the work of the herdsmen and grooms. The last day was given up to the local societies which had, in view of the Royal Lancashire Society's visit, foregone their annual shows. The classes were numerous and attracted considerable interest. A notable incident occurred in the judging of the cattle. In the female cattle classes the Edgeworth Society offered the Walter Mucklow Cup, value 25 guineas, for the best female, and here there was quite a reversal of the first day's judging. Mr. Edward Mason, of Natland, Kendal, was judge, and he placed Mr. R. R. Rothwell's Lady Graceful as cup winner, with Lord Calthorpe's Sweetheart reserve, whereas the latter was declared champion on the first day, when it beat Mr. Rothwell's Lady Graceful.

In the open show one of the chief events of the last day was the contest for the "Tong" 25 guinea champion challenge cup, presented by the Mayor of Bolton, for horses in single harness that had won first, second, or third prizes in the open classes. The cup winner receives £15 as well, and the others in order prizes from £5 down to £1. It was a splendid class, and for a long time the final contest lay between the famous gelding, Radiant, a winner on Saturday, and the champion pony, Tissington Kit Cat. Both have splendid action, but Kit Cat gets over the ground better, and popular approval gave Kit Cat as winner; but the judges gave the award to Radiant, who certainly moved well on the rough going.

Tring.

That the show of the Tring Agricultural Society, held in Lord Rothschild's picturesque park, has lost none of its attractions was proved by the satisfactory entries and attendance of visitors at the show held on Thursday. In actual numbers of entries the show suffered in comparison with that of 1906, a result partly attributable to the excision of several classes, and partly doubtless to the occurrence of the show upon the same day as that of the great Yorkshire Society, to which both Shires and cattle usually present at Tring had been sent. In spite of this, the show was well supported by the leading breeders, among them being his Majesty the King, who entered a Shire and a Shorthorn from the Royal farms.

Shire horses numbered 169 entries, as against 206 last year, but what they lacked in quantity they made up for in quality. In the open class for mares foaled previous to 1904, Mr. H. Towgood scored an easy win with his grand Rolleston Fuschia, which also took the Shire Horse Society's medal. One of the best classes was that for yearling fillies, and here Mr. Max Michaelis led with his noted prize winner Fuchsia of Tandridge, and she had as immediate followers a very big filly, shown by Sir P. A. Muntz, and Barnfields Forest Queen, shown by Mr. J. G. Williams. Sir P. A. Muntz took premier honours for yearling colts with a son of Dunsmore Jameson, whilst in a grand class of mares with foal at foot Mr. R. W. Hudson won with his famous Blythwood Laurel, to which Dorothy of Waresley and Holker Marionette, owned by Mr. J. G. Williams and Lord Winterstoke respectively, were placed second and third. Mr. Williams showed the first-prize colt foal, and Mr. F. W. Lester the first-prize filly. The challenge cup, presented by Captain J. W. Smith-Noill, was won by Beachendon Forest Flower, the property of Messrs. Flowers, to whom also the silver medal was awarded as her breeder.

The local classes for cart horses were all well filled, many of the animals being pure-bred Shires or of Shire breeding. The challenge cup for the best animal shown in these classes was won by Mr. J. Brandon's Chiltern Maid, reserve in the open class, and reserve to her was Blackland's June Rose, the property of Mr. W. G. Amos.

Hunters were principally confined to the exhibits of local breeders. First prize winners included Mr. W. F. Manning, Mr. B. G. Bishop, Mr. G. A. Elliott, Messrs. W. C. and A. J. Flowers, and Mr. T. R. Seaton, while in the two open classes Mr. J. H. Stokes and Mr. T. R. Seaton took leading honours. Mr. C. Lewis and Mr. T. Seaton won with ponies, while Miss D. Schintz and Sir Walter Gilbey divided the prizes for Hackneys.

For the first time Guernseys were included in the schedule, but Shorthorns and Jerseys still formed the bulk of the cattle section. For the former the leading prize-takers in open classes were Mr. E. S. Godsell, Mr. J. Evens, Mr. H. S. Leon, Mr. C. F. Raphael, and Mr. F. Bedford. Jerseys made a great display, and chief prizes being taken by Bishop Fisher, Mrs. McIntosh, Lady de Rothschild, Lady Smythe, Mr. A. Pocock, Mr. J. Joicey, and Mr. F. J. Brown, the champion prize going to Mr. A. Miller Hallett's Lady Viola. Mr. E. A. Hambro and Mr. F. Hargreaves divided the honours for Guernseys.

Sheep were shown in good numbers, successful exhibitors being Mr. J. G. Williams, Dr. Vaughan Harley, Sir R. P. Cooper, and Mr. R. Barclay. Mr. Williams took the special prize for lambs, and Dr. V. Harley the challenge cup.

The sheep-dog competitions, as usual, attracted a very large entry, and the operations of the shepherds were watched with great interest.

Hemel Hempstead.

The second annual exhibition of the Hemel Hempstead Horse Show and Agricultural Society was held on Bank Holiday, under the most auspicious conditions. That the inauguration of the society was a popular inception is apparent from whatever standpoint it may be viewed, and that it is increasing in popularity is evident by the growth in entries, the total this year being over 200 as against 163 last year. Further, the exhibits represent a wider radius, extending as far north as Derby, whilst the south, east, and west of the country was well represented. The judges were high in their praise of the quality of the exhibits. The Shire horse section was a capital one, an interesting feature being the large number of purely local exhibitors. This department showed a slight improvement on last year's exhibition. There was keen competition in several classes, more particularly in the one for two-year-old Shire fillies. In the Hackney and Hunter classes lay the strength of the show, both being strong sections and of remarkable quality. The jumping competitions were, as usual, the centre of much interest, and the whole show was a highly creditable one.

Waltham Cross.

The experiment of changing the venue of the Waltham Cross and Three Counties Society's Show to Hertford has resulted in an improvement, as the number of entries on Monday was 54 above the average of the previous seven years. The weather was favourable; the attendance was numerous; the quality of animals was better than it had been of late years at Waltham Cross, although not better than in the society's early years; and the show altogether was very successful.

The Shire horses made the best show, many of the winners at the Herts County Show being forward, thus adding to the interest. Hackneys and hunters were not so numerous, but the high-class quality made up for the deficiency. There were some jumping competitions, and these proved of considerable interest to the many visitors present.

The Crown Lands Act.

Under the provisions of the Crown Lands Act of last year the President of the Board of Agriculture was given the management of the principal agricultural estates of the Crown, with the idea of encouraging the establishment of small holdings wherever possible. In his first report on the work done in this new sphere, Earl Carrington quotes his instructions to the agents as showing the policy he proposes to carry out.

It is his desire, he tells them, that opportunity shall be given to parish councils and other local authorities to rent any lands within their jurisdiction which may become vacant or which can be obtained from the existing tenants by mutual agreement, and that wherever possible every cottage tenant on the Crown property shall be allotted at a fair rent a piece of land commensurate with his means, beginning with not less than twenty poles or a quarter of an acre. He wishes the labourers on the Crown estates to understand that if they prove satisfactory tenants of such allotments they will be given the opportunity to hire more land from the Crown should they desire to increase their holdings. At the same time he does not propose any wholesale interference with existing Crown tenants who are farming their land well.

As a result of a circular addressed to local authorities, the President of the Board now has applications for nearly 10,000 acres of land for small holdings, and he hopes that by Michaelmas upwards of 2,000 acres will have been let.

Nearly £700 will be given in prizes at the Bath Horse Show to be held on September 4 and 5, and as a large number of the classes are again open ones there should be a large entry from breeders in all parts of the country, thus sustaining the high reputation of the fixture. Entries close on Saturday, the 17th inst., so that early application for entry forms, prize schedules, &c., should be made to the secretary, Mr. L. C. Mundy, 41, Milsom Street, Bath.

THE WEEK'S SHOWS.

Arundel.

Fairly favourable weather was experienced for the Arundel Show on Tuesday, and visitors attended in large numbers, whilst entries were good all round, so that another successful show may be recorded. The entries in the horse classes were a little in excess of previous years, except in the driving competitions, and some splendid animals were shown, the judging of which proved a source of considerable interest to the visitors. There was a fine show of Southdown sheep, the exhibitors including the Duke of Richmond and Gordon, whilst of dairy cattle there was a highly creditable display. Other sections which helped to make up an altogether attractive show included pigeons, poultry, rabbits, vegetables, flowers, and fruit from gardens and allotments, and a needlework section, whilst the shoeing competitions were watched with considerable interest.

Barnstaple.

The Barnstaple Agricultural Association were fortunate enough to experience beautiful weather for their show on August Bank Holiday, and though the entries were not so large as in some previous years, the show was a good one, and attracted a large attendance. The total entry of horses was 176, an increase of eleven on last year, and a very fine lot of brood mares and agricultural horses were shown, whilst colts showed an undoubted improvement in quality, more particularly noticeable in the class for three-year-olds, but the classes for younger horses were not so well supported. The open pony class attracted a creditable entry, and the specials given by Mr. Soares, M.P., for Polo ponies also made a good open class. Farmers' Hunters, and the open heavy-weight and light-weight Hunter classes compared well with previous shows, some exceptionally good local horses being shown in the light-weight class. The cattle, which numbered twenty-five against thirty-two last year, were a useful lot, particularly the bulls, whilst sheep were a creditable lot.

Berkeley.

The Berkeley Hunt Agricultural Society received a record entry for their show held at Berkeley on Monday, and being favoured with fine weather it attracted a large number of visitors. The total was 699, apart from the horticultural section, in which there was also a record entry. Cattle were about the same as last year, but there was a considerable falling-off in horses, and in the cider and perry entries. But these deficiencies were more than made up by the improvement in sheep, pigs, cheese, and butter, and poultry and eggs, all of which sections showed an encouraging increase in the number of competitors, whilst quality was all round of a highly creditable standard.

Brentor.

The Brentor and Lydford Pony Society's nineteenth annual show, held on Tuesday, was favoured with a good entry—364 as against 229 last year—and a capital attendance, so was an all-round success. The ponies and hunters were naturally the feature of the show, but there was a nice display of sheep, whilst the sheep-dog trials, in which the competitors numbered fourteen, or more than double last year's total, proved very interesting to the large company present.

Border Union.

Beautiful weather favoured the show of the Border Union Agricultural Society held on Monday at Friars' Haugh, Kelso, a picturesque site adjacent to the town, and skirted on the one side by the river Tweed and on the other by the Teviot, and it proved most successful, there being a large entry and a good attendance of visitors. There was a good show of cattle and large entries of agricultural horses, and also in the hunting and driving classes, some outstanding good animals being shown. Border Leicester sheep, also half-breds and Cheviots, made a meritorious display, all the leading exhibitors being represented, and the prizes in most cases went to sheep which have distinguished themselves in the showyards this season.

Coleshill.

The fifteenth annual horse show at Coleshill took place on Tuesday, when for the first time the horticultural show was amalgamated in view of the meagre support given to the horticultural show when held separately last year. Tuesday's event was not favoured so far as weather was concerned, for rain caused a decreased gate, but the show itself was quite up to the average. The exhibits in the horticultural section were numerous and good, while the horse show was an improvement in many ways upon the exhibition of 1906. The society would, however, liked to have seen greater support given to the yearling colt or gelding class (foaled in 1906) two-year-old gelding class (foaled in 1905), and two-year-old filly class.

Felton and Warkworth.

With an excellent entry of stock the show of the Felton and Warkworth Society, held, by permission of Mr. Riddell, in Felton Park, one of the loveliest and most picturesque spots in Coquetdale, was very successful, being favoured with good weather and a large attendance. Close upon 270 entries were obtained, of which horses formed the strongest section, but there were some first-class cattle forward.

Gainsborough.

Ideal weather favoured the show of the Gainsborough Agricultural Society held on Monday, and it was as regards quality certainly one of the best, if not the best, yet held by the society, whilst the number of entries was quite up to the average. The foal classes in the heavy section were exceptionally strong, almost every animal having been a winner in district show rings, and some of them having taken honours at country shows. In the brood mare, two-year-old, and yearling classes many animals, with big reputations and with long lists of successes to their credit, were paraded. Mr. Robert Surfleet, of the Beckingham Stud, Gainsborough, established a record in the Hackney section, successively carrying off the premier awards in the brood mare, foal, yearling, and two-year-old classes with stock that has seldom known defeat. In addition, he had the satisfaction of taking the Hackney Society's medal with his yearling. There were thirty entries in the four Hunter classes, and once again the fact was demonstrated that more attention is being paid in the district to the breeding of Hunters. There were also highly creditable displays of produce and horticultural subjects.

Keele.

The North Staffordshire Hunt Show decided this year to amalgamate with the Keele Agricultural and Horticultural Society's Show, and the result was that at the latter society's annual fixture on Thursday there was an increased entry and an altogether good show. There were 52 cattle, against 25 last year; 119 horses, against 117; 38 sheep, compared with 21; 17 pigs, against 9; 44 cheese, instead of 12; and 16 butter, an increase of 4. Further, the weather was fine, though very threatening in the morning, and there was a splendid attendance, so that a complete success can be recorded. The horse section was conspicuous for its general excellence. Harness horses were not quite so numerous as has been usual at the Hunt Show, but the agricultural horse classes were remarkably well filled here. Hunters were an exceptionally level good lot. The combination of the two shows resulted in a far better exhibition of cattle. Sheep were a very fair show, and pigs above the average, whilst cheese was an excellent show, and there was a large show of dogs, including many of the best of the season.

Lytham.

The show of the Lytham Agricultural and Horticultural Society held on Thursday in Lytham Hall Park—an ideal show site—was not so large as in previous years, but quality showed no deterioration, and the weather being fine, there was a good crowd of visitors. The open classes suffered as the result of clashing with the Yorkshire Show, but there was an excellent display of locally bred and owned Shire horses, the breeding of which is one of the chief supports of the Fylde farmer. There were few cattle; the cows are busy earning the rent in providing milk for Blackpool visitors; and no sheep or pigs. Light horses were poor, but there was an excellent dog show, and a large entry for the sheep dog trials.

Nantwich.

The fourth annual show of the Crewe, Nantwich, Sandbach, and District Agricultural Society was held at Nantwich on Wednesday in fine weather, and attracted a large attendance. The outstanding feature of the exhibition was the very fine quality of both the coloured and white cheeses exhibited. The winner of the championship prize, given by the Duke of Westminster, was Mr. Vernon Smith, of Nantwich, one of the best-known makers in the county. Both the Duke and Duchess of Westminster were first prize winners in the limited classes, and the Duke also carried off championship honours. Heavy horses and hunters made a strong show. The championship in the heavy horse classes was carried off by Captain Hoywood Lonsdale's Crankwell Nora, who at the Royal Lancashire Show was beaten by Lord Rothschild's famous mare, Belle Cole.

Newcastle Estates.

The annual show of the Newcastle Estates Tenants' Agricultural Society was held at Clumber Park, Worksop, on Monday, and was, as far as quality at least was concerned, one of the best of the eight held by the society, a result due to the keen, though friendly rivalry of the tenants and the great interest taken in the show by the Duke and Duchess of Newcastle, who, as in former years, contributed liberally to the prize list. The entries totalled 502, of which no fewer than 235 were in the horse classes, and, as usual, the agricultural and half-bred horses were the chief feature, the animals being of high quality, more especially those by Clumber sires. Light horses were not so numerous, neither were they equal in merit, although there were several good Hackneys and Hunters. The cattle classes were excellent, and nowhere, perhaps, was the improvement more marked. Sheep were fairly good, though a trifle below last year in point of quality. Poultry, butter, and eggs, and a military display by the Sherwood Rangers I.Y. added interest to an altogether pleasant fixture.

Royal and Central Bucks.

An excellent entry was received for the annual show of the Royal and Central Bucks Agricultural Association, held on Tuesday in the grounds of Winslow Hall, lent for the occasion by the president, Mr. N. McCorquodale, the total being 527, as compared with 437 at the show at Aylesbury last year. All the sections were well supported, and some first-class animals were forward. Shire horses made an exceptionally fine display. The Mentmore Cup, presented by the Earl of Rosebery, for Shire colt or filly foaled last year, was won by Mr. C. Colgrove, of Swanbourne, whilst Miss Alice de Rothschild's Ferdinand de Rothschild Memorial Cup for four-year-old Shire gelding or mare was secured by Messrs. W. C. and A. J. Flowers, of Beachendon, who also took the championship prize for best Shire mare, the property of a tenant farmer. The Mayer de Rothschild Memorial Cup, offered by Lord Rosebery for yearling colt or filly likely to make a hunter, was won by Mr. C. M. Prior, of Adstock.

Mr. H. S. Leon, of Bletchley Park, took a number of prizes for Shorthorns, as well as Lord Rothschild's champion prize. For sheep the principal prizes were won by Dr. Vaughan Harley, of Bletchley Hall, and Mr. J. G. Williams, of Pendley Manor; whilst Mr. T. Henson, Peterborough; Mr. R. A. Ayre, Watford, and Mr. R. E. Horwood, Drayton Beauchamp, were the most successful in the pig classes. An interesting feature of the show was the exhibition of goats arranged at the suggestion of the Hon. Rose Hubbard, and its success should ensure its continuance in future years.

South Brent.

The twelfth annual show of ponies and Hunters held under the auspices of the South Brent Agricultural Society took place on the 3rd inst. at Brent, and was noticeable for a marked improvement in quality, thus testifying to the useful work of the society. There was a record entry of ponies, and the Dartmoor breed naturally showed to the greatest advantage. A new and gratifying feature was a class for brood mares registered in the Dartmoor section of the Polo and Riding Pony Stud Book. The prizes in this section were given by the Polo and Riding Pony Society, with the desire of encouraging the breeding of Dartmoor Polo ponies, and the section when better known should prove a most interesting one. The show also had dairy produce and horticultural sections, but owing to the very unfavourable character of the season these were not well filled, and, in fact, several classes had to be abandoned for lack of competitors.

Tutbury.

The outstanding feature of the show of the Tutbury Shire Horse and Meynell Hunt Society, held at Tutbury, near Burton-on-Trent, on Monday, was the remarkable success of Mr. Egerton Orme, The Ash, Etwall, near Derby. This famous Shire horse breeder had the good fortune to be on his own territory, and was consequently able to show in both local and open classes. Out of the eleven classes in which he competed he secured first honours in ten, and in addition secured two seconds and two thirds, whilst he swept the board of all three cups, and secured the society's gold medal, thus establishing a record hard to beat as a prize winner at any one show.

In the opinion of the judges, expressed at the luncheon, over which Mr. Gerald Hardy presided,

the Hunter classes brought together the best class of animals ever seen in the ring since the inauguration of the show. The two-year-olds stood out conspicuously in point of merit, and were very strong indeed. The total entries for the show were not so numerous as last year, but quality was quite up to the average.

Tyneside.

The Tyneside Agricultural Society's Show at Hexham on Monday was a decided success, for there was a record entry (1,871), and the attendance also exceeded that of other years. Notable as this show has always been for draught horses, last week's display surpassed anything yet seen at Hexham; in the agricultural classes alone there were no fewer than 138 entries, and competition was naturally keen. The Shorthorn cattle came next in importance, whilst the non-pedigree Shorthorns, the dairy cows, the Galloway cattle, and the grazing stock were all capital, and made the cattle worth making a long journey to see. In connection with Shorthorn classes, there was a milking competition, which provoked keen rivalry, and the judges had a difficulty in making their awards, so excellent were the performances. Sheep made a good show, whilst goats formed a new and successful feature, 30 of these animals being forwarded. The dog section, always a popular one here, was the largest and best collection seen at this show.

Welbeck Tenants.

The eighteenth annual exhibition of stock and produce held by the tenants of the Duke of Portland took place on Tuesday in the beautiful grounds of Welbeck Abbey, and once again afforded a notable illustration of what can be done when landlord and tenants work in harmony. As is well known, the Duke of Portland gives practical aid to his tenants for breeding first-class stock, and also provides the major portion of the prizes offered at the show, and how his efforts are appreciated was shown by the increase in entries, the total being 1,222 as against 1,062 last year. In several of the important sections the effects of the cold, wet season were noticeable, but otherwise the quality was well maintained, and the show was a most interesting one.

Agricultural horses once again made a very fine show. Improvement was noticeable in some of the younger stock, but as the season has been unfavourable not so many brood mares were shown, and the foals by the Duke's stallions were not quite so noteworthy. The geldings were a strong lot, and the turn-outs by tenants farming under thirty acres were so good that a fourth prize was recommended. Half-bred horses by a Thoroughbred stallion always make a good feature, and some very useful animals which have been ticketed at the Royal and county shows were entered.

Cattle made up a very good show, the quality being satisfactory all round. Although not so numerous as last year, sheep were fairly up to the standard, but owing to the cold, wet season lambs were not so well developed as usual. Swine fever regulations prohibited an entry of pigs, but the other sections proved as attractive as ever.

The Duke of Portland entertained over 600 tenants to luncheon in the riding school, and speaking in reply to the toast of his health he said that with regard to the Small Holdings Bill he questioned whether the benefits suggested by it were ever likely to be realised. Some years ago he let a farm of 480 acres at Gringley in that county to six agricultural labourers. The rent was moderate, and he provided a full complement of live and dead stock free of cost. In return they agreed to pay a small rate of interest on the capital. The scheme turned out disastrous both to them and to him, for after fifteen years the farm was given up, and in the meantime it had not improved as agricultural land. Although the men had worked hard, they were worse off at the end of the tenancy than at the commencement. He did not regret his personal loss, for it taught him the lesson not to expect the impossible, but it had made him extremely doubtful of the likelihood of small holdings bringing back to the land that prosperity the present Government predicted, and which both political parties so much desired.

West Gloucestershire.

With a record entry, fine weather, and a big attendance the show of the West Gloucester Farmers' Club held at Springfield, Westbury-on-Trym, on Tuesday, was one of the most successful of the forty-six held by the club. Horses were not quite so numerous as last year, now being 196 against 203, but the cattle showed a remarkable increase, they totalling 160 as compared with 132 last year and 80 in 1905. Sheep were about the average as were also pigs, and cheese, and butter, the respective entries totalling 26, 15 and 15.

Hunters and hacks formed the chief feature of the horse section, and though they were less numerous than at some former shows, they were, nevertheless, good, useful, and meritorious animals. Cart horses were not very numerous, but comprised a gratifying number of staunch and sturdy animals, and the competition altogether was of a healthy order. While there was reason to be grateful for a substantial increase in the entries in the cattle classes, there was no marked improvement in the quality of the animals. One of the judges asserted that the animals in Tuesday's competitions were inferior in merit to some he had met with at previous shows of the society. Nevertheless, there were some good animals in several classes. A capital lot of sheep were penned, and pigs made a creditable show, whilst a decided improvement was noticeable in the exhibits of butter and cheese.

Wisbech.

The Wisbech Horse Society's Show held on Monday was by far the best of the seven held by the society, and happily it attracted a record attendance of visitors. In addition to entries from the immediate locality, animals were sent from the South of England and the Midlands, and included quite a number of Olympia and Richmond winners, so that quality was of a high standard. Shires and Hackneys made a capital show, but the feature of the show was the harness section, the entries in these classes being exceptionally good.

Worthing.

Delightful weather was associated with the Worthing and West Sussex Horse Show held at Beach House Park, Worthing, on Wednesday, and it was largely attended, whilst the entries reached the record number of 140, so that the event was a complete success. There was a nice show of Hunters, the principal prize for which fell to Mr. E. W. Robinson, Brookleigh, Esher; Mr. J. P. Hornung, Horsham; Mr. W. G. Fladgate Slinfold; and Mr. W. Dawtrey, Petworth. Hacks and harness horses also showed to advantage, but as usual chief interest centred in the jumping competitions. In the open event Mr. Nixey Smith's Grasshopper, which secured first prize for jumping at the Arundel Show on Tuesday, was beaten by Mr. J. Coleman's well-known prize winner White Rose. Both horses gave a splendid exhibition, but in the final test Grasshopper knocked down a rail, after clearing all the other fences in good style. Having won the open class, White Rose was debarred from competing in the United Hunts jumping competition, which was won by Grasshopper, although Mr. Walter Winans' Sirdar made a very bold bid for premier honours.

Highland: Changes in Awards.

On account of animals failing to comply with the regulations as to calving and foaling, a few changes have taken place in the official prize-list of the Highland and Agricultural Society's Show at Peebles last year. These changes are as follow:—

Sir Richard Cooper's first-prize two-year-old Shorthorn heifer, Dalmeny Beauty 2nd, having died, Lord Polwarth's Bonnie Gowan, placed fourth, and Mr. William Bell's Belle of Alne having failed to produce a calf within nine months of the show, the first prize has gone to Mr. A. Robertson, Haugh of Ballechin, for Royal Lily, the second prize to Mr. W. T. Malcolm, Dunmore, for Lowland Dream, and the third prize to Mr. A. J. Balfour of Whittingehame for Lady Gordon 2nd, whilst the fourth prize is forfeited to the society.

Mr. W. Montgomerie Neilson's first-prize three-year-old Galloway heifer having failed to produce a calf within nine months of the show, the first prize has gone to Mr. Robert Graham, Auchengassel, for Gipsy Queen of Auchengassel; the second prize to Mr. A. H. Fox Brockbank, Kirksanton, for Graceful; the third prize to Mr. J. Wilson, Tundergarth, for Clara VIII.; and the fourth prize to Mr. John Cunningham, Tarbreoch, for Louisa 5th of Tarbreoch.

In the class for Clydesdale yeld mares Mr. H. B. Marshall's Pomona, which was placed second, Mr. R. Chapman's Winsome Baroness placed third; and Mr. G. Findlater's Lilah placed fourth, having failed to produce a foal within twelve months of the show; the second prize has gone to Mr. T. Riddell, Blackall, for Evelyn; the third prize to Sir John Gilmour for Montrave Dorothy; and the fourth prize is forfeited to the Society.

SOCIETY ANNOUNCEMENTS.

BATH HORSE SHOW.
SEPTEMBER 4 & 5, 1907.
Nearly £700 in Prizes.
Great Jumping Competitions.
Entries close August 17.
Schedules and all particulars to be obtained of Lewis C. Mundy, Secretary, 41, Milsom Street, Bath.

THE EAST BERKS HORSE SHOW SOCIETY will hold its ELEVENTH ANNUAL HORSE SHOW
At Hawthorn Hill Racecourse (between Maidenhead and Bracknell), on
THURSDAY, AUGUST 22, 1907.
Entrance One Shilling all day.
Judging commences at 9 o'clock punctually.
Motor omnibuses will run from Maidenhead Station to the Show Ground, leaving Maidenhead at 12 o'clock noon, 2 p.m., and 2.30 p.m., returning at 5.15 p.m., 6 p.m., and 6.30 p.m.—C. H. W. Dixon, Hon. Sec., 4, Henrietta Street, Covent Garden, W.C.

CHILTERN HILLS AND SOUTH-ERN BUCKS AGRICULTURAL ASSOCIATION SHOW, at HIGH WYCOMBE, on WEDNESDAY, SEPTEMBER 11, 1907.
OPEN CLASSES for SUFFOLKS, HACKNEYS, HUNTERS, JUMPING and DRIVING, JERSEYS, SHORTHORNS, BUTTER, and HONEY.
Forms and Entry Forms apply to
Joseph Bliss, Secretary,
76, High Street, High Wycombe.

ROYAL JERSEY AGRICULTURAL and HORTICULTURAL SOCIETY.
Agricultural Department.
President—W. Duret Aubin, Esq.
Summer Show of Bulls, Cows, Heifers, Horses, &c., at the Society's Show Grounds, Jersey, AUGUST 21 and 22, 1907.—John A. Perree, Secretary.

LEIGHTON BUZZARD & LINSLADE FOAL SHOW SOCIETY, held on
SEPTEMBER 17 (TUESDAY).
Entries close September 3. Post entries (double fees) September 10.
Walter C. Prudames. } Hon.
W. Gravely W. Willis. } Secretaries

NEWBURY HORSE SHOW, AUGUST 21, 1907.
JUMPING CLASSES.
Valuable Prizes. Extension of time for Entries.
Class 24 (Open) for best Horse or Mare over 15 hands.
1st Prize, £20; 2nd, £8; 3rd, £2.
Class 25 (Open) for best Horse or Mare not exceeding 15 hands.
1st Prize, £15; 2nd, £5; 3rd, £2.
Entries close August 16.
E. J. Forster, Secretary.
Newbury.

CLYDESDALE HORSE SOCIETY.
STUD BOOK VOL. XXX.
ENTRIES at ORDINARY FEES CLOSE on 31st inst. Forms and all information from—
Archd. Macneilage, Secretary,
93, Hope Street, Glasgow.

BUXTON HORSE SHOW.
SATURDAY, AUGUST 24, 1907.
President:
His Grace the Duke of Rutland.
Over £300 in Prizes, including Challenge Cups and Gold and Silver Medals.
Entries close Thursday, August 15.
For Prize Lists, &c., apply to the Secretaries, Hampson Bros., 3, The Quadrant, Buxton.

SOUTHDOWN FLOCK BOOK.—
NOTICE is hereby given that the Southdown Flock Book will be definitely closed to unregistered flocks on December 31 next, after which date no sheep from unregistered flocks will be accepted under any conditions whatever.
Owners who have not yet registered their flocks are earnestly requested to write for full information respecting the Southdown Sheep Society to
W. J. Wickison, Secretary.
12, Hanover Square, London, W.

OKEHAMPTON AND DISTRICT AGRICULTURAL ASSOCIATION.
The 17th ANNUAL EXHIBITION of Horses, Cattle, Sheep, Dairy and Garden Produce, Poultry, and Pigeons, will be held at Okehampton, on SEPTEMBER 12.
Prizes about £300.
OPEN PRIZES for HUNTERS and HACKS.
JUMPING, DRIVING, SHEEP, &c.
Schedules and Entry Forms of
Chas. J. Futcher, Hon. Sec.
Okehampton.
Entries close August 31. Separate Schedules for "General," "Poultry and Pigeons" Section. Please state which required.

HAY HORSE SHOW, FRIDAY, SEPTEMBER 20, 1907.
Entries close on September 5th; double fees, September 12th.
Reece Morris, Secretary,
Broad Street, Hay, Hereford.

WORSLEY SHOW.
(Lancashire Federation.)
WEDNESDAY, AUGUST 28.
Horses, Cattle, Pigs, Poultry, Pigeons, Dogs, Cats, Rabbits, Cavies.
320 Classes, £700 in Prizes, 14 Silver Cups, 175 Specials, 41 Judges.
Entries close August 21.
Schedules apply, J. W. Parkinson, Worsley.

MID-SOMERSET AGRICULTURAL SHOW, SHEPTON MALLET.
TUESDAY, SEPTEMBER 3, 1907.
W. Ozzard, Secretary,
Shepton Mallet.

CORRESPONDENCE.

Pig Breeding and Feeding.

SIR,—We desire to ask your valuable help in drawing attention to the almost unaccountable fact that pig rearing and feeding is on the downward grade.

The Agricultural Returns for the United Kingdom for the year ending June, 1905, showed a decrease on the previous year of 590,030. Again, for the year ending June, 1906, another decrease of 20,576; the latter figure would have been a much greater decrease but for Ireland's increasing 80,220. England's decrease for the year ending June, 1905, was 393,129, and for the year ending June, 1906, it was 99,624.

We the Birmingham and District Butchers and Pork Butchers' Trade Association, the Pork Butchers' Associations of London, Liverpool, Manchester, Sheffield, and Bristol, have been greatly concerned at this remarkable and unsatisfactory state of things.

We are very soon entering on the third year of scarce pigs. We have at certain times found the greatest difficulty in getting supplies to carry on our normal trade and that at little or no profit. We feel sure that if you will kindly interest yourself by addressing the farmers of Great Britain through your valuable articles discussing, suggesting and advising the matter of pig producing the result would be a great benefit not only to the farmer, but to the public, the trade of pork butchers and ham and bacon curers.

In our opinion we fear that the restrictions of the Board of Agriculture have greatly tended to the decrease which has also induced neglect and apathy on the part of farmers. We might mention that the recent disclosures as to Chicago methods turned the public tastes towards home products, but this great opportunity was missed for want of larger supplies. Sixteen million pounds a year is going out of the country for bacon and hams, three and a quarter millions for lard, and close on two millions for pork.

In our opinion at least ten millions of this money might go into the British farmers' pockets.

We may look in the future for some assistance from our Government in this matter; so far their action has been only one of instituting restrictions for the removal of swine in the endeavour to stamp out swine fever.

We hope example may be taken from the Governments of Canada, United States, and Denmark, who conduct experiments, give data, and send expert advice to all those interested. We earnestly hope that you may advise your writers on agricultural subjects to give the matter of pig rearing and feeding prominence in their valuable articles from the present time onward.

In conclusion, we may say that this appeal has the approval and support of the National Federation of Meat Traders of Great Britain:—

F. SWADKING, President Birmingham and District Butchers and Pork Butchers' Trade and Benevolent Association.
E. A. LEWIS, Vice-President.
C. H. PALETHORPE, Vice-President.
THOS. BRIDGEWATER, Secretary.
ROBERT H. BRECHIN, President National Federation of Butchers' Associations.
JOHN LINDSEY, President London Butchers' Association.
GEORGE ROBB, President Liverpool Pork Butchers' Association.
JOHN H. BRIDGE, President Manchester Pork Butchers' Association.
FERDINAND GEBHARDT, President Sheffield Pork Butchers' Association.
S. R. SELMAN, President Bristol Pork Butchers' Association.
J. M. MURRAY, President Glasgow United Fleshers' Society.

July 29, 1907.

Milk.

SIR,—Regarding your remarks as above on page 160:—

If the experts (?) who have been frantically endeavouring, through the medium of the daily press, to convince the public that the milk which is now sent from the country to London and other large towns is injurious to those who consume it, by reason of its being taken from cows suffering from tuberculosis, and kept amid insanitary surroundings, will explain why country children who partake largely of this same milk are robust and healthy, whilst those who get very little of it are weak and ailing, the truth of their statements will be less likely to be doubted by intelligent minds.

One daily paper boldly printed in large type the ridiculous statement that "there are 80,000 milch cows suffering from tuberculosis in this country." And the description given in the same paper of the conditions under which milk is handled at the dairy farms was as revolting as it was untrue.

The influence of milk upon the infant mortality of large towns is that town children do not get sufficient of it, and if some of the fads that these would-be reformers suggest are carried into effect, the cost of producing milk will be raised so that they will get still less.

Are farmers to be forced to submit to being told how they must carry on their business by some impertinent imbecile who never milked a cow in his life, and cannot tell whether a cow be "right in her bag" or not to save himself from hanging? I am afraid that such a one would require to have his photograph retaken after a visit to some of the farms about here, as I am sure that his features would not resemble one taken previously.—Yours, &c.,

A. J. R.

July 30, 1907.

Why Do Ram Breeders Return Again and Again?

SIR,—The above heading appeared in an article in THE MARK LANE EXPRESS on July 22, the main features of which I am, as an old breeder of rams, much interested in, and certainly agree with the opinions expressed. On reading the article it at once struck me how old blood told at the very recent sales of Mr. Dudding's and Messrs. Dean's sheep. At the former's sale the 900 guineas ram was sired by the son of a Pointon ram, purchased by Messrs. Wright, and at the latter sale the highest-priced rams were also by a ram of Mr. Tom Casswell's direct, the oldest flock in Lincolnshire. Such a marked feature in actual practice needs no better evidence than this.—Yours, &c.,

July 29, 1907. OBSERVER.

The Utility of Soil Analysis.

SIR,—In the notice of the recently published report on "Agricultural Experiments in the Eastern Counties," which appeared in your issue of the 29th ult., attention was drawn to a paragraph stating that these experiments had "brought out the unreliable character of ordinary soil analysis as a guide to the treatment of the land with fertilisers."

The grounds for such an unusual statement being based upon the experiments carried out on two farms only, it seems desirable to investigate the circumstances.

It appears that though on one of these farms the soil was well supplied with phosphoric acid according to analysis, yet the experiments carried on for a period of six years indicated that the chief requirement was available phosphoric acid; while the soil on the other farm, though shown by analysis to contain but little phosphoric acid, was nevertheless unimproved in fertility by the application of phosphates.

There is, however, a very reasonable and probable explanation of these apparently contradictory results—namely, in the first case the phosphoric acid was associated with iron compounds and therefore not readily available as plant food; whereas in the latter case the phosphoric acid, though present in comparatively small proportion, was not associated to any great extent with iron compounds, and was therefore in a comparatively much more available condition.

It is one thing to make the analysis, and quite another to correctly interpret the practical bearing of the results obtained.

As an analyst of some forty years' experience, I contend that soil analyses, when carefully performed, are capable of affording *reliable* information respecting the character of fertilisers that should be applied for the respective crops to be grown on such soils.

Further, that soil analyses should always be made in connection with field experiments in order to afford information respecting the chemical composition of the soils operated upon. Indeed, the omission to publish the analyses of the soils on experimental plots renders the results obtained, however carefully carried out, of merely local interest to farmers in the neighbourhood; because without proper information farmers at a distance cannot form any practical opinion whether similar results could reasonably be expected on their own particular soils in a different part of the country.

Naturally farmers are cautious in drawing practical conclusions as to the real value of field experiments carried out under different climatic conditions, and probably on very different quality of land to that of their own farms.—Yours, &c.,

JOHN HUGHES, F.I.C.

Agricultural Analyst, 79, Mark Lane, E.C.

Manure for Grass Land.

SIR,—A thirty acre field, formerly arable and producing good crops, has been let run to grass, bearing little even of this. This year for a wonder it has thrown a large crop of mixed grasses, a large proportion being hop clover. But it appears exhausted, and there will be very little aftermath. The tenant is naturally anxious about next year's crop, and is desirous of manuring it, if such can be done at a small expense. What artificia would be most suitable, and about what would be the cost? The soil is rather a mixed one, shading from gravel on one side to loam on the other with a chalk subsoil. Yours, &c., SOUTH BUCKS.

*** You say that the field which was formerly arable has been let run to grass. If by this you mean that the land has never been laid down and seeded, but the grass—such as it is—has grown of its own accord, it is not surprising that it has produced very little herbage. It is hardly necessary to say that if land has been allowed to get into a bad way for the want of good farming, it takes time as well as liberal manuring to get it back into a fair state of cultivation. From the description you give of the field, I feel sure that a liberal dressing of farmyard manure would do it more good than anything, but if that is out of the question artificials would doubtless improve matters. I would suggest a complete dressing, and for land such as you describe yours to be an application of 5 cwt. of superphosphate, 2 cwt. of kainit, and 1 cwt. of nitrate of soda to the acre should prove beneficial. The last-named fertiliser should be given as a top-dressing after growth has commenced in the spring, and the two former mixed together some time earlier in the year. The cost of the manure would depend on the market price at the time of purchase, but you can ascertain this by consulting our columns, as the current prices of artificial manures are given from time to time. I am inclined to the opinion that animal manure is what is wanted the most, at any rate for a start, and if the tenant can feed cattle or sheep on a portion of the land, this would help to supply the necessary requirement. The grass evidently wants feeding and building up as it were, and whether this can be done by means of artificials alone is a matter that you have to prove. —RUSTICUS.

The Farming Outlook in North Westmorland and Mid-Cumberland.

SIR,—The summer months of 1907 are now within measurable distance of an end, and therefore the forecasts of its productive powers may be approximately estimated. Upon the whole it has not been unfavourable to arable farming, though the weather, which has always the chief control over farmers' welfare, has been somewhat capricious, varying from short fits of extremely hot forcing weather, almost unbearable, to dark, showery weather, which has proved extremely favourable to grass and green crops of all kinds, especially the late sown, which is now completed and nearly all thinned and growing rapidly, but will require a highly favourable autumn to make them an average crop.

The eight or ten days of hot, forcing weather which we had in July enabled farmers to secure a large quantity of hay in prime condition, with the minimum amount of labour, the crops of seed grass being exceptionally heavy and meadows fairly good. The last few days of July and August so far have been very unfavourable for haymaking, and a large quantity is still unsecured and is suffering damage, although the rain came just in time for the oat crop, which was just bursting into ear, and has considerably increased the length of straw, and thus largely increased the quantity of winter provender for cattle. The weather is now very unsettled and rain falling daily, more or less, seriously injuring the quality of heavy crops of meadow now lying cut.—Yours, &c., T. B.

August 7, 1907.

Nantwich Cheese Fair.

There were seventy tons of cheese on offer at Nantwich cheese fair on Thursday, and though there was a slight hesitancy on the part of buyers, a good clearance was eventually effected. Best lots made from 55s. to 60s. per cwt., and lower grades from 48s. per cwt.

Shorthorns for Canada.—Messrs. Alfred Mansell and Co. recently shipped to Quebec per s.s. *Parthenia* on account of Mr. Robert Miller, of Stouffville, Canada, the following high-class Shorthorn cattle:—Peer 96348, an all red two-year-old Shorthorn bull sired by Sittyton Choice 84822 from Rosetta 16th by Scottish Prince 73592. The red yearling bull Violet's Crown got by Royal Crown 84598 dam Vinella 10th by Jasper 62744. A beautiful roan two-year-old heifer Blythesome 23rd by Bapton Tyrant 85245 from Blythesome 22nd by Golden Victor 70542. Also two nice white heifers, Roan Lady 37th and 38th, both sired by Royal Crown 84598, their dams being respectively by Morning's Pride 69154 and Wanderer's Gift 80211. Accompanying these was a Clydesdale mare from Messrs. A. and W. Montgomery and a young colt from Messrs. Wilson Gale.

Northern Notes.

LORD HELMSLEY, M.P., is one of the scions of a great Yorkshire family who is making himself useful in the agricultural world, and preparing his way for the time when he will, in the course of Nature, succeed to a seat in the Upper House. It is a pleasure to record that several heirs of Yorkshire estates, who may be said to have been born in the purple, are serious-minded men, and are taking a broad view of their future responsibilities. Lord Helmsley is a good speaker, and he is quite at home among his agricultural friends. He has a happy way of dealing with current topics, and is a thorough believer in farmers' clubs and in co-operation by farmers. The advocacy of clubs and other forms of organisation by landowners and other responsible persons has done much to impress farmers on the subject, and to induce them to adopt more than a merely passive policy.

FARMERS' clubs have increased at an encouraging rate in Yorkshire, and at Helmsley in that county a co-operative dairy is about to be started. Farmers as a class are very difficult to move out of the ruts in which they are accustomed to go; but having once experienced the benefits of a new policy they will go forward. They ought to pay great attention to the Bills which are from time to time introduced into Parliament affecting agriculture, in order to see that their interests are not prejudicially affected. The member for Thirsk and Malton, speaking at the show luncheon at Thirsk, made brief reference to the question of small holdings. There was no doubt, he said, that although small holdings in some places might be very beneficent—and he believed they were—and although everything they could do to keep people on the land was a good thing, at the same time they did not want experiments made at the expense of the rates, and they did not want to injure sitting tenants by taking away their best land for small holdings without giving compensation.

ANOTHER young and gallant Yorkshireman, the heir to a big estate, said in our hearing the other day that he was invited to join an association connected with the defence of land and property. Although his father had a very considerable and direct interest in landed property, he somehow felt that to join an association of that kind would not be a very safe proceeding, for the reason that if a sharp distinction were drawn between those who had property and those who had not, the former would be found in a somewhat striking minority, and in the event of a contest between the two parties it is obvious that the larger section would prevail.
